## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and CO., the Proprietors.

SATURDAY, JULY 5, 1884.

## ANGLING FOR SALMON.

By GEO. M. KELSON.

### ARTICLE NO. 9 (EXTRA), ILLUSTRATING "CLARKE'S SPEY CAST."

SINCE the wintry season of mince-piety and indigestion, when for the first time I ventured to address you upon the various methods of casting salmon flies, we have passed through one more spring, which, in its awakening, was inspiring and animating to witness ; despite the February frosts in May, we felt its warm, welcome breath gliding over our senses, and we have also noticed the moist mellow earth shooting forth the green blade and tender bud, together with the leafless trees and shrubs in their revived colouring, foretelling the promise of returning flower and foliage.

The majority of fishermen have experienced the hardest of hard times ; they have battled with the coldest of cold winds, ruffling the catches and forcing them as well as the fish to seek securer shelter. Still here and there, some of the "old hands"—ever energetic and enthusiastic—have been rewarded with unusual, if not extraordinary, success. Indeed, truth accomplishes no victories without enthusiasm, which must be the genius of both sincerity and determination ; and do not the energetic, may I ask, whether in public or private life, in trade, profession, business, or sport, often meet with Nature's most bountiful gifts ?

The piscatorial wheel of events has been spinning round, and it may be verily recorded we have had our favours as well as our drawbacks, inasmuch as a few important improvements have been submitted to our notice.

Old times seem changed, old manners gone ; and the casting of "auld lang syne" has disappeared with them. But as brevity makes counsel more portable for memory and readier for use, I will only just say, *en passant*, that any angler who knows how to cast can "reach 'em" with the greatly-improved, five-yard, double-tapered salmon lines, now offered to the public by Messrs. Hemming and Son, Windsor Mills, Redditch. That Farlow cannot make the patent lever salmon winch fast enough to supply the demand. That the four new patterns by Bernard, Piccadilly, seem to be the favoured flies of the season. That Malloch, of Perth, has done wonders for the followers of the proselyte prawn, by inventing a reel which is a luxury and cheap. That the champion, Mr. Ridley, has discovered a dressing which report says is perfect. And that the Editor of this popular little GAZETTE has devoted his attention to trout fishermen, and introduced, through Messrs. Allcock and Co., a new actioned rod, which, I hear, is a universal favourite.

In science and art, amateurs cannot cope with others ; but "the line" is not drawn so hard and fast with fishermen, for where we find one who *will* conquer, that kind of gentleman seldom fails. The readers of this journal may judge for themselves of the usefulness of the flies I am now illustrating ; and in one of these columns to-day I have endeavoured to describe an invaluable invention by another gentleman.

It is, indeed, most agreeable to see them breaking down the barriers of fashion, and ranging successfully over a new and vast field, which at least, forebodes the culture of an advanced age.

Before hastening pell-mell into the more pertinent observations in reference to the present illustrations, I most candidly admit that the Spey Cast was considered dead and without the hope of resurrection ; I mean the one which I have always known by that appellation—because my friends, without a single exception, prefer the "Peter." They make it with a rod, which, in their skilful hands, can demonstrate every other cast, a rod, too, equally suited to manage and master a salmon, even in the strongest run of the Spey. The catches there, as a rule, are in swift currents, and, therefore, it is one of the best rivers for "showing off" Peter ; the same reason equally applies to this cast of Clarke's, for it is much more difficult in a steady stream, and really impossible in still water. I took much pains with Peter in my letter of 19th January last, to explain why that is, in my opinion, the best "switch." The work, be it remembered, is commenced and completed in front of the angler ; but, perhaps, now I should not uphold the opinion that "Peter still reigns with unchallenged supremacy."

There is a deal to be acknowledged in favour of "this Spey," which is certainly destined to become permanently popular, and but little can be said against it. However, one point we should not overlook is, that the cast cannot be made unless there is lots of room on the water just above us, which space must be free from all bushes and overhanging trees.

It is simply delicious to watch the expression of mingled perplexity, vexation, and good humour upon the countenance of a novice in his first attempt at this cunning cast. But when the celebrated practitioner, Mr. Clarke, visited the Tay, at Perth, anglers young and old, flushed with excitement and anticipation, congregated upon the banks of the river to witness his wonderful performance ; they became positively awe-stricken with his apparently matchless strength. One catch, over a peeping rock, the line had to be propelled just upon fifty yards. I have never seen it done, and regret I have failed in my endeavour to get this place (wherever it is) accurately measured ; but a friend of mine writing from the neighbourhood says, "Mr. Clarke has been fishing my water, and when he was teaching me the cast here, *I saw him switch forty-seven yards* . . . . . . for twenty years he has been working scarcely any other cast but this, in one of the best districts on the Spey."

I am in a position to state his rod is a thoroughbred Castleconnell. I particularly noticed this when practising with it the other day upon the Dee (N.B.) It is admirably suited for this purpose, though rather heavier at the point than usual, which favours butt action, so necessary for all switching ; but to my mind I cannot say it is one I should care to use for any other cast save the Flip.

Looking now to the illustrations, the point of the rod in Fig. 1 describes the outline of, say, a reversed letter S (head being down and tail up the river), which movement precedes the down-cast. The letters A to A show the track of the upper ring. By effecting this most important letter S, the line is kept in swing—exactly what the overhead work in petering is for—the motion terminating and the down-cast commencing at about the point of the arrow. It will be observed that previously, the line is held high up out of the stream, the fly being well down the river at the mark X, with only the traces and a very small proportion of the line on the water.

The secret is just to lift and drag the fly out *as steadily as possible*, so that it strikes the water at the mark X in Fig. 2. This part of the cast requires much practice ; but salmon fishermen are more persevering, perhaps, than any other class of sportsmen. There are many who never get tired of trying ; who will attempt anything almost, except to do an injury, which they would much prefer to endure than to inflict. A persuasion that we shall overcome every difficulty in works requiring patience and skill, seldom fails to carry us through them.

It is manifest that the rod must be held well up at starting, because if there is much line on the water it is obvious there would be more power required, and consequently more uncertainty, in locating the fly by the side of the angler as illustrated.

Fig. 2 correctly and distinctly shows the effect produced upon the line by the letter S motion, which, if done at random or hurriedly, will cause the fly to be sent too far up stream ; then the constant tugging of the line, *so absolutely necessary*, will be lost. It will prove that the proper strength has been allowed when the fly is made to alight momentarily or strike the water as directed ; then, as there is no pause, the line or fly has not time enough to shift or sink before it is propelled ; but it must not be "picked up" too quickly from there by unnecessary and fatal haste in the down-cast.

The numbers 1, 2, 3 in Fig. 2 point to the progressive effect from the beginning to the end of the letter S dodge ; the thrash or down-cast follows without hesitation on the part of the angler, and the rod continues its course to the position in Fig. 3.

In describing the down-cast, perhaps I cannot improve upon my former injunction, and therefore may be pardoned for repeating that the power required must be entirely suggested by the length of the cast. Gradually increase the pressure at the butt of the rod, most with the upper hand. The centrifugal force emanating from the generated centre at the butt where the strength is applied drives its course along, expelling the line, and is exhausted, while the fly is alighting from A to B, Fig. 3.

The younger members in our ranks who have endeavoured to complete the "Peter" *over* the water instead of with a sort of loop in the line running as it were along the surface, will probably agree with me that it is only effected by a "miracle of dexterity." In that cast most of the line is away down the river just previous to the thrash ; but in this, the fly is close to the angler, and therefore it can be propelled with comparative ease out of the water. Our artist has made this pretty clear in Fig. 3.

There is a charm in this exciting cast—a charm so enjoyable, that any analysis is better left alone ; exciting, simply because it is so fearfully difficult ; but things laboriously learnt at first come to be done at last without an effort.

Some of us may probably talk of the "dull domesticity" in hooking fish every minute from our own lawns ; but we are not living in

No. 9.—CLARK'S SPEY CAST.

primitive or fabulous times when fishermen were uncorrupted by luxury and ambition. Then why not regard this cast as fresh food for our appetites ? Every earnest angler should seize spare moments to examine it. Yes, they will be turning such moments to fragments of golden account if they but find time, place, and opportunity to practise this "splendid Spey" ; for, however genuine and generous fishermen may be, they are apt to forget that which is rarely recalled to them.

And let me finally hint that knowledge is power and a natural consequence of learning ; it is unlimited in space, and infinite in duration ; but it cannot be acquired without some pains and application. If, however, fishermen have a practical knowledge of every cast, and more especially master the art of fly dressing, they may often snatch advantage, they may often increase the weight of the frail ; and it is then that their enjoyment becomes elevated because the proud desire of distinction, the desire for success, is satisfied, the acquisition of honours secured.

## THE NATIONAL FISH CULTURE ASSOCIATION, SOUTH KENSINGTON.

THE Aquarium at the Health Exhibition now presents at night a very pretty sight, the Electric light having been laid on, and the tanks thoroughly stocked. The latest additions to the Aquarium in the shape of fish include a dozen fine trout and a dozen pike, as well as several perch—all presented by the Most Hon. the Marquis of Exeter, the President of the Association ; half-a-dozen barbel, several wrass, and two octopus. "British Fishes," the official handbook of the Association, compiled by Mr. W. Oldham Chambers, F.L.S., is obtaining a large circulation, not only in the Exhibition, but all over the country. We are in receipt of a copy, which will obtain notice in due course.

## THE HEALTH EXHIBITION.

WE have the pleasure to inform our readers that we have made arrangements with our special correspondent for a series of notices of such exhibits as may be of general interest.

## A BRITISH ISLAND FOR SALE.

OUR readers will doubtless have noticed in our columns Messrs. Debenham, Tewson, and Co's announcement of the sale by auction on July 29th of one of the English Channel Islands. The Island of Herm is one of great natural beauty. It is about one and a half miles in length and three-quarters of a mile wide, and comprises some 460 acres of land, a considerable portion of which is highly productive. There is partridge and pheasant shooting, and the splendid and varied sea fishing to be had off these islands is too well-known to need more than passing reference. For particulars of the inhabitants, trade, buildings, harbour, granite quarries, &c., all of which are to be sold on July 29th, we must refer our readers to Messrs. Debenham, Tewson, and Co's. announcement. After perusing with much interest a very carefully drawn up prospectus of the property, among the other great attractions we found there was one thing about it which made us very much inclined to buy it,—viz. there are *no rates or taxes!* But on second thoughts we were obliged to give up the idea on account of the difficulty of editing a London newspaper from the centre of the English Channel. We consider Messrs. Debenham, Tewson, and Co. are fully justified in stating that "the property offers a perfectly unique purchase for a nobleman, statesman, yachtsman, or professional or business man seeking thorough rest and recreation in a charming climate at the seaside."

## THE FISHERIES CONFERENCE AT THE SOCIETY OF ARTS.

MR. J. W. BENSTRIN, of the Leicester Angling Society, writes to ask us to point out that he, and not Mr. A. J. Little, as previously stated, seconded Mr. Geen's resolution to prohibit netting. He says the Leicester anglers are most strongly against the use of the net.

## GERMANY AND THE ISLAND OF ANGUA-PENQUINA.

WHILE on the subject of islands it will interest our readers to know that it is to the developement of its valuable sea fisheries that the Germans look to be repaid for colonising the above-mentioned island, which has caused so much correspondence between England, Germany, and the Cape.

## THE TRENT FISHERY DISTRICT AND ANGLERS' CHEAP FARES.

THE London and North-Western Railway Co. have again been strongly urged to re-grant the fishing facility tickets to anglers in the Trent district as heretofore by Alan Bagot, Esq., acting for the Trent Fishery Commissioners, but, we regret to say, without avail, although the matter was thoroughly reconsidered by the Directors ; as will be seen from the following copy of a letter to Mr. Bagot, the original of which is now before us :

London and North-Western Railway.
General Manager's Office,
Euston.
June 26th, 1884.

DEAR SIR,—In reply to your letter of the 24th inst., I have to state that the question of the issue of tickets at reduced rates to anglers received, quite recently, the very careful consideration of the Directors, and I regret I can hold out no hope to you that they will be able to see their way to alter the decision at which they have arrived in the matter.—Yours faithfully, G. FINDLAY.

Alan Bagot, Esq., J.P., 42, Lowndes-street, S.W.

The above account shows that, in spite of his serious illness, Mr. Bagot has not lost the great interest in anglers and angling which he has always evinced. Eighteen months must elapse before he can be said to have recovered entirely. Mr. Bagot is suffering from a severe injury to the lung, the result of an accident. He continues to receive letters from all parts of the Trent district inquiring after his health ; but the surgeons will not allow him to reply, as he has to be completely quiet, and we are sure anglers will be glad to direct any inquiries they may have to make to the offices of the Board, 40, St. Mary's Gate, Derby, instead of to him, and so secure him a rest from the work his position as conservator entails.

## CERTIFICATE OF AWARD TO MR. GEO. M. KELSON.

IT affords us much pleasure to notify that Mr. Kelson has received a communication from the authorities stating that Her Majesty's Commissioners have awarded to him a Diploma of Honour for special services rendered at the International Fisheries Exhibition, 1883. This well-merited compliment will be highly appreciated by Mr. Kelson and his friends, and it will give general satisfaction to the angling community throughout the country.

## MR. GEEN.

MR. GEEN'S very numerous body of friends and correspondents will be glad to know his new address.

It is—

Davenham Lodge,
Mount Ararat,
Richmond.

## AN OTTER'S ATTEMPT TO ASCEND THE TEME AT LUDLOW.

A SINGULAR occurrence took place at Ludlow on Tuesday morning about five o'clock, when William Nash, of 40 Lower Broad-street (sexton and lamplighter) in this town was engaged in fishing in the river Teme from one of the recesses of Ludford Bridge, Lower Broad-street. His attention was attracted by several repeated splashes in the water, and for some time he could not make out the cause ; but on looking down the river in the direction of the weir, above Nicholas and Marston's Miles, he observed a dark-looking object, which on closer observation proved to be an exceedingly large otter, which was vainly making attempts to leap the weir for the purpose of proceeding up the stream. Again and again did the otter make the attempt ; but all its efforts however were futile and were completely baulked by the great volume of water which was at that time rushing over with great velocity. Finding its inability to surmount this obstacle, his "ottership" retired down the river much exhausted. The animal was also watched by two men named Pope and Ovens.

## ANSWERS TO CORRESPONDENTS.

J. H. W. asks : "What is a suitable feather for making the small, plain, black spider fly from ?" He says he has used cock's hackles, but wants a softer feather with rather more substance. Various feathers are used—coote, moorhen, small hen's hackle, &c. ; but perhaps the best for the purpose is the black hackle from the unsunned (young) blackbird.

CLERICUS.—(1) Yes ; we have worn out two of Messrs. Williams and Co.'s guinea trout rods, and can strongly recommend them ; they make them whippy, or stiff, or medium. (2) No ; we do not know any London fishing-tackle maker who has more than a bit of back yard in which to try the play of a rod. It is a great drawback, as you say.

R. C. WELLS.—It is difficult to advise you to go where you will be "sure of sport," especially as most of our streams have never been so low before during this century. You can walk across the Thames below Teddington easily at low-water. See the "River Reports,"—more rain seems to have fallen in Herefordshire than elsewhere.

A. B. C.—Write to Mr. Mudford, fishing-tackle maker, Tiverton ; also to Mr. Wm. Hearder, fishing-tackle maker, Plymouth. They will give you the information for their respective districts. We shall have some articles on Fishing in the Exmoor Streams in the GAZETTE shortly.—ED.

## CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### PATTERNS OF SALMON FLIES, &c.

SIR,—As Mr. Kelson is describing my patterns of salmon flies in the FISHING GAZETTE, I venture to make a few remarks for the information of any of your readers who may take an interest in the task he has undertaken ; and I wish to take this opportunity of expressing my entire satisfaction at the accuracy of his descriptions, as well as of the engravings as far as they have been published.

One of the leading fishing tackle manufacturers, in a letter, which I received a few days since, said : "Mr. Kelson is making a splended job of your flies in the FISHING GAZETTE," and I quite agree with him.

Mr. Kelson has done me the honour to mention my work in rather flattering terms ; but I claim no merit for my flies, beyond a novelty of pattern, and that they are entirely made with natural feathers.

Many years of careful study and observation have led me to the conclusion that variety is not only pleasing to the fish, but also to the fisherman. In my opinion, I believe any of these patterns will suit our large rivers anywhere in the spring of the year, when large, bright, and brilliant flies are favoured. They are also suited to the snow-fed rivers, either in Norway or Canada.

A little careful casting is desirable ; otherwise, the wing feathers are liable to break, and as they are scarce and difficult to match, this would be a serious loss. The art of dyeing has been brought to such great perfection that very fair imitations of natural feathers may be found. From time to time, I have been supplied with splended specimens of red, orange, yellow, and blue, by Farlow, Harold of Mallow, W. Haynes of Cork, and others ; but I have never succeeded in getting a good green, with the exception of a few feathers which were given to me by Mr. Kelson, and which were, I believe, dyed by him. I inclose one for your inspection : it is, I think, as near perfection as possible. But dyed feathers, however bright-looking when new, will quickly fade, and the prismatic hues of the natural sort are never imitated well by dyers. It is, however, a fact, that the colours of some natural feathers possesing these qualities in the greatest degree will fade or change colour in the water. The kingfisher, green parrot, and that most beautiful of all naturals, the blue macaw, will each assume a dirty brown shade after having been used on a fly for half an hour. Some of these would be comparatively worthless were it not that they quickly reassume their colour when dried.

It would therefore be well for fishermen to have one or two spare flies to use alternately.

The crest feather of the golden pheasant loses its lustre rapidly if exposed to the sun.

I agree entirely with what Mr. Kelson says of the kingfisher, cock-of-the-rock, and scarlet ibis. The two latter are remarkably likely-looking feathers, but make a poor show in the water when used as hackles ; in fact, as that gentleman asserts, the ibis "is abominable" ; but two or three strands of it, and no more, go very well in a mixed wing.

The chatterer is by far the best for cheeks, and although the feathers from a young bird may change colour a trifle, there is no apparent difference in those from two year old birds ; and therefore the chatterer has a great advantage over the kingfisher. Indeed this is one of the first lessons we learn ; but all fishermen detect this at once.

I shall be happy to give any further information required. JOHN P. TRAHERNE.

P.S.—Since sending you my letter, I have read "Eastern's" remarks in the GAZETTE of last week. If he will kindly refer, he will see that I have alluded to the defects he mentions in the feathers. Indeed, a trifling experience tells us all this ; and I may confidently assert that Mr. Kelson must have been intimately acquainted with the details for very many years.

It has just occurred to me in reading over the description of "Juno," the cheeks are said by Mr. Kelson to be kingfisher : they should be chatterer.

The only fly I gave him of this sort was so damaged that I am surprised it was even so correctly described. Mr. Kelson made a new one for the artist to work from, and except this accident—no fault of his—he was correct.

With regard to "Eastern's" questions as to coloured water, &c. If I may be allowed to give an opinion, I should say that owing to the fact that a dark object is plainer to be seen than a light one when seen through the light, that the darker the fly the better for success in muddy water.

But in the state of water "Eastern" describes, I should certainly say, if he will try a spoon or large phantom minnow, he would find either far more killing. —J. P. T.

### DRY FLY FISHING.

SIR,—Your editorial note to my letter in last GAZETTE seems to throw cold water on the statements I have made on the authority of Mr. Lascelles.

There is no doubt that, as I have said, he does not give particular instructions as to drying the fly before each cast ; but his remark, I take it, virtually assumes this, for how is one to throw a fly, or three flies, up stream and allow them to swim down with the natural ones, unless the said artificials are to follow the example of the naturals, and float on the surface ?

The expression "swim" in his letter appears to me to have given you the idea that Mr. Lascelles' flies were intended to come down partially dry, or perhaps wet.

The whole matter depends on the word "swim," and I shall take "Webster's" definition as supporting my argument, that Mr. Lascelles was, if not the first, at least an early advocate of the "dry fly." "Webster" gives (page 1001) : "Swim—to float—to be supported on water or other fluid—not to sink." Now, if Mr. Lascelles says, allow your flies to "swim" down as the naturals, so certainly this means that the artificials are to follow the example of the natural ones, and any angler who has common sense in him with such instructions as Mr. Lascelles gives could not do otherwise than dry his flies, so that they might float or swim down on the surface. The question of one, two, or three flies is of no importance in this case ; that is a matter for the angler's pleasure or convenience. When one fishes a stream abundant in weeds it is imperative to use one fly only. The veriest tyro in such circumstances in fly-fishing knows well that if he uses more than one fly the hooks that are free become very often entangled in the weeds, and the dead strain so produced enables the fish caught to break away and be lost ; but if the stream be clear of weeds the angler may please himself, and use as many flies as seems good to him. But the conditions are in all cases the same—*the fly must swim or float down as the natural fly does.*

If, Mr. Editor, you can point out any instructions of earlier date than those of Mr. Lascelles, I shall esteem it a great favour, because I know that you thoroughly sympathise with me in all disputed angling matters in giving credit to him who deserves it.—I am, &c., JOHN BRUNTON, M.D.

June 29.

[The Doctor ought not to mind a little cold water this weather ! We must wait until we have the pleasure of meeting him before repeating the douche.—ED.]

### FISHING AT WHITBY.

SIR,—Can any of your readers give me any information about the fishing, both salt and fresh ?—I am, &c., G. M.

[The "Angler's Diary" says there is good brook and capital sea fishing at Whitby. Pollack, whiting, cod, flat-fish in the bay and offing. There are a great many becks in the neighbourhood. Day tickets on the Esk (trout) cost 2s. 6d. each, and can be had of Mr. S. Wilkinson, Hon. Sec. Esk Association, Whitby. The salmon angling in the Esk is very good at times ; great numbers of salmon were taken last year. When we fished there, a year or two ago, the Esk was in flood, and the Mirk Esk seemed almost utterly devoid of trout, though it looks a lovely little stream.—ED.]

### EYED DOUBLE SALMON HOOKS.

SIR,—Failing to obtain good double salmon hooks, either from Kendal or Redditch, I wrote to Messrs. Woodfield and Son, who advertise in your columns. They at once undertook to make any form of hook desired.

After several trials, owing partly to want of the requisite tools, the inclosed form of hook was so far perfect as carrying out the design I had given, though one or two improvements might be made.

My object was to get a double hook finer at the tail of the shank than the ordinary double Limerick, so that the body of the fly might taper. The iron eye is more convenient for many reasons than the gut loop, while the form of the hook pushes the point deeper and deeper instead of tearing.

Professional fly-tyers will not like them, as they are rather awkward to "tag," "tail," and "butt" ; but the gillies here call them "hungry-looking hooks." They are rather light in the wire, but are beautifully tempered, and I have killed some large fish with them. W. Woodfield and Son, of the Easmore Works, Redditch, were very obliging, and took great pains to carry out my ideas.—I am, &c., F. W. ADYE.

Dalmally.

### SEWIN FLIES, &c.

SIR,—Will Mr. Kelson or Major Traherne, through your valuable columns, be good enough to favour me with some good dressings for sewin flies ?

Can you or any of your readers give me a good mode of preserving the natural flies ? I have tried everything I can think of without success. The coarser land flies there is little trouble with, but the delicate duns I find impossible to secure their natural shape and colour.—I am, &c., BITTERN.

Cardiff.

[Our experience is the same as "Bittern's," and although several correspondents have kindly sent us natural flies as specimens, they have always been almost useless.—ED.]

## THE FISHERIES PRESERVATION ASSOCIATION.

AN important meeting of the Council of the above Association was held on Wednesday, the 25th of June last, Lieut.-Colonel Lord Abinger, C.B., in the chair.

After the first business on the Agenda paper had been disposed of—namely, the passing of a hearty and unanimous vote of thanks to his Grace the Duke of Northumberland for his valuable servicesto the Association during the sixteen years his Grace had been its President, and the election respectively and unanimously of Lord Abinger as the new President, Mr. Edward Birkbeck, M.P., as vice-president in the room of Lord Abinger ; and Mr. C. E. Fryer, of the Home Office (who attended to represent Prof. Huxley at the meeting) as a member of the Council, the meeting considered the draft of the short Bill to amend in several essential particulars the present ineffective Rivers Pollution Preventive Act, so as to make that Act more summary in its action, and much more effective against pollutions.

Having approved of the Bill, the Council decided on taking immediate steps to get it introduced at once in the House of Commons.

They next considered a Bill which is standing for second reading on 9th July in the House of Commons, entitled "Salmon Weekly Close Time (Ireland) Bill," and which proposes to shorten considerably the present weekly close time for salmon in Irish rivers.

The Council attached such great importance to the maintenance of the existing weekly close time, that they determined to petition against the Bill in both Houses of Parliament, and to oppose it by every means in their power.

A report which had been drawn up in accordance with the resolution passed at the late Conference of Fishery Board Angling Societies, and of the proceedings of that Conference (an account of which we have already given in the FISHING GAZETTE), was then read, approved, and signed by Lord Abinger as chairman of the Conference, and copies pursuant to the same resolution were directed to be forwarded by the secretary to the different fishery boards, angling societies, and others interested, together with the following circular letter to be addressed to the chairmen, clerks, and secretaries of the various boards, societies, &c.

Fisheries Preservation Association,
(President Lieut.-General Lord Abinger, C.B.)
11, Seymour-street, Portman-square, W.
July 1st, 1844.

SIR,—In accordance with a resolution passed at the Conference of Fishery Boards, Angling Societies, &c., called by this Association and held at the house of the Society of Arts on the 18th of June, 1884, Lieut.-General Lord Abinger in the chair, I beg, by direction of the chairman, to forward to you on the other side a report of the proceedings of the Conference.

I am to add that the Association will be glad to give any information or render any assistance to any board of Conservatives, angling societies, or other body desirous of adopting or carrying out the provisions of the Freshwater Fisheries Act, 1884.

The Association have in preparation model forms of by-laws and instructions as to the mode of forming fishery districts, copies of which they will be ready to supply to any applicant.—I am, Sir, your obedient servant,

H. A. KINLOCH, Secretary.

The business of the meeting then terminated.

# CLUB REPORTS.

### ALEXANDRA SOCIETY OF ANGLERS.

The members of the Alexandra Angling Society fished for some valuable prizes on the 29th ult., being their first day of the season, Mr. John Smith taking first prize with a capital take of fine dace, Mr. Edward Wicks, roach, perch, and bream, second prize. Mr. Gripton, Mr. Hansie, Mr. Wilson Lucione, and Mr. Dabbs all had a very good show of fish.—F. Wagner.

### AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Taylor had a nice show of bream, six fish weighing 8lb. 1oz. : Mr. Farebrother and Mr. Holliday, perch from the Lea ; Mr. Chevalier, roach, dace, and gudgeon from the Stort. Members will dine on July 6th, at Mr. T. Coomes', Five Horse Shoes, Hoddesdon, Herts, at 1 o'clock sharp.—J. Worledge, sec.

### ANGLERS' BENEVOLENT SOCIETY.

The committee will meet on Friday, July 11th, 1884, to make final arrangements for the tournament, and to select the various officers for the day. For the peg-down match Mr. R. Marston and Mr. P. Geen, in addition to the prizes already given by them, will give £1 1s. each, and Mr. G. H. Field (South London Angling Society) 10s 6d. In answer to numerouss inquiries, the committee will meet at the Foresters' Hall on the second and fourth Friday in each month.—R. Ghurney, sec.

### BOSTONIAN ANGLING SOCIETY.

We had a fair show of fish on the 29th inst, Mr. Jamieson having chub and dace from the Thames, Mr. Jennings over 8lb. of carp and rudd. The following members weighed fish from the Welsh Harp :—Mr. Eltan, bream, the largest weighing 1lb. 8oz. ; Mr. Constable, bream ; Mr. Maynard, roach and perch.—J. J.

### BROMPTON ANGLING SOCIETY.

Some very good shows on the 29th ult. Mr. Ducker having some good bream and roach ; Mr. Sewel, trout and chub ; Mr. E. Saunders, some good roach ; Mr. Dutton, roach ; Mr. Burbidge, roach. Several other members were out, but did not show up.—W. Dutton, sec.

### CAMBRIDGE AND ELY ANGLING SOCIETY.

The annual meeting and supper of this society was held at the Red Lion Hotel, Cambridge, on Monday evening, and both were well attended by members, who took a most hearty share in the proceedings. The balance-sheet showed 6s. 5d. to the credit of the society, but also contained items amounting to £15, representing rents of fisheries paid in advance. The report stated that the number of members last year was 373, that excellent sport had been had, and that, owing to the liberality of Mr. John Hodson, several thousand yearling trout had been placed in various parts of the society's waters. In the conversation that ensued upon the report, suggestions were made as to the providing of bait for members, and also that the leasing of the eel fishing should be discontinued; but the latter was tabooed by the majority, several of whom described eels as nothing better than vermin. It was also proposed that there should be a season of trout fishing, but it was considered that there were not sufficient fish in the society's water as yet to warrant it. A promise was made, however, that when the fish got sufficiently large and plentiful the suggestion should be entertained. The election of officers resulted in Dr. Cooper being re-elected president, Mr. Purchas re-elected hon. secretary and treasurer, and Messrs. Allpress, Archer, Luddington, Lee, Miller, Jones, Dewberry, R. Ellis, A. T. Ellis, Hills, Parr, and Hodson were appointed the committee. Local hon. secs. were appointed as follows :—Ely, Mr. A. C. Allen ; Littleport, Mr. Leach ; Newmarket, Mr. Howlett. One of the members, Mr. Sadd, strongly condemned the establishment of a close season, arguing that it was detrimental to the interests of anglers, not only because they had to lose some of the best months of the year, but also for the reason that the fish "got out of practice," and would not take the bait. He moved that the society should permit of angling on Easter Monday and Whit-Monday, but this found no seconder. At the supper that followed, Dr. Cooper presided, and the Mayor was present, and proposed the toast of the evening, "The Cambridge and Ely Angling Society." As one of the principal members of the town, he was delighted to find that their society was flourishing. Dr. Cooper responded. He was glad to say that the society was prosperous. Last year they had the finest fishing season that had ever occurred within living memory, and he could fairly say, and without exaggeration, that the fish honestly caught with rod and line in streams amounted to tons. When they went to Littleport they were hardly satisfied unless they got 10 to 20lb. weight—not of wretched little fish, but magnificent fish, including pound and half-pound roach. Their prospects for the coming season were equally good. He had been recently over the whole of their water, from Jesus-green sluice to Denver sluice, and he was highly delighted with the quantity of fish he saw, the best spots being between Bottisham and Ely, to reach which spots better accommodation than that now existing was required. He expressed the obligations the society were under to Messrs. J. M. Jones, Purchas, and Dewberry, whose lining of the waters at the South Level Cut (Littleport) originated the society. The water there literally teemed with fish, and at the recent termination of the lease an offer was made by a speculative gentleman of treble the rent the society paid for possession of the water. But the Commissioners refused to entertain the proposal, and the thanks of the society were due to those public-spirited gentlemen who had enhanced the pleasures of their neighbours by resisting an attempt to deprive the society of one of the most valuable pieces of water it possessed. Other toasts followed, and in the course of the proceedings the prizes gained in the angling match last year at Littleport were presented.

### CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 29th :—Mr. Castell, a good show of bream and roach from Dagenham ; Messrs. Chambers and Nitz, roach and bream from Amberley ; and Mr. Gentry, dace and gudgeons from Hampton. Our combined general and eastern district visit will take place on Tuesday next, July 8th, in our club room, Cogers' Hall, Bride-lane, Fleet-street, where our brother anglers will find everything cool but the welcome.—Cas.

### THE CLAPTON.

The ordinary weekly meeting was held at the Swan Hotel, Upper Clapton, E., on Wednesday, the 2nd inst., when a large muster of members were present ; Mr. Field in the chair. The Secretary reported that he, accompanied by the treasurer and Mr. Graham Bennett, had proceeded to Lewanstone on Friday, and after viewing Bailey's fishery came to an agreement with Mr. Bailey by which the Clapton Society had now the right of fishing these waters for the present season. The Secretary also reported that they had had an interuiew with Mr. Coventry, and suggested to him that it might suit the Clapton to rent his waters also. Mr. Coventry asked that he should have a little time to consider the proposition, stating that in a few days he would let the Clapton know his views, but that on the first blush of the matter he thought he should be pleased to enter into arrangements with them. Twelve new members were elected (including six proposed by Mr. Graham Bennett). A few roach were shown, but on all sides it was agreed that until a push of water came fishing would be almost at a standstill. Mr. Howse stated that one or two bits of water in private grounds had been promised for the exclusive use of the members of the Clapton. That identical morning, at 5 o'clock, saw him "paddling his own canoe" with the trusty Binks. Success, however, was denied them—a 1lb. eel only coming to bank. "But," said B., "wait till they are on!" What does this threat imply—should there be anything in it? On the quiet, "You shall know!" A very hearty vote of thanks to their genial chairman brought the business to a close ; after which Mr. Worth ably officiated at the piano, when some capital songs, &c., were rendered.—Henry Howse, hon. sec.

### CROWN PISCATORIAL SOCIETY.

Several members were out on the 22nd and 29th ult., but the takes were small. Mr. Willcockson had on the 22nd inst. a nice show of carp, rudd, and tench, one of the latter weighing nearly 3lb., which has been sent to Mr. Cooper for preservation ; unfortunately the fish were not weighed in on account of not arriving home in time. On July 6th, the members fish at Weybridge for four prizes, go where they like. A very important meeting will take place next Thursday, July 10th. All members are particularly requested to attend early. Secretaries who have sold tickets for the benefit of Mr. Long will kindly oblige by sending cash or stamps for the same as soon as possible, as the committee are waiting to settle the affair up. The winning number was 419.—W. Burwash, jun., sec.

### GLOBE ANGLING SOCIETY.

Our show of fish was not so good on the 29th June as the previous week, the average takes not exceeding 3lb. or 4lb. each. Messrs. S. Howell, S. Orrow, J. Philpot, F. Lawrence, and J. J. Holmes had roach and bream from Amberley. Messrs. G. Jeffries, C. Elis, and H. Jeffries, roach and bream from Pulborough. Messrs. H. Lake, D. Thomas, W. Whatcott, J. Ballard, J. Titmus, and H. Orrow, roach and Bream from various waters.—Joseph James Holmes, sec.

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

Our show of fish on the 29th was an improvement on the previous week, Mr. Stammer having 8lb. of bream from the Welsh Harp, Mr. Scott a nice lot from the same place, one fish weighing 3lb. 4oz. ; Mr. G. Watling 6lb. 9oz. from Amberley. The following members also had roach and bream from Amberley :—Messrs. J. A. Fitch, C. Warren, Graves, F. Hewitt, Baker, Martinella, J. Watling, Baillie, and C. Watling, senr., J. K. Fitch, rudd ; S. Smith, tench.—J. Fitch, sec.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above Society was held on Tuesday evening at the Masons' Hall Tavern, Masons'-avenue, Basinghall-street, Mr. Chambers in the chair. The minutes were read, confirmed, and signed. There was very little business to transact, and the greater portion of the evening was therefore spent in chatting over the past week's experiences of the gentlemen present. The Rev. J. Walker and Mr. Lake weighed in some very nice perch. A number of tickets for the Fishing Gazette Competition for the benefit of the Anglers' Benevolent Fund were disposed of. Negotiations are in active progress for the acquisition of a piece of private water for the members, and the committee hope to be able to make a definite proposal in the course of a very short time. A vote of thanks to the Chairman brought the proceedings to a close.

### HENLEY-ON-THAMES AND DISTRICT FISHERY ASSOCIATION.

At the annual meeting of the above association, at the Town Hall, on the 25th ult., the treasurer, Mr. Archibald Brakspear, presiding, the hon. sec., Mr. J. M. Knight, J.P., read a comprehensive statement of the work done by the committee, which will shortly be published, and in the hands of the members. The possession of remarkable facilities of rearing trout have been taken advantage of, and resulted in nearly 30,000 Loch Leven trout fry being turned into the river and tributary waters ; not 2 per cent. of the ova having failed. 5,000 have been placed in the River Loddon, the control of which, as well as the Patrick stream, is now jointly in the hands of this association and that of Reading ; while the handsome contribution of the late Mr. Arthur Deans, of Coltiop, taken from the Hambleden brook, has been placed in the river. Poaching and illegal practices have been almost entirely suppressed, and information of the Conservancy Bye Laws successfully prosecuted. During the past and present season more heavy trout have been taken than previously known. These fish are, of course, not the result of operations of the Henley Association, but attributable of stock by societies in the lower portions of the river ; yet the protection afforded by this association may have been the means of preserving them here when arrived. An endeavour to collect the spawn of perch, and protect it from the swans that devour it, by hurdles, with brushwood and broom fenced round, was repeated this season ; but being only fenced towards the water, were invaded from the bank and plundered. Another season they will be entirely covered in by wire netting over and around. The report deals with the question of the Patrick stream being an open backwater of the Thames, and it is now shown conclusively that the water is naturally one of the channels of the River Loddon, the flow of which has been reversed by the effect of Shiplake Lock, and is, as claimed, a private water. The report congratulates the members upon the fact that, after discharging all outstanding liabilities, a balance in favour of the association stands to its credit. Mr. Clare Sturgis having resigned his seat upon the committee, Mr. Watson, of Wargrave, was elected in his place. A vote of thanks to the chair concluded a very unanimous meeting.

### HOXTON BROTHERS ANGLING SOCIETY.

We again had a fair show of fish in our Club Room on the 29th inst., consisting of roach, dace, perch, tench, carp, and a fine show of rudd, by Mr. Harris—one among the number, a very handsome fish, weighing 1½lb.—R. Ghurney.

### THE PISCATORIAL SOCIETY.

On Monday last the members of this society held their usual meeting at Ashley's Hotel, Covent-garden. Present : Messrs. Lander (hon. sec.), Booker, Meyer, Pattison, Bennett, H. B. Brown, Fennings, Gray, Jesse, Foreman, Hill, Lemann, Huggett, Blundell, Sachs, Gillatt, Hatfield, Murray, Adlington, Goodger, Brown, Rev. G. Sumner, Dr. Brunton, Mr. Gillatt, E. Walker, &c., and amongst the visitors were Messrs. Harley and H. P. Jones. Mr. Gillatt was unanimously voted to the chair. The minutes of the previous meeting were read and confirmed. The hon. sec. announced that the Central Association had forwarded him a supply of their tickets, and members were entitled to one of the same, with its privileges, on payment of 1s. 6d., and several members accordingly had one. Mr. Meyer has been trying the Blunham waters ; but without success. He took a quantity of worms and properly baited a couple of places, tried early in the morning, and was there at sunrise, having fished for several hours without a touch, returned to London. Mr. Jesse, fishing at Maidenhead, one small trout, duly returned, and hooked another of about 4lb. ; but was unfortunate enough to lose same. Mr. Leman has been trying Moulsey. He met our member, Mr. Ross Faulkener, there ; but neither had any sport. Rain is wanted before much can be done. Dr. Brunton, after a hot day's attendance at the Old Bailey, went to Uxbridge and fished from 8.30 to 9.30., fishing with a large sedge. Took one trout 1½lb., and other smaller ones ; but he considered sport was not up to the mark at the present time. Mr. Blundall, fishing at Maidenhead, took some chub and perch. Mr. Huggett showed three nice bream from the Stour. They were much of a size, and at the time of capture weighed 14lb. the three. The chairman, in the usual manner, proposed his health as the successful angler. Mr. Huggett, in reply, thanked the members for their kind expressions. He was always glad to have a show of fish on the table, although the take might be a small one—20lb. weight of fish shown upon the table was worth 40lb. of those fish which are often talked about but not so often shown. Mr. Hatfield reported that Mr. Wheatstone was now in fair way of recovery, and it was hoped that he would soon be amongst us once more. Mr. Harden has been fishing at Market Deeping—took a large number of roach and dace with fly. He expressed his fears that this water was netted, no vigilant supervision, so far as he was able to see, being exercised over the water. A long discussion took place upon the practicability of mullet-fishing with fly in tidal rivers, and the following members took part in same :—Rev. G. Simm, Mr. Manning, Mr. Sachs, Dr. Brunton, &c. ; and the continued prosperity of the Piscatorial Society was proposed and carried in the usual manner ; and the health of the chairman, who returned thanks, brought the business of the meeting to a close.—T. H.

## CONVICTION FOR FISHING WITHOUT PERMISSION IN PRIVATE WATER.

At the Town Hall, Nottingham, William Wilcock was charged with having illegally fished in a pond belonging to Mr. Walker, at Bulwell-common, and also with having assaulted Police-constable Darker.—Mr. Martin appeared to prosecute.—It was stated that on the 25th inst. Darker saw prisoner fishing with a line in the pond. He was spoken to, but declined to leave off fishing or to give up the fish which he had caught, and assaulted Darker when the latter tried to take them from him.—Prisoner, who said he thought he had a right to fish in the pond, was fined 10s. for each offence.

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | |
|---|---|---|
| Add | 30 minutes for | Chelsea. |
| | 40 „ | Putney. |
| | 45 „ | Hammersmith. |
| | 50 „ | Barnes. |
| | 55 „ | Kew. |
| | 75 „ | Richmond. |
| | 80 „ | Twickenham. |
| | 85 „ | Teddington. |

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | Morning. | Afternoon. |
|---|---|---|
| Saturday, July 5 | 11.59 | 12.0 |
| Sunday, „ 6 | 12.25 | 12.47 |
| Monday, „ 7 | 1.9 | 1.30 |
| Tuesday, „ 8 | 1.51 | 2.10 |
| Wednesday, „ 9 | 2.27 | 2.45 |
| Thursday, „ 10 | 3.2 | 3.20 |
| Friday, „ 11 | 3.37 | 3.55 |

Note.—New moon, July 22; high tide, July 24.

## THE LOWER THAMES.

### General Remarks.

The river is at present insufferably low, and in the tideway especially it greatly interferes with the anglers. It is the general opinion this state of things will lead to the erection of an additional lock below Isleworth, and from all that can be learnt it has not escaped the attention of the "powers that be." As a proof of the large increase of Thames anglers on the banks, one day this week there were no fewer than two hundred between Isleworth and Teddington, and all got fish of some sort, returning home perfectly satisfied. The barbel have been found plentiful by this class of anglers, one alone getting three in one day of 3lb. each, and a juvenile piscator got one of 1½lb. The fishermen in the punts say their clients at the finish each day expressed themselves well pleased with the fish. It has been a remarkable sight each morning this week at Kingston Bridge to see the immense shoals of roach and dace, and it has attracted a large number of visitors. The fish have been described by a local fisherman as "being seen in cartloads, but as soon as the boats get about they sink until the next morning." The trout are seldom seen feeding after six o'clock in the morning. Mr. Bond, of the Sun Hotel, at the end of last week got a very handsome fish of 8lb. The recent convictions for taking unseasonable and unsizeable fish amongst the netsmen and anglers, and with the former for using illegal nets, has not only taught them a salutary lesson ; but the promise of the magistrates of enforcing full penalties will prove a formidable check. There have been no less than ten convictions.

### Chertsey.

J. Poulter, four bream, two dozen of roach and dace, and four jack—two of the latter being put back again. Thomas Tayler, in gudgeon fishing, caught a trout of ¾lb., which he carefully returned to the river.

### Egham.

Mr. A, Simmonds fishing for four hours caught a good pike of 8lb, and one of the bank anglers one barbel of 6lb. and two of 2lb. each.

### Hampton Court.

Thomas Davis, in one day, 8lb. of roach and dace ; John Smith, during the week, fifteen dozen of roach and dace, two barbel, and eight chub ; J. Wheeler, during the same time, a jack of 3lb, eight barbel, six chub, and twenty-four dozen of roach and dace ; William Milbourne, in two days, seven dozen of dace, and a barbel of 8lb. ; Thomas Milbourne, in the same time, five dozen of roach and dace, and one perch ; Charles Stone, in three days, sixteen dozen of roach and dace, and three perch ; the bank anglers have had good sport, and on Tagg's Island they have been getting good quantities of roach, dace, and bream.

### Hampton.

The fishing here has been principally on the banks, and it has been computed during the week, sixteen dozen of roach and dace, and ten bream, the largest 5lb., have been taken.

### Halliford.

T. Strudwick, in one day, nine and a half dozen of roach and dace ; and George Rosewell fourteen dozen, two bream, and one jack.

### Kingston.

John Johnson, sen., in two days, thirteen dozen of roach and dace ; John Johnson, jun., in three days, has taken sixteen chub, a fine perch of 1½lb., nine dozen of roach and dace, one jack, and the trout of 8lb. previously referred to. The length of the fish was 27½in., and round the girth 14½in. The bank anglers have been well in amongst the roach, dace, perch, barbel, bream, and chub, and at the Surbiton sewer the bream that have been caught were fine ones.

### Penton Hook.

Master Wright, fishing from the bank, caught two chub weighing 3½lb. ; and Master Percy Pearce, of Hounslow, a very handsome roach of 1½lb.—the latter being shown to the Secretary of the T.A.P.S.

### Richmond.

Christopher Brown, in one day, 6lb. of roach and dace : Henry Mansell, in four days, 12lb. ; Henry Howard, in one day, 9lb. of dace.

### Shepperton.

F. Purdue, in one day, two dozen of gudgeon, eighteen roach and dace, and a brace of jack—the latter, being small, were put back again.

### Sunbury.

Messrs. E. Clarke and Sons, in three days, three chub, twelve dozen of roach and dace, and seven dozen of gudgeons ; the bank anglers have been getting some very fine roach, dace, and gudgeon.

### Staines.

Charles Hone, in one day, five dozen of roach and dace. J. Keene, jun., eight chub, four dozen of roach and dace, and three dozen of gudgeon. John Keene, sen., two dozen of roach and dace and a brace of perch. An Angling Competition has taken place from Staines Railway Bridge to Egham Gas Works, for which there were about 50 entries. The first prize of one pound was won by Mr. Wright, the Secretary of the Second Surrey Angling Club.

### Thames Ditton.

H. Rogerson, in one day, four barbel, the largest 4lb. ; Edward Tagg, one dozen of gudgeon ; the bank anglers have done well amongst the roach, dace, and perch.

### Twickenham.

Mr. W. Walker, with John Spong, in three days, five dozen of roach and dace, and four barbel ; Joseph Dobbin, in two days, four dozen of roach and dace ; Samuel Cole, in four days, nine dozen of dace and three barbel ; Edward Finch, in half a day, three dozen of dace.

### Teddington.

Joseph Baldwin, in three days, eleven chub, 2½ dozen of roach and dace, and a couple of barbel ; John Stevens, in one day, four chub.

### Walton.

The rain here has improved the fishing considerably ; the roach, beam, and perch have been feeding well. John Hone, jun., one day, sixteen large bream, and one brace of jack ; another day, eleven good bream and two dozen of roach ; another day, three bream and three dozen of roach ; another day, four bream and two dozen of roach. George Hone, in one day, fifteen large bream, two dozen of dace, and one brace of perch. R. Watford, one day, nine bream, all over 2lb. each, and two dozen of roach and dace ; and another day, in three hours, four dozen of roach and dace, and one bream. Mr. Robinson, staying at the Swan Hotel, caught three dozen of perch with minnows, several of the perch over 1lb. each ; and on the same day another visitor from the hotel, in fly fishing, got two dozen of good roach.

---

## UPPER THAMES.

The twelve hours' rain of the past week has materially improved the angling conditions of the upper portions of the Thames, and those piscators who have ventured out have been fairly rewarded with roach, perch, and chub. Jack fishing should not be indulged in until the latter part of August, or even September, for sport and clean fish. Henley Regatta, with all its surroundings of boats, large and small, fearfully and wonderfully made, going to and fro on the waters from London upwards and Oxford downwards, has been a sight to see, and has altogether upset any chance of quiet fishing. I have only three reports of notable catches, and even those, Mr. Editor, I will postpone mentioning, as even I have got the human-race mania, and am anxious to take advantage of a lift to Royal Henley, offered by a brother piscator, who says to-day he is sick and silly of river fishing just at present.—Marlow Buzz.

### Goring.

Water in good order for all sorts of fishing, perch biting very well, roach coming on better. We have been taking some good perch, some going over 1lb. My best day, one dozen of perch and two dozen of roach and dace, one roach going 1½lb.—John Rush.

### Thames (Oxford).

The fish are entirely off the feed, and they will be so until we get another twenty-four hours' fall of rain. In the early mornings and late in the evening chub go well at the crayfish tail, and several heavy bags have been made at Pinkhill, Duxford, and the higher reaches. A curious parasite has been brought to my notice during the past week. So far as I can learn, all species of fish in this part of the Thames are affected with it, more or less. As my informant was unable to give me anything more reliable to work upon, than the rather vague description of its general appearance, which he said very much resembled a bug, I felt rather at a loss ; but, fortunately, I managed last night to secure a brace of chub, each with one on its body. The insect, whatever it may be, was totally unknown to me, and, as yet, I have been unable to make a microscopic examination of it ; but I hope to be in a position to speak with greater certainty when I write again.—Cherwell Otter.

---

### Acle (Host Rose, Acle-bridge).

This is an excellent station for anglers to stay, as they are sure of good accommodation, and the advice and assistance of Rose, who is a first-rate angler as well as a jolly host. He can make up beds for five or six, and has plenty of very fair boats, or should the piscator be a solitary bank fisher, he can be accommodated here better than any other place I know of. My own experience was that there were any number of fish to be caught here ; but they run small take the day through, and we returned nine-tenths to water as they were taken from the hook. Only a few worthy to be called bream turned up, though usually here the bream run large, and are very numerous.

### Ancholme District.

A goodly number of anglers have been out bottom fishing, but the results have been very poor. Early and late are now the best times ; but a good rain is greatly needed to put the fish on the feed. Trout fishing is quite at a standstill.—Thomas Ford, Caistor.

### Ballynahinch.

Since last report nothing has been done on above ; only Mr. G. Sutherland, on the 30th ult., three peal, 6½lb., 7lb., and 8½lb. ; same date, Mr. Houlgrave got a white trout—the first this season. To-day we have every indication of a change for rain, which is greatly needed, as water are still very low.—Walter Blackadder.

### Bure.

Having just had nine days' sailing and angling on this river, I will just jot down my experience at each spot in the order in which they occur running up from Yarmouth.

### Chichester.

During the past week anglers have been busy, bream being well on feed. Mr. Cardy, from Brighton, paid the water a visit a few days since, taking a couple of dozen nice bream from the Ash Tree swim, the larger 2¾lb. The veteran roach angler, Mr. S. Young, landed at one setting over 50lbs. of bream, all over half a pound, the ten largest scaling 23lb. On Tuesday the same angler landed a well-proportioned carp of 4¾lb. This evening fish are not feeding, but may be seen by the thousand near the surface. I believe this water contains more fish than any other of its area in the country.—George F. Salter.

### Dee (Aberdeenshire).

No rain, no fish, is the current remark. Seldom, we may say never, at this season of the year have we seen such a truly disheartening state of matters. Within the memory of most the river was never known to have run low so long, or been so very small in the early summer. Anglers are leaving their beats in disgust, and the few yet remaining are scarcely ever looking near the river. One or two devotees of the gentle art are still whipping away, but the occasions on which their labours are rewarded prove exceptional indeed. Every day, almost, we have indications of rain, but anything more than a mere drizzle, and that very seldom, too, is never experienced. It is just possible that the grilse fishing this year may prove a complete blank—as yet it can be regarded as nothing more ; in fact, we have had no grilse fishing at all. There are plenty of fine fish on the coast, and the river netters are having good hauls ; but what is the matter, the nets intercept nearly every fish that seeks up. At one or two of the stations nearly outside the tidal waters a single fish cannot pass. The river being so extremely clear and low, they are watched crossing the garths or from a bridge, and the nets are forthwith shot, and a clean sweep made. Between 6 o'clock on Saturday evening and the same hour on Monday morning, when the nets are off, some fish ascend doubtless ; but these at once get out of the usual casts, and seek places where the fly cannot be properly played. If any are hooked they are invariably lost. The flies they come to are so small that they have little hold : add to this the fact that they fix in rough places, and at once the initiated will see that the angler's chances of victory are small. Of eight hooked in the Banchory district this week by excellent fishermen, not one was landed. This year the sea trout are plump and heavy, the average weight being about 3lb. Grilse, on the other hand, are unusually small, averaging little over 3½lb. if anything. Fungoid, so prevalent amongst the salmon, is also showing on the grilse. Altogether, a very unhealthy state of things exists. The silver doctor, blue doctor, blue charm, Oliver, and black Palmer are the flies the fish come at most readily at present. The sizes are extremely small ; Nos. 8 and 9 double irons are the sizes they are taking and getting clear from invariably. All the best sections have been yielding nothing, and some accounted the very worst at this season have, strange to say, been doing best, if best it may be called. At the Bridge of Feugh only some half-dozen grilse have yet been got, whereas by this time in a fair year generally 500 to 600 would have been landed. Others are reported about, and these disturb the pools ; but no matter—in the present state of the river the fish would not take whatever. The river inspector and his assistants are just now making a raid on the upland waters, and removing the fish affected with the disease and burying the dead ones. About Braemar, so far as the fungus is concerned, matters have been very, and still are a little, alarming. Fish a month or six weeks ago were dying in great numbers. About Ballater it was scarcely so bad, and the farther down the river its ravages were proportionately less. In the river nets fish a little touched were got coming up. This is a nut for the Editor : Where, then, and how was it contracted? If rain does not come soon, and even if it does, the fish will not take freely, as the season is too far advanced to hope for free rising fish in the Dee, though in its tributaries they may yet be got in good numbers. By the long-continued steady flow many of the finest casts are silted up, and nothing but a heavy spate will put them to rights, and remove the slime and filth with which the bottom of the river is covered. Trouting is at a standstill—not a thing taking ; even the Don is yielding but little. The natural minnow, which works so well in the evening at this season in an ordinary year, is rarely accepted. Dee river reports :—Crathes and Kineskie : C. Wollaston, Esq., Bath, Tuesday, 1 grilse, 3lb., and 1 sea trout ; Wednesday, 1 salmon, 10½lb. ; Thursday, 1 grilse, 3½lb. ; Friday, 1 grilse, 3lb. Park : Major Scott has had little sport on the Durris and Drum sections. Banchory : J. B. Keith, Esq., 1 trout. Nether Banchory : Robert Clark, 1 fish, 12lb. To-day (Wednesday) it looks as if making for rain. The clouds appear low, and seem denser than they have done for some time. The reverberation caused by firing of the big guns at the Aberdeen Wopinschaw, just now going on, may have the effect of breaking the low-sailing clouds, and causing the long-looked-for rain to come at last.—W. M.

Mr. George Smith, saddler and tackle merchant, Ballater, reports that though the beats in that locality were not occupied by gentlemen last week, the fish were taking pretty freely. Though, as a rule, a good deal brownish, the fish landed are in good condition, on the whole. The head keeper on the Invercauld Arms Hotel water, Mr. John Sturton, went out on three consecutive days with the following result :—Tuesday, one fish, 11lb. ; Wednesday, two fish, 7lb. and 8lb. ; Thursday, one fish, 9lb. Weather bright and dry, the fogs prevalent further down Deeside being entirely absent. Plenty of fish in the river. Fresh-run fish arriving every week and settling in the pools. The flies Sturton was successful with were supplied by Mr. Smith.—W. M.

### Dove.

Rain fell pretty heavily on the 29th ult., but it did not suffice to colour the water. The weather since has been very hot and bright, and sport has been very indifferent, except after about eight o'clock in the evening, when the sun had gone down and the heat had moderated. The best killing lures have been the caterpillar and coachman, but these have only succeeded (as they usually do) at night. Sport will not improve until we have a thoroughly heavy downfall of rain. The river wants freshening up sadly, for neither trout, grayling, barbel, chub, roach, dace, or perch will feed freely while matters remain as they are. We have had many rods out daily, but all their complaints are alike—the low and fine water prevents sport.—The Splodger.

### Eden (Weldon Bridge).

Some good baskets have been caught here with worm up stream for the last fortnight. Water very fine.—Frederick Brown, the Angler's Inn.

### Eden (Carlisle).

There is very little of interest to anglers to report for the past fortnight. The river is wonderfully low, in fact, lower than the "oldest inhabitant" can remember to have seen it; and, I daresay, it never was lower in one of the old-fashioned dry summers, as 30 or 40 years ago drainage was much less complete than it is now, and consequently rivers did not rise and fall so rapidly. Scarcely anyone hereabout is trout-fishing except at nights, and even then I am told sport is not good. Grilse and sea-trout have become much more plentiful in the market here, and are now selling at 10d. per lb.; but they are chiefly coming from the Solway and the lowest of the river drafts near Rockliffe. Sea-trout could get up the river, low as it is; but they have not a chance except during the weekly close time, as the bottom net can cover the whole of the stream easily. This is another proof of what has been so often said, that the upper proprietors, who find the spawning grounds, do not get their fair share of the fish.—Silver Grey.

### Horning Ferry (Host Thompson).

This spot is unquestionably the most charming and agreeable station to stay at of any in the county, and those who are more particular about attention, civility, and the picturesque than sport (that is to say, of catching large fish), cannot do better than select Horning Ferry Hotel. It can easily be reached from Wroxham Station (on the Norwich and Cromer line), as Host Thompson will, on receipt of notice, send to meet visitors. Any number of small flat, small roach, and perch can always be caught here at almost any time, and jack, in consequence, abound. Higher up stream is what is called Didle reach. I had some capital sport, including eight or nine gudgeon, which are not frequently caught in this river angling. What with the attractions of this secluded spot, combined with the first-rate attention from both host and hostess, this house is a very haven of rest for anglers and the lovers of the gun. Oh! by-the-by, Thompson informs me that for years past he has not known the young snipe and ducks so numerous and strong as they are this season. Some friends of mine had a good catch of bream here on Saturday last.

### Ilfracombe.

Sea Fishing. Glorious summer weather has prevailed during the past two weeks, and, as a consequence, the shore has been lined daily with numerous fishing parties, and good catches have been the order of the day. Bream are plentiful and in prime condition, while there have been some catches of bass. W. Barbeary and S. Ley, fishing off Baggy Point, caught 60lb. of bass. Several other fishermen have had good catches; they report prospects, for both bream and bass, good, fish well on the bite and in fine condition. Some good catches of bream and ling by boating parties fishing off the Torrs. Monday, T. Davie caught 180lb. of bream. Some large fish caught from the jetty by both rod and hand lines: one gentleman caught two ling weighing 44lb.: others had nice catches of eel and pout. A fine sole was caught off Beacon Point by a hand-line fisher; some good fishing off Lea just now. Weather fine, and prospects never better for amateurs and lovers of the hook and line.—E. Comer.

### Lugg and Arrow (Leominster).

Both these streams are now in splendid order for the anglers, who have been quite busy with the rod, since the heavy rain, which visited this part the latter end of last week and Sunday; the water rose considerably on Sunday, but soon began to lower and clear itself on Monday, and by evening was in good order for the fly. The fish are now rising freely at the black gnat, marlow buz, and blue dun, which are the best flies on at present, and some very good fish have been taken with them. On Friday, a gentleman fishing in the Arrow with the blue dun and Marlow buzz, landed a good basket of fine trout, some scaling ¾ lb. each. The Lugg was tried the same day, below the town, and a good dish of trout was landed with the fly. There was some good sport had in the Lugg on Saturday with the blue dun, and a very good dish of fine fish was taken. Good sport was had in the Arrow with the black gnat and blue dun, when one gentleman landed 4lb. of very fine trout. The rain coming on stopped all fly fishing till after Monday, as the water went very thick. On Monday a gentleman tried the Arrow with the worm, and landed a very nice dish of trout. A nice lot were taken in the water below the town with the maggot. The fish were biting well at the worm in the Lugg, and a very good basket of trout was landed. The water having run nearly clear on Tuesday, a gentleman with the blue dun took a very nice dish of trout in the Arrow. Some good fish were killed with the Marlow buzz in the Lugg the same day. Some good fish have been killed in the Lugg, near Aymestry, with the fly. Some good trout have been taken in the Eardisland waters. The Pinsley is in good fishing order, and has risen slightly; the fish are now rising freely at the fly, and some good fish have been landed. Good fishing at Ivington with the fly.—Gwynne.

### Leicester.

With the exception of a shower on Sunday, we have had a spell of hot, very warm weather, not a breath of wind at times prevailing to modify the heat. It is somewhat surprising, however, to find that the sport has been of an encouraging character. There have been but few who have been fishing in the local society's waters that have not been successful in taking a fair number of fish. Mr. J. Neal one day caught about 16lb., 12lb. being roaches, the largest weighing 1lb. 6oz., and a chub weighing 1½lb. Mr. G. Hardy was also well among the roach, on several successive days taking between 6lb. and 7lb. per day. Mr. O. Bird fished the waters most days, and showed some nice lots of roach and dace. Messrs. J. Blackwell and Adams took some fair-sized perch up to 1lb. The waters are very fine and low, both in the Soar, at Leicester, and the brook at Aylestone. The best catches of roach have been landed with white paste. Those anglers who have been fly-fishing have had the best sport among the dace. A good many have been pike fishing, but up to the present no large ones have been caught. At Narborough the waters are very low and fine, and the sport, with the exception of roach and chub fishing, quiet. Several of the subscribers to these waters obtained some fine baskets of roach. A good many rodsters have also availed themselves of the opportunity to pay a visit to the Wreake, and in several instances a fair amount of success has attended their efforts. Some large quantities of roach and perch have lately been brought into Leicester, having been taken from the waters in the vicinity of Silsby and Barrow-on-Soar, evidently with the net. Cannot something be done to stop this wholesale destruction of fish? To-day (Thursday), the riverside was well patronised, it being a general half-holiday. The weather remains sultry, without a prospect of an early change.—Alert.

### Medway (Tunbridge).

Rain! Rain!! Rain!!! When will it come? is the anxious cry of the angler. Till it does, I fear nothing very grand will be done, though small bags of bream, roach, and chub continue to be had. The bream are seen on top of the water in myriads; but how to get them down to the bottom, and on the feed, has puzzled wiser heads than that possessed by Ye Medway Water Rat.

### Moy and Loch Conn (Ballina).

Since my last report angling has been very poor on river and lough, owing to low water, bright sun, and no wind. Plenty of fish in river and lough.—Frank Hearns.

### Ouse (Huntingdon).

No improvement in the condition of the water, but the bream are on the feed very nicely, more particularly in the evening and very early in the morning—36½lb. were taken on the 29th June by two fishermen, and some very nice takes since. A most splendid rudd was taken on the 26th June, weighing 2lb. 12oz.—such a fine fish is seldom seen. On the 3rd, ten bream were taken by one fisherman, weighing 28lb. the largest going 4¼lb. The red worms are the principal bait and fine tackle. On the same morning 18 were taken—but I do not know the weight—but one was 4½lb.—H. Rout.

### Ranworth.

This is another difficult place to get at, but will equally repay a visit, as the water is deep and abounds with bream, roach, perch, and many jack. A paternoster is very effective here with good lively minnows.

### Severn (Kidderminster).

Not much angling news this week. Though we have had six or seven hours' rain, it did not stir the water to any great extent; the land being very dry, the rain was soon absorbed. I have sent you one of our local papers, in which you will see a report of our meeting respecting the freshwater fisheries, our members being unanimous in support of the same. I am very sorry to say that we are, like other societies, come to grief in respect to the privilege tickets of the railway. When I heard of the affair, I could not believe it. I went this morning to see the railway officials, and found the rumour only too true. I asked the station master if any of the members had been using their tickets for other purposes; he said they had not, to the best of his knowledge. He said it was a general order from one end of the line to the other, and gave me an order to that effect, and in my humble opinion there ought to be some reduction, considering the double journey. I am almost inclined to endorse Mr. Woolfall's ideas, and stop at home. I mentioned the circumstance to some of our members; they said they could go by 'bus for less money. I know this, that the G. W. Railway is as dear a line as it is possible to travel by. I can go to Bewdley, a distance of 3½ miles, for 3½d.; but to come back on the same line, in the same carriage, the same class, I have to pay 8d. for the same distance. Surely there is some imposition somewhere. I am very sorry the privilege tickets are withdrawn; they were a great boon to the poor anglers, especially those who have a family to support, and with whom angling is a favourite pastime, as it is mine.—E. Earp, hon. sec.

### South Level Cut (Littleport).

No roach fishing to signify up to present, and the bream fishing, what there is of it, almost exclusively in the hands of Mr. Ward, Littleport, who has had what I should call some good takes for this water since last report. On 30th ult. he took 7, on 1st inst. 13, and to-day, again, 8—all good bream. The average, from all I can hear, being 3lb. Mr. Harris, Ely, on 30th, also 7 very fine bream; to-day, again, 1. Mr. Mitchell, Manchester, on 1st inst., 1 very good bream over 4lb.; on 2nd inst., 1 bream 3lb. 10oz., and 1 roach 1¾lb.—Charlie South.

### South Walsham.

The fishing hereabout is always regarded locally as the best on the stream; but it is difficult to get at, as one must drive; but the visit will repay a little trouble and expense, especially to those fond of visiting ruins: the famous St. Benet's Abbey is opposite South Walsham Dyke. Early morning fishing for choice here; bottom very level, with fair depth of water, being, in fact, a cut made some years since.—Robert Moll.

### Torridge (Torrington).

The river is very low, and the few showers we have had are not enough to rise the water. Some few good trout are taken with the fly in the evenings, when the fish are very lively, flopping all over the pools. Now is the season for dapping, and some splendid lots have been taken in the deep holes under the oak trees with live gentles. Many mullet over 2lb. and lots of bass have been taken this week with the lug worm in the tidal waters.—Practical Angler.

### Teme (Ludlow).

A welcome rain commenced falling here on Saturday evening at 4.30, and drenched us to the skin before we could make our way home from the Teme. The downpour continued with slight intermission until Sunday, the earth receiving such a soaking that it has not had for months. Monday found the Teme and all the tributaries again brought into capital order, and on Tuesday they were all that could be desired, a slight stain remaining upon the latter. Fishermen of all classes have been very busy this week. On Tuesday evening towards nightfall Mr. Blakemore, of Knighton, visited the Teme at Ashford, but the fish did not rise very eagerly. Fishing two hours with the blue dun and Marlow buzz, he managed to catch seven nice trout and club. Hearing that pike had been seen in the Ashford quarter of the Teme, a gentleman on Monday tried his hand there. After about three hours' fishing, he succeeded in landing a very fine specimen of the tribe, which weighed nearly seven pounds. Elated with his success, he visited the waters again on Tuesday (a little nearer Saltmoor this time) when he was again successful, and landed another pike between 3½lb. to 4lb. He continued fishing, and in about an hour's time hooked another; but the fish, giving a sudden jerk when getting near the shore, away down the river went the fish with two yards of line, in the direction of Ashford. Later in the afternoon, some men fishing about a quarter of a mile from the spot, saw the bough of a tree, which was in the water, repeatedly moving. They got into the river and found the broken line entangled in the bough, and a fine pike hooked safe at the end of it. It was supposed to weigh 4 or 5lb., and the men sold it for 3s. Several pike have been seen in that quarter lately, also beneath Whitcliff and by the Folly. Some good trout have been caught with the orle and red spinner up the Oakly Park waters. The Clun is nicely coloured, but little doing. Some nice perch were caught in the Corve on Tuesday. Good catches in the Ledwych waters and in the Oney. A gentleman from Ludlow informs me that the other day he was going on a fishing excursion into the adjoining county of Radnor, when near to Penybont he saw a man lying on his side by the river Oran, engaged in some mysterious proceedings; curiosity prompted the gentleman to approach the spot, with a view to discover the doings of the man, who was found to be engaged in what is called "tickling" the trout. In an almost incredibly short space of time he landed with his bare hand, from the river, and threw upon the grass, 13 fine healthy trout.—S. Ludlow.

### Teme (Tenbury).

There has been some very good sport had in this part this week. After the heavy downpour of rain which was had in the district on Saturday evening and Sunday, the water was a little muddy, and had slightly risen; but by Monday evening the water had run into splendid condition for the fly, and the fish were rising well. The best flies on at present are the blue dun, orle, and Marlow buzz. The water below the town was fished on Friday, and a gentleman hooked a good dish of trout with the blue dun. The sun shining brightly on Saturday morning, a gentleman fishing in the water above the bridge took with the orle and Marlow buzz a splendid dish of fine trout, averaging from 10 oz. each. After the rain on Saturday the water was slightly muddy; a gentleman tried the water with the maggot and took six very good fish. A very nice lot of trout were taken with the worm in the water above the town the same day. On Monday the fish were biting well at the worm; one gentleman took eight very nice fish a short distance from the town, and four more were taken by another gentleman. In the evening a few good fish were landed with the fly near Little Hereford bridge. On Tuesday the water was in splendid order for the fly; a good dish was landed on the down water with the blue dun, and a very good day's sport was had in the upper stream, and some splendid trout were killed with the orle and blue dun. The Kyre and Rea are both in good fishing condition, being higher and slightly coloured; the fish are biting well, and since the rain there has been several nice lots of trout taken. A gentleman fished the Kyre on Saturday morning, and took a good dish of trout with the fly, and a few nice ones were taken on Tuesday. A good dish of trout was landed in the Rea on Tuesday with the blue dun. A few nice trout have been taken in the Ledwyche.—WORCESTER.

## Trent (Torksey).

The Trent is very low and fine, and not much is being done by anglers. A good many have of late come down here, and they are able to do justice when opportunity offers. Just now many flounders are to be had, and a lively bit of sport they afford. Mr. T. Collins, from Sheffield, caught thirty of these fish easily this week, along with a roach of 1¾lb. Rain is badly wanted in this district; but the Trent is not in bad condition from the fact that it has completely lost the effects of the sewage of the towns higher up.—TRACE.

## The Trent (Nottingham).

The river here still remains very low and clear, and although some hundreds of anglers have been out, the takes generally have been of an inferior character. Barbel, notwithstanding the hot and long-continued dry weather, are backward in condition. and, so far, not many fish appear to have been killed. The best takes are recorded from Shardlow, where thousands have been seen scouring on the shallows. The deep swims should be eschewed for those of about 4ft. in depth. A goodly number of chub have been caught in this length with the cad-bait, and fly-fishing has been excellent, especially in the evening. Some barbel "snatching" has been going on at Wilford, and the bailiffs of the Trent Fishery Board might easily get a case. Mr. W. Jerram, of this town, has been daily killing enormous quantities of dace with the artificial fly above the Trent bridge. He always uses horse-hair in preference to gut, and there is no doubt he takes more fish than any others of the craft. Pike have been running in the lower waters, in one of the tributaries of which I regret to say some scores of trout have been netted and poisoned. The Trent specimen recently killed by my friend, Mr. S. Sills, has been preserved by Mr. J. Stanley, of Trent-street, who has also enclosed in the case that angler's handsome Trent dace of 12¾oz.—THE MAN AT THE CLUBS.

## Trent (Newark).

The river still continues very low and clear, and angling matters are not very brisk just now. A few lucky anglers manage to secure a decent bag of fish at times; but the generality of our fishermen fare very badly. Odd barbel are taken with both worms and scratchings for bait; and I have heard of a couple of decent bags of those fish being had this week, one above and one below, but particulars are not to hand. The cad bait has killed a few decent roach, dace, and bream, while the worm has secured a few eels, flounders, bream, and an odd barbel or two; but the flannel weed is very troublesome; we sadly want a fresh down the river to sweep it away; and also the swarms of insect life, for while there are such quantities of natural food in the river it is not likely anglers will succeed in making sensational bags; but it is a long lane that has no turning, so perhaps better days are in store for us.—THE TRENT OTTER.

## Tweed (Berwick).

Up to the present time the net fishing for salmon has been very poor indeed; in fact, quite ruinous. The last fortnight there has been some slight improvement in the catches, though far from satisfactory. There is little angling going one just now: except at night none are caught. I hear of 11lb. of trout having been caught in three hours in the Whitadder. The river Tweed is full of weed; a fresh is much needed to clear it, and, doubtless, this would do much towards the inflow of the fish from the sea. Some of the net fishers here are of opinion that the deepening of the Tyne has caused the salmon to give it a preference over the Tweed. However this may be, the salmon fishing at the Tyne has much improved recently, while the salmon fishing here has gone back. The movements of this king of fish are still unsolved to a considerable extent. "Light, light, more light," is what is wanted about all sea fish.—J. J. HILLS.

## Walton-on-Thames.

There has been abundance of water here owing to the preparation for the Henley regatta, and fishing has been fairly good. Rain is, however, needed to freshen the water. On Saturday, John Hone, with a gentleman, took three dozen roach and three fine bream. On the same day George Hone, jun., with two gentlemen, had four dozen roach and dace. On the 29th ult.,, John Hone, with a gentleman, had two dozen roach and four large bream. On the same day George Hone, jun., had four dozen roach and eight large bream. On Monday, George Hone, sen., had thirteen very fine bream, two dozen roach, and two perch. On the same day John Hone had two dozen roach. On the same day, Mr. Robertson, a visitor at the Swan Hotel, caught a nice trout of 3lb. weight with a fly, and lost two others. On Wednesday, John Hone, with a gentleman, had four dozen roach after six o'clock p.m. The bream and perch are very numerous in the river here. On Thursday, John Hone, with a party of gentlemen, caught three jack and a few roach. One of the party hooked a large trout in Tumbling Bay with a killing fly, supplied by the proprietor of the Swan Hotel; but the trout retained the fly, the tackle being too light.—GOLDFINCH.

## Waveney (Beccles).

Owing to the clearness of the water, caused by the continual drought, nothing of any account has been done on this river, and not likely to be so long as the drought continues. On Saturday last W. P. Garrod, Esq., had a fair catch of perch, and the same gentleman succeeded in capturing a tench, angling with a worm, weighing 1½lb. This is quite a rare occurrence on this river. Some of the oldest anglers can only remember this being done two or three times before. Water very clear, weather bright, and no appearance of rain.—A WAVENEY ANGLER.

## The Wharfe (Yorkshire).

Beyond a slight shower or two things have remained *in statu quo* since last week's report. I had an evening's tench fishing on Tuesday, in a private pond, along with another gentleman, the fish did not bite freely until nearly dusk, when I secured eight, weighing 7½lbs; my companion killed the best fish, scaling 1lb. 10oz. I regret to have to report that some miscreants have been engaged recently in liming several streams in this district; one of them was caught in the act on Killinghall Beck, preserved by the Rockingham Angling Club; he was fined £5, or two months' imprisonment in default. At Ilkley over 1,000 trout were poisoned in one night, and since that a stream near Addingham has been treated in a similar manner. I send you one of the bills offering £20 reward; but unless a sentence of imprisonment is passed it will only act as an incentive to offer such a large amount.—FRANCIS M. WALBRAN.

## Witham.

Angling in the Witham is now very good, considering all things. The water, though low, is in fairly good condition, and in the drains it is very good. Roach are coming on very nicely, and some really good hauls have been made this week. A Yorkshire angler from below Boston took home with him a splendid bag containing about 4st. of roach, running from ½lb. to 1lb. each, a nice level lot. At Tattershall, an angler took up above 3st., mostly roach, but his bag included six nice bream, running up to 2½lb. Mr. Lee, of Sheffield, got 6lb. 10oz., including a pike, 2½lb. Bream are to be found at several points. Mr. H. Bell, of Sheffield, showed up one caught at Dogdyke weighing 2lb. 13oz., along with perch and roach, and Mr. Riley, of the same place, caught a bream 3lb. 11oz., along with a tench, 2lb. 9½oz., and a few roach. Below Bardney there was a match between two noted anglers for £10 a-side, for the best gross weight, Sheffield rules. This would show well what was possible within the short space of three hours. C. Powell, the winner, caught 88 roach and three bream. His bream scaled about 9lb, and his remainder were roach of the smallest description. His opponent, R. Brown, caught 4lb. 6oz., mostly roach.—THE YELLOW BELLY.

## Wroxham.

Wroxham Station is really in Hoveton, so are the two inns to which anglers resort, and their addresses are Simpson, Hoveton, King's Head; and Whittaker, the Horseshoe, Hoveton. Simpson's is where the better, or rather wealthier, class usually stay, and Whittaker's is much resorted to by the anglers of humbler means; but in each you get good attention, civility, and very reasonable charges. There are plenty of boats at 1s. a day, and the famed Wroxham Broad is within easy distance, and is not closed (as unfortunately too many lovely sheets of water now are, on which it might almost be said the eye of man rarely rests). Sport is excellent here, both up and down stream. Some prefer going up Coltishall direction, whilst others affect spots known to them between the bridge and the Broad. I had plenty of luck as far as numbers go, could at times catch fish nearly every swim, but in most cases so wretchedly small. A tench of 2lb. 11oz. gave me rare sport on my fine roach tackle, but after a game fight he had to give in. Two gentles on a No. 10 drawn gut was the lure. Worms are generally the bait which now and again tempts a tench to take a hook, but cases of the kind are rare. Bow nets or sickling do their business. Prospects all along the line excellent.—ROBERT MOLL.

## Wye and Derwent.

Both the above rivers are very low and clear, and the greatest care should ever be taken to protect the fish from being taken by the poachers. It is at these dry times, when there is nearly always such destruction made both in the brooks and rivers. I am very pleased to say that F. Cartwright, Esq., J.P., has given to the Matlock Angling Club his water below Cromford Bridge, from the 1st of this month; and the new fishing club is thinking of turning in a thousand Loch Leven trout yearly. The river below Cromford is going to be netted, on purpose to get the pike and coarse fish out. Any one requiring any information respecting this new club had better write to the secretary, Mr. A. Clarke, the Post Office, Matlock Bath. Sport on these rivers has been very fair, especially the last thing at night, and baskets up to seven brace per angler are nightly made. The killing flies have been yellow dun, light dun, and sand flies; the little blacks have also killed a few fish. The dibbing fraternity have killed a lot of good trout lately by dibbing under the bushes and trees, with the natural downlooker and small bluebottle flies. The Bottom fishers have done fairly well with both worms, wasp flies, and maggots, chiefly last thing at night. Weather excessively hot, rain much wanted, both by the farmers and anglers.—GEORGE JAMES EATON.

## The Yare (Norwich).

As I anticipated, the warm weather during the past fortnight has caused the fish of all kinds to come on feed first rate. Starting from Brundall (Flowers' Fishing and Yachting Station), and Coldham Hall (Host Brown), I hear of a remarkable catch of perch, in one instance as many as between 50 and 60 being caught, and another gentleman succeeded in securing 27 in a very short time; all were caught at the same spot, so there must have been a very numerous shoal. Catches of bream varying from 6st. (of 14lb.) downwards, have been recorded in numerous instances, whilst many anglers have also been busy amongst the roach, which may now be said to be well on. Lower down from Buckenham Ferry (Host Garretts) very encouraging reports, both with regard to bream and roach, have reached me; in several cases large numbers of fine fish have been taken here. I do not hear much from Cantley, but am of opinion that if this station were tried more than it is, many successful days would result, with the additional pleasure that usually only large fish are caught in these waters. Notwithstanding the long drought, the county of Norfolk looks first rate from an agricultural point of view, but rain would undoubtedly improve all the crops, as well as make the roads less disagreeable to all travellers; tho walking is simply horrible, as in some places the dust is inches thick. Prospects good.—ROBERT MOLL.

## SCOTCH FISHING NOTES.

LOCH RANNOCH.—The members of the Aberfeldy Anglers' Club had their annual lake competition on Loch Rannoch on Wednesday. The day was very boisterous. The following are the prize takers:—(1) Mr. W. L. Wood, of Craighill; (2) Mr. P. Stevens, Weem; (3) Mr. D. McFarlane, Aberfeldy; (4) Mr. John McGregor, Alberfeldy. The prize for the three heaviest trout was won by Mr. W L. Wood. Mr. Whyte and party, London, from the Burn-Rannoch Hotel, for two days' fishing had 6½ dozen trout and one Salmo ferox, 4¾lb.; Messrs. Hardie, of Edinburgh, from the Macdonald Arms Hotel, Kinloch, Rannoch, had good sport on Thursday last, capturing a fine Salmo ferox of fully 12lb., a trout of 4lb., and a number of smaller ones. The ferox is a well-shaped fish, being 29in. long with a girth of 18in. Mr. Hugh Mitchell, Pitlochry, fished this loch for a number of days last week. Each day he was out he procured a very satisfactory basket with the fly. On Loch Rannoch, on Friday, Messrs. Menzies, of Leith and Newcastle, from the Macdonald Arms Hotel, had five dozen fine trout; Messrs. Potter and Ridley, had 3½ dozen; and Messrs. Hardie, Edinburgh, had 2 dozen trout; Mr. Campbell, Shrewsbury, had 1½ dozen nice trout, several weighing over 1lb.; Mr. Hugh Mitchell, Pitlochry, had 13 dozen fair trout.

---

LOCH TAY.—The Killin Fishing Club had a competition on Loch Tay on Monday. The weather was very unsuitable, being sultry and warm, and not a breeze of wind blowing. The following are the prize-takers:—1, Mr. John McDiarmid; 2, Mr. T. Crerar; 3, Mr.A. McNiven; 4, Mr. P. Stewart.—P. McG.

---

LOCH AWE.—The following baskets were made on Wednesday on Loch Awe by gentlemen from the Tay Chreggan Hotel:—Messrs. Thomson and Hardinge, 24 trout; Messrs. Binge and Parsons, 20 trout; Messrs. Randall and Hoole, 10 trout. On Thursday Messrs. Binge and Parsons, 16 trout; Messrs. Thomson and Hardinge, 7 trout. On Saturday, Messrs. Thomson and Hardinge secured 8 dozen nice trout. The hill lochs are all yielding large baskets.—P. McG.

---

LOCHS ERICHT AND LOGGAN.—On Loch Loggan, on Friday, Mr. Goltz, Leith, and Mr. Scotland, Glasgow, killed 16lb. of trout; Mr. McGregor, Leith, and Mr. Haddie, Leith, 14½lb. of trout. Loch Ericht.—Although last week was very unfavourable for fishing, yet good baskets were got. On Wednesday, Mr. Scott, Dundee, fishing from the shore, the day being too stormy for the boats to go out, was successful in capturing, in three hours, 13 trout and 68 char. Such a large quantity of char has never before been taken from Loch Ericht. They were in fine condition, and some of them fully weighed ¼lb.

---

THE TUMMEL.—Messrs. Charles and George Scott fished the Pitlochry Hotel water on Tuesday morning for a short time. The water was low and clear, but they got a very good basket of trout with bait. They had 13 trout, and the weight of them ran from ½lb. to 1¼lb. Loch Tummel was very calm and clear on Saturday. One party was out and got one good trout on the loch, but not meeting with success, went to the river and captured other eleven. P. McG.

# NOTICES OF FLIES, &c.

MR. TRAHERNE'S SALMON FLIES.—Mr. Kelson has kindly consented to continue the description of these patterns next week, when he proposes to illustrate "Tippetiwitchet."

A FINE RUDD.—Mr. C. A. Bryant, of Huntingdon, has captured a splendid rudd in the river Ouse weighing a little over 2¾lb.

# CLUB REPORTS.

[*Continued from page* 5.]

## HIGHBURY ANGLING SOCIETY.

The following members weighed in on the 29th ult :—Mr. Henry Temple, a capital show of barbel, chub, and dace from the Thames, the heaviest of the two former scaling respectively 3lb. and 1lb. 6oz. Mr. Higley, a nice basket of bream, between 7lb. and 8lb., heaviest single 1lb. 5½oz., and Mr. Anthony, a pretty assortment of bream, roach, and dace. Many other members contributed to the trays, the most prominent being Mr. G. Howell, jun., Mr. Young, Mr. E. Wheatley, Mr. K. Middleton, Mr. H. Champ, and Mr. Edwards.—Jas. E. Wheatley, sec.

## INDEPENDENT BROTHERS ANGLING SOCIETY.

We have had a nice show of fish on our trays this week, consisting of chub, roach, dace, and gudgeon, taken by Messrs. Clark, Coomes, Roberts, Moore, and Leader. We shall be happy to enrol the names of some more gentlemen as members.—H. Moore, sec.

## LINCOLN ANGLING SOCIETY.

On the 29th ult. we were able to produce a nice show of fish, which repaid us for the bad show the week before. Our one-armed champion, H. Bingle, came to the front with a grand show of roach and dace. Several others also weighed. We go to Sunbury on the 6th inst. for several prizes.—H. Bingle, secretary.

## LONDON AND SOUTH-WESTERN RAILWAY ANGLING CLUB.

The committee of the above-named club desire it to be perfectly understood they hope that all anglers visiting the neighbourhood of Ashford, Wraysbury, and Staines will respect our members' right of fishing at these places. Gentlemen desirous of fishing same can do so by obtaining a ticket at a cost of 5s. per year from J. Woodcock, sec.

## NORTH-WESTERN ANGLING SOCIETY.

The members of this society intend that the aggregate weight of fish this year will supersede those of late years. A fine show of bream and jack took place on the 29th ult. The trays that had already been painted, were quite finished when they received the contents of the numerous bags the members brought in. Mr. Grindley, brace of jack, Mr. Plumpton, sen., also a brace, Messrs. Hayes, Hillier, and Wynn, jack, Mr. H. Underwood, a fine lot of bream, weighing 40lb., Mr. Roxbee, roach.—W. Hillier, Secretary.

## PHŒNIX ANGLING SOCIETY.

The following members—viz., Messrs. Reed, Milton, Keen, Bartrip, Milton, Elbourn, Baillie, and Ashley, were out on the 29th ult., but the takes were not great—about 10lb. of fish between the lot. Never mind, boys; try again, and get better luck is the wish of—W. E. Lee.

## SIR HUGH MYDDELTON ANGLING SOCIETY.

The members of the above society were out on the 28th ult. for a series of prizes. Although the members visited different rivers, the shows of fish were meagre; the general complaint of the members was water too bright. Mr. Will. Fowler took first prize with dace, Mr. Caborn second prize with a pretty show of roach and rudd, 13 fish scaling 9lb. Messrs. Rogers and Falcon had some fine fish from the Thames, but were too late to weigh. The prizes not won will be fished for on the 6th inst.; go where you like.—Geo. Caborn.

## SOUTH EASTERN ANGLING SOCIETY.

This, our last meeting on Wednesday night, was fairly attended, and some important work was got through, after which the question of the overstanding prizes was gone into. It was resolved that the presentation of same should take place on Tuesday, July 15th, when it is hoped all members, and as many friends as can, will attend. There were present three out of the five gentlemen who were proposed, two of whom were elected members. Ballot for the remainder to take place on the 8th inst. The veterans, Messrs. J. Smith, sen., J. Smith, jun., and F. Allard were out on the 29th ult., at Staines, weighing in some nice barbel, dace, roach and chub, while others of their party were less fortunate, returning without a weighable fish.—F. H. H. Weston, sec.

P.S.—Our meetings in future will be held on Tuesdays and Sundays.

## SOUTH LONDON UNITED.

On the 29th, some of the members of the above—about 60—started from Waterloo for Staines, to compete for the first pegged-down match of the season, and a solid prize, given by Mr. Jones, of The Swan Hotel. Previous to our starting from Waterloo the clouds became dark and the prospects looked wet; we had scarcely passed Vauxhall before it came down in torrents, but when we reached Staines the rain ceased. No time was lost in getting to friend Jones's, down by the river side near the bridge on the Egham side; here we were met by Messrs. Gafney and Allen, who collected the tickets for the competition and distributed to each member the number of his swim. The swims commenced near the railway bridge and reached up to the gas works. Having seen all members off to their swims, I passed in and saw Mr. Jones, who promised me he would add to his already large collection of Posters, one of the Fishing Gazette tournament. I then passed down to No. 1, where "The Baron" was spotted, and then returned up to 52, a swim allotted to me. I must say that the water was a nice colour, and as smooth as a mill-pond, except when steamers, tow-boats, row-boats, and other vessels were passing, which, I must say, was rather too often for me, for several times when I got nicely settled down, some imbecile, acting the part of a donkey, tugging a rope with a boat at the end of it containing four or six brother imbeciles would come along, the delight of the occupants being to steer the boat as near shore as possible and catch the lines, and thereby draw the rods into the water should the owners not be present, to say nothing about disturbing the swims. A friend walking up near the lock found a rod so treated, and on rescuing it found all the line run off the winch. He wound it up to within a few yards, and discovered an eel was on. He laid the rod on the bank and left the eel in the water. On the arrival of the owner he informed him that he had caught a fish for him. "What did you want to touch it for? You had better left it alone!" was the thanks he got. Moral.—Never land a fish or take a rod out of the water unless you are acquainted with the owner. Anglers are funny people. At seven o'clock time was called by "The Baron," and a retreat was soon made to The Swan. Here Messrs. Field and Allen weighed the fish, with the following result:—Mr. Wright, of The Second Surrey, 2lb. 15oz. of roach and dace, largest fish 10oz., took the first prize, and also Mr. J. Smith's prize; Mr. Howe's, Second Surrey, 1lb. 8½oz. roach and dace, 2nd prize: Mr. Beard, Peckham Brothers, 3rd; Mr. Davis, Anchor and Hope, 4th: Mr. Divers, United Brothers, 5th; and Mr. Robins, Second Surrey, 6th. Messrs. Tyler, Gafney, and Grant also had fish. Mr. Jones, in presenting his prize, stated that it gave him much pleasure to see so many down, considering the condition of the river at the present time. It was not in a state to be productive of large takes of fish on account of the dry weather we have had, but as soon as we get some rain the place will then be in a condition to get some good shows. He thanked them one and all for coming there, and at any future occasion he could do anything for them he would be most happy to do so. The prizes were then handed over to the various winners, and they departed thence to catch the train for London.—Pixie.

P.S.—The next return visit will go to the Rodney Piscatorials, Rodney Tavern, Rodney-road, Walworth, on Monday next, when Mr. Hotham, the Secretary, will welcome all who may please to pay them a visit.

## ST. JOHN'S AMATEUR ANGLING CLUB.

The members of this club have held their first outing this season to compete for prizes. There were about twenty met. There were five prizes to fish for; and Thursday last was a hot bright day—all points against killing a good dish of fish; but the spirits of the anglers were high, and all went to work well, trusting that fortune would favour each one, as he felt that the honour would be easily obtained, as no one could take more than one prize; but there seemed to be every reason to think that the day would be a blank. At the hour appointed for refreshments none failed to take his appointed post, or rather seat. To look around at the cheerful faces, who would have thought all had been disappointed by the finny tribe? None at that hour, 6 p.m., had fish worth weighing in; but the worthy host, Mr. Higgs, soon put us all something to do, and all, like Britons, got to work; if the fish would not take the bait, all the amateurs at angling seemed to me to be professionals with the knife and fork, and took the bait well. I could not let this feast pass without thinking of the great contrast between the Cromwellites, who, 244 years ago, sat round their camp fires the night before the Battle of Worcester, when Charles I. was defeated. The spot chosen for our tent was in the same meadow. Generation after generation it is handed down as the spot where the headquarters of the army of Cromwell camped on that memorable night. After the snack fishing was resumed, and the fish were a little on the move. The result was that Mr. Porter got Prize No. 1, Mr. Hill, hon. sec., No. 2, Mr. Burgess No. 3. For best, Mr. Brooks, No. 1; myself, No. 2. There was great fun, as one of the party struck at what seemed to be a good bite; it proved to be an old teapot when landed, and is now in the hands of a gentleman who would not part with it. It is intended that at the next outing this old teapot will be used, as many of the members are in favour of teetotalism.—J. A. Griffin.

## STOKE NEWINGTON ANGLING SOCIETY.

On the 29th ult. Mr. C. Martin weighed in 14lb. 5oz. roach and bream; Mr. W. Robinson, 5lb. 4oz. bream, roach, and dace; Mr. T. Gretton, 2lb. 12oz. bream; Mr. W. Webb, 2lb. 9½oz. bream; and Mr. W. Whitmore, perch.—T. Gretton.

## UNITED BROTHERS, DEPTFORD.

Most of our members fished in the match at Staines, and I am pleased to say Mr. W. Divers, came in for No. 5 prize, but did not show up at the club, but Mr. J. Jones saved the club from a blank with some fine roach from the canal.—H. T.

## RICHMOND PISCATORIAL SOCIETY.

The summer dinner of this flourishing society took place at the Mitre Hotel, Hampton Court, on Wednesday. On the same day there was a fishing competition for three prizes—one of £1 11s. 6d., one of £1 1s., presented by the society, and one of 10s. 6d. presented by Mr. Field. The fish were to be caught in the Thames between nine and five o'clock, and the prizes were for specimen fish. The first prize was won by Mr. Scantlebury, the second by Mr. Nicholls, and the third by Mr. W. Abbott.

The dinner passed off most successfully. Sixty gentlemen sat down to a banquet that was admirably served, the company including—Mr. A. J. Little (chairman), Mr. H. Dickinson (vice-chairman), Mr. Spreckley, and Mr. Brougham (chairman and secretary of the Thames Angling Preservation Society). Most of those present had ridden over from Richmond in an omnibus and a brake kindly lent for the purpose by Mr. W. Cockburn. The loyal toasts having been honoured, the Chairman proposed "Success to the Richmond Piscatorial Society." He said he was proud to be in that chair, and proud of the day's fishing, for although there had not been a large amount weighed in, he was glad to say the members had done all they could to carry out the suggestion of the committee that gross weight should be abolished, and only good fish entered on the books as taking the prizes of the society. (Applause.) He thanked those who had added to their prize fund, and hinted to others that the list was not yet full. He hoped all who took small fish would return them to the river, for it was useless for that society to send its annual five guineas to the Thames Angling Preservation Society if the members took out shovelfuls of small fish. He heard of a party recently who took thirty-nine dozen of dace in an afternoon. They were all over the six inches prescribed by the by-laws, and that was all the anglers in question cared; but in that society they thought eight or nine inches was not too large (Applause). They were now about to undertake a good work, which had been instituted by their vice-chairman, Mr. Dickinson. In October they were going to turn in fifty trout, two years old, in the tideway. (Applause.) Referring again to the competition of that day, he thanked Mr. Brougham and Mr. Dickinson for their service, and announced the result of the competition, adding that Mr. Terrill's handsome dace, nine-and-a-half inches long, was "highly commended."—The toast having been honoured, Mr. Powell proposed "The Thames Angling Preservation Society." He referred in high terms to the good work done by that society in the interests of the anglers. He thought it was a crying disgrace to Thames anglers that the income of the society only amounted to £400 per annum, one-fifth of which was given by certain City companies. He urged all present to send their names to Mr. Brougham as subscribers.—Mr. Spreckley, in responding, congratulated the members of the Richmond Piscatorial Society on the success of that dinner, much of which he thought was due to the respect they had for their chairman (Applause.) He then referred to the improved state of the Thames as to fish, and expressed his gratification at the steps taken in that day's competition with regard to the exclusion of small fish. Whatever was done for the Thames benefitted all classes of people. On the 29th ult., between Richmond Bridge and Teddington, there were something like two hundred bank anglers, the great bulk of whom went home perfectly satisfied with what they had done. That showed how much pleasure they could confer upon their fellow creatures by improving the angling. (Applause.)—Mr. Powell proposed "The Visitors," for whom Mr. Burrows and Mr. Board responded.—Mr. Dickinson proposed "The Chairman," referring to Mr. Little as "the right man in the right place," and one whose constant geniality and readiness to protect the interests of anglers made him exceedingly popular amongst the members of the society. The Chairman responded, after which Mr. W. Cockburn proposed "The Vice-Chairman," remarking that the longer they knew him the more they appreciated his worth. Mr. Dickinson replied, stating that he had been an angler since 1832, and all that time it had been his wish to retain only sizeable fish, and return the unsizeable to the water. The Chairman next proposed "The Officers," of whose services he spoke in high terms, and Mr. Terrill responded. The remaining toasts were "The Press," proposed by Mr. Turner, and acknowledged by Mr. Wheeldon and Mr. Dimbleby; "the health of Mr. W. Cockburn," proposed by Mr. Turner; "The Ladies," proposed by Mr. A. Clarke; and "the health of Mr. Brougham," proposed by Mr. Dickinson. Some excellent songs were given during the evening, Mr. Johnson presiding at the piano.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

## POISONING FISH.

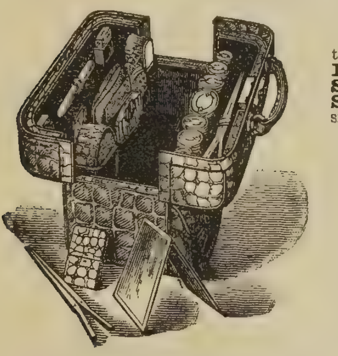
AT the Warwickshire Quarter Sessions, on Wednesday last, before Mr. J. S. Dugdale, Q.C., Chairman, Henry Timms was indicted for having at Arley unlawfully and maliciously put a certain noxious material into a brook with intent to kill and destroy the fish therein. Mr. Eardley Wilmot prosecuted, and Mr. Dorsett defended. The accused and three other men were found walking up and down the brookside collecting fish, which came up to the surface of the water, and, after swimming about for a short time, either became stupefied that they could be taken by the hand, or else they died. There was a strong smell of chloride of lime along the brookside, and the water was very much discoloured. Mr. Dorsett, for the defence, urged that there was no clear evidence as to any poisonous matter having been put in the water, and, even if they were satisfied that the water had been poisoned for the purpose of bringing up the fish, it had not been shown that his client was the guilty party. The Jury returned a verdict of guilty, and Mr. Shaw informed the Court that, on the day when this offence was committed, the fish were thrown up along the brook for a distance of two miles. That was bad enough; but, as the brook ran into the Birmingham reservoirs, the throwing of poison into the water might be attended with very serious consequences. Since the present defendant had been in custody the brook had been poisoned on two occasions. The Chairman said it was necessary to put a stop to an offence so dangerous, and sentenced defendant to eight months' imprisonment, with hard labour.

MAIGNEN'S PATENT
FILTRE RAPIDE,
FOR ANGLERS, TOURISTS, AND HOUSEHOLD PURPOSES.

THE FISHERMAN'S FILTER, &c., will be fully described next week by our Special Correspondent.

P. A. MAIGNEN,
22 and 23, Great Tower Street,
LONDON, E.C.

**Thornhill's Ten-Guinea Silver-Fitted Ladies' Travelling Dressing Bag.**
(No. 68.) 14-inch Best Polished Morocco Patent Wide-opening Travelling Dressing Bag, with one outside Pocket, Stitched Handle, with Gilt Rings and Plates, Gilt Double-Action Registered Lock, and Thornhill's Improved Patent Stop-hinges; Bag lined with rich Moiré Antique Silk, with Thornhill's Improved Indestructible Pockets.



CONTENTS.

Set of plain cut Glass Fittings, with richly Engraved **HALL MARKED SOLID SILVER STERLING** Tops, consisting of—
- Oval Soap.
- Tooth Brush Roller, with two Tooth Brushes.
- Nail Brush Roller, with Nail Brush.

## SALES BY AUCTION.

### ISLAND OF HERM.

The beautiful Island of Herm, between Guernsey and Sark, in the English Channel. A perfectly unique purchase for a nobleman, yachtsman, gentleman, or professional or business man seeking thorough rest and recreation in a charming climate at the seaside, with a series of attractions which could not be matched elsewhere within the same compass, and within 10 or 11 hours of London. The island is a mile and a half long, by three-quarters of a mile broad, and contains 460 statute acres, including 100 acres of highly fertile arable and pasture land, with fine deep alluvial soil, forming by far the largest farm in one occupation in the Channel Islands. The remainder of the land has a picturesque broken surface, clad with gorse and cover, and there are some rich feeding lands. Pheasants, partridges, and wild geese, and rabbits abound. The higher portions attain an altitude of upwards of 284ft. above sea level, and are crowned by several cromlechs, "The Old Mill of Herm," a noted nautical mark, and the ancient Franciscan chapel. At the western side of the island an excellent harbour, also landing steps accessible at all times of the tide; elsewhere are lofty and wild cliffs, gorges, romantic pinnacles of rock, and broken bits of wild rock scenery, which delight the eye of an artist, and form the natural home of the cormorant, gannet, guillemot, razor bill, curlew, of innumerable gulls, and other sea birds. The Creux, one of the sights of the Channel Islands, a deep, funnel-shaped depression near the shore, communicating at its base with the sea by a natural archway, and the renowned shell beach of Herm, an inexhaustible object of interest to conchologists. The entire island is in hand, and available for possession. A good family house, stabling, and gardens, in a well-chosen and picturesque position in the centre of the island, there are several smaller houses and cottages and a large hotel, which until lately realised £80 a year, and could be re-let. The lands are well adapted for the growth of fruit and the high-priced early potatoes and vegetables which are daily so extensively exported from the neighbouring islands of Guernsey and Jersey. The land could be farmed to great profit, or let at high rents. Exceedingly heavy crops of grapes, which can be exported at full prices, are obtained from the extensive vineries, and there are other sources of income, irrespective of the mineral wealth, which is more particularly referred to in the following advertisements. The property is likely to prove a good and remunerative investment for capital, besides offering a great scope for residential enjoyment. There are several springs of fine water on the island. The property is held on lease from the Crown (by order in Council of his Majesty George II.), perpetually renewable every 21 years on payment of a nominal fine of £42 and at a rent of £14 per annum, and is free from any rates, taxes, and Government dues of every kind. The population is 37. There is good fishing round the island, and lobsters and crabs are abundant.

MESSRS. DEBENHAM, TEWSON, FARMER, and BRIDGEWATER will SELL the above valuable and very attractive PROPERTY, at the Mart, on Tuesday, July 29th, at 2 o'clock (unless an acceptable offer be made by private contract). Mr. Simmonds, the resident manager, will, with his boat, meet any intending purchaser at St. Peter's Port, Guernsey, by appointment. Particulars, plans, and views (now ready) of Messrs. Arnold and Co., Solicitors, 60, Carey-street, W.C., and of the Auctioneers, 80, Cheapside.

### To Cement Merchants.

MESSRS. DEBENHAM, TEWSON, FARMER, and BRIDGEWATER beg to direct special attention to the preceding advertisement of the Island of Herm. The well-known shell beach, extending along many hundreds of yards of the shore, offers (in connection with a clay obtainable in the adjoining bays) the necessary material for the formation of first-class CEMENT, similar to the well-known Chunam (Madras) cement which is so extensively used for harbour and other submarine works. The free harbour at Herm affords cheap and ready facilities for the exportation of the finished article.

### To Road Contractors and Granite Merchants.

MESSRS. DEBENHAM, TEWSON, FARMER, and BRIDGEWATER direct special attention to the SALE of the ISLAND of HERM, referred to in the preceding advertisement. There are Four important Quarries of Granite, and the necessary dwelling houses for the overseer and workpeople. The quarries have not been worked during the proprietorship of the present owners of the island, but looking to the exceedingly large and annually increasing export of Guernsey granite, for which granite a very full price is obtained, and the advantages that Herm possesses by reason of its free harbour, there is not a doubt that operations at these quarries could be carried out advantageously. The stone from Herm was used for the formation of the causeway to the East and West India Docks, for the former paving in Cheapside, and for the formation of the steps of the Duke of York's column (the latter built about 60 years since, and showing no signs of wear).

ROYAL AQUARIUM.—THIS DAY, and during the week.—Grand programme.—Over 11 hours of amusement. See the Elephants, the Lions, and Leaping Horses from India. The talk of London. Open at 12.0 close at 11.30.

ROYAL AQUARIUM.—THIS DAY, and during the week, at three, GRAND VARIETY ENTERTAINMENT, specially selected for ladies and children, including some of the most amusing artistes in England. Constant changes. See daily programme. The largest White Elephant in the world, the den of real wild African Lions, and the wonderful Australian Leaping Horses.—Every Afternoon, commencing at three o'clock.

ROYAL AQUARIUM.—Miss NELLIE REID (Madame Ponenti), acknowledged to be the première Lady Equestrienne of the world, will RIDE the champion Australian leaping horse UNION over the high timber jump TWICE DAILY during the week. This daring and fearless lady equestrienne has been specially engaged for this feat. Every rider in England should witness this performance. Daily at 5.0 and 10.45.

ROYAL AQUARIUM.—GRAND PROMENADE CONCERT, at 8.0. Solo Concertina, Mr. H. Roe. M. Ch. Dubois, Conductor.

ROYAL AQUARIUM. — WILLIE BECKWITH (the Champion Swimmer of the World) assisted by accomplished lady swimmers, will give his SWIMMING ENTERTAINMENT DAILY, at 5.30 and 9.30. p.m.—Admission 1s.

No skilled labour is required in the application of the Stain.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and CO., the Proprietors.

The Fishing Gazette.

SATURDAY, JULY 12, 1884.

## AN OLD WANDLE TROUT.

By Mr. Geo. M. Kelson.

PARADOXICAL as it may seem, it is nevertheless probable that more than one of my readers who have taken a basket of fish from this favourite river, have never yet seen a "Wandle trout." "Trout in the Wandle," and "Wandle trout," are now, alas! two different things. Take the train from London Bridge, or Victoria, to Mitcham Junction, there descend, and crossing the line, walk along the road to Carshalton. Right half-turn at the "Goat Inn" (and here, let me say, in parenthesis, if not a teetotaller, and if thirsty, you may pause without fear of being poisoned). Cross over the bridge by the mill, and take the road to the left, by the waterside, a road suddenly contracting itself to the more modest dimensions of a footpath. Peer into the water on the bright gravel patches between the long trailing tresses of green weed. What do you see? Trout of various sizes, and of almost every colour. Long, lean, black, eel-like rascals — cannibals these, more "fit for spear than spice," that ought to be knocked on the head and distributed on the farms for manure. Light yellow trout—bad risers these—occasionally taking a drowned fly, but grubbing like barbel, and paying more attention to the larvæ on the weeds, and cadis at the bottom of the water. Bright emerald green trout, with red stained sides, resembling in hue the tints of a stickleback in the spawning season (probably American brook trout), bad risers again, and suspected, not without reason, of a weakness for fish diet. And finally, bright silvery trout, very vivacious and quick to rise, but attaining, as a rule, no very great weight. These last are, I am told, none other than Loch Leven trout, slightly changed by altered conditions of water and diet.

All these are but immigrants, due to artificial hatching and stocking. But we have not yet met with the aboriginal native, nor is he often to be seen here; more's the pity!

In Mr. Bidder's water, lower down the stream, and in the intermediate reaches, you may occasionally meet with him; but here he seems to be crowded out by the host of foreigners that have invaded his haunts. Who, that has once seen him, can ever forget his golden-yellow back, his blood-red spots, his silver-white belly, his small head, deep shoulder, and thick tail? Who, that has seen him fresh from the water, can forget the prismatic sheen that flickers on him as he springs in the sunlight, his colour changing like shot silk? Who, that has tasted him, can forget the beautiful yellowish pink tinge of his flesh, almost as dark as that of a salmon trout, or ever forget the delicacy of his flavour?

I fear the day is not distant when this true Wandle trout will be the subject of history!

A well-known Wandle fisherman—Mr. Basil Field—to whose notes I am indebted for much of the matter in this article, gave me an account of the capture of one of these trout, that will, I think, be of interest to my readers. I will endeavour to tell the story as nearly as I can in his own words; so please note that from this point the personal pronoun "I" refers to Mr. Field, and not to me.

In June, 1882, I was fishing below Hackbridge with my friend M—. He is a first-rate performer; and as you know I am not entirely a novice, nevertheless we were doing badly. A desultory rise would occasionally come on for a minute or two, and just when we had caught a brace or so of undersized fish, which always take time to carefully unhook and return, it would cease, and the surface of the water resume the appearance of a looking-glass, with not a single ring to be seen anywhere. At last a rise of olive dun came on fast and furious, and it would have puzzled you to find a square yard of unbroken water in the whole reach from the "Limes" to the "Mill." M.'s rod and mine seemed in a chronic state of flexion, and "tight lines" became the normal state of things. Unfortunately, it was Saturday! To you who know the practice of the riparian owners on the Wandle, need I say more? I do not blame a man for liking a clean lawn on Sunday, but it *is* hard on London anglers, who are busy all the week, from Monday morn till Saturday afternoon, that every blade of grass, every uprooted weed, and every sort of garden refuse, should be swept into the river during the few brief hours they can spare for sport. In ten minutes fishing was absolutely impossible. The most aggravating circumstance was that the rise continued, the fish taking the fly under, between, and even off the mass of "salad" that completely covered the water.

In reference to stage-plays, I have often heard it objected that soliloquies are absurd; that no man ever speaks aloud when he is alone. Had any captious critic of the dramatic art been behind me unseen, when this cloud of weed and grass first came down, I think he would have heard some earnest and emphatic utterances that might have caused him to reconsider his opinion. I believe I *did* say something—I know I threw my rod down to the imminent danger of the top joint, lit a pipe, and walked down to the mill with a brace of fish for the miller, who had been very civil in allowing me to take a short cut through his yard.

What M.'s emotions were I know not, but I fancy I heard something very like a soldier's prayer wafted across the water.

The miller condoled with me, saying the weeds were nearly enough to choke his wheel, and to while away the time offered to show me a fine trout he had known for two or three years under a tree; adding, by way of encouragement, "You can't catch him, you know; lots of people have tried, but it's no good; he lies right under an overhanging branch, almost touching the water, and there are trees close above and below, so that no fly can get near him."

I went to inspect the "locus in quo," and the result was not promising. There was Mr. Trout, sure enough, and a beauty he was. He took no heed of us peeping through the bushes, but continued sucking down the duns, drawn over his nose by a convenient back eddy, with a confidence born of assured immunity from danger.

I watched him leisurely devouring the struggling insects as they were swept round and round in the eddy, picking them now and again from the submerged stems of grass and floating withered weeds. I observed that he fed entirely at the surface, and treated with contempt the half-drowned duns that were carried beneath him. It was evident a wet fly would be useless; and how on earth, or rather, "on water," could I ever pop a dry fly over him? Casting up stream was impossible, owing to the trees, and if I attempted to float my fly down it would inevitably sink by the weight of the line long before it reached the eddy. To utilise my obstructive opponents, the weeds, was a thought that struck me; and getting well above the spot, I sent a handful of grass and buttercups down the water, which floated on, till caught by the eddy, it was wafted over the nose of the trout. Eureka! I had found a vulnerable point in the enemy's position. Another raft of grass and weeds was launched, with my fly lightly hooked in the extreme edge of a daisy leaf, carefully placed on the top; the root of the daisy being imbedded in the bunch, so as to yield sufficient resistance to admit of the fly being quietly snatched away without drawing the plant with it. When the weeds came to the eddy, a short, smart jerk released the fly, and caused it to fall some inches nearer the trout, the rod point being immediately dropped that there might be no checking of the line. The fly floated slowly, surely, and buoyantly on . . . .

"Well! I'm blest if I a'int seen a lot of gentlemen try for that fish, but I never expected to see him on the bank, sir, I'll be hanged if I did; and he's all three pounds if he's an ounce—as true an old sort as ever I see."

I am bound to say he was not three pounds, but he was well over two and a half, and a beautiful specimen of "An Old Wandle Trout."

## ASSERTION OF ANGLERS' RIGHTS IN THAMES.

MR. PHILIP GEEN, President of the Association of London Anglers, called on us the other day. Among other things he mentioned that he was on his way to Eynsham to fight the Earl of Abingdon, who claimed the right of fishing in a certain part of the Thames over which Mr. Geen asserted his lordship had no right. We learn by telegram from Mr. Geen that Earl Abingdon has been defeated, and the case dismissed with costs. Mr. Geen took up the case on behalf of a local angler named Wall, who had been summoned for fishing by Earl Abingdon, although Wall had permission from another gentleman, the freeholder of the land. We hope Mr. Geen will give us a little account of the matter. He deserves the thanks of anglers for his spirited defence of their interests, all the more meritorious in his case because he has any amount of the best private fishing at his command.

## CONVICTION FOR FISHING IN THE FENCE MONTHS.

AT the Town Hall, Nottingham, Charles Handley was summoned for attempting to take fish within the close season on the 15th June.—Mr. Eddowes said he appeared to prosecute on behalf of the Trent Fishery Board. That Board employed a large number of water bailiffs, and on the day mentioned one of the bailiffs, named Swanwick, saw the defendant angling in private water within the jurisdiction of the Board. From inquiries that had been made, it appeared that the defendant had been visiting some friends in the neighbourhood and had committed the offence thoughtlessly.—A fine of 2s. 6d. was imposed.

## THE HEIGHAM SOUNDS CASE.

We see from the *Yarmouth Independent* that the Heigham Sounds Fishery Rights Case has come to a most unsatisfactory conclusion. Our readers will remember the affair, and how generously London anglers came forward to help what they were told was a good case. From the *Independent's* excellent *résumé* we quote the following :—

> "The Heigham Sounds controversy has at length come to a conclusion, so far as the appeal which was brought before the Court of Queen's Bench some months ago is concerned, and everybody who has followed the course of events must feel that the conclusion is one of about the most unsatisfactory nature that could well be conceived. The case was heard before Mr. Justice Day and Mr. Justice A. L. Smith, when, owing to the 'case' not sufficiently disclosing the real point at issue, the matter was referred back to the Justices at Smallburgh, and it was only to be expected it would come on again in the usual course. This idea has, however, been rudely dispelled by the proceedings which took place in the Queen's Bench Court on Monday, when the appellant—that is nominally Mr. Crowther, but in reality the Great Yarmouth Piscatorial Society, backed up by subscriptions obtained from all parts of the country, was adjudged to pay the respondent's costs, the appeal having been abandoned. The numerous persons who were liberal enough to subscribe their money to try this most important question, affecting as it does the welfare to a great extent of this neighbourhood, are placed in a position of great disappointment, and must be at a loss to know how the appeal was allowed to lapse in such a manner that their money has been simply thrown away to no purpose. It would seem that the proper course would have been to re-enter the appeal for trial after the case was referred back to the Justices within three days, and it would be interesting to know, looking at the important issues at stake, why this course was not taken. Of course it is possible to enter the appeal again for trial, but the whole matter will have to be gone into *de novo*, and all the expense that has already been incurred will have to be borne again. It is doubtful, however, whether persons, after the impotent issue arrived at, will be found ready to raise the necessary funds to fight a question that has been attended with such disappointing results. The whole thing would seem to have been mismanaged, and it is only due to those who subscribed so liberally to the funds that some explanation should be afforded as to the cause of failure."

We quite agree with our contemporary's remarks, and can assure Mr. Lark that anglers generally will be anxious to see what is the real reason of this collapse.

By omitting an important, and it appears vital, action in the legal conduct of their case, no decision has been arrived at, and they have to pay the costs, which will not be light. Surely someone is responsible for what appears like culpable negligence ? Whose duty was it to enter the appeal for trial ?

## A VALUABLE INVENTION IN GUT LINES.

### Patent Double Gut-Cast Lines.

Messrs. Carswell & Co., of Glasgow, write to us as follows : "We enclose samples of our new patent double gut-line, which we think you will approve of ; if so, we shall be glad if you will notice them. It has hitherto been quite impossible to make a double gut-line (not twisted) having the two strands bearing an equal strain. This difficulty is now entirely obviated by our new and simple method, which consists in tying each section of gut in a loop, in place of singly, and slipping the loops into each other after the manner of slip knots, so that any two pair of loops so slipped into each other when drawn taut distribute the stress of tension precisely at or from the central point of each loop, and so unite the strands of gut, so as to form virtually a thick single strand, thus preventing the excessive splash caused in casting the old-fashioned double gut-line."

We think very highly indeed of these lines, which are made of gut of most excellent quality, and Messrs. Carswell's patent system of putting them together does produce perfectly equal lengths between the knots, and therefore equal strain. Before testing them with a spring balance, we had an idea that at the slip knots the gut would be practically single, and that the lines would only pull the strength of single gut. But this theory was at once disposed of on putting the line to the proof, when the double line pulled 13½lb., and single strands of the same line only pulled 7lbs. A second experiment confirmed the result within an ounce or two. The fact is, as Messrs. Carswell point out, the strain is so distributed over the single strands as practically to form a knot, and this is also the case when the line or fly is attached to the gut by the loop. A gut-line which shows but little on the water and will bear a dead weight of over 12 or 13lb. is just what anglers want.

## THAMES ANGLING PRESERVATION SOCIETY.

The 46th anniversary banquet of this Society is announced for Wednesday, July 16th, at the Star and Garter Hotel, Richmond-hill, under the presidency of Mr. Thomas Spreckley. Already a considerable number of tickets have been sold, and there is every reason to believe the dinner will be a great success.

## THE BONA FIDE ANGLING SOCIETY.

The inaugural banquet of this young, but already strong, society took place on Thursday evening, Mr. R. B. Marston in the chair. We shall next week have an account of the affair, which went off most successfully and pleasantly.

## THE FISHERIES DIPLOMAS.

We learn from Mr. J. R. Somers Vine, the official agent of the Fisheries Exhibition, that the Paris printers made a first delivery last week, so that we may hope to see them before long. They are to be extremely beautiful, and will deserve a handsome gold frame and a place of honour on the wall.

## ADDITIONAL PRIZES FOR THE TOURNAMENT.

Mr. Thomas Spreckley, President of the T.A.P.S., says : "You can put me down for what you like up to, say, £3 or £4." Mr. Spreckley is sure to be forward in helping any good work.

Mr. J. C. Chubb, of 128, Queen Victoria-street, very kindly promises to give "one of our patent Cash-Boxes, value £1 1s., as a prize for the Tournament." Mr. Chubb is an enthusiastic angler, and succeeded in getting his first Thames trout the other night.

Mr. James Gregory, of Birmingham, has again promised us some of his metal baits as prizes.

The Manchester Cotton Twine Spinning Co. write :—

"Dear Sir,—You may promise, as prizes from us for the Tournament,

6 Trout lines, assorted ;
1 Best trout landing net ;
1 Taper salmon casting line ;
2 Cakes for re-dressing lines ;
3 Cable laid pike lines ;

and, perhaps, one or two out of three special salmon lines, which we have submitted to Mr. Kelson."

Mr. Malloch, of Perth, promises to give one of his new patent casting reels, value 22s. He says he hopes to be present.

Mr. Slater, of Newark, is also coming, and promises to send us some prizes.

Messrs. C. L. Mathews and Co., 1a, Wynyatt-street, E.C., have kindly promised half-a-dozen of their nickel-plated rod holders.

Mr. Henry Howse, Hon. Sec. of the Clapton Angling Society, 2, Comberton-road, Upper Clapton, E., says :—"I shall have much pleasure in giving another prize this year of 100 yards of waterproof line."

If other friends will add to the list we shall be all much obliged.

At the banquet of the Bonâ Fide Anglers, Mr. Marston sold 50 Tournament tickets.

## THE TOURNAMENT.

The following is a copy of a circular which has been sent out ; but in order to give it much wider publicity, we print it here :—

"Crown-buildings, 188, Fleet-street, London, E.C.
"July 10th, 1884.

"The Tournament of Anglers at the Welsh Harp, July 26th, 1884, in aid of the Funds of the Anglers' Benevolent Society.

"Dear Sir,—I have had the control of this placed in my hands by the committee of the Society, and for this charitable purpose I venture to ask if you will help us by giving some article as a prize ?

"I will undertake not only to acknowledge its receipt in the Fishing Gazette, but also to give it a notice in the same.

"Several firms and well-known anglers have already very kindly promised prizes.

"Anything will be acceptable : it need not refer specially to angling, or be of great value.

"I am, dear sir, faithfully yours,
"R. B. Marston.
"(Ed. Fishing Gazette.)"

## THE INTERNATIONAL HEALTH EXHIBITION.

[From Our Special Correspondent.]

One of the greatest discoveries of the period is doubtless that which has traced the majority of diseases—to which human and other living beings are liable—to the presence of parasites and specific germs which enter the system sometimes with the air, but much more frequently with water.

No lake or river is free from pollution of this kind. Small streams and tributaries germinate and conduct all sorts of organic matter resulting from vegetable and animal decomposition ; and the water is also poisoned by weeds, which become in a state of putrescence in the latter part of the summer. To bathe in it is injurious, as fever has been traced to this cause ; but to drink such polluted water is unquestionably dangerous. Malarious fevers, cutaneous complaints, boils and ulcers are often found to be connected with vegetable detritus contained in marshy water. Cholera, typhoid and yellow fever, erysipelas, and even diphtheria are known to be caused by drinking it when impure ; and if a small quantity of water undergoing putrefactive changes percolates, or by other means gets access to rivers and wells, it imparts to enormous volumes of wholesome water the power of propagating a disease, which, if not fatal, completely prostrates the patient.

Many of the poisonous parasites are infinitesimal, and surely it must occur to every angler to prevent these dreadful *bacteria* from entering the system to do their deadly work. To avoid them is simply to subject the water which we require for our use to a proper process of filtration.

It is pleasurable to see, as one of the outcomes of the late International Fisheries Exhibition, an invention which had already earned a well-merited reputation. We allude to Maignen's patent "Filtre Rapide," which is admirably adapted to the purpose under consideration. This rapid filter, so-called because it has a large filtering surface in a small compass, has been specially arranged to suit the convenience of fishermen, &c., &c. It is upon the same principle as that used at this and the last Exhibition to purify the whole of the water of the fish tanks, and the process is in course of adoption by several of the London water companies. But what concerns and interests our readers more is probably the fisherman's filter.

This small pocket filter consists of an oval filter case, measuring 5¼in., 3¼in. by 1½in. Inside this case is a filtering frame covered with pure asbestos cloth, offering a comparatively very large filtering surface to the water ; which cloth is indestructible, proof against fire, water, or acids ; and being a mineral cloth, cannot become impregnated by animalculæ. Round the filter case two drinking cups are telescoped. Of these, one is for the purpose of fetching the water from the river, the other to receive it from the filter.

Having alluded to the mechanical construction, it remains to say how the water is purified.

With the first water, put in one or two teaspoonfuls of finely-powdered charcoal ; Maignen's patent carbo-calcis is best. This soon settles evenly round the asbestos cloth, and the contrivance is ready for use.

The difficulty of cleansing—usually a drawback to filters—is entirely obviated here, and the facility with which this is accomplished rendered it one of the qualities for which Mr. Maignen received the highest honours from sanitarians, notably the Sanitary Institute of Great Britain, the National Health Society, and from the special Commissioners at the Fisheries. When the "Filtre Rapide" has been in use some time, say two months, the filtering frame is taken out, the old filtering medium or charcoal is easily removed under a tap and discarded, and a new supply as previously directed is put in at a cost too ridiculous to mention—probably not one farthing.

The fisherman has his packet of charcoal, and this, we may inform him, he will find also useful for other purposes. With it he not only purifies his drinking water, but he can also, by sprinkling a little in his frail, prevent and remove any and every bad smell arising from these baskets by their constantly being used for carrying fish. Not only that, if he puts some of this charcoal in the gills and mouth of his fish, and sprinkles some over them as well, they will remain fresh for a considerably longer time, and maintain their delicate flavour.

## THE DEE (ABERDEENSHIRE).—GRILSE FLIES.

### EVENING PATTERNS.

IN a former article on local flies for summer use, we observed that unless for fishing in very heavy water the irons on which grilse and salmon patterns are dressed can scarcely be too slender if sufficiently strong. We further noted that in a swift-flowing and "free-rising" river, such as the Dee, the advantage to the angler in possessing flies with nicely-tapered heads and spare, well-fixed hackles cannot well be over-estimated. To the same opinions we adhere in respect to flies for evening use. The only difference, bar a difference in pattern, that we would suggest is, that these lures should be ribbed pretty closely with broadish, flat tinsel. Fidelity to pattern and a desire to contribute toward success in angling leads us to make these observations.

The system of paying out a considerable quantity of line and winding in quickly is rapidly becoming popular amongst Dee fishermen. Especially in fishing for grilse when the river is anywise low and clear is this plan deserving of a trial. When the "giggling" fails (working the rod with a tremulous motion), this method of allurement is frequently successful. The Dusty Miller and Silver Doctor, sizes 7, 8, or 9, are two of the patterns with which the experiment can possibly be made.

As regards equipment, we may notice that in general we have been most successful with a fairly supple 16ft. rod. When a long cast is necessary, a rod of greater dimensions, if not too stiff, may be used with more success. By those who wade, however, these long casts are seldom required, provided the rod and line are nicely balanced. Grilse are so tender in the mouth, that working a stiff rod, and hooking one with a small fly attached to a weighty line, the chances are ten to one against the angler. Our reason for preferring a light rod is, therefore, obvious—the strain thereby being comparatively slight.

For grilse and sea trout fishing, the angler should be careful not to stint himself in respect to the quantity of cast line used. Five yards of nicely-tapered gut, though ample, is not too much. Personally, we rarely use less when the river is low and clear. The proportion of two to three yards, two plaited and three single, may be regarded as the most approved make-up. When evenly-tapered throughout, and stained a smoky blue, the cast is perfect. Attach the fly by the figure 8 process. These observations over, we are now in a position to describe

### NO. 1.—THE PEACOCK.—Limericks, Nos. 2, 3, 4, and 5.

Tag : Silver tinsel.

Tail : Double tipped, *upright* and proportionate with the size of the fly—for a No. 2 iron, about half-an-inch in length is a fair example.

Body : An equal proportion of orange and greenish blue mohair—the former to be closest to tag.

Ribbed : Flat tinsel (silver), 6 turns.

Wings : Strips from peacock's wing.

Hackle : Grey heron, a third-way down body, fairly longish likewise, and spare.

Shoulder : Teal (sparely) round about.

Head : Black.

Though regarded principally as an evening lure, the "peacock," if regulated in size, will be found a good all-round fly.

### NO. 2.—THE DODGER.—Limericks, Nos. 3, 4, 5, and 6.

Tag : Silver tinsel.

Tail : Golden pheasant rump feather.

Body : One turn orange, 2 turns greenish blue, and 3 turns clarety-red mohair —all fairly picked out.

Ribbed : Silver tinsel, 5 turns.

Wings : In strips, ginger speckled turkey, lightish toward the tips.

Hackle : Grey heron, very spare, and only a little way down the body.

Shoulder : Teal round about—a small quantity.

Head : Black.

Like No. 1, this fly is also suitable for general angling purposes.

### NO. 3.—THE SKIER

Works best late in the evening, and is described thus :—

Tag : Silver tinsel.

Tail : A bunch of tippet, double and upright.

Body : Black floss.

Ribbed : Flat silver tinsel, 5 turns.

Wings : Single strips of white turkey.

Hackle : Black, half-way up body.

Head : Black.

Limericks, Nos. 5, 6, and 7.

The above, with the addition of the ordinary grey heron and grey eagle, ranging in size from No. 2 to No. 5, form the best range of evening patterns for summer use.

W. M.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices : Point Flies, 2s. 6d. per Dozen ; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(ADVT.)

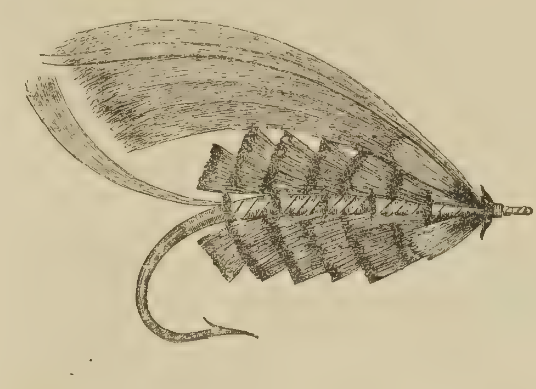
## ON THE DESCRIPTION OF SALMON FLIES.

BY MR. GEO. M. KELSON.

### MAJOR TRAHERNE'S PATTERNS *(continued)*.

### NO. 5.—TIPPETIWITCHET.

WITH reference to dyed hackles, it would be absurd not to admit they are cheap and convenient, and that, in many instances, we cannot dispense with them ; at least, until something more suitable is introduced. Fourpence per dozen all round cannot be said to be an exorbitant demand, but it is questionable whether in the end they are not more costly than "naturals." The numberless shades that may be purchased are almost unending in variety and tone. We may be told—and, indeed, it is often asserted—that the colours are fast, that, by some heoretical process, they must be so ; but after four-and-twenty hours' practical experience we invariably find this a mistake. Perhaps oranges and yellows under the influence of acids last longest ; but what can be worse than a washy blue, or generally better than a brilliant one ?—not that this applies to other colours, because a staring scarlet, for instance, is often better for a little toning down, except when the water is very clear ; then, as I have urged before, our colouring should be very bright.



The Vulturine guinea-fowl affords a splendid blue hackle, long or moderately short ; it never seems to fade unless exposed to the sun ; it plays beautifully in the water, and maintains its colour when in use. The light blue Macaw is a trifle more brilliant, but the fibre is coarser and consequently not so elastic in the water ; and the Jay is our recognised friend, but a little of it goes a long way, and flies are too frequently overburdened with this favourite feather.

If harmony were maintained there should be no difficulty for dyers to produce three or even four consecutive colours in a hackle ; say, for example, ½in. of golden yellow for the point, then the same space for red claret, following with orange and the rest blue. This feather would be a novelty, and one most useful to us ; it would save time, trouble, and expense, for a fly of such description would only take one instead of four hackles.

What is there that can boast of such a wide assortment of colour in so small a space as a salmon fly ? And, therefore, is not harmony of the greatest importance to us ? The metaphysician will speculate and advise there is no such thing as colour ; that what we call red is merely a sensation produced in the mind by a wave of light, in much the same way as a wave of sound is changed into a musical note. Some, indeed, assert that an atmospheric vibration produces simultaneously a sensation of colour and music, and consciously or unconsciously the one cannot occur without the other. Such theories, however, find little favour with the practical colourist. To him the harmony of colours is merely the result of combinations of primary, secondary, and tertiary pigments ; and he has little sympathy with the scientist who would rob him of the old red, yellow and blue primaries for the comparatively useless substitutes of violet and green, &c. The student should strive in such a way to arrange that, while each colour is shown to its fullest advantage, it is enhanced in beauty by proximity to the one next to it ; and this is equally applicable to seals' furs as well as hackles.

In reference to this week's illustration, "Tippetiwitchet" presents an attractiveness that can scarcely be surpassed. It is elaborately designed, and like those which preceded it, harmoniously coloured ; indeed, one other excellent specimen of our "Chief's" most golden and treasured fancies. It is, in short, a fly which will be sure to pique the curiosity of many a spring fisherman.

Perfection in fly dressing is the essence of an angler's life, and I have heard it said almost the end of his ambition. We can, however, only be led to perfection by the gentle hand of Time. None of our flies are infallible—if so, the charm of fishing would be irretrievably lost ; but we may often, when inventing, feel lifted above our-selves when we attain a point we had never reached before.

In describing this fly, which as heretofore I have been able to do without the aid of standard colours, I begin as usual with the

Tag : Silver twist, and light blue silk the same colour as a light blue chatterer.

Tail : A topping.

Butt : Black herl.

Body : In five equal divisions, each terminating with a black herl butt.
There are four tippets ; two (back to back) tied in top and bottom of every section as illustrated over the golden floss which, silk is the same shade as the golden toppings.

Ribbed : Oval tinsel.

Throat : Blue chatterer feather (as shown).

Wings : Five or six toppings, according to size of hook.

Cheeks : Blue chatterer.

Horns : Blue Macaw.

Head : Black herl.

I venture to state there is no fly in this valuable collection that requires more care in dressing ; the parallelism, and the coextension of the tippets being most important, and the quill of each one must be tied on so that the feather matches and rests gently against it mate. To effect this by mean manipulation after the body is finished—should any of them project—would be of no earthly use, because after a very few minutes' wear they would reassume their blundering and bulging position merely to skirt the water and scare the fish. It would be of no importance practically what deformity faultlessly-made Tippetiwitchets might assume by negligence in drying, because the bilateral symmetry of the tippets would be renewed in a moment when wetted again, on which occasion they would readily trim and fish as well, if not better, than ever.

In my opinion, the easiest plan for previously managing these tippets is to hold them at about an angle of 45 degrees flat, lengthways, and fibres upwards between the thumb and forefinger of the left hand, having its palm towards you. The quill of the feather is now projecting below for indentation by the right thumb nail which—to show its correct position—could carry a fourpenny-piece throughout the entire process.

The right hand is stationary, and pressing the quill against its forefinger with the thumb nail; and while so engaged, if the left elbow only is raised, say a foot, the dent for the tying silk will be properly shaped and completed; then it would be difficult to fix these feathers incorrectly from that point.

For the side of the hook facing you in the illustration, the upper or face of the feather should be held against the left thumb, and for the other side of the hook against the left forefinger.

Attention by the student to these and similar details would pave the way and make the high and pleasant road to perfection somewhat easier of access. The golden gates, not hopeless adamant to force, might thus be steadily stormed, and the goal reached by long laborious hours; and with his set purpose before him, this one great prize of his life would fall in time into his hands like ripe fruit, and then only would he understand with an unerring surety of perception that which is but unsubstantially revealed to others in their imagination.

Owing to the correspondence in former numbers of the Gazette, I will with pleasure give a description of the "Black Prince" next, which can be strongly recommended for dark, or porter-coloured water.

## ANSWERS TO CORRESPONDENTS.

A. B. C.—Try the "Marston" rod. The nearest firm to you which keep it in stock are Messrs. Watson, 308, High Holborn; they also supply a splendid line of the right size.

Oxonian.—We shall publish an Index shortly for the first six months of 1884, and provide a cover for this half-year.

C. Hartlepool.—Messrs. Hardy Bros., of Alnwick, send salted minnows in moss, and also small red worms by post at a very cheap rate. We fancy Mr. Cummins, of Bishop Auckland, also does the same.

J. H. W.—Of course it should have been printed "back hackle," and not "black hackle."

A. S. D.—Many thanks for the cutting.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### MATERIAL FOR WINGS OF ARTIFICIAL FLIES.

Sir,—The remarks of "W. P. H.," in your issue of June 28th, have opened up a matter that has long been in my mind—namely, the procuring of a suitable material, other than feathers, to furnish the wings of artificials. I cannot see that mica would fulfil the end in view.

In addition to objections already shared by pike-scales, and other materials now used, it has also those of fragility, want of buoyancy—being heavier than water—and want of pliability in a greater degree. The latter defect is borne by all materials now known that are really serviceable for the purpose specified, and therin lies the great objection there is to them.

I have frequently found that the extreme rigidity of some materials used acts as a deterrent to the penetration of the hook in practice, and I should say in some cases is answerable for the hook losing its hold, acting, as they must do, as a lever against the angle of penetration of the hook.

Many materials I have tried and cast aside as unsuitable, some the outcome of my own inner consciousness, and others wrinkles picked up from extraneous sources.

Pike-scales are certainly the best that have been discovered up to the present time, but even they to a certain extent have some of the disadvantages already enumerated. Thin paper soaked in copal, and dried, is good, whilst it remains intact, but it soon cracks at the junction with the body of the fly, admits the water to the interior, and then comes the inevitable whipping-off. The skin of mutton suet is good, but will not stand the flicking in drying. Very thin sheets of lanthorn horn have the same objection as before stated. Thin sheets of gutta-percha are good for the wings of large flies, like the stone-fly, but too heavy for the delicate duns. Strips of bladder, which have enclosed lard, can be improved upon. Goldbeater's skin is all right until it is wetted, when it curls up and loses all shape. Thin bits of transparent quill, flattened by soaking in warm water, and drying under pressure, are good for some of the land flies, and of this material the wings of the artificial house-flies which I sent you recently, and of which you were pleased to approve, were composed; but this even has its objections. What is really required is a substance which combines the lightness and buoyancy of the feather in the air as well as in the water, with the toughness and power to retain its shape, of the quill, together with the pliability, transparency, and texture of the goldbeater's skin, and the property of being easily stained or dyed, and this material, as far as I know, has yet to be discovered. Indiarubber may give it. I have tried the stuff from toy balloons, but did not succeed. It should be made thicker at the base than at the tips of the wings, and I see no great difficulty in working it out.

It will not pay an amateur like myself to take the matter up alone, but I am willing to join both technically and pecuniarily anyone inclined to solve this interesting problem; but until something better than is already known is discovered I intend to stick to the feather, which after all, though the best, is but a very poor imitation of the original.

I am given sometimes to tying my flies with hackle-tips, and in many cases would rather tie the fly buzz than add a thick heavy feather, that is presumably of the right shade for wings. The hackle-tips are good for sunk flies, but are too divided in the fibre for floaters.

I attribute the success of the "Francis" as a sunk fly to the natural movement of its hackle-tip wings, and have constructed a dark fly on the same lines, using the red instead of the blue hackle. I find this good for heavy water, and as an evening fly.—I am, &c., Bittern.

### ANGLING IN THE WITHAM.

Sir,—Having occasion to visit Lincoln in connection with the usual trip of our Association, I took advantage of it, and with a friend, ran down to Dog Dyke, a station on the river Witham, and tried for a few bream, and although not well provided with baits, we took some very fine samples—the largest weighing 3lb., next 2½lb., and several between 1lb. and 2lb. each.

Although we did not take any, I heard of several fine tench being hooked, one man's rod (a Sheffield angler) being completely smashed with a splendid sample of about 3lb.

Roach, dace, and perch are coming on nicely. My friend took a nice roach of 14oz. well over spawning. Small eels were a nuisance.

Although the river was low and fine, with careful fishing and good ground baiting, a good basket could be got; but I would advise fishing well out. Lob worm was the best bait, paste the next; we could do nothing with maggot.

As our trip is for the 13th inst., and this letter is for information of members uncertain about going, I trust you will kindly allow it to appear in this week's Gazette, and oblige.—I am, &c., W. R. Ridgway, Hon. Secy.

2, Albert-square, Manchester.

### PATTERN OF SALMON FLY FOR COLOURED WATER.

Sir,—To the excellent letter from Major Traherne last week may be supplemented the following remarks in further reply to "Eastern."

The "blue-over-black," a very old pattern of mine, has been a great favourite everywhere in dark or porter-coloured water. But "Ajax," a later one, and perhaps not so well known, I find more successful. Hook, No. 1 Limerick; tag, ⅛th of an inch silver twist, butted with three or four turns of a small coch-a-bonddu hackle. Place over the hackle on either *side* of the hook the white and black point of a jungle. The body represents that of a wasp, by using alternate hoops of black and of yellow chenille. There would be about three turns of each to the middle of the hook. Here repeat the coch-a-bonddu and jungle, using the former feather larger; then continue with the chenilles as before, and at the head place another coch-a-bonddu and two jungle; the former reaching the barb of the hook, and the latter running parallel with the shank of the hook, like the others. The jungles must be very small. I prefer the winged fly in spring; this one in autumn.—I am, &c.,

Geo. M. K.

### FISH IN THE LEITH.

Sir,—The following is rather an interesting fact, and may be worthy of notice:—

"Fish in the Water of Leith.—As indicating the increasing purity of this river, it may be stated that the workmen engaged in contracting the channel at Reid-terrace have caught a considerable number of roach of an average size. One of them, about 8½in., may be seen alive at the shop of Mr. Somerville, bookseller, Stockbridge."

It would be difficult for the "oldest inhabitant" of Edinburgh to remember a similar catch in that part of the water of Leith which flows through the northern suburbs of the city.

Not long ago the water, during the prevalence of drought, was little else than a chain of stagnant, offensive-smelling pools, which received the sewage of a very populous district. The pollution was finally removed by the introduction of large drain pipes which follow the course of the water. Since then the progress of purification has been slow but sure.—I am, &c., William Stephen.

12, Rush Hill-road, Lavender-hill, S.W.

### AN UNFORTUNATE DOSE OF CASTOR OIL.

Sir,—Can any of your readers kindly help me out of the following mess? Some months ago—I think it was in the *Field*—I saw it recommended as a good waterproof for new boots, to rub them well with castor oil. I did so to a pair of new long fishing boots made of the usual leather. The result was the oil thoroughly saturated right through the leather, made them in a filthy mess inside, and every time I wear them the water follows through where the oil penetrated, and I come home with the boots half full of water. I have tried filling them with hot water; it certainly drew out some of the oil, but they are still quite unfit to wear. If anyone can tell me of a cure I shall be much obliged.—I am, &c., W. G. Turle.

### GREAT YARMOUTH PISCATORIAL SOCIETY.

Sir,—Having, for certain reasons, retired from the Great Yarmouth Piscatorial Society, I beg to request that no further subscriptions to the "Potter Heigham Defence Fund" be forwarded to me as treasurer.—I am, &c.,

Alexander Mitchell, M.D., M.S.
(Late President and Treasurer of the Great Yarmouth Piscatorial Society.)
Burton House, Great Yarmouth, July 8.

### A CORACLE WANTED.

Sir,—Can any of your readers oblige by informing me where I can procure a coracle?—I am, &c.,

Conservative Club, Liverpool, July 9. X. Y. Z.

### A PISCINE MONSTROSITY.

Sir,—My object in writing at the present time is to inform your readers that I have alive a young trout (fario) with two well-formed heads attached to a perfectly-normal body. The operation of the gills in breathing (and not for eating and cleansing water, as has been stated recently by one of your correspondents), is somewhat heavy, but regular. I am not prepared to say whether this monstrosity belongs to my first or last delivery of ova, but it must at least be five weeks old. It cannot swim, but turns topsy-turvy when disturbed. I am not aware that it has had any food except what Nature provided for it at first, and as its food sac is now absorbed (only one food sac was provided), I am afraid the life of my curious bantling is fast ebbing away. I should be glad if some kind correspondent would write me how best to preserve and mount for microscopic purposes so interesting an object, and it would afford me pleasure to elicit whether it is on record of a fish, young or old, having been seen before with two heads.—I am, &c.,

Piethorne, near Rochdale. William Watts.

### "THE BLACK SPIDER" AND EXE FISHING.

Sir,—If your correspondent, "T. H. W.," who inquires as to the best hackle for dressing the plain, black spider, makes use of the black feather from the neck or back of the cock starling, he will find it kill well.

Stewart, in his admirable "Practical Angler," gives a high place to this hackle. He says, "We consider the feathers taken from the cock starling the most valuable of all to the angler. They have a rich, glossy black, which no other feathers possess, and we always use them in place of the black cock hackle."

Stewart's black spider is an easily-dressed fly, the body of brown silk with a few turns of the hackle down it. I have found it kill very well indeed on the Exe, particularly when the water is high and slightly discoloured; a gentleman tells me that he got with it one day this season eight fish, five of the larger ones weighing collectively 5lb.—a very unusual size for this river. It must, however, be invariably used for up-stream fishing. When cast down stream, the fibres of the hackle being extremely soft, are forced together, and no semblance of any insect is presented to the fish.

Owing to the extreme lowness of the river, there is little doing on the Exe just now, except at sundown, when a few trout may be had if the weather be favourable, and under such conditions, angling may be profitably pursued for the greater part of the night with large flies.

A fornight ago I saw some splendid fish that had been killed night fishing, the biggest weighing 3lb. It was taken with a floating green drake. Night fishing, however, is not always satisfactory just now. The hot, sultry days are often attended in the evening by heavy mists on the water, which effectually stop the rise of fly—and of fish too, or, perhaps, there is thunder hanging about. A week ago we had a thunderstorm, with seven or eight consecutive showers of heavy rain, which raised the water to a respectable stream, and the fish rose well while it lasted, but it went down again with the proverbial rapidity of a summer spate, leaving the river lower than ever,—I am, &c., R. A.

### FISHING NEAR WHITBY.

Sir,—In answer to query about fishing near Whitby, day tickets can be had on the Esk, to be obtained from most fishing-tackle shops, or from Mr. S. Wilkinson, 2, Grape-lane, Whitby. There are salmon, sea trout, and brown trout. From Whitby to Ruswarp the river is tidal, and from Ruswarp to Sleights there is a large mill dam, which is private; from there to Glaisdale the fishing is fair, though better for sea fish, and very good during a fresh. Salmon fishing is best in September. The Mirk Esk is a very pretty stream, and full of small trout; wading necessary. Above Glaisdale, I believe, there is another association on the Esk. There is good fishing to be had on the Derwent; apply to the Johnston Arms Hotel, Hackness. I never did any good sea fishing.—I am, &c.,

Manchester. J. A. Hutton.

## AN UNEXPECTED VISITOR.

Sir,—About three weeks ago a friend of mine residing at Richmond was sculling his wife and children up the river, and when near Pope's Villa a barbel, weighing about 2½lb., made its appearance in the bows of the boat. The fish was seen by the lock-keeper's man at Teddington, and ultimately given to a lad employed at Wheeler's boat-house, Richmond.

This rather unusual occurrence may probably interest your piscatorial readers.—I am, &c., W. R. Lyne.

66, Old Broad-street, E.C., July 8.

[Strong corroborative evidence as to the bad state of Thames water at the present time.—Ed.]

## DRY-FLY FISHING.

Sir,—I am of opinion that the idea is as old as the art itself; it was a favourite practice of my father when a boy, and he is now 81 years of age, and I have often followed suit. I consider a dark fly the best for this style, and better in a lake than a stream. Best feather for wing, water hen (Coote), and if killed at the proper season it makes a very buoyant fly, and will float on surface of the water a long time. It should be watched carefully, and as the line will bag you must strike instantly. All this arises out of the old, old story—fish are shy, and we keep on changing in hopes of finding out the sure-killing fly; but I go in for exercise, and if fishing a water fairly known to me, I would put on a cast of three flies I had confidence in, and keep flogging away, and in the long run it will lick all fancy fishing into a cocked hat. Excuse the length of this. I inclose stamps for another six months' subscriptions, and, trusting you are going on an angling tour soon, and will give us an account,—I am, &c., John Kinna.

Liverpool.

## PATTERNS OF SEWIN FLIES.

Sir,—If "Bittern" will send me his address to Junior United Service Club, London, S.W., I shall be happy to send him some patterns of sewin flies.—I am, &c., John P. Traherne.

July 7th.

## LLANFAIRFECHAN, N. WALES.

Sir,—Can any of the readers of the Fishing Gazette kindly give me information on the following points:—

1. Is there any trout fishing to be had within walking distance of the village of Llanfairfechan, N. Wales, during the latter end of September?
2. If so, what flies would be best to use?
3. Is there any sea-fishing to be had at Llanfairfechan?

Any information will be acceptable.—I am, &c., E. M.

## A CORRECTION.

Sir,—Mr. George Cording requests that you will allow me to state that the trees with which he supplied me were not "Carmichael," but indiarubber boot-driers, of his own manufacture. They are, I believe, somewhat different in construction from the article as advertised in your paper.—I am, &c., Chas. C. Capel.

Cray Fishery, Foot's Cray, Kent, July 6.

## SCOTCH FISHING NOTES.

Earn.—Rain has fallen here more or less heavily since the thunderstorm, and anglers are in high hopes of having splendid sport. The river is in fair condition, and the numerous streams in the neighbourhood have a good flow. On Monday morning, Mr. P. Jack had a basket of 12lb.

Allan.—During the past few days numerous anglers have been out in the expectation of good sport after the rains. The streams, notwithstanding the rain which has fallen, are still small, and consequently the takes have been light. On the Allan on Monday, Mr. Alex. M. Faichney, Forfar, had over five dozen excellent trout, with worm as bait.

Loch Awe.—Yesterday Miss Allen, St. Ann's, North Berwick, killed a very fine pike weighing 13lb., in one of the bays. It gave very good sport.

Loch Ard.—On Monday two parties were out, and had respectively 19 trout, weighing 17lb., and 23 trout, weighing 13lb. Several of the trout were close on 2lb. weight. Several other anglers were also out, but had but indifferent sport.

Loch Ericht.—Mr. Chambers and friend, Perth, has had, in four days' fishing, 37lb. trout and three Salmo ferox of 2, 5½, and 6lb. each. On Wednesday, Major Parker and friend, Perth, had 13lb. trout, two weighing 2 and 3lb. each, and a ferox of 6lb.

Loch Rannoch.—Last week the weather was unfavourable for sport. Some days the surface of the lake presented the appearance of a mirror, reflecting a lovely picture the livelong day. On other days the wind was boisterous and frequently a dense mist capped the surrounding hills. The elements being thus unpropitious, good sport was not to be expected, and the hopes of anglers were not very high. Notwithstanding, some nice baskets were made. Major Colquhoun, Edinburgh, from Bun Rannoch Hotel, killed a ferox of 5lb., and another gentleman from the same hotel captured a 3lb. trout. Mr. Duncan Macgregor, Mr. Gregor Macgregor, and Mr. John Morris, all of Edinburgh, were out on Friday from Bun Rannoch Hotel—the two former fishing from the same boat. Messrs. Macgregor landed 20lb. of trout, all with fly; and Mr. Morris, with the same lure, had 40 trout to his own rod. The weather, for the greater part of the day, was too stormy: and Mr. Morris, happening to be caught in an unlucky moment at a part of the loch exposed to the full severity of the wind, had to take shelter in a small creek, and thus lost four hours' fishing. The night fishing on the river is now at its best—the stonefly being out—and good takes were got by the parties from Edinburgh on Wednesday and Thursday nights between 9·30 and 11. On Friday night, Mr. Ellis landed a trout of 3lb. behind the hotel.

Lochleven.—Perth Club Competition.—This club competed for five prizes on Wednesday, it being their second competition on the loch this season. The weather was favourable from a fine steady easterly wind and a moist atmosphere, so that the club had a fair prospect of good sport. They had six boats engaged, with eleven competitors, who succeeded in capturing 45 trout, weighing 45lb. 3½oz., the prizes being gained as follows:—1, Mr. P. D. Malloch, 9 trout, 8lb.; 2, Mr. James Kaye, 5 trout, 6lb. 3oz.; 3 (in the same boat), Mr. James Fenton, 5 trout, 4lb. 10oz.; 4, Sergeant-Major Knight, 6 trout, 4lb. 7oz.; 5, Mr. W. Wilson, 4 trout, 4lb. 5oz. The heaviest trout was a very fine one weighing 2lb. 10½oz., and was killed by Mr. Kaye. Private parties gave in the following reports:—Messrs. W. Dougal, Singapore, and Mr. John Macdonald, Alloa, 11 trout, 10½lb.; Mr. Salt, 7 trout, 7lb; Mr. A. Smith, of Brighton, 15 trout, 14½lb. Dunfermline club competes to-morrow.

Loch Ericht.—On Tuesday the morning looked threatening, and few boats ventured out. The weather, however, improved in the afternoon and excellent sport was got. Captain Murray and Mr. Martin L. Martin had a basket of trout weighing 18¼lb., besides two Salmo ferox of 2 and 4½lb. Mr. Thursby, of Burnley, and Mr. Handsley had 8lb. of trout and one Salmo ferox—a beauty, weighing 10lb.

The Earn.—On Monday Mr. Cameron M'Leod, Edinburgh, and Mr. James M'Laren, Crieff, fished the Earn, and got a fine basket of 7 dozen. The anglers in this district are having splendid sport now.

## FIELD'S PATENT AERATING BAIT CAN.

The open season for pike fishing being fairly commenced, I may call attention to this useful Can which, as will be seen in another column, is now to be obtained by the public.

The Fishing Gazette gave a flattering notice of this ingenious contrivance, June 2nd, 1883. Since then its value has been practically tested, and baits confined in it have not only sustained a long journey without the least injury, but have been kept alive for three days without a change of water.

The law of Nature which suggested this invention, and the means by which the conditions of such law have been complied with, may be briefly explained as follows:—

The exposure to air is a provision necessary for the maintenance of life of all organised beings. Beast, bird, fish, reptile, insect, and plant alike, die if excluded from air. It might be conjectured that fish were an exception; but such is not the case. Place fish in water that has had the air exhausted by boiling, or by the action of an air-pump, and they will suffer at once, and soon die. Water absorbs and retains a considerable quantity of air. Fish breathe by taking water in at the mouth and forcing it out through the apertures on each side of the throat into the gill-cavities; the air contained in the water being, in its passage, brought in contact with the blood-vessels in the gills; and the oxygen—a component part of the air, which has the property of renovating the blood—being extracted, and carbonic acid given off in the process. If the supply of oxygen be cut off, or when all the oxygen that was in the water has been absorbed and its place taken by carbonic acid, the fish die of suffocation—just as man would do under similar conditions. A question here naturally suggests itself. If fish are air-breathing animals, why should they die when taken from the water if still exposed to the air? Simply because the gills get clogged for want of moisture, and the act of respiration cannot, therefore, be properly performed. If fish are wrapped in moist grass, or put under a tap dripping with water, they will sustain life for a considerable time, and would probably live still longer did they not exhaust themselves in repeated and ineffectual struggles to regain their natural element.

A fish that has been stunned by a blow on the head, but not killed, will live much longer out of water than one that has retained its vital energy.

All fishermen know that the best way to "drown" a fish—as it is commonly called—is to drag it down the stream in a rapid current. This is because the action of the water makes it difficult for the fish to shut its gill-covers when taking water in its mouth, and equally difficult to force such water out again when once taken in, through the gill apertures while going against the stream. The fish is, in fact, "out of breath," as we should say if speaking of a man or a horse. It is to avoid this difficulty in respiration that exhausted salmon, when seeking the sea, go down the rapids tail first.

But I have digressed sadly; let me return to the Can. Given that air when exhausted by respiration must be renewed in order to sustain life, let us now examine how far and by what means this condition is fulfilled.

The Can, which has been much improved since the first embodiment of the idea was exhibited in the "Fisheries," is now made on the Slapton Ley pattern. It has, that is to say, an inner chamber or cage of perforated metal, which can be either taken out altogether, or so far raised as to admit of baits being selected and extracted without the intervention of a bait-kettle net, and in either case without the loss of water.

This inner chamber has a lid capable of being fastened, and a wire handle, to which a piece of string can be attached.

The Can, in fact, forms two Cans, one within the other. The inner Can, on arrival at the fishing station, may be taken out and immersed in the water, thus forming a reserve reservoir for one's baits not wanted for immediate use. Such as are wanted for the time may be carried in the outer Can, to which a lid is also fitted when desired, and which then forms a second can complete in itself. In the handle of this outer can is fitted a cylindrical air chamber or bellows of indiarubber, worked by a compressor which passes through the top of the handle, and may be conveniently acted upon by the thumb while the Can is being carried. From these bellows a small brass tube is fastened down the side and along the bottom into a rose or distributor, having a series of minute holes in it. The air forced down the bellows passes through these holes and ascends through the water, producing a number of small bubbles, which are further broken up, multiplied, and scattered by the perforated inner chamber, thus enabling the water throughout to imbibe fresh oxygen in place of that which has been exhausted in the manner already described, by the respiration of the baits.

I should not be surprised if this invention, when applied to vessels of a larger size, might prove of use in Fish Hatching establishments, where delicate and tender young fry have to be moved from pond to pond. Certainly, in its present form it will be such a boon to many a travelling angler, that it is with the greatest pleasure I have at some length endeavoured to explain its value.

Geo. M. Kelson.

# NOTICES OF FISHING TACKLE, &c.

An Automatic Swimming Bait (Patent).—Miss M. C. Campbell, Fishing Bait Maker, of 2, Cecil-terrace, Maynard-road, Walthamstow, writes as follows:—"Sir,—Enclosed you will find one of my Automatic Swimming Baits, and I trust you will be able to notice it after a fair trial. Throw the bait into a basin of water, and you will find that it keeps its proper balance. The fins and tail move by the action of the water. Take hold of the loop and pull the bait backwards and forwards, and you will see the natural effect. The fins and tail become pliable almost immediately. You can make the bait heavier by squeezing it a few times under water. I make them in eight sizes, and painted to life to represent every kind of fish." We have tried this new bait, and have no scruples in endorsing all Miss Campbell says about it; and, although we shall not have a chance just yet of trying it with trout, we feel perfectly certain that it will be found to answer very well indeed if fished on fine stained gut and fished properly. It should be cast across and down stream and overhand like a fly, then brought back with a series of pulls and stops, as in working a salmon fly. The hooks are ingeniously hidden; in fact, we do not remember to have seen a more life-like deception, especially when in the water and the fins are working. It will be irresistible for pike—*i.e.*, if Miss Campbell can make as good a resemblance of a Thames dace as she does of a samlet. Miss Campbell also makes about fifteen other kinds of artificial baits.

A Vice for Fly and Tackle Making.—Messrs. O'Handlen and Co., of 48, Victoria and Temple-streets, Bristol, have brought out a most useful little instrument for those who make flies and other tackle requiring the use of a vice. It can be used in three positions—viz., upright, fixed to a table, or slanting to the right or left, and has the advantage of good wide jaws giving a firm grip. It is well spoken of by Mr. H. S. Hall, one of the best, if not the best, amateur trout-fly makers living, and this alone ought to be sufficient to recommend it. It is very well made and not expensive.

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,

JAMES OGDEN'S
**MULTUM IN PARVO FLY RODS,**
PRICE 21s.,

The enormous and increasing demand for which is a sufficient guarantee for the high estimation in which they are held by the leading anglers of the day.

All Standard Flies ordered, or dressed correct to pattern, will be despatched by return of post.

N.B.—NO CONNECTION WITH ANY OTHER PERSONS ASSUMING THE SAME NAME.

**A NEW PERFECT FLY AND SPINNING LINE.**

"IT'S SIMPLY PERFECTION." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES; FREEDOM FROM IRRITATING ENTANGLEMENTS; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by? Every follower of the art deemed GENTLE will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian SPORTING TIMES, says:—"I find the Acme more valuable than all others."
Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction, will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. SAMPLES, POST FREE, 2 STAMPS.

# RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

Add 30 minutes for Chelsea.
40 „ Putney.
45 „ Hammersmith.
50 „ Barnes.
55 „ Kew.
75 „ Richmond.
80 „ Twickenham.
85 „ Teddington.

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

FOR TIMES OF HIGH WATER AT LONDON BRIDGE.

| | Morning. | Afternoon. |
|---|---|---|
| Saturday, July 12 ... ... | 4.13 | 4.33 |
| Sunday, „ 13 ... ... | 4.52 | 5.11 |
| Monday, „ 14 ... ... | 5.30 | 5.52 |
| TUESDAY, „ 15 (ST. SWITHIN'S) | 6.14 | 6.38 |
| Wednesday, „ 16 ... ... | 7.3 | 7.31 |
| Thursday, „ 17 ... ... | 8.0 | 8.32 |
| Friday, „ 18 ... ... | 9.7 | 9.48 |

NOTE.—New moon, July 22; high tide, July 24.

## THE LOWER THAMES.

### GENERAL REMARKS.

It appears the heavy rainfall which accompanied the thunderstorms was only partial, and the river has received scarcely any benefit from it. There is a lamentable deficiency of water everywhere. The following interesting communication from an old practical fisherman will somewhat explain matters piscatorial:—"The boats from Hampton Court have all been doing well amongst the roach and dace. The takes daily have varied from eight to twelve dozen between Thames Ditton and Hampton Court weir. That reach of water is all alive with those fish, and the reason why that portion of the river is so thick with roach and dace is the weather being so dry, and the weir being shut in so close, there is no stream anywhere else. The fish collect themselves together where the water is deep and good. There are great quantities of chub and barbel to be seen on the Weir hill, but they will not feed, and nothing will be done with the barbel till we get some rain." Another old fisherman writes:—"You can see any amount of fish on a morning, and I am sure there will be some good sport if we could get a couple of day's rain and some stream. The water is quite warm, and the large fish do not seem to care about feeding in the middle of the day." The report from the tidal waters is, "No improvement in the water yet." It is satisfactory to know the bank anglers have been doing remarkably well. One of them at Teddington, at the end of last week, got four barbel weighing 18lb., and everywhere throughout the entire district of the Lower Thames this class of sportsmen have done some good business. The following reports will show what has been done:—

**Richmond.**—Christopher Brown, in six days, has made a total score of forty-eight dozen of dace. Job Brain brings up a total of twenty dozen of dace, one barbel, and three chub; and Henry Howard, as a result of four days' records, twenty-nine dozen of dace.

**Twickenham.**—George Coxen, during four days, credits himself with twenty dozen of dace and roach, one of the dace measuring $9\frac{3}{4}$in. Samuel Cole, in three days, ten dozen of dace, two barbel, and a bream of $3\frac{1}{2}$lb. Edward Finch, in the same time, sixteen dozen of dace, two bream, and one barbel. C. Miles, in two days, about seven dozen of dace. Joseph Debbins, in one day, five dozen of roach and dace, which he says were all good fish. John Spong, in one day, with Mr. Walker, eight dozen of roach and dace, and another day four dozen.

**Teddington.**—Joseph Baldwin, in four days, eleven dozen of roach and dace, and one barbel. The bank anglers have done well, and in one of the takes there were a couple of flounders, one measuring 8in. and the other 6in., the rest of the fish being six dozen of dace.

**Kingston.**—John Johnson, sen., in two days, five dozen of roach and dace, four barbel, twelve brace of perch, and six fine eels. John Johnson, jun., in three days, four jack, the largest 7lb., eight barbel, five chub, six dozen of roach and dace, and nine perch. James Wilks, in four days, ten dozen of roach and dace, six brace of perch, five bream, the largest 5lb., and one chub. The bank anglers have been getting about nine dozen of roach and dace in the day, and during the week some bream, barbel, chub, and perch, the largest barbel 6½lb. ; and at Surbiton the sport has been considerably better, including a bream of 5½lb., a barbel of 6½lb., and some good eels.

**Hampton Court.**—William Milbourne, in two days, sixteen dozen of roach and dace ; and John Smith, in six days, thirty-seven dozen of roach and dace, three barbel of 2½lb. each, and three perch, the largest 1lb. The bank anglers have been getting a good supply of roach, dace, and perch. At "Tagg's Island Fishery," in addition to about twenty dozen of roach and dace falling to the rods of the bank anglers, some fine bream, chub, and perch have been brought to grief.

**Sunbury.**—Messrs. Edward Clarke and sons, in two days, six brace of perch, and thirteen dozen of roach and dace. The bank anglers between Hampton and Sunbury have had some capital sport amongst the roach, dace, perch, chub, and gudgeon, and all good fish ; the roach going up to 1¼lb., dace 10in., and gudgeon 6½in., measured by one of the keepers.

**Walton.**—Richard Watford, in one day, four dozen of roach, and three bream. George Hone, one day, five dozen of roach, and three bream ; and another day twelve bream, one jack, and four dozen of roach and dace. John Hone, one day, seventeen bream, and four dozen of roach; and another day ten dozen of roach and three bream. Samuel Rosewell, during the week, twenty-two dozen of roach, seventeen bream, and two jack, weighing respectively 5lb. and 4lb.

**Halliford.**—Thomas Strudwick, during the week, makes a total return of twenty-two dozen of roach and dace ; and Edward Rosewell, in one day, six dozen of roach and two bream. The latter fisherman has succeeded to the business of his late father, "Old Tom Rosewell," and evidences great interest in assisting in the work of river preservation.

**Weybridge.**—Herbert Curr, in one day, with the Rev. H. Lewis and friend, got a fine pike of 9lb. in splendid condition, and three dozen of roach and dace ; and another day, with the same clergyman and his son, four dozen of good roach and dace, and a fine perch. Captain Wilmore and Mr. Burrows in bottom fishing caught a trout of 1¾lb., which was at once returned to the river. Mr. William, in fly fishing, got one chub of 1¼lb., and another of 2¾lb.

**Shepperton.**—F. Purdue, in one day, seven dozen of gudgeons, one jack, and three perch ; H. Purdue, a jack of 3lb., and ten dozen of gudgeons ; W. Rogerson, fourteen dozen of roach, six of the best fish weighing 1lb. each, and a perch of 1½lb. Above the lock Mr. Meyer, in one day, fishing with James Haslett, got four bream weighing 12lb., which were weighed in at the Piscatorial Society.

**Chertsey.**—James Poulter, in one day, seven dozen of roach, one chub, and eleven bream. The bank anglers have had some good sport between here and Penton Hook, and it is a favourite resort for the better class of anglers who fish from the banks.

**Staines.**—Charles Hone, in one day, three jack, which were put back again, and 9lb. of roach and dace ; J. Keene, jun., has a final score of twenty-three dozen of roach and dace, and four barbel ; Mr. Clarke, one barbel and one roach ; Mr. Smith, four barbel and one chub ; and G. Osman, one barbel, one roach, and a few dace. The barbel are showing themselves at Bell Weir ; Mr. Simmonds in one day got fifteen, and Mr. G. Rowles nine.

## UPPER THAMES.

Rain has been coming down for twenty-four hours in the proverbial "cat and dog" fashion. The state of the elements will materially improve the river, and render fishing pleasurable and lucrative. At Henley, since the regatta, fish would not bite at all at ordinary gentles, lob worms, or paste, in consequence, it is imagined, of their tastes being vitiated with pâte d'homme, lobster tails, and the thousand and one luxuries thrown away on such occasions by the Upper Ten. However, a day will come when Henley fish will be glad to accept the tail of a lob, instead of the ditto of a brother lobster, and then the human race will have the pull of them. At Hambleden three trout have been had during the past week, and at Hurley Messrs. Lever, Corneley, and Bogley have been doing execution amid the roach. At Marlow, a correspondent this morning tells me, that Mr. F. Francis has taken with a fly a pretty trout of 3½lb. Mr. F. has for some time run Father Thames down as a fishing river, and has sought "fresh fields and pastures new," Winchester way ; but this capture will, I hope, set him itching for his old love. Mr. Anthony, of Marlow, has kept his eyes on a 5lb. barbel, and Mr. Scott a pretty trout just under 4lb. The river, after this rain, will become in fine all round trim, and happy will be that man who has his quiver full of lob worms, for that will certainly now be the sort of bait to meet with success.—MARLOW BUZZ.

### Goring.

Water in good order for jack and perch fishing. Roach biting very well at night. We took two dozen of roach and dace in two hours. Gudgeon biting very well. One day six dozen of gudgeon and two dozen of perch. Some of the roach going over 1lb. ; largest dace ½lb.

### Datchet.

The fishing has been of a very uncertain kind, with the exception of the dace, and they bite beautifully. The barbel only fall to the lot of the very patient. Very heavy rain fell here on the 6th ; it has not affected the river in the least. R. F. Lines, Esq., on the 6th, some roach and dace, and a carp 1½lb. ; on the 7th, with me, three barbel and a chub, good fish, and some dace. Two patrons, with J. Hoare, on the 8th and 9th, a good bag of dace and roach, and a barbel or two—in all 30lb.

### Docket Point.

Missed the post last week. I have but one day to report—six bream, one perch—perhaps owing to price. Barbel and bream fishing wants doing. There are plenty of gentlemen know that I fish with not only ten-shilling-a-day, but more—I often get what gentlemen would begrudge the price for a day's barbel fishing. I know plenty ready to come, and I hope to send you more lively news next week. I commenced the fishing last season with the ledges and finished the same ; did but three days' jack and perch fishing ; but if one wants roach fishing six or seven days I am on the job. A few gentles and brand does not cost much, and there is no baiting for three days beforehand. Believe me, there is more to see to at the present time than what a fisherman gets for a day's fishing—I mean some rowing boats and launches, which go as fast as ever. Saturday's fishing with Mr. J. L. Meyer—five bream, one chub, put back two dozen roach and dace.—J. HASLETT.

### Thames (Oxford).

Fish, despite the unusually hot weather and the awfully low water, are feeding well. Meal worms, near a flour mill, and crayfish tail are unequalled for either roach or chub. With a fly, Pennell's sweep, the black and red palmers, and the black gnat and red hackle are about the best for chub or roach. On Thursday, out of a nice bag of 25 chub, Messrs. Kelson and Cooper had three fish over 2lb. On Monday, Mr. L. Kelson bagged two at Pinkhill, which scaled 5lb. On Tuesday, Mr. Kelson, at Pinkhill, had several chub, the best 2½lb., and a bleak measuring 6¾in. by 2¾in. On Wednesday, Mr. G. E. Simms, at Benson, landed a fine chub weighing 3lb. on Nottingham roach tackle, with a fine-drawn gut bottom and a No. 10 hook.—CHERWELL OTTER.

---

### Bure.

From what I can gather, the same tale holds good of this river. Any number of fish can be caught, but they run exceptionally small. Here and there we hear of good catches of bream, especially on Wroxham Broad by those whose lungs and constitutions will allow them to be out in the open all night, and who commence with the dawn and leave off at breakfast time ; also at Acle (Host Rose), good bream fishing is to be had at the present time, and from a report in a local paper this morning, I find that a club, with the somewhat musical and feline title of "Cat and Fiddle," were at Horning Ferry the other day, and they had comparatively good sport, considering the thin character of the fish which are usually caught here. The season has now fairly commenced for the numerous clubs of Norwich to hold their annual matches and outings, and as they number upwards of 50, some lively proceedings at the various fishing stations may be looked for during the ensuing month or two. I find the Champion Club has fixed upon Ranworth for the exciting struggle for their beautiful challenge cup and other prize, whilst the Old Norwich Angling Club still clings to their old love, the "swift-flowing Yare," and have decided to hold their annual match at Buckenham, on Tuesday, August 12th. Prospects on Bure were never better. The storm of last night was very partial, but at Norwich it was short and sharp.—ROBERT MOLL.

### Ballynahinch.

Since last report nothing has been done on above, only a few trout, which are now making their appearance plentifully, wherever they can get into. We have no change as yet, and water is very low.—WALTER BLACKADDER.

### Chichester.

With weather changeable, sport has, during the week, been very unsatisfactory. Takes have been small, and fish small also. Some fine eels were landed with small roach on Tuesday. Water in excellent condition. Weather stormy.—GEORGE F. SALTER.

### Dove.

We have had showers nearly every day this week, but up to the time of writing (Wednesday evening) our river has not been materially affected either in height or colour. The land had become so hard and cracked that it has sucked in greedily every drop of rain that has fallen. However, if the wet continues much longer we shall have a great improvement in the condition of the river. I never knew the water want freshing up more. Old rodsters say it has been one of the dryest summers they ever remember. A heavy storm is falling as I write. This will beat down myriads of flies on the surface of the river, and there ought to be a good rise of trout at them during the next few days. The caterpillar and the coachman are still the best evening lures. The dishes since my last have amounted to about five brace per rod. There has not been much doing in the coarse fishing line. Anglers are awaiting a good rise of water.—THE SPLODGER.

### Exe and Barle.

The rivers are now exceedingly low ; consequently fishing by day is difficult and almost at a standstill. The evenings are, however, taken advantage of, and some nice baskets are made from about 8 until 11 p.m. The coachman, white moth, and red palmer are the best killers. Salmon fishing is quite out of the question, and will be until after heavy rain has fallen.—C. W. NELDER.

### Exe (Tiverton).

Showers have been frequent but not enough to satisfy the thirsty land, and the river continues in the same state—very low ; consequently very little is doing except of an evening, when some very good fish have been taken by those who have fished late. The flies that have taken best are the red ant and fern web.—W. MUDFORD.

### Ilfracombe.

Sea Fishing.—There has been a little thunder this week, so the fish did not bite so free ; however, several boating parties have been fishing off Popple Cove, and their average catches of bream, whiting, and codlin have been about 20lb. each boat per tide ; a few pout, weighing about 1½lb. each, were caught by rod and line. Fishers from the Flat Rock.—Several lobsters have been brought in from the pots. The fishing from the pier-head and jetty for rod and hand-line fishers, rather slack. Weather at present very fine.—E. COMER.

### Lark and Cam.

Bream feeding well now in these waters. Mr. Howlett, of Newmarket, took on Saturday last, in the morning, about 35lb. A tremendous thunderstorm coming up stopped the fishing ; ground bait grains, bait with lobworms. Dace are well on in the beautiful little Lark stream. Three gentlemen, on Monday, landed over 20lb., bait gentles. The greatest curse anglers have to contend with just now are the weeds coming down stream in acres; several good chub have been taken near Mildenhall, and some very fine perch at Workington, on the river Lark—Mr. Howlett landing one of 2lb. Netting is quiet at present owing to the exertions of Mr. W. Owens, of Mildenhall.—G. W. MERLIN.

### Lodden.

The weather having been so excessively hot and bright, and the river so exceedingly low, trout fishing has been completely "nihil." On Saturday last, fishing for nearly four hours, only rose one trout, but chub and dace were taken at nearly every throw. On Sunday we had several very heavy storms, each lasting for some time. The same kind of weather still with us, but very bright and hot between the showers. The river is but little affected at present with the downfalls, the earth being very much parched ; but the trout seemed to have benefited thereby, as they are rising splendidly ; many have been seen of 2lb. weight and upwards, so we anticipate good sport.—F. GOSDEN.

### Lea.

At last I have something worth reporting, and that is we have rain ; for it rained on Sunday, again on Wednesday very heavily, and to-day has rained all day, and in consequence the river is coloured a beautiful colour. It would do no harm if it kept on two or three more days, as the fish have too much natural food, and a good flood would cleanse the weeds. Mr. Buller has been at it again (netting), and fined 10s. and his net condemned, the net being worth £4, the Hertford Bench giving him the tip that they meant enforcing the laws in this respect. I hope to be able to give you some good takes next week. The natives have been using the caddis with good effect. P.S.—Is a license required for letting a punt on the Lea for fishing purposes ?—PIPE CLAY.

### Leicester.

Since Friday we have been visited by several very violent thunderstorms in this locality, considerable damage being done. Rain was greatly needed for the waters, and, besides putting anglers in good spirits, has caused the fish to bite more freely. In the local society's waters some rare sport has been had during the last day or two, more particularly among the roach, Messrs. Starkey, Bird, Gladstone, Real, and Mee, having on several occasions well filled baskets. Mr. Gladstone one day took eighteen roach, weighing 10lb. ; and on Tuesday last this angler had a good creel of fish, among which was one fine roach, weighing 1½lb. A large number of anglers have also had some good sport with the perch from the brook at Aylestone. Pike fishing remains quiet, a few small ones only being taken, the largest that came under my notice being about 4lb. The waters are now a good colour. The best fish have been taken with the straw-worm and may-grub. The rains have greatly benefitted the waters at the Wreake, which, until the downpour came, were very slow. Sport has, upon the whole, been fairly good. At the time of writing (Thursday night) rain is falling sharply.

### Lugg and Arrow (Leominster).

These streams are now in splendid order for the angler ; they still keep very low, but in good fly-fishing condition. The fish in both these streams are rising well at the fly ; there have been several very sharp showers in this district, but they made little or no difference to the colour of the water, and only made the fish bite better. The most killing flies at present are the blue dun, orle (in low streams), and Marlow buzz, and the anglers have been quite busy with them, and good baskets have been taken. Some capital sport was had in the Lugg, when a gentleman landed a splendid basket of fine trout with the orle and blue dun. In the Arrow, the same day, some very fine fish were taken with the blue dun. On Saturday a good day's sport was had by a gentleman in the Arrow, he landing, with the Marlow buzz and blue dun, a fine basket of 20 good fish, in fine condition. The Lugg was tried, and a very nice lot of trout was landed with the blue dun, averaging ½lb. each. Some very fine fish were landed by a gentleman on Monday, in the Arrow, with the orle. In the Lugg, the same day, some good sport was had with the blue dun; one rod landed a very nice basket of good fish, scaling 5lb. the lot. On Tuesday the fish were rising freely at the fly; a gentleman tried the Arrow with the Marlow buzz, and took a splendid lot of trout. Good sport was had in the Lugg the same day, and a good dish of trout was taken with the orle and blue dun. The Pinsley is in good fishing order, and the fish are rising well at the fly. Some very nice trout were taken on Saturday evening with the blue dun, and a good dish was taken on Tuesday. Some good fish have been landed in the Ivington waters, and some nice ones in the Shobdon waters.—Gwynne.

### Medway (Tunbridge).

Anglers, above all people, should be thankful for small mercies. At last, after many days, we have had a shower, though not enough to make a drizzle. This, however, makes it look more like fishing, and no doubt we shall soon have the bream lovers busy, as well as better swims.—A good bag or two has been taken at the ballast pit during the week.—Ye Medway Water Rat.

### Ouse (Huntingdon).

The water is in good condition for fishing; but nothing has been done lately but a few dace until this morning, the 14th. The bream have been off the feed until this heavy rain has fallen, which caused them to feed a little more. A nice take of bream were brought to land, but the weight I have not heard. Since my last report it has come to my notice that one gentleman took, on the last day of June, 35 chub, the largest weighing 7½lb. If the weather continues favourable, the bream will be on the feed well.—H. Rout.

### The Ouse and Ivel (Blunham.)

The late rain has very much improved the state of the waters, and some good takes have been had. Bream are feeding freely.—T. E.

### The Shannon (Castleconnel.)

The following fish were landed during the week:—Mr. Henry Hodges, on his Doonass fishery, 2nd inst., one salmon 24½lb., and two peal 6lb. and 7lb.; 4th, two, 6lb. and 5lb.; 5th, one salmon, 16lb.; 8th, one, 20lb. Mr. E. T. Ingham on his preserves, 3rd inst., one peal. 8lb.; 7th, one salmon, 28lb., and three peal, 6lb., 6½lb., and 8lb.; 8th, one, 8lb. and one 5lb. on the World's-end; 5th inst., Mr. T. B. Cartwright on his Newgarden fishery, 2nd inst., one peal, 6lb.; 3rd, four—4lb., 5lb., 6lb., 7lb.; 4th, two—5lb., and 6lb.; 5th, one peal, 5lb.; 7th, two—5lb. and 8lb.; 8th, one, 4lb. Mr. W. O. Bell Irving and Mr. Francis Joynson, on Prospect and Landscape fishery, 2nd inst., five peal—3lb., 4½lb., 5lb., 7½lb., and 8lb.; 3rd, two—5lb. and 5½lb.; 4th, one, 6lb.; 5th, one salmon, 11½lb., and two peal 6½lb. and 7½lb; 7th, two—6lb., and 6½lb. Lord Massey on Hermitage, 2nd inst., two peal—5lb. and 6lb.; 3rd, one salmon, 12lb.; 4th, two peal—5lb. and 8lb; 6th, one, 6½lb., and one salmon, 13lb.; 8th, one peal, 5½lb. Mr. G. A. G. Rush on Woodlands, 3rd inst., two peal—6lb. and 7lb.; 6th, three—4½lb., 5lb., and 7lb.; 8th, one, 8lb., and one salmon, 10lb. We have had a good spill of rain, which, no doubt, will improve sport. Trout fishing pretty fair. Perhaps it may be worth noting that a lamprey eel was hooked and landed on a trout fly black rail by a workman in the employ of Mrs. Phelps, Water Park, named Peter Hastings; it weighed 2lb.—J. Enright and Son.

### South Level Cut (Littleport).

Not much to report again this week. Roach still dead off feed, and bream fishing very uncertain, owing, as much as anything, to large quantities of floating weeds, which bother the angler awfully. When the wind has been sufficiently strong to blow them either one side or other of the river, there has been a chance, for several fly-anglers who have been down have done fairly well. Mr. Ward, Littleport, has also again had two or three fair takes, 7 good bream falling to his rod yesterday. Mr. T. South, Littleport, has also been among them. On the 7th, he got six, four largest going 3½lb., 3lb., 2lb., and 2lb. Mr. Tuck, Newbarns, Ely, got two very fine ones about 4½lb. and 3½lb. respectively. On the 8th, Mr. T. South again got five bream, 3¾, 3½, 3, 2¾, and 1½lb. respectively.—Charles South.

### Teme (Tenbury).

This stream is still in good fishing order, being rather low, but in splendid condition for the fly. The fish are sporting freely, and good sport has been had, and some very fine fish have been landed with the blue dun, Marlow buzz, and red spinner, which are the best flies on the water at present. At the latter end of last week a gamekeeper in the employment of a gentleman at Ashford was fishing in the water near to Newnham Bridge, below Tenbury, with the blue dun, when he hooked a fine trout, which turned out to be 1½lb. in weight, when a pike struck out from the side of the river and boldly seized the trout, which it held in its jaws for some seconds. The sight of the keeper no doubt caused it to relax its hold; but the body of the trout bore several traces of the teeth marks of the pike. Fishing on Friday in the water near Easton Court. a gentleman with the orle took a good basket of fine trout. On Saturday a good day's sport was had below the town with the fly; one gentleman landed a dish of 4lb. with the blue dun, and another nice dish was taken with the Marlow buzz. The water was tried on Monday, and a very nice lot of trout was landed above the bridge with the blue dun. Good sport was had on Tuesday near the bridge; the fish were sporting freely with the blue dun and Marlow buzz. A gentleman landed a very fine lot of trout, averaging from ½lb. each. A gentleman fishing the water from Little Hereford Bridge down, landed a fine lot of trout with the blue dun. The Rea and Kyre are both in good fishing condition; the fish are rising well at the fly. A good dish of trout was taken in the Rea on Monday. Some very nice fish have been landed in the Kyre this week. In the Ledwyche some very nice fish have been landed with the fly.—Worcester.

### Teme (Ludlow).

This river and all the tributaries have wonderfully improved, and are now in first, class condition for angling. The showers of rain that have fallen at intervals have been highly beneficial; particularly the smaller streams, which sadly wanted rain. I heard of a gentleman at the end of last week, who caught no less than 62 fish, principally trout, in Teme in one day with the fly. On Friday, a gentleman visiting Ludlow on an angling excursion caught 9½ brace with the blue dun. A gentleman down the Steventon waters on Monday caught seven nice trout, two chub, and six fineperch with the worm and maggot. On Monday, a mere boy, named Lowe, landed 11 trout from Teme with the blue dun. A well-known fisherman from Corve-street, caught up the Ony at the end of last week 20 grand fish. On Thursday, while passing over the gridge to Craven Arms, by Stokesay Castle, your correspondent saw some gentlemen and keepers netting the river Ony for "rough" fish. They brought up with the nets four large pike, one of which weighed nearly 8lb., the others ranged from 3 to 7lb. each. The nets brought up some very fine chub, and a quantity of dace, also large numbers of trout and grayling; these latter were carefully returned to the stream, none the worse for their visit to *terra firma*. One of the gentlemen appeared to possess an amphibious existence; even while we were looking his foot slipped, and he disappeared in the Ony, but quickly returned to Mother Earth none the worse for his compulsory baptism, and laughing, resumed his netting. Some few fish have been caught up the Clun this week, one gentleman on Tuesday securing some 8 brace of fine trout. We hear of some very nice fish being taken from Letwyche Pool.—S. Ludlow.

### Tweed (Berwick).

Since last writing there has been a considerable fall of rain; but the ground was so dry that it absorbed it nearly all. The fresh there has been has brought down much weed, causing the net fishers a deal of trouble. A much greater fresh is what they would like, to effect a clearance. The salmon continue to be few and far between. Little or nothing is being done with the rod as yet. The herring fishing has now commenced, putting more life into the "good old town of Berwick-on-Tweed."—J. J. H.

### Trent (Lower).

A number of anglers again were out on the Trent in the neighbourhood of Dunham, Torksey, &c., and though the weather influences were against them, here and there were fair takes to be found. Eels and flounders afford some good sport at places, and some anglers are taking roach, dace, and bream fairly. A gentleman early in the week at Dunham, caught a pike of over 3lb., as well as four bream nearly 3lb. each, along with a lot of smaller fry. Some few barbel have been also taken towards Carlton.—Trace.

### Trent (Newark).

Sport during the past week has been a little better; bream, roach, dace, eels, flounders, &c., have been taken in very fair quantities, the worm being the most successful bait. One angler had 17lb. of very nice bream, in fact, there has been nothing to grumble about these last few days. The long hoped for fresh is now coming down the river, the water being considerably higher and very much charged with colour, and as we have had a steady downpour most of to-day, I should not wonder, in fact, I hope, that the river will get a good cleaning out, which will be a very good job. The worm will be found the best bait under the present circumstances; but the angler must not be disappointed if he finds the Trent in high flood by the end of this week.—The Trent Otter.

### Trent (Nottingham).

On Wednesday there was a most refreshing downpour of thunder rain; but the river, so far as this district is concerned, remained very low and clear. Anglers, during the week, have been unusually numerous, and in the upper reaches first-rate sport has been met with amongst dace and chub by the wielders of the fly-rod. A few barbel have been secured with the worm in the Shardlow length, and reports as to these fish feeding are more favourable from Willington and Burton. On Monday a dead salmon weighing 25lb. was taken out of the river at Hazleford by the ferryman, and it is feared it had been blown up bp the dynamite fraternity. I learn that two pike of 9lb. and 5lb. have been caught in the Fleet, at Besthorpe, and that on Saturday two Nottingham gentlemen, Messrs. Bown and Butler, landed 4st. of bream. Salmon have been seen disporting themselves above Kelham-bridge, but the subscribers who have tried for them have met with no reward. Salmon are still plentiful at Weston; but pending a rise, there is, in this respect, a dearth of sport. A man named Joseph Benson, of this town, has been fined 40s. by the Southwell magistrates for attempting to catch fish during the close season in the river at Hoveringham. At the same time an information was laid against a water-bailiff named Foster, who was a witness in the case, on the ground of his having committed perjury.—The Man at the Clubs.

### Upper Test.

Water very much improved since the rain on Sunday, and fish are more on the feed. On the 8th they rose off and on all day, and were not so shy or particular as to fly. I killed three brace about 1¾lb. each, some on red quill gnat, others on olive dun ribbed with gold wire. I had to knock off at 5 o'clock in the evening. They rise like mad from about 7.30 to 9; after that a brace or two are always to be had by fishing across and down stream with two big flies—"adopted" and large ledge are very good. Of course if there is any moon, you require either a white moth or coachman, taking care to fish the deepest and quietest water, particularly the end of a bunch of weeds, and close in to your own bank. Avoid all bushes, ledges, &c., as once hung up you are done for. A long line is not necessary; strike from the reel the instant you feel the slightest touch. This style of fishing is not half practised enough—there is much more excitement in it; you do not know what you have got on till it is in or near the net, and with a little care there is no necessity to hang your line up. I believe it is called streaking.—Hampshire.

### Witham.

The prospects of the angler in the Witham will have been much improved by the heavy downfall of rain which has come since Tuesday last. Up to this the water has been low and bad to reach, and the flush which will naturally follow will put the fish freely on the move so soon as the electric influences which have accompanied the storms have been expended. During the earlier days of the week anglers did not, as a rule, do well; but here and there there were some decent takes. The best were made on the drains, and particularly on the Lowbridge drain, where some capital bream were landed. Several anglers caught bream up to four pounds each, and one named Wilde, of Sheffield, exhibited a fine specimen of 6lb. 2½oz., taken near to Boston. Mr. Smith, of Sheffield, had in his basket four bream, which scaled nearly 18lb. Some very nice tench were also taken in the Lowbridge drain. Roach have now got into good condition. Maggots and wasp grub are pretty generally used in this district now by the visiting anglers, but home anglers have a partiality for local paste and other baits.—The Yellow Belly.

We have been favoured with the presence of several of our old friends from Manchester, Sheffield, and other places, some of whom have had very good catches, more especially two gentlemen from Manchester, who landed some very fine bream weighing from two to three pounds each. Both perch and roach are now beginning to come on feed. I would advise anglers to provide themselves with worms.—Packet Hotel, Dogdyke.

### Walton-on-Thames.

A lot of rain fell here yesterday, which will improve the fishing very much; the barbel are biting more freely, the bream are very numerous, and of larger average. Friday, 4th inst., J. Hone, 6 bream and 2 doz. roach; on the same day G. Hone, jun., 3 bream and 4 doz. roach; on the 5th and 6th inst. J. Hone, 17 bream and 3 doz. roach; G. Hone, jun., 12 bream and 8 doz. roach, 2 pike, one 6½lb. Monday, 7th inst., J. Hone, 6 doz. roach; G. Hone, sen., 12 bream; G. Hone, jun., 2 bream and 6 doz. roach. Tuesday, J. Hone, 3 doz. roach. Thursday, J. Hone, 5 bream and 4 doz. roach. Watford has had some large baskets of fish, but details have not been reported. The anglers staying at the Swan Hotel have had some large baskets and several nice trout. On Thursday, a gentleman fishing near the gas works took a nice barbel of over 6lb., fishing near the bank.—Goldfinch.

### The Wharfe (Yorkshire).

At last the welcome rain has come, and the hopes of anglers are in the ascendant. A terrific thunderstorm burst over Leeds this afternoon (Wednesday), such a storm as I never witnessed before, and devoutly hope shall not again for some time; the lightning fairly blazed on all sides, and the peals of thunder were simply deafening, while the rain, mingled with large hailstones, descended in sheets. During the week the bottom fishers have had good sport with the eels, but excepting in the reservoirs, where one or two good dishes of trout have been taken with maggot, there has been little done in this district. As I write it is still raining heavily, so that I anticipate a good fresh down the Wharfe in the morning, when, no doubt, some splendid dishes of trout will be taken.—Francis M. Walbran.

### Wye and Derwent.

We have had a very great deal of thunder; rain fell during the past week. Yesterday (Wednesday), Derbyshire was visited with one of the severest thunderstorms ever known to the oldest inhabitants living, the lightning doing a vast deal of damage all over Derbyshire, such as killing a great quantity of cows, &c., splitting trees, and knocking chimneys down and the roofs off houses. Both the Wye and Derwent to-night (Thursday), have a nasty white limestone-coloured water on them. The Derwent is rising a little, so no doubt we shall have a flush before long. The bottom fishers, all up and down the Derwent, have killed a fair quantity of fish to-day, mostly with wasp grubs and maggots for baits. Mr. Smith, Matlock Bath, has killed a set of over 3lb. this morning, by angling with wasp grubs for baits. In iact, I hear of a lot of eels being killed on night lines lately. Sport during the week, with the artificial flies, has been very fair, and baskets up to nine brace per angler have been made. The killing flies have been bumbles, yellow dun, ash dun, and black gnat. F. C. Arkwright, Esq., of Willesley Castle, Cromford, has been having the Derwent netted below Cromford last week, on purpose to get the pike and coarse fish only. They killed two pike, the largest fish being 9¾lb., some chub of good size, and a number of roach and dace, the grayling and trout being returned to their native element again. Fishing prospects are looking first-class for next week.—George James Eaton.

### The Yare (Norwich).

As I fully expected when I wrote last week's report, sport has been first-rate at nearly all stations on this river. From Brundall, both at Messrs Flowers and Co., and also at Coldham Hall, reports of an exceedingly encouraging character have reached me. Without going into names or details, suffice it to say that both roach and bream are now sharp on feed, and nearly every party who understands these peculiar waters are successful. If friends from a distance visit these waters and rely on their own experience, they will, in all probability be disappointed, as fishing here requires some local knowledge, and as the season is now fully in, I shall be pleased to answer any inquiries, and to give any information to the best of my ability to intending visitors, always provided they inclose *stamped* directed envelope. Braam are now being caught all the way down at the rate of from 4 to 6st. per boat, and two friends of mine fishing at Cantley on July 10th, had a very rare and interesting incident occur whilst angling. A gentleman, by name Mr. Lapthorne, was suddenly hit by something in the back of the neck whilst bream fishing from a punt, and to his and his companions' astonishment they found it was a trout of nearly 4lb., which had jumped into their boat. The prize was exhibited in Mr. Lapthorne's window on Thursday, July 10th. From Buckenham the reports are first-rate, both with regard to roach and bream, and I should advise all those who contemplate a visit to Norfolk to come as soon as possible, for the prospects were never better. A heavy storm, accompanied by sharp lightning and thunder, visited this district last night (Wednesday), but it was not enough to disturb angling. Eels were picked up next morning, also pike, near Norwich.

### Yore (Hawes).

My long silence has been caused by want of matter that would interest your readers. I have now good news for them. The weather has broken, and there is now every prospect of sport. The river came out on Thursday, and again on Friday. A friend of mine took 17 brace on Friday, and 3 brace on Saturday morning. I was out myself for about three hours on Friday evening, and got 6 brace. I do not hear of any large fish being taken. The "cuss" is on in millions, and the river seems literally alive with small fry. I am glad to note that a good many spiles have been put into the river during the dry time, but unfortuaately not soon enough, as I am of opinion many of the finest holes were cleared out by the netting fraternity; but better late than never. Weather dull. Barometer falling. Thermometer lower than it has been for some time.—Joseph Corry.

## CLUB REPORTS.

### ACTON PISCATORIAL SOCIETY.

Having resigned the Acton Piscatorial Society, I beg to send you my last report for them, per same post. The members of the above society held their first dinner of the season on June 18th, Mr. A. C. Bocking in the chair, Mr. W. Eydman, vice. After the usual loyal toasts had been drunk, "The Army and Navy" followed, being responded to, the former by Mr. M. H. Robinson, of the Yeomanry, in a humorous speech. Mr. Brougham responded for "The Thames Angling Preservation Society" in his usual form. In the absence of Mr. P. Geen, the name of one of the delegates to the Anglers' Association responded for that body. Mr. Brougham, secretary of the T.A.P.S., in a happy manner proposed "The Health of the Society," which was coupled with the names of Mr. Bocking and Sec. Simpson. "The Prize Winners of the Past Season" was proposed by Mr. Parker, our champion fly fisher, and was drunk, coupled with the names of Messrs. Cook, W. Eydman, E. Eydman, F. West, W. Howell, C. Simpson, and G. Townsend, who took, as named, some good prizes, Mr. Cook wetting the cup won by him with some "cham.," which was passed round the top end of the table, and seemed to me, from the bottom end, to be enjoyed. Some good prizes were given for the season 1884-85, Mr. Cook's 10s. being followed by a shower of them (prizes I mean), given by Messrs. W. Eydman, West, Richardson, Simpson, R. M. Robinson (another cup for the first fish sizeable for setting up by the society), Mr. Blackman, Mr. Blackbag, and Mr. Bocking, our president. Mr. M. H. Robinson gave us as a prize, the Fishing Gazette, handsomely bound, up to present date, for the first roach, 1lb. 4oz., to be set up by the club. The chairman having ruled short speeches were to be the order of the evening, that was carried out by himself and others, some capital singing filling up the evening.—C. J. Dean.

### ALEXANDRA SOCIETY OF ANGLERS.

The members of the above society had an excellent show of fish on the 6th inst. Mr. Wilson and Mr. Tom Gripton, bream from Dagenham; Mr. E. Wicks, roach, perch, and dace; Mr. Flansie, perch. Mr. Hicks, our worthy host, has given a very handsome fishing box as a prize for the heaviest weight, and several other prizes are promised.—F. Wagner, sec.

### AMICABLE BROTHERS ANGLING SOCIETY.

The thirty-first annual dinner took place at the Five Horse Shoes, Hoddesdon, Herts. Thirty members and friends sat down. The dinner passed off very successfully, Mr. Coomes having catered in his usual manner, leaving nothing to be wished for. Mr. Medcalf occupied the chair, faced by your humble servant. Notable amongst the guests were Mr. Murray, Mr. Crumplen, Mr. Hatfield, and Mr. Fitch. Mr. Hatfield brought an American friend, who kindly gave us some of his experiences across the broad Atlantic with regard to fishing and other matters. They do catch "whoppers" over there. After dinner Mr. Brearley proposed the toast, "Success to the Society," Mr. Medcalf, "The Press," which was responded to by Mr Crumplen, followed by others from Messrs. Murray, Hatfield, Fitch, Sinclair, &c., when the chairmsn announced that the open air would be a benefit to all, and stated that Mr. Coome, the host, would take the guests and himself for a ride. All anglers like to see water, whether it be salt or fresh, so that it can produce a fish; so we went to have a look at the source of that beautiful river known as the New River, although it is very old, and known as the Amwell Springs. Then we paid a visit to the quaint old church and churchyard—Amwell. Afterwards we went to Mr. Longmate's, the Red Lion, at Stanstead, to have a look at Mr. Murray's breeding-boxes, and the baby perch contained therein. We met Mr. R. Ghurney there, and several suggested alterations for the future, for the benefit of breeding fish for the anglers—whose name is legion and still they come. After which we returned to the starting-point and had a very good tea, Mr. Medcalf doing the old lady's part with the teapot in his usual genial manner, in which I think very few can surpass him. After tea to the Rye House and gardens, and then the return to London. We have to record a blank with regard to weighing fish in on that day; but several were fishing and got fish—Mr. Willis, Mr. Powers, and others, during the short time they had to try. I shall now conclude with my most hearty thanks to those gentlemen who did us the very great honour by their presence on that occasion.—J. Worledge, sec.

### ANCHOR AND HOPE ANGLING SOCIETY.

About 20 members of the above society fished for a series of prizes on the 6th inst., at Tonbridge; but after a hard day's fishing only two prizes were taken, the following being successful:—Mr. Clark, sen., first; Mr. Somers, sen., second.—D. Davis, sec.

### ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of 16s. from the donation box of the Highbury Angling Society.—G. Ghurney, sec.

### BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

Messrs. Wride, Tippitt, Stephens, and Harvey had some nice bags of roach and dace at Highbridge on Saturday last. Amongst Mr. Wride's catch was a couple of very fine roach, one scaling 1lb. 9oz., and the other a little over 1lb.

### BROMPTON ANGLING SOCIETY.

Some more good shows on July 6th, Messrs. Ducker, Roach, and Burbidge having some nice bream; Messrs. E. Saunders, C. Saunders, and Dutton, roach; Messrs. Stonebridge and Pearce, dace—altogether a very creditable display for the visitors and fellow-members.—W. Dutton, sec.

### BURDETT ANGLING SOCIETY.

The following gentlemen have weighed in fish at this club during the past fortnight:—On the 29th ult., Mr. Hadkiss, bream and roach; Mr. Reeves, chub; Mr. Stoke, perch; Mr. Eaton, chub and roach; Mr. Hammond, bream; Mr. Searle, tench; Mr. Flint, bream. On the 6th inst., Mr. Hadkiss, bream; Mr. Reeves, chub; Mr. Searle, tench.—T. G. Walker.

### CITY OF LONDON ANGLING SOCIETY.

We had a good show of bream and roach from Dagenham on the 6th, contributed by Messrs. Castell, Chambers, and G. Blackwell. Our return visit was not so well attended as our former ones, owing to the hot weather, 17 clubs being represented, viz., Hoxton Brothers, Reform, City of London, Waltonians, Convivial, Brompton, Good Intent, Bermondsey Brothers Stoke Newington, and Original Clerkenwell, also the Angler's Pride, Bostonians, Crown, Piscatorial, Globe, Independent Brothers, Peckham Brothers, and Rodney. Mr. Rowland, of the Waltonians, was in the chair, faced by Mr. Holmes, of the Globe; Mr. Beningfield pianist. The following gentlemen contributed to the harmony, Mr. Rowland singing "Don't I Love my Rose"; Mr. Holmes, "Sunny Days"; Mr. Scott, "A Man is a Man," and "Never Desert an Old Friend"; Mr. Watkins, "The Midshipmite"; Mr. Cecil, "Curious Days"; Mr. Roberts, "Chamois Hunter"; Mr. Ethridge, a reading; Mr. Burwash, "The Old Nigger"; Mr. Chambers, "Love is a Funny Thing"; Mr. Jennings, "Sailing"; Mr. Cecil, "Paddy and the Rope"; Mr. Ellis, a song; Mr. Constable, "Bonnie Black Bess"; Mr. Adams, "The Spade"; and Mr. Loomes, the last song of the evening. The next visit on the general list will go to the Waltonians, and the next on the district list to the Bermondsey Brothers. I am requested to thank those gentlemen who attended.—Cas.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly meeting was held on Wednesday last, Mr. G. Parry in the chair. The Secretary reported that since the last meeting an agreement had been entered into with Mr. Coventry, by which the Clapton now had the right of fishing his waters for the season. This was much approved by the members, as now, besides the fisheries at the Tottenham, they had also the fisheries from Flanders Weir to Enfield lock. The secretary brought forward a suggestion than an alteration should be made in the day upon which the weekly meetings were held, and suggested Monday as far more suitable than Wednesday. The former day would allow of catches on the preceding Saturday to be shown on the Monday, whereas such catches would not be fit to show on Wednesday. Mr. Howse instanced the number of City gentlemen who had joined the Society, the majority of whom would avail of the Saturday afternoon for angling. Those also who angled on Sunday and Monday could so easily weigh in and show their catches on the Monday. The members present thought the suggestion an excellent one, and it was unanaimously ageed to. The secretary stated that he would have a circular printed and sent to each member notifying the proposed alteration, and if the members not then present were agreeable to the alteration, that it could come into force after the next meeting which would be held as usual on Wednesday next. The secretary reported that he had great pleasure in stating that the numbers were now upwards of 60, and that he thought the members should congratulate themselves in knowing this, that they had 20 miles of excellently preserved water close to their houses available for a day, afternoon, or evening's fishing; also that they had pieces of private waters gratuitously placed at their service by a gentleman in the neighbourhood, and he suggested that it would be only now fair to the present members that those joining the society after the expiration of the present month, should pay an entrance fee of 10s. 6d. This was generally agreed to. There were several shows of fish, notably: Mr. Graham Bennett, roach from the Lea, largest 13½oz.; Mr. Chillingworth, roach from the Lea, largest 9¾.oz; Mr. H. Short, small barbel and fine dace from the Thames. Five new members were elected. The secretary then alluded to the poisonous condition of the river, and read a letter, copies of which he sent to the papers. The secretary's son produced a basketful of fish, poisoned and stinking, which had been collected in a few minutes from the river at the end of spring-hill. It was stated that thousands of fish were then floating about dead, and surprise was expressed that any fish should live at all in such a poisoned water. A cordial vote of thanks to the chairman closed the proceedings.—Henry Howse, hon sec.

### CROWN PISCATORIAL SOCIETY.

The members of this society fished at Weybridge, on the 6th inst., for the following prizes:—A Handsome Lamp and Silver Watch (club prizes), Mr. Senneck; a Fishing Box and Knives for the third, Mr. Penn; a Volume of Novels for fourth. I am happy to say that all were taken; first, by Mr. W. Burwash, with roach and dace; second, by Mr. Johnson, with dace; third, by Mr. Cavanagh, with roach; a fourth, by Mr. W. Attridge, with perch. Mr. Johnson promises a prize for the gross weight from Dagenham Lake, taken during July.—Old Nigger, sec.

### EDMONTON AND TOTTENHAM ANGLING SOCIETY.

This society had a fine show of fish at the club-room on the 6th. Our trays not being large enough to hold all of them, we had to borrow two more from our treasurer, Mr. C. Lowen. The following gentlemen had fish:—Messsrs. Crane and Bentley, trout and dace, and roach, dace, and perch; Messrs. Gray, Collyer, Nathen, Ferry, and Foster, bream and roach; and Mr. J. Hasler tench from our water. This is the largest show we have had this season, but we hope to have a good many more like it.—F. A. Gray, sec.

### FITZROY ANGLERS.

This society, which is held at F. Kemp's, The Crown, Cleveland-street, Fitzroy-square, had some nice fish on view on the 6th, from various parts of the country. Mr. Mitchell had three bream that turned the scale at 9½lb., and a roach over 1lb.; Mr. Ramsey also had some nice fish. On the 8th, Mr. F. Kemp was out with a friend for a few hours, and got a nice lot of dace from the Thames. On the same evening The Golden Barbel paid this society a complimentary visit. Mr. Ramsey presided, assisted by Mr. Ralph George. Mr. Emery and friends entertained the company with selections on the banjo and concertinas, and a very pleasant evening was passed. The members of Golden Barbel, Great Northern, and the Fitzroy will fish for a prize given by Mr. Kemp. The competition will take place at Shiplake on the 27th, all to start from Paddington by the 9 o'clock train.—Pixie.

### THE GRANGE ANGLING SOCIETY.

The usual fortnightly meeting was held on the 3rd inst., Mr. Hosken, the president, presiding, there being also a good attendance of members. After the business of the evening was concluded, Mr. George Gibbons presented to the society, for the use of the members, fifty gauge boards, giving both Thames and Association measurements, a specimen of which, Mr. Editor, I send you with this report for your inspection. The boards will be a great acquisition, as no undersized fish can now be taken in error. A hearty vote of thanks to Mr. Gibbons for his kindness brought the meeting to a close.—W. K..

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

July 6th the following members weighed in roach, dace, and bream—the takes were small :—Messrs. G. Watling, Scott, King, W. Theobald, Martinella, P. Stammer, Baker, F. Watling, Young, Hewitt, Seeley, J. K. Fitch, and Watling, sen.—J. Fitch, sec.

### GREAT GRIMSBY ANGLING ASSOCIATION.

List of names of successful competitors in the match fished on June 25th, 1884 :—1st prize, Mr. Southern ; 2nd prize, Mr. Ellis ; 3rd prize, Mr. Gibbons ; 4th prize, Mr. Morris ; 5th prize, Mr. Stokes ; 6th prize, Mr. Willmott ; 7th prize, Mr. Johnson ; 8th prize, Mr. Skelton ; 9th prize, Mr. Croft ; 10th prize, Mr. Thompson ; 11th prize, Mr. F. Robinson ; 12th prize, Mr. Trolley ; 13th prize, Mr. T. Green ; 14th prize, Mr. Senior ; 15th prize, Mr. Calvert. Prize for largest roach, Mr. Willmott ; prize for largest perch, Mr. Forge, sen. ; prize for largest eel, Mr. Senior ; prize for greatest number of fish, Mr. Southern ; prize for greatest variety, Messrs. Forge, Senior, and Johnson.—J. Green, sec.

### GOLDEN BARBEL.

On the 6th several of the members visited the Welsh Harp. Master Crow (a youth about 14) managed to hook a very nice carp about 10lb. It was successfully landed by Mr. Stoner, much to the delight of the whole body of Golden Barbels present. Master Crow not being a member, transferred the fish to the society for a consideration, and the fish is now in the hands of Mr. J. Lancaster, of Camden Town, for the purpose of preservation. On the 8th Mr. J. J. Jones had some nice plump roach from Rickmansworth.—Pixie.

### GOOD INTENT ANGLING SOCIETY.

The members of this club fished at Ware on June 22nd for 10 prizes, the winners being the following :—Mr. J. Bell, first ; Mr. Maybury, second ; Mr. Kemp, third ; Mr. Winter, fourth ; Mr. Rollison, fifth ; Mr. Hadfield, sixth ; Mr. Ormes, seventh ; Mr. Green, eighth ; Mr. Philpott, ninth ; Mr. Lassiter, tenth. On June 29th, the members fished for 10 prizes, go where you please, the result being some good takes, the winners being the following in order :—Mr. Maybury, first ; Mr. Fortiscue, second ; Mr. Philpott, third ; Mr. Devon, fourth ; Mr. Guntrip, fifth ; Mr. Nelson, sixth ; Mr. Pluckrose, seventh ; Mr. Murphy, eighth ; Mr. H. Lord, ninth ; Mr. J. Robinson, tenth. That concludes our prizes for the year. On July 6th there was a good show of roach, bream, and dace—Mr. Philpott having two roach, one 1lb. 10½oz., and the other 1lb. 4½oz., and some good bream. This brings our financial year to a close.—R. Murphy.

### GREENWICH ANGLING SOCIETY.

President—Baron Henry de Worms, M.P. Members of neighbouring clubs are informed that this society has removed to the Prince Albert, Royal Hill, Greenwich, and are invited to attend any Thursday evening at 9 o'clock.

### HIGHBURY ANGLING SOCIETY.

Several members were out on the 6th instant, but the result of their efforts did not realise their expectations. The following gentlemen, however, produced some very fair roach, perch, gudgeon, dace, and bream—namely, Messrs. Higley, Edwards, E. Wheatley, H. Temple, and S. Howell, jun. The annual dinner is fixed to take place at Mr. Lyndsell's, the Pied Bull, St. Margaret's, on Saturday the 30th August next.—Jas. E. Wheatley, sec.

### INDEPENDENT JOVIAL ANGLING SOCIETY.

Several of our members were out on the 6th, but met with very little success. One of our members, Mr. Spratley, fishing in the river Colne, landed 11¾lb. of bream in about three hours ; he was quite busy. Lost several others, he having left his landing net at home.—C. Smart, sec.

### IZAAK WALTON ANGLING SOCIETY.

Mr. Wilshire has again had some very fine dace. Messrs. T. Dennison, sen., and T. Dennison, jun., had roach and dace on Wednesday, the 2nd inst. Messrs. B. Crook, A. Bass, and J. K. Charters had roach and dace on the 6th inst., and Mr. Stevenson, a visitor, showed roach on the same morning. Messrs. G. Wood and G. P. Rolt had some very good bream on Wednesday, the 9th inst. ; Mr. G. Bliss had roach on the same day. Messrs. G. Wood and G. Bliss won the two special prizes given by Messrs. A. Bass and G. P. Rolt, for the two heaviest weights of any kind taken on the first four Wednesdays in the season. The week-day members dine at Mr. J. Lyndsell's, Pied Bull, Stanstead, St. Margarets, Herts, on Wednesday next, the 16th inst. Dinner on table at 2.30 precisely.—H. B.

### LIVERPOOL ANGLING ASSOCIATION.

We had our opening day after the close season on the 19th ultimo, when thirty members fished in New Pool and Petty Pool by the kind permission of Lord Delamere, per G. Garfit, Esq. The weather and scenery were all that could be wished for, and the outing was thoroughly enjoyed and appreciated by every one, though light creels were the order of the day ; but this matters little when accompanied by light hearts, as was the case on this occasion. The prize winners were, Messrs. H. Wood, Leaman, Cardwell, and Woolfall, in the order named. Our next excursion is fixed for the 24th inst. in the large lake at Combermere Abbey, by the special permission of Lord Combermere. There will no doubt be a goodly muster of members on this occasion, as the lake is famous for its abundant store of big fish, and the ancient and historical abbey for its lovely surroundings and scenery. Members will receive the usual circular with full particulars in due course, and, as I shall endeavour to get a saloon carriage for the party, I have to ask each one to make up his mind as soon as he can and inform me without delay of the result.—R. Woolfall, hon. sec.

### LIVERPOOL CENTRAL ANGLING ASSOCIATION.

The members of the above club held their first match of this season on July 7th, in the canal near Mollington. The weather being very unfavourable, there being thunder and heavy rain the greater part of the day, the baskets were small, and only two prizes taken. First prize, silver lever hunting watch, taken by Mr. W. Wilds, with roach and bream. Reel and line, specimen prize, taken by Mr. G. McKee, with the heaviest single fish.—R. S McQueen, hon. sec.

### NEWARK-ON-TRENT PISCATORIALS.

The supper and prize distribution of the winter club of the above took place on Tuesday evening, July 1st, at the Horse and Gears Inn, Portland-street. A large number of members were present, who partook of an excellent supper, after which prizes were presented to the successful competitors as follows :—Roach : R. Chilton, G. Gumsley, and R. Dale. Dace : H. Smith and F. I. Levick. Bream : J. H. Levick and T. Longdon. Chub : A. J. Allcock, A. Wilson, and H. Cubley. Perch : W. H. Norledge, W. Atkinson, and C. Lane. Bleak : J. Proctor, W. Edlington, and J. Roe. A pike club was also started by nearly a score of members paying one shilling in addition to their usual contribution. This association is now in a very promising state, the doubtful members having received a check by having three of their number expelled for illegal practices during the last club, it being the purpose of the committee to try and remove the reproach sometimes attached to Nottingham and district clubs.

### NORWICH PISCATORIAL SOCIETY.

A special meeting of the members of this flourishing club was held on Tuesday evening, 8th inst., at their club house, The Walnut Shades, for the purpose of presenting the prizes won in the first peg-down match, which was fished at Horning Ferry on Thursday, the 3rd inst., and, although the weather, &c., was everything that could be desired, yet the sport was slow. This is accounted for, undoubtedly, by the fact of the angling taking place during the middle and hottest part of the day, the fish usually beginning to come on just as a match concludes. There were present on this interesting occasion the president (Mr. Charles Daniels), Messrs. F. Parker (chairman), R. Otty (vice-chairman), O. B. Wilson, J. Wayth, J. Barnes, J. Carey, F. F. Bradley, R. Bradley, G. Bassingthwaite, J. Johnson, E. H. Capon, Lemmon, W. Butler, E. H. Corbyn, H. C. Townshend, F. Spelman, W. Page, J. Weyer, T. Kelf, W. Wright, R. Page, J. Holmes, A. Bunnett, Russell, W. Hinsby, W. Gill, Plummer, Tandy, Barnes, Paveley, G. Cubitt, A. Simm, W. Capon (hon. sec.), and R. Moll (hon. sec. Norwich Angling Club. The chairman stated that 43 members entered for the match, and that it was his pleasing duty to present prizes to the 21 successful competitors, whose catches averaged about 5lb. each. Their prize list was one of the best they had ever known, and he heartily congratulated the winners. The prize winners were :—1st, Mr. R. Page ; 2nd, Mr. Gill ; 3rd, Mr. H. Lacey ; 4th, Mr. Hinsby ; 5th, Mr. Cushion ; 6th, Mr. O. B. Wilson ; 7th, Mr. W. Wright ; 8th, Mr. Cubitt ; 9th, Mr. W. Capon ; 10th, Mr. Russell ; 11th, Mr. Lemmon ; 12th, Mr. Otty ; 13th, Mr. Butler ; 14th, Mr. C. Daniels ; 15th, Mr. W. Page ; 16th, Mr. Corbyn ; 17th, Mr. F. Spelman ; 18th, Mr. J. Barnes ; 19th, Mr. F. Bradley ; 20th, Mr. E. Capon ; 21st, Mr. Kelf. The proceedings were interspersed with some capital songs by Messrs. Corbyn, Carey, Barnes, and Paveley, accompanied by Mr. Bunnett. The toasts of the prize winners and non-winners were coupled with names of Messrs. Page and Gill and Wayth and Simm, and "Kindred Societies" with the name of Mr. R. Moll, and a hearty vote of thanks to Messrs. Butler and Spelman, for their arrangements on the morning of the match, brought to a close one of the most successful meetings of this prosperous society.—R. Moll.

### NORFOLK ANGLING SOCIETY.

On June 29th, Mr. Measures and Phelps had a fine show of bream weighing over 30lb., largest weighing 4lb. 4oz. ; Mr. Tattenhall also showing a very nice tray of roach and dace, On July 2nd, Mr. Foulger had a splendid show of tench and one jack weighing 28lb., largest tench 5lb. On 6th, Mr. Tattenhall weighed in another pretty lot of dace. Mr. Wharton showed roach and dace, but not at all up to his old form.

### NORTH-WESTERN ANGLING SOCIETY.

The members of this society have been getting some sport lately. On the 6th inst. the trays in the clubroom were well filled with fish. Mr. Culpitt, 3 jack ; Messrs. D. North and W. Plumpton, sen., a brace each ; Messrs. J. Grindley, W. Aldis, W. Hillier, jack, bream, and roach. On the 5th, Mr. England weighed in a brace of jack and some bream.—W. Hillier, sec.

### ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The following members weighed in some capital fish on the 6th inst., consisting of roach, dace, and a few perch :—Mr. Longman, roach, dace, and perch, 10lb. ; Mr. Craffard, roach and dace, 9lb. 5oz. ; Mr. Kent, roach and dace, 8lb. 4oz. ; Messrs. Laundy, Newman, and Obbard also weighed in, the latter winning Mr. Laundy's prize.—J. Obbard, sec.

### PECKHAM BROTHERS ANGLING SOCIETY.

The members of this club fished at Amberley on the 6th, "The Duke" scoring a win for the President's cup, beating W. H. Page by 6oz. Messrs. Gafney, Parsons, and Brancher also weighed in. A special general meeting, to vote club prizes for the season, will take place on the 22nd ; all members are requested to attend.—Gadfly.

### PHŒNIX ANGLING SOCIETY.

About 12lb. of bream, perch, roach, and rudd were weighed in on the 6th inst. by the brothers Ashley, Joe Keen, Grist, Reed, and Milton.—W. E.

### THE PISCATORIAL SOCIETY.

Last Monday was the half-yearly meeting of this society, and the circular convening the meeting set forth the following business :—1. To receive the treasurer's audited financial statement for the past half-year. 2. To appoint the date, and fix place of meeting for the summer dinner. 3. To elect a chairman and vice-chairman to preside over same. 4. To consider and to confirm, if approved of, the following alterations to rules : Rule 5. After the words "to consist of," to read "the president, treasurer," &c. Rule 6. After the word "committee," to read "president, treasurer," &c. Rule 26. To add after the word "year," "and caught and weighed 20lb. of fish, and has paid all arrears due." Regulation.—"Grayling," to read as follows: "To be taken only from 16th June to 14th March, not less than 8oz. in weight." Perhaps it is hardly necessary to say that the spacious room was exceedingly well filled, amongst those present being Messrs. Pattisson, Brougham, Meyer, Gillatt, Booker, Inderwick, Jesse, Blundell, Goodger, G. Gillatt, Fennings (hon. treasurer), Godwin, Turnner, Brown, Gray, Sachs, Foreman, Dr. Brunton, Perelli Rocco, Bennett, Walker, Russell, Huggett, Crumplen, Clegg, Bromley, Rev. G. Sumner, Hatfield, Wheeldon, Harden, Beasley, Gray, J. Lander (hon. sec.), &c., &c. Amongst the visitors were Messrs. Spreckley, G. Smith, &c. The hon. treasurer was unanimously voted to the chair. The minutes were read and confirmed in the usual manner. The audited statement of accounts for the half-year was duly submitted to the meeting ; and the finances being in a satisfactory condition, the accounts were unanimously passed. The fixing of the place for the summer dinner led to a division, as follows : Mr. Pattisson proposed, and Mr. Gillatt seconded, that the dinner be held at Mr. Stone's, The Ship Hotel, Halliford. Mr. H. B. Brown moved as an amendment, and Mr. Foreman seconded, that the dinner be held at the Ray Mead Hotel, Maidenhead. In the result the amendment was carried by a large majority. The date was fixed for 23rd July. The chairman of the summer dinner will be Mr. T. R. Sachs, and the vice-chairman Mr. H. B. Brown. The alterations of rules 5 and 6 were carried *nemine contradicente*. A long discussion took place on the suggested alteration to rule 26, which had been proposed by Mr. T. Gillatt, and which in effect made it impossible for any member who had not during the year weighed in 20lb. weight of fish to take any prize or prizes. Rev. G. Sumner opposed the motion, on the ground that it would be a hardship for a member to be excluded from prize winning supposing he had taken a splendid specimen of either the salmon, trout, or grayling. The weight of coarse fish was an entirely separate and distinct question. Dr. Brunton moved an amendment to the effect that salmon, trout, and grayling specimens should still be entitled to prizes if they gained them ; Mr. Crumplen seconded. Mr. Ross Faulkener, by letter, opposed the alteration of the rule as suggested. Mr. Pattisson moved that no alteration should take place in the present rule ; seconded by Mr. Lander. Dr. Brunton hereupon withdrew his amendment. A division was then taken. For Mr. Gillatt's proposed alteration, 4 ; for Mr. Pattison's motion, 21. The proposal was therefore lost. Several of the members did not vote. Mr. H. B. Brown carried his proposed alteration of the rule as to grayling, except so far that the 1st of August is, I believe, the first day on which he may be shown on the tables of this society. Messrs. Brunton, Sumner, and Walker took part in this question. Mr. Spreckley was of opinion that this society should not only amend their own rules if necessary, but should show a leading spirit in the alteration of any rules throughout the country which injuriously affected the fisheries. Not only the grayling, salmon, and trout fisheries, but also those of every other kind of fish. He believed more attention would be paid to this subject during the next few years than had been paid to them for centuries. Mr. Huggett weighed in three chub (the largest 3lb. 5oz.), from Sonning ; and Mr. Meyer four bream, from the Thames, and their healths were proposed as the successful anglers. The "continued success of the Piscatorial Society" was carried with the usual *éclat*. Although some divisions had taken place on the proposed alterations of rules, the utmost cordiality and good fellowship prevailed. "The Health of the Chairman" was duly proposed and carried, and the meeting brought to a close.—T. H.

### PORTSMOUTH WALTONIAN ANGLING SOCIETY.

On Monday, June 30th, the members and friends of the above society had their annual outing to Rooksbury Park, the seat of J. Carpenter-Garnier, M.P. About seventy started from the club quarters in four brakes. The drive is through some of the most delightful scenery in Hampshire, and the weather was all that could be wished for in "Leafy June." Carp fishing was the order of the day, and three prizes were to be contended for, value £10, divided as follows ;—1st, £5 ; 2nd, £3 ; 3rd, £2. The first and second was won, but the third did not come up to the mark. After a most enjoyable time of it, the party returned to head-quarters about 11 o'clock p.m. This is the third year they have accepted the hospitality of J. Carpenter-Garnier, he placing the whole of his extensive lakes at the disposal of the club on that special day.—Daggerwood.

### RODNEY PISCATORIALS.

On the 6th Mr. R. Smith exhibited some nice bream and perch from Amberley. On the 7th the South London United visited the headquarters of this society, and the result was a very pleasant evening. Mr. R. Smith, R.P., presided, assisted by Mr. Bignall, P.B., and sounds rang through the old hostelry that made the old walls ring again. Among those present were Messrs. Field, T. S. Hughes, Beckett, Page, Hopkins, J. Smith, Allen, &c. On the roll being called, the following societies responded : Bermondsey Brothers, Second Surrey, South London, Peckham Brothers, Wellington, South-Eastern, United Brothers, the Crown, Angler's Pride, Original Angler's Pride, Excelsior, Battersea Friendly, the Grange, the Marlborough, Busy Bees, St. Alban's, Gold Barbel, City of London, the Independent, and Walworth Piscatorials. On behalf of the Rodney Piscatorials, I beg to thank one and all for their company that evening, and when we get into our new quarters we shall be very happy to see them again, and exhibit the whole of Mr. T. Hughes' grand collection of piscatorial trophies. The next return of the South London United will be paid to the South London, Mr. Morris's, George and Dragon, Camberwell-road, the date of which will be announced by Mr. Kirwin, secretary of that society.—Pixie.

At a meeting held on the 9th inst. it was proposed that the next competition take place on the 20th inst., up the Thames, for prizes. Members are requested to attend on the 16th to confirm the above proposition.—Pixie.

### ROYAL GEORGE ANGLING SOCIETY.

A great number of the members of the above society went out on the 6th inst., the result generally being very good. The maximum quantity of fish was brought from Amberley, but the Thames was not badly represented. Messrs Palmer, Holden, Sinclair, Hewett, and Farey visited Amberley. Messrs. Henderson, Wood, Rider, and Hughes the Thames. We all hope to do better as soon as we get some heavy rains, as there are some good prizes to be fished for.—W. H. Rider.

### STOKE-UPON-TRENT ANGLING SOCIETY.

The first annual dinner of the above society was held at the Roebuck Hotel on Friday evening, June 27th, when thirty-three members and friends sat down to an excellent repast, prepared by the hostess, Mrs. Goodwin, to whom great praise was accorded for the admirable manner in which everything was served. The worthy president of the society, Mr. J. E. Hassall, being unable to attend through illness, Mr. Councillor Adams was voted to the chair, and Mr. W. R. Taylor to the vice-chair, when, after the removal of the cloth, the presentation of prizes to the successful competitors in the late contest was proceeded with, after which the chairman gave the usual loyal toast. The vice-chairman next gave "The Mayor and Corporation of Stoke," and was suitably responded to by the chairman. Mr. J. Montford next proposed "The Town and Trade of Stoke," Mr. Elliman responding. Mr. J. G. Fenn then proposed, in a neat little speech, the toast of the evening, "The Stoke-upon-Trent Angling Society," which was received with great enthusiasm. "The Ladies," "The Visitors," "The Hostess," and "The Hon. Secretary," then followed, the latter toast being proposed by the vice-chairman. Mr. J. Hollins, in responding, spoke of the great progress of the Society, and congratulated the members on its present flourishing condition. He also pointed out the great advantage of having one great centre association for the district, and regretted that his efforts towards this end had met with such poor support from the other societies in the neighbourhood, "The Dresden" and the Longton "Izaak Waltons" being the only societies which had signified their intention to co-operate. Notwithstanding this, he assured them he did not intend to relax his efforts in this direction. Mr. F. Clark very ably presided at the pianoforte, and during the evening sang several songs in capital style. Messrs. Baily, Fenn, J. Bell, Potts, Wm. Hollins, and Young also sang, and were thoroughly appreciated. A vote of thanks was given to the chairman and vice-chairman, and a most enjoyable evening was concluded by the singing of the "National Anthem."—J. Hollins, hon. sec.

### UNITED LONDON FISHERIES SOCIETY.

A meeting of the full committee will take place on Monday evening, July 14th, at 9 o'clock.—J. C. Murray, chairman ; R. Ghurney sec.

### UNITED BROTHERS, DEPTFORD.

Several of our members were out on the 6th, and had some very good sport. The following members weighed in :—Mr. G. Belton, roach and chub from the Medway ; Mr. H. Tyler, roach and perch from the Medway ; Messrs. Currans, Payne, Penton, and Beak, bream from Dagenham Lake. All members are requested to show up on Saturday night, as some very important business is to be done.—H. T.

### WAVENEY ANGLING CLUB, BECCLES.

The ordinary monthly meeting of this club took place on Thursday evening, July 3rd, at the club room, Caxton Arms, the Mayor (J. P. Walton, Esq.) in the chair. After the preliminary business was disposed of, and five new members elected, Mr. Oldham gave two humorous readings from "Anglers' Evenings," entitled "A Conger Story," and "An Intercepted Letter." Votes of thanks were accorded to Mr. Oldham for his readings, and to the Mayor for presiding. On Saturday afternoon several members assembled between the Swing Bridge and Cove Mill, to take part in the first match for prizes. Fishing commenced at about 3.15, and ended at 7.30, when the competitors adjourned to the club room to weigh in. The principal weights were as follows :—1st J. Hooker, 5lb. 14oz. ; 2nd, C. Chase, 3lb. 7oz. ; 3rd, T. Rouse, 2lb. 12oz. ; 4th, G. Knell, 2lb. 7oz. ; 5th — Oldham, 2lb. 2oz. ; 6th, J. Rouse, 1lb. 15¾oz. Mr. Chase, who caught the largest fish of the day (a roach 1lb. 2½oz.) takes Mr. Pickthall's special prize for the finest tray of six fish caught during the competition. The next monthly meeting of the club will take place on Thursday, August 14th, when Mr. West will give a practical paper on fishing tackle.—J. Hooker, hon. sec.

### WESTBOURNE PARK PISCATORIAL SOCIETY.

The usual weekly meeting of this society took place at the Pelican Hotel, Westbourne-park, on Tuesday evening last, there being a good attendance of members, several of whom have joined in a sweepstakes for competition on the Thames on the 13th July, at an entrance fee of 5s. each, although with very little confidence in securing a good take of fish. owing to the present very low state of the river. Since the opening season several good fish have been recorded, Mr. Beasley having several bream from the Thames, the largest weighing 4¼lb. ; but subsequently overtaken by Mr. Buttery with one of 4½lb. Mr. Walker has been successful among the rudd, having weighed among others last week one of 2lb., which would tax a good many to surpass. Others have been trying their skill with more or less fortune, Mr. Bowen producing on Monday some of the Welsh Harp bream, one weighing 3lb. 3oz. He did not, however, bring with him one of those large carp—no doubt, to his disappointment, as his visit to this water was, we believe, expressly for this species of fish.

CASSELL AND COMPANY'S ANNOUNCEMENTS.

BOOKS FOR COUNTRY GENTLEMEN.

SIXPENCE TO TWENTY-FIVE GUINEAS,
Will be sent on request Post Free to any address on application.
CASSELL AND COMPANY, LIMITED, LUDGATE HILL, LONDON.

## A COARSE FISH ANGLER'S ADVENTURE WITH A SALMON, AND OPINION OF THE FISH.

MR. THOMAS WALKER, secretary of the Sheffied Anglers' Association, sends us the following :—" If the fish had not prevented me, I think I should have turned a poacher under the Salmon Acts last Saturday. I was ledgering in the Trent, above Torksey, for eels and flounders. I had caught two eels over a pound each with well-scoured lob-worm, and had put on another splendid bait, when off went my reel like a steam engine, and I found I had hooked a splendid salmon. Unfortunately, we did not keep company long, for he rushed up stream, and I followed until stopped by a stiff fence, which came down to the water's edge, and he smashed me.

" The play of a pike is only like having hold of a bleak compared with the fighting qualities of salmon."

TWEED AND TEVIOT.—The heavy pluvial descents of Saturday night and Sunday had the effect of bringing down the Tweed and Teviot to the extent of 2ft., thus rendering trout angling a little more productive than it has been for some weeks back. Taking advantage of the rise in the streams, anglers have again been at their favourite sport, and good baskets have been got. On the Tweed on Monday night, George Fairbairn had 8½lb. In the same river yesterday, Thomas Wightman had 5lb. ; and on the Teviot J. Johnston had 4lb. Many lighter baskets have also been killed. The rivers were again rapidly fining down, but rains overnight have caused a rise to-day of about 2ft. Our Coldstream correspondent writes as follows :—With the heavy thunderstorm which was experienced on Saturday night, the river on Sunday and Monday rose to over 3ft. With this fresh run of water the various fishing stations, which have for weeks been blank, had a few takes on Monday night. Twizel Mill tops the list with 27 grilse and 70 trout, Tweedwell and Lennel Haugh had four salmon and some trout, and most of the other stations had also a few. The following baskets were killed on the Tweed and Gala in the Galashiels district on Saturday :—Geo. Noble, 13½lb. ; Wm. Grant, 7¼lb. ; P. Bell, 7lb. ; J. Willcox, 6½lb. ; A. Blake, 5½lb. ; J. Murray, 5½lb. ; R. Key had six weighing 2½lb.—MAXWHEEL, Kelso.

TWEED SALMON FISHING.—The reports from these fishings state that last week trout, which had been the principal source of supply for the last month, were showing signs of decrease ; whilst grilse, which should have been increasing, show no signs of improvement, and salmon were as scarce as ever. On Saturday week, Mr. F. Edwards, Bridge-street, Berwick, had a fish, caught at Middle Seas, which weighed 38lb. The coast fisheries—notably Marshall Meadows and Goswick—are, however, getting better catches than they obtained last year at the same period. During the present week, however, the fishings showed a great improvement, the heavy rains on Saturday and Sunday having flooded the river. Yesterday the prices were : Salmon, 1s. 3d. ; grilse, 1s. ; trout, 1s. 11d. per lb.

CAPTURE OF A FINE STURGEON IN THE SEVERN.—One of the largest sturgeons ever caught so high up in the Severn for the past four years was captured off Gatcombe on Saturday by a fisherman named John Withers, of Awre. The royal fish measured 6ft. 2in. in length, and weighed 265lb. It was secured by a gentleman of Lydney, and forwarded to Birmingham.

PUBLIC RIGHTS.—ILLEGAL FISHING IN TEME.—On Tuesday, at Worcester County Petty Sessions, Mr. R. Rofe, innkeeper, Angel-street, Worcester, was summoned by Mr. G. A. Griffin, lessee of the fishing in the river Teme below Powick Bridge, for illegal fishing on June 26th. Defendant admitted fishing there, but said he did not know he was infringing private rights. He was fined 13s. including costs. It will be remembered that some time since the place where the defendant was fishing was claimed as a place where the public had the right to fish, but the justices decided adversely to the public.

THE
GREAT REMEDY
For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

# The Fishing Gazette.

SATURDAY, JULY 19, 1884.

## STAFFORD ANGLERS AND IZAAK WALTON.

THERE is something very appropriate in the establishment of an angling club for Stafford, which was for a long time the home of Izaak Walton, and where, he tells us, it was his delight to

> "Loiter long days by Shalford brook."

The Club has purchased the right of angling in "some excellent water at Newton Bridge and Shallowford, the same water that has in years gone by been angled in by Izaak Walton, and whose house still stands in close proximity." We have much pleasure in referring our readers to the report of the hon. sec., Mr. B. Downing, and hope that some day the club will permit us to catch a trout or grayling in their classic stream.

## ANOTHER SILVER CUP FOR THE TOURNAMENT.

AFTER the T.A.P.S. dinner the other evening, Mr. R. B. Marston called on the Richmond Piscatorials, with the object of angling for a prize for the Tournament, and although the disbursements of the club, having been rather heavy, prevented their giving as a club, after an appeal from Mr. Marston in a very few minutes the sum of five guineas was promised, made up as follows :—Mr. Nuthall (Mayor of Kingston), £2 2s. ; Mr. Little, president of the society, £1 1s. ; Mr. Eyre, £1 1s. ; Mr. G. V. Powell, 10s. 6d. ; Mr. Smith, 10s. 6d. ; and it was decided to give a five guinea cup on the same conditions as before—the entrance fee to be 2s. 6d. A good many tickets for the Tournament were also disposed of. Will not some others, and much larger societies, follow the example of the generous Richmond Club ?

## ADDITIONAL PRIZES FOR THE TOURNAMENT.

THE Editor begs to acknowledge with thanks the following additional prizes for the Anglers' Tournament at the Welsh Harp on July 26, in aid of the Anglers' Benevolent Society. The programme of the Tournament will be published next week, and a complete list of the prizes, with notices of the same, on July 26.

THE TWO GUINEA CUP kindly promised us by Mr. W. Thomas, of the Gresham Angling Society, has arrived.

Miss CAMPBELL, of 2, Cecil-terrace, Maynard-road, Walthamstow, Essex, writes :—"In answer to your note, I shall be most happy to contribute for the Tournament a card of different kinds of baits, value about 25s. I have also a great curiosity, which will indeed be a prize—viz., a very little dog about 4in. long and perfect in form, mounted in a case ; it lived three months. Will ladies be admitted to the Tournament ?" Of course, we replied that ladies were admitted, and that we cannot have too many of them.

Messrs. D. and W. FOSTER, Naturalist Anglers and Tackle Makers, Ashbourne, write :—"We will send 100 yards of salmon line, value £1, as a prize."

Messrs. S. ALLCOCK and Co., of Redditch, say :—"We send you as prizes one of our new patent standard fly books, value 15s., and two fishing straps made from Col. Mawson's design, value 3s. 6d. each.

Mr. REUBEN HEATON, of Hospital-street, Birmingham, says :—"I have much pleasure in sending you this day one of my patent reels and a spring balance up to 40lb. in case as a contribution to the prizes for the Anglers' Benevolent Society, and I trust it may be greatly benefited by the Tournament. (Will Mr. H. kindly say value of each ?)

Messrs. GEO. ROUTLEDGE and SONS, The Broadway, Ludgate Hill, send us as prizes one copy each of Pennell's "Angler Naturalist," "Modern Angler," and "Book of the Pike."

Mr. TRELOAR, of Ludgate Hill, has kindly sent one of his guinea carpets as a prize.

Messrs. GILLETT, 40, Fetter-lane, say :—"We have much pleasure in sending you one of our solid cane fly rods, two tops, bronzed ferrules, bound cane handle, landing handles, and bag and spear, value 21s., as a prize for the Tournament."

Mr. H. BOOTH, 13, Chariot-street, Hull, promises a 12s. fly rod. (We wish he would give a couple of his capital light roach rods instead. We have used one now almost constantly for two years, and have caught pike and bream up to 5lb. and tench up to 2½lb., besides eels and numberless roach and rudd on it, and it is as good as ever.)

Messrs. W. WATSON and SONS, 308, High Holborn, say :—"We have the pleasure to send herewith a 'Tourists' General Rod,' value £1 10s., as a prize for the forthcoming Tournament, wishing you every success."

Mr. ROBERT RAMSBOTTOM, 81, Market-street, Manchester, writes :—"In response to your request, I beg to inclose a hank of my long gut as prize, and hope the affair will be a success." (Kindly say value, Mr. R. ; it is splendid in length and quality.)

Mr. A. BULMER, of 62, Wandsworth-road, says :—"I have sent by parcels delivery a landing net, which I shall be pleased to contribute."

Messrs. WOODFIELD and SONS, of Redditch, write :—"We send as prize one of our new patent joint folding landing rings, with net and telescope landing handle, as a prize for the Tournament."

YE MEDWAY DACE, one of our correspondents, kindly promises a prize.

Mr. WM. BROWN, 36, George-street, Aberdeen, says :—"I send you half-a-dozen of my phantom minnows as prizes for the Tournament."

Messrs. H. SCHWEITZER and Co. say :—"We shall be pleased to give a small contribution of cocoatina in aid of the funds of the A. B. Society."

The following prizes, which were not won, remain over from last year :—"British Sportsman," given by Mr. Day. Plated Tankard, given by Mr. Parker, of the "Good Intent" Anglers. Three Spinning Baits, given by Mr. Wrigley, of Cheltenham. Three Spinning Baits, given by Mr. Bullock, of Derby. Victor Hugo's "History of a Crime," and "Darwin on Worms," given by Mr. Marriott.

(We shall doubtless have other prizes to announce next week).

## THAMES ANGLING PRESERVATION SOCIETY.

THE Star and Garter Hotel at Richmond was, on Wednesday, the scene of the forty-sixth anniversary banquet of the Thames Angling Preservation Society, at which many well-known faces were to be seen, although the attendance was not so large as on some former occasions. The chair was occupied by Mr. Thomas Spreckley, the president of the society, and amongst others who were present were :—Sir Trevor Lawrence, Bart., M.P. for Mid-Surrey, the Mayor of Kingston (Mr. Alfred Nuthall), Captain Alfred, Mr. Joseph Andrews, Mr. W. H. Brougham (the secretary of the society), Mr. Joseph Brougham, Mr. J. M. Brougham, Mr. Lewis Brylett, Mr. J. Colston, J.P., Mr. F. H. Lemann, Mr. W. D. Lewis, Mr. A. J. Little, Mr. R. Lloyd, Mr. R. B. Marston, Mr. Hugh Marston, Mr. P. Mason, Mr. Ellis Mason, Mr. A. O. Miles, Mr. F. Moore, Mr. J. Reid, Mr. T. R. Sachs, Mr. W. Senior, Mr. W. R. Spreckley, Mr. J. P. Wheeldon, Mr. S. White, and Mr. N. Wootton.

During the assembling of the company, a well-executed painting of a perch and roach was exhibited by Mr. C. Eorster, of Dalston, who for many years was in the studio of the late Mr. H. J. Rolfe, and who is well-known to a large number of Thames anglers who were in the habit of visiting "The Landseer amongst fishes" in Nicholas-lane. The musical arrangements for the evening were kindly taken in hand by Mr. John Larkins, who gave some excellent songs, as also did Mr. H. H. Hughes and Mr. Evans, Signor Mori (of the Richter Concerts) presiding at the piano. The whole of these gave their services.

The toasts of "The Queen" and "The Prince and Princess of Wales and the rest of the Royal Family" were given from the chair, and heartily received.

Mr. Samuel White proposed "The Army, Navy, and Reserve Forces."

Mr. Joseph Andrews, whose name was coupled with the toast, said that with regard to the army he was very pleased to see that the supply had not been reduced, and while there was a sufficiency in that respect he was quite sure the army would be able to undertake anything that was placed in its way. A remark made by the speaker as to the position of General Gordon, which was understood by some who were not near him to be a political reference, gave rise to some expressions of disapprobation, mingled with cheers. Mr. Andrews went on to say that, with regard to the navy, he was quite sure our wooden walls, although turned into iron walls, might still be depended upon, for the ships were good and the men were strong. (Cheers.) The reserve forces were extremely valuable, and if the Government would give a little more money to encourage them they would still be more useful. When the volunteer movement commenced the corps were composed principally of gentlemen and men of business who had not much time to spare ; but now we had the working men, the sinew of the country, who were ready to do good service More officers were needed, and he thought many anglers, if they had a little time to spare, might do well to accept commissions in the volunteer service.

Captain Alfred also responded, remarking that he had been connected with the service for twenty-five years, having held her Majesty's commission in the oldest regiment in the service, the Honourable Artillery Company of London. The army had done good service in Egypt, and they had also done good service as anglers, for there was some good fishing in the Suez Canal.

The Chairman, in proposing "Success to the Thames Angling Preservation Society," said he wished to thank them all for coming at the call of the society to support him on that occasion. He did not feel very lively in giving that toast, for there were a great many absentees, but he wished to remind them that this was a society by itself. It knew no other society, and leaned on none. It was either a great lie or a great and living truth. If it was a lie they were doing wrong in receiving the money of the anglers and many of their kind-hearted friends who supported it although they never wetted a line. But they would easily see that it was not a lie. Was the old Thames full of fish ? Was it so seven or eight years ago ? (No, no.) Was it full of fish now ? (Yes, yes.) Everybody told him that it was so, and that was supposed to be owing to the preservation of the angling in the river during the last nine or ten years. (Cheers.) He was not going to detain them with a long speech, but he gave them that as a text to drop down into their hearts, to be photographed on their minds, and to carry home with them—a text which he commended to all who loved angling in the grand old river they had enjoyed so long, and that they hoped to enjoy for many years to come—(Cheers)—and if they went on in the way that he believed they were going on, they would be doing something that would not only enable them to enjoy it, but their boys, and even their girls too, might enjoy it when they were laid in their graves (cheers). The members of the Thames Angling Preservation Society were a very quiet lot of people. His friend Mr. Brougham did a good deal, but they did not puff themselves much. Their work, however, was making its influence felt in many directions, and they would easily recognise that if they knew the hundreds and hundreds of letters that were received with respect to it, and the many people who called, not only at their office, but at his counting-house, with respect to its work. In fact, his partners talked about cashiering him, because they thought he devoted more time to the society than he did to their business, but he told them that they ought to think it an honour that he could trust them to carry on the business without him (laughter). He, and their old friend Brougham—who had sown good seed that would bring forth fruit when they were all dead (applause)—had answered hundreds of letters from people in the country, who inquired as to the best way to form similar associations. They had a member of Parliament with them that evening (applause), and he hoped that Sir Trevor

Lawrence would do what he could to promote angling. Fishing was a great institution. The welfare and happiness of a great many people depended upon it. Many gentlemen who owned waters in this country possessed the power of giving an immense amount of pleasure to the hard-worked bread-winners of our great towns—pleasures which would make them good citizens, good patriots, and good men.- He had great pleasure in proposing the toast of "Success to the Thames Angling Preservation Society" (cheers).

Mr. W. H. Brougham, who was heartily received, here stated that amongst a number of letters which he had received in connection with that meeting was one from Sir J. Whittaker Ellis, M.P., who said that he would never forget the very pleasant evening he spent with the Thames anglers a few years ago, when his friend, Mr. Frank Buckland, was alive. That was about ten years ago, and he believed on that occasion they collected something like £200 for the society. He had very much hoped to be with them that evening, but he found that his engagements in town rendered that impossible. He regretted that the more, as he had hoped to have had the pleasure of meeting his colleague, Sir Trevor Lawrence, and their esteemed president, Mr. Spreckley. (Cheers).

Mr. A. J. Little, Chairman of the Richmond Piscatorial Society, said he had been asked to propose "The Board of Thames Conservancy." He did so with very great pleasure, because the Thames Angling Preservation Society would be no good at all without the Thames Conservancy, for they enforced the by-laws which that board issued, and at the same time he was happy to say they had done a great deal of work in instructing the Conservators as to what those bye-laws ought to be. A year, or a year and a half ago, all the angling societies of London—he might almost say of England—met together and suggested a revision of the by-laws. He was happy to say that the Conservators adopted their suggestions, and those by-laws were now in force. (Applause.) As one of the society's honorary river-keepers, he had a good deal to do with those connected with the Conservancy, and they worked very happily together. Sir Frederick Nicholson and Captain Burstall were always ready to do whatever they could to further the interests of the anglers. He would like to take that opportunity of thanking Sir Trevor Lawrence for the handsome prize he had given to the Richmond Piscatorial Society. He was always ready to look after the interests of fishing. (Applause.)

The Chairman remarked that in everything they did they were in full accord with the Thames conservators, who were willing to do whatever the society desired to add to the comfort of those who fished in the Thames. (Cheers.)

The Mayor of Kingston proposed "The Press," remarking that inasmuch as the gentlemen connected with the Press present that evening were not only thorough anglers, but personal friends of his, he did so with much pleasure. He expressed great regret at the long illness of Mr. Francis Francis, and remarked that his paper, the *Field*, had always been a great friend to the society, and contributed twenty guineas a year to its funds. They were glad to see Mr. Senior there as the representative of that paper—a gentleman whose experience in angling matters, both here and abroad, must have brought him to their notice. They also had amongst them their friend, Mr. Marston, the Editor of the FISHING GAZETTE, a gentleman who was a thorough angler. The reports they received weekly in the FISHING GAZETTE were most accurate and useful. He congratulated Mr. Marston upon the enlargement of his paper. Then there was Captain Alfred, of the *Angling Journal*, who gave them very fair accounts of fishing on all parts of the river, and finished up with a few little tit-bits which must be very amusing to them all. Mr. Wheeldon was one of the greatest anglers of the day, and nothing had been read with greater interest than his writings in *Bell's Life*. There was also their friend, Mr. Temple, of pictorial fame. He had great pleasure in proposing the health of these gentlemen.

Mr. Senior, in responding, said that good wine needed no bush, and at this time of day not only the power but the services of the Press were sufficiently well known to require no description. He thanked them very heartily for the manner in which the toast had been received.

Mr. Marston, in response to the calls of the company, said the Thames Angling Preservation Society had already done a great deal of good, and might do much more now that the Thames seemed to be in a state of Banting up the river, and was in a state of corpulency in the lower reaches that certaintly wanted taking down. If those who had the power would do something to keep sewage out of the river, it would be a great benefit, for it was no use preserving fish if the water was not fit for them to live in. (Hear, hear.)

Mr. Wheeldon also responded, remarking that he was proud to have been associated for many years with the Press of England, whose boast was that it endeavoured to salve over every difficulty that arose, and to make peace where it could. In that respect it was not like the Press of a neighbouring country, which seemed to delight in fomenting a quarrel. He congratulated the society on the good work it had done. Having fished in the Thames for many years, he was well able to respond to the challenge of the Chairman when he asked whether the river was not now full of fish, for he knew that it was. The work of filling the Thames with good fish had been the work of this society. He had been endeavouring for years past to preach the doctrine that it was a standing disgrace to the anglers of London that the income of that society should be so small.

Sir Trevor Lawrence, M.P., who was received with loud and protracted cheering, said that just at the last moment of those cheers he caught the smallest echo of the voice of a gentleman who said, "No politics." He thought he might very fairly and honestly appeal to every gentleman present at that table to ask them if he had not, as far as in him lay, on every occasion of a non-political nature, done his best to forget that such a thing as politics existed? (Applause.) He need scarcely say that nothing would have occurred to his mind to have been more inappropriate on that occasion than to make the smallest reference to political subjects. With regard to their chairman and president, whose health he had the honour to propose—(applause)—he knew that it was absolutely unnecessary for him to say anything as to his merits. They knew what he had done for the society, they knew what he had done for Thames angling, and how he had done everything that he could to advance the interests and realise the wishes and desires of the anglers. He happened to have on his right some gentlemen who were the chairman's neighbours in Kent, and they told him that he was highly esteemed in the district in which he lived as a man full of public spirit, anxious to help his neighbours in every way, and a man for whom everybody had the highest possible respect. He thought they might congratulate themselves as a society that they had the honour of having him as president. It was a great thing to have a man of energy and capacity too. (Hear, hear.) He had interested himself very much in regard to the question of increasing the supply of fish in the Thames, and, no doubt, that supply had greatly increased. He (Sir Trevor) had a sort of feeling that the fish must be saying to one another what the American young lady said when it was suggested to her at the close of a dinner that she should have some lobster salad: she said she was "pretty crowded already." (Laughter.) He could not help thinking that what with the increase in the number of fish, and the present smallness of the stream, they must be "pretty crowded." They had now to supply the fish with water. It was a most melancholy consideration to see the state to which the river was now reduced, and the worst of it was that they did not see how it was to be improved. As to the suggestion which had been made that it might be possible to prevent the population of London taking what water they wanted from the river, those of them who were acquainted with the feeling of London must know that that was a perfectly idle suggestion. (Hear, hear.) Whether anything could be done with regard to placing locks lower down the Thames, or embanking the river higher up, he could not say, for he was not an engineer, and he knew nothing about these things; but it was a very serious question for the dwellers in the Thames valley to consider what could be done to improve matters in view of the yearly decreasing supply of water in the river. Their chairman, in speaking on another subject, turned to him, and said that anybody who had control over a reach of a river had the power in his hands to do a great deal to the advantage and interest of his fellow creatures. He happened to be in that position. He possessed about a mile of the Mole—a miserable stream; but they had fish in it, and on no occasion had any gentleman, or any gentleman's son—for some of them were very small anglers—asked him to be allowed to fish there, but the request had been cheerfully granted. (Applause.) He did not claim any great credit for that, for he would think it a very churlish thing to prevent anybody exercising such a right as that. The last time, or the last but one, that he had the honour of dining with them, they had his friend, Mr. Frank Buckland, with them. The appointment of that gentleman as inspector of fisheries was one of the best appointments ever made. It was a very great advantage that of late years they had had connected with the fishery interests of this country men of science. When, to succeed Mr. Walpole, Mr. Huxley was induced to take the position he now occupied, it was greatly to the interest of fishing. No doubt they had seen the perfectly ridiculous outcry that was made about mackerel, because the mackerel, like human beings, had a few parasites. They knew how, in a few sentences, Mr. Huxley disposed of that. Returning to the toast, he thought their chairman was a man who had his heart in the right place, and a man who devoted himself to the duties of his post. He had told him that evening that he did not think there was any place in the Lower Thames where there was any danger of poaching or other malpractices, but he could get several boats' crews together at very short notice to deal with the offenders. He was the right man to deal with the interests of anglers, and he was sure they had done right in selecting him as their President. He begged to propose to them, with the greatest possible pleasure, the health of a man who had thoroughly earned the hearty goodwill of every angler—Mr. Thomas Spreckley. (Loud cheers.) The toast was drunk with musical honours.

The Chairman, in responding, said that so long as he had their esteem and confidence, he would be happy to do all he could for the society. In concluding, he proposed "The Kindred Societies of the Thames" and all societies that helped them in their work.

Mr. F. H. Lemann, of Maidenhead, responded.

The Chairman next proposed "The Visitors," for whom a neighbour of his, Mr. Richard Lloyd, of Sydenham, and Mr. J. Reid, responded.

"The Fishing Associations of London" was also proposed by the Chairman, and Mr. Murray, President of the Central Association, returned thanks.

Sir Trevor Lawrence proposed "The Ladies," for whom Mr. W. R. Spreckley responded.

The next toast was "The health of Mr. Brougham," the secretary of the society. This was heartily proposed by the Chairman, and enthusiastically received.

Mr. Brougham said that, during 25 out of the 46 years of the society's existence he had laboured heartily, earnestly, and diligently in the work of preserving Old Father Thames. He referred with pleasure to the presence that evening of Mr. Clark, a professional fisherman, who was a subscriber to the society, and expressed his hope that he would be able to continue for some years to come to do his best in the interests of the anglers, the professional fishermen, and the Thames Angling Preservation Society. (Applause.)

The Chairman proposed "The Vocalists," and Mr. Larkins having responded, the proceedings terminated.

## INAUGURAL BANQUET OF THE BONA FIDE ANGLERS.

ALTHOUGH one of the youngest of the metropolitan angling societies, the Bonâfideans have already become one of the most important. As their name implies, almost without exception all the members are actually anglers, and the club intend not to elect any gentlemen who are not anglers. They already have promises from members of large contributions of books on angling for their library, and ancient and modern fishing-tackle, poaching implements, &c., for their museum. On Thursday in last week they held their inaugural banquet, under the chairmanship of Mr. R. B. Marston, at the Moorgate Tavern, when about half a hundred gentlemen sat down to what proved to be in every way a most excellent dinner. Mr. Alfred Jardine was vice-chairman, and among those present were Messrs. H. Brett, E. H. Bassett, F. W. Jardine, W. H. Brougham, E. Frost, T. Dixon, C. Christie, W. F. Hammond, F. W. Norman, A. Paterson, T. James, F. G. Newton, McCulloch, S. Constable, Harvey, Homann, and Geo. M. Kelson.

Dessert having been removed, the Chairman gave the order to fire, and it would have done the heart of Sir Walter Raleigh, Izaak Walton, Thomas Carlyle, or any other "friend of the weed" good to have seen how every angler at once proclaimed himself also a smoker, and how under the influence of the "peaceful plant" harmony and good fellowship prevailed throughout the evening.

The Chairman, in giving the toast of "The Queen and the other members of the Royal Family," said that he was quite sure that this toast needed no recommendation to any body of British anglers. He had been to a great many meetings of anglers, but he had never heard it received otherwise than with enthusiasm and loyalty. From the earliest times the English Royal Family had been fond of fish, if not of fishing, and they would all remember the case of the English prince who died from eating too many lampreys. He might tell them that the late President of the Fisheries Exhibition (H.R.H. the Prince of Wales) had been nearly choked at one of the fish dinners by the enormous fish which did duty for whitebait. Then there was the Duke of Edinburgh: he had done more than most anglers could boast of—viz., nearly lost his life in a weir-hole when pike-fishing. He (the Chairman) had asked his Royal Highness for particulars of the affair; but the well-known modesty of the Royal Family and dislike of seeing their adventures in print had deprived them of an account of one of the most interesting episodes connected with angling, and especially with pike angling. It might not be known to some of those present that one of the most enjoyable days the family of the Prince of Wales spent during the year was their annual angling picnic on Virginia Water, and he hoped that might lead some of the young princes to become bonâ fide anglers. (Hear, hear.)

The National Anthem having been sung, the Chairman said the next toast he had to propose was that of "The Army, Navy, and Auxiliary Forces." He thought there was no more fascinating reading than the history of the feats of arms performed in battlefields on land and sea by our soldiers and sailors. He was no pessimist in regard to the future of the British Empire, which he believed was as yet only in its infancy. He thought it was only necessary to look about one and note the thousands of pretty girls—(hear, hear)—and handsome young fellows—the future fathers and mothers of the British race—to laugh at the idea of degeneracy. Outdoor sports of all kinds were never more popular than at present, and those who could play could fight. He knew it was advisable never to refer to political matters at angling meetings. At the same time, he didn't think much of a man who was ashamed of his opinions. He was a Conservative, and he could assure them that if ever that wretched Channel Tunnel was made, and the French came through to fish in our waters, we should all very soon become extremely Conservative. (Laughter.) He had much pleasure in coupling the toast with the name of Major-General W. F. Hammond, of the Honourable Artillery Company. They were all proud to think he was a member of their society.

Mr. Jardine having very effectively sung "Friends of the Brave," the Major replied. He said he was afraid he could not lay claim to such a high military title as had been bestowed on him by the chairman, but in whatever position the individual members of our fighting forces might be, he was quite sure they would always endeavour to do their duty to their country. There were doubtless troubles ahead; and, with an extended empire like ours, we could never hope to be quite free from little wars or big ones; but as long as we kept our powder dry and stood no nonsense we should easily hold our own. (Hear, hear.)

The Chairman then gave the toast of the evening, "The Society of Bonâ Fide Anglers." He said he was proud to be a member of their society because he believed it was one which intended to keep a thoroughly sportsmanlike feeling predominant. (Applause.) He did not think they would countenance the taking of fish out of condition merely because it was not illegal to take them, but that they would set themselves a high standard and rigidly maintain it. He was always glad to aid in the formation of angling societies, and had had the pleasure in assisting to bring to life very many of them in various parts of the country. They might not at first sight think there was much connection between angling societies and that bird of ill-omen, the cholera, which now threatened to sweep down on them, but he could assure them that there was. Impure and sewage contaminated water was the friend of cholera and many other diseases which, not half so much feared, were far more fatal. (Hear, hear.) Fish could not live in it, and anglers were the only portion of the community who made a stand against the conversion of our streams into sewers. He hoped in the future they would combine together, and, by means of their societies, compel the authorities to do their duty. Only the other day scores of tons of splendid fish had been killed in the Trent—("Shame")—and their Trent angling brethren were up in arms at once, and hoped to punish the perpetrators of this piscine atrocity. Their society would, he was sure, support all useful objects; they should remember that every angler and every society was the centre of a circle which could do good if once the ball was set rolling. Of course, they must aim at unity and never—well, hardly ever—quarrel. (Laughter.) Family squabbles were in the natural order of things, but they only cleared the air like the proverbial thunderstorm, after which everything was fresher and sweeter than ever. (Laughter.)

In responding, Mr. Jardine, the Vice-Chairman, mentioned that the inception of the society was the outcome of a meeting of anglers who, for reasons well known to those present, had decided to start a society, all the members of which must be good anglers. This had been achieved, and, with the view of preserving and developing fisheries and encouraging sportsmanlike angling, a high scale had been fixed in the various fish for weighing in, and much higher weights for specimens for the museum. He was glad to hear the remarks of their Chairman as to the number of their members who were fly-fishers—certainly a far larger proportion than any other London club could show.

The Hon. Secretary then gave "The Jolly Anglers" in capital style.

The Vice-Chairman, in proposing the toast of "The Preservation Associations," spoke of the stale condition of the rivers and the scarcity of water owing to the long-continued drought, and alluding to the old method of drainage and weirs which held the rain and floods back, drew comparison with modern weirs and systems of surface draining, whereby the rains ran off at once, carrying much of the tillage and artificial manures into the rivers, thereby injuring fish and fish-food, and producing but a temporary flush which was not of much use to anglers. He was sure the Thames Angling Preservation Society was doing great good to our metropolitan river. He had much pleasure in calling upon his old friend, Mr. Brougham, to respond.

Mr. W. H. Brougham, in reply, said he could lay claim to being the oldest official representative of one of the oldest, if not the oldest, Preservation Societies in England. The Thames Angling Preservation Society is recognised throughout the country as a parent institution, and frequently applied to for information and advice in the establishment of similar associations. He had been 25 years connected with his society, and could honestly say, whatever may be said to the contrary, during that period the preservation of the river had never been neglected, and scarcely any new methods had been adopted in that direction, which the minute books could testify, as well as the experience of his old friend Mr. Jardine when he came on the Committee fourteen years ago. It had always been a regret to him that not only the angling clubs of London, but anglers as well, did not support the society as they ought to do, for if its existence depended upon them it would soon cease to exist. The income of the society last year had exceeded the previous one by £80. In conclusion, he said all were indebted to Mr. Spreckley for his energy and liberality, and the feeling he had aroused in the interests of the Thames Fishery.

Mr. S. F. Hughes then favoured the company with a song, and Mr. G. H. Bassett, in a few very kind words, proposed the toast of "The Chairman."

Mr. Marston said he had felt much honoured in being asked to preside at their inaugural banquet. He thanked them most heartily for the kind way in which they had supported him, and he trusted the society would go on and flourish in such a way that before long there would be no jollier company of anglers, and none doing more useful work, than the Bonâ Fide Society. He would give them an opportunity of commencing that night by asking them to support the Anglers' Benevolent Society by purchasing the fifty tickets for the Tournament which he held in his hand.

Mr. Edwin Frost gave "Out with my gun in the morning" most effectively; and Mr. Geo. M. Kelson, in responding to the toast of "The Visitors," proposed by the Chairman, said: "I have only just been asked to reply for the visitors—a toast so admirably proposed and so heartily accepted—and for them I beg to thank you for your bountiful hospitality. For myself, I may say I am delighted I was able to accept your kind invitation, even had it only resulted in my increasing my angling acquaintance. Gentlemen, I have listened with much interest to the remarks which fell from the Chair and Vice-Chair in reference to angling differences of opinion. I cannot help thinking there are no sportsmen who can boast of more friends and fewer enemies than fishermen. I venture to say that we sometimes benefit by meeting those who do not quite strike the same key-note as our own, because in one or another of their arguments they may remind us of our own trivial errors; but, gentlemen, as to angling friends, we cannot have too many, and when associating with them, do they not often picture to us the sentiments uppermost in their mind which make the angler's life so enjoyable? You have no doubt many a time heard it said that 'brevity is the soul of wit.' Now, as I really am not able to make a speech, you will confer a favour by allowing my remarks to be very brief; and, as to wit, I cannot do better than leave that in the hands of our accomplished Chairman, from whom it has been so ably illustrated throughout the evening. But before resuming my seat, allow me to say that the more I come in contact with fishermen—no matter what sort—the more I see how readily the knapsack of custom, overladen with good fellowship and generosity, falls upon their backs; and so we cannot be introduced to too many. Gentlemen, I beg to thank you on behalf of the guests for a most pleasant and enjoyable evening."

In proposing the toast of "The Press," the Chairman said they had all hoped Mr. Wm. Senior would have been present to respond to it—(hear, hear)—but he regretted to say he had had a letter from Mr. Senior lamenting his enforced absence. He had known Mr. Senior personally for some years, and a great many more through his books and writings—in all angling literature there was hardly a more delightful book than his "Waterside Sketches"—and he could only say that he was never more pleased than when in his company, whether chatting about angling over a cigar or catching trout. He hoped Mr. Senior would join them on some future occasion. Mr. S. was an all-round angler, and he (the Chairman) felt sure would agree with him that an angler who prided himself on only going after one kind of fish was no true Waltonian. (Hear, hear.) He thought his friend the Vice-Chairman had something to say to them about this toast; perhaps he would get Mr. Brougham to respond.

The Vice-Chairman said he greatly regretted the absence of Mr. Senior; but they had another old Press man present in Mr. Brougham, and he would call upon him to reply to the toast, which Mr. Brougham briefly and pleasantly did.

At a late hour, and after songs from Mr. McCulloch, Mr. Jardine, and other gentlemen, the majority of the guests departed, and a most enjoyable and in every way pleasant evening came to an end. The members present each purchased a ticket for the Tournament.

## ON THE DESCRIPTION OF SALMON FLIES.

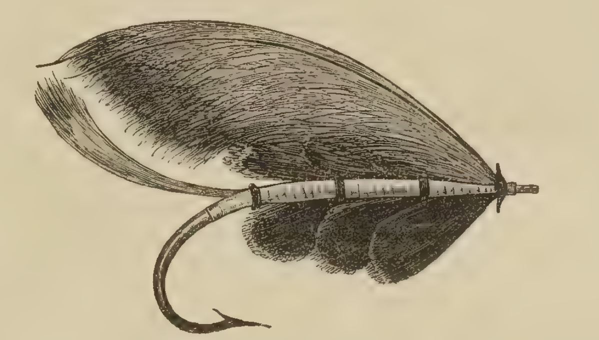
By Mr. Geo. M. Kelson.

Major Traherne's Patterns *(Continued)*.

### No. 6.—The "Black Prince."

In pursuing the subject of hackles, perhaps it would be well to come to some definite understanding for future reference regarding coch-a-bonddus. A coch-a-bonddu is a black-pointed furnace hackle. The red part cannot be too red for winged flies unless required for dark water, though the deeper shades are generally reserved for grubs, neither can the black list up the centre be too dark and shiny, nor the black points of the fibres too long. Evenly-tapered hackles having these qualities, with a good under colour, are, in my opinion, most valuable.

Then there are those something similar in character which have natural blue dun points, and that colour running up the middle of the feathers; these we will term "natural blue coch-a-bonddus." One just dipped in Bismarck brown aniline dye is, perhaps, the best of all hackles in low water everywhere; at least, as far as my experience goes.



And there are those I call "white coch-a-bonddus," having central black lists and points, but white where the red is in an ordinary one; they may be dyed any colour, and will be found to be much more attractive and killing than any plain white hackle stained. The black list enriches and "stands out" over any lightish body, and is very effective, as it is with "Childers," which is an old standard pattern.

That class of "naturals" which are most rare are, perhaps, the "Kneecaps," but they may easily be recognised. Except that they are reversed in order, the colours are red and black as with a coch-a-bonddu—that is to say, instead of black centres and points, they have red; the black part being the streak running up in the middle of the fibres.

Farlow purchased the whole of these birds—I know of no others in the kingdom; and the fly called "Kneecap" can only be obtained at this establishment, correct to pattern.

With regard to Fiery Browns, I consider those dyed and supplied by Mike Rogan, Ballyshannon, the best. Upon this, the whole of my friends who have a voice in the standard colours agree.

Plain white hackles may be purchased anywhere of almost any shade and size.

It will not be necessary, I think, to say any more about these feathers, if I may refer my readers to the article of the 8th March last, where particulars are given in detail how to double hackles. They should, however, be kept flat and not allowed to get twisted.

It is astonishing what quantities of valuable feathers are damaged in keeping, and, therefore, I particularly call attention to the letter in another column from a special correspondent relating to the Flymaker's Box. I have tried all sorts of plans, but have found nothing so suitable, convenient, and I may almost say, necessary, as the cabinet which he advocates.

When this fly is wanted smaller than the illustration, natural black hackles should be used instead of the feathers on the body, which, though flaccid, are not weak, but malleable, and have a yielding, leech-like appearance in water terribly seductive. Whole feathers, though, are not often used as hackles, because they are inanimate in the water; but the discovery here was indeed a grand one.

Many of the whole feathers that are used in wings are not only to a certain extent stubborn, but are intended to be stationary, simply to form a background for fibres of other varied shades over them to be shown to greater advantage—take, for instance, the tippet in the "Butcher." But in this pattern, as in other of these novelties, these "legs" are left to do duty alone without other facial union. The golden topping element, in dark water, when the "B. P." is always more successful, can claim but a trifling share of commendation; but in bright water, the sting of disappointment may often be averted, especially in a tumbling torrent, by this admirable contrast—these life-like, beguiling "decoy ducks" in the wing. Having the illustration, the fly may be described :—

Tag : Silver twist and golden silk (the same shade as toppings).

Tail : Topping.

Butt : Black herl.

Body : Three equal divisions of silver tinsel, butted, and with two black feathers from the nape of the Indian Crow at top and bottom at the termination of each section, V-shaped, as illustrated.

Wings : Five or six golden toppings.

Horns : Blue Macaw.

Head : Black herl.

Wherever salmon take a fly, at one time or another this bewitching "Circe" would be sure to tempt ; but if required spring size—or say, double, as large—these black feathers would be useless, and those from close under the blue striped feathers in the wing of the jay should be selected, and they will answer admirably, especially if the angler has *faith* and takes pains. But persistence is often forged hard in the flame of fashion ; in fact, the fascination for old standard flies—used, too, in the same customary way—is almost universal, and with some of us almost irresistible.

It is, however, astonishing how a "new acquaintance" will take at times; dressed in sombre array, or even gaudy glitter—a decided change—a "something they have never before seen," is unquestionably the fly to use in any fantastic way when salmon are immovable. Allow a quarter of an hour's rest if you can get in front of your fish, and, a yard from the fly, fix two or three swan shot ; cast, and let the fly remain perfectly still a few feet before and in a line with the fish for three or four minutes ; then drag it gently, say a couple of feet, and give it a short, sharp snatch ;if that fails, try a prawn. Great care must be taken to see that the fly is perfectly made, so that it fishes evenly, for if it wobbles the least atom there will be no recognition.

Messrs. Farlow, London ; Bernard, Piccadilly ; Malloch, Perth ; and Wright, Sprouston, supply these flies.

### THAMES BARBEL.

In spite of the lowness of the river, we hear of several fair takes of barbel. Mr. Alfred Jardine and Mr. Geo. M. Kelson got twenty-two nice fish last Saturday.

We are glad to see it is now becoming the general practice for barbel anglers to put back all the fish alive, with the exception of a small proportion of the best specimens.

### ANSWERS TO CORRESPONDENTS.

F. Francis, Folkestone.—Mr. Basil Field's patent bait-can can be had of H. Bawcombe, 2a, Victoria-road, Holloway.

C. Fox, Kingsbridge.—Thanks for the letter and cuttings.

A Coggeshall Volunteer.—We have had one of Booth's roach rods in constant use for about two years, and can recommend it.

F. F. C.—Write to Mr. Vickery, of the Torcross Hotel. See his advertisement in our columns. We believe you would get good jack fishing there in August. Slapton Ley is also in the neighbourhood.

## CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### FISHING ON THE STOUR.

Sir,—I should feel exceedingly obliged if you or any of your readers could inform me whether any fishing is to be had on the river Stour—say between the villages of Saare and Minster. Also, for any particulars relating thereto.—I am, &c.,

Alfred J. Best.

[If Mr. Best will make an appointment with Mr. Kelson, of 13, Colville Mansions, W., to meet at 12, Fetter-lane, one morning at 11 o'clock, he will learn all particulars of a mile of fishing to be let at a reasonable sum near the association water on the Stour at Canterbury.—Ed.]

### PIKE FISHING NEAR MANCHESTER WANTED.

Sir,—Will any of your readers be good enough to inform me where good pike fishing can be had near Manchester ?—I am, &c.,

G. Maitland.

22, Bradshaw-street, Manchester, July 12.

### MATERIAL FOR WINGS OF ARTIFICIAL FLIES.

Sir,—I inclose you two backbones of the squid (*Loligo vulgaris*). If you wet them you will find them flexible and perfectly transparent. These were taken from good-sized fish, and may be a little too stout ; but the bones from the small ones are, I believe, exactly what are required. There are scores of these little fellows taken at every haul of the mackerel seines, and I will get you some in the course of a day or two.—I am, &c.,

E. Gosling.

Budleigh Salterton, July 12.

[We are much obliged, but fear the squid bone is too brittle even when wet to stand the flipping an artificial fly is exposed to. Pike scales, as prepared by Mr. McNee, answer admirably we always find. For instance, last Monday we were trout fishing, and out of nine and a half brace got several of the best fish in still, bright water after they had *refused* the feather fly (a yellow dun), notably in the case of a 1¼lb. fish which was feeding near the top in a deep still hole. The keeper said he had often been tried for ; on putting the feathered fly near him he carefully and leisurely examined it—even followed it for nearly a yard, but would not touch it or look at it again. We then put on a little quill gnat with pike scale wings, and much to the keeper's astonishment his old friend was on the bank in about two minutes.—Ed.]

### FISHING AT KINGSBRIDGE OR SALCOMBE.

Sir,—Can you or any of your correspondents tell me if there is any trout fishing in the neighbourhood of Kingsbridge or Salcombe, near Start Point, in South Devon, and the names of any small fishing inns on the Avon or neighbourhood ? I have looked up several books and do not find any, or I would not trouble you.—I am, &c.,

Alfred Brewer.

### FISHING NEAR SEASCALE, CUMBERLAND.

Sir,—Can any of the readers of the Fishing Gazette kindly give me any information on the following points :—Is there any trout or pike fishing within walking distance of Seascale, Cumberland ? If so, is it free, or can permission to fish be obtained ? Is there any sea fishing ? Any information will be acceptable.—I am, &c.,

R. M. H.

### WHO INVENTED DRY-FLY FISHING ?

Sir,—My husband wishes me to say that if Mr. Ogden was the inventor of dry-fly fishing it must have been very many years ago, as he (Mr. Francis) had friends who used that style of fishing some years before his "Book on Angling" was written. We have been away for a month, and I hope Mr. Francis will have greatly benefitted by the change.—I am, &c.,

Mary Francis.

The Firs, Twickenham.

[We sincerely trust Mr. Francis will continue to recover as rapidly as he is doing at present. We find the late James Ogden, in his work on "Fly Tying," published in 1879, says, page 31 :—"Some forty years ago, when I introduced my floating flies, the love of angling was increasing at the rate of ten to one from when I was a lad. I always found the more a stream was whipped over the more wary and shy the fish became, and I always made it a rule never to leave a good rising fish while he was feeding. I have tried every dodge, and often every fly in my book. By changing my end fly I have occasionally, without intending to do so, made a cast with a dry fly. In those days it was said this would scare a rising trout, and cause him to leave off feeding. On the other hand, I found while my fly was still on the surface, without a ripple, it has tempted the fish to seize it, after I have been throwing a sunk fly over him scores of times in vain. These observations were the cause of my introducing floating flies." A reference to Mr. Ogden's interesting little book will give more particulars about his dry flies. No one can read his book without seeing that he was a thoroughly practical angler.—Ed.]

### FIELD'S AERATING BAIT-CAN.

Sir,—I notice that your correspondent, G. M. Kelson, writes an extremely favourable notice of an aërating bait-can, which was shown at the "Fisheries," and awarded a prize by the Jury, of which your correspondent was a member. It seems to me only fair to point out that the aërating machinery appeared to be very likely to get out of order, as, in fact, it did soon after being placed on view. Then as to the internal can—called by your correspondent the "Slapton Ley" pattern—this is not even new, as Alfred and Son introduced this arrangement many years ago ; however, a can of their pattern exhibited by another firm was not even noticed by the Jury that was able to see considerable merit in an imitation. In conclusion, the best possible bait-can is one with the internal arrangement mentioned, but without the needless complication of the aërating apparatus so much liked by Mr. Kelson, as any good results obtained from it may be gained by an indiarubber tube with elastic ball attached, which costs very little, and is not likely to get out of order. Trusting that you will, in common fairness, insert these few lines,—I am, &c.,

C. S. Bentley.

[We understand Mr. Field's can has been greatly improved upon since last year. The one exhibited at the Fisheries was broken by the number of people, most of them non-anglers, who examined it. The principle of the inside perforated can was, undoubtedly, invented by the late Mr. Alfred, of 20, Moorgate-street ; but the chief feature in Mr. Field's can is the most excellent and simple aërating arrangement, of which we think most highly.—Ed.]

### CLOSE TIME AND LIVERPOOL ANGLERS.

Sir,—In the Fishing Gazette of 21st June a report of the "Liverpool Central Angling Association" appeared, signed "Piscator." In this report "Piscator" says, "This (the Liverpool Central) is the only Liverpool Association that have strictly observed the spirit of the Freshwater Fisheries Act on this particular point," *i.e.*, close time. Let us see how they observe the spirit of the Act. It can be proved by scores of witnesses that both officers and members of the Liverpool Central have during the whole of the close season been seen Sunday after Sunday—not to mention week days—returning with small perch and roach of a size any angler worthy the name would have scorned to carry away from the pond side, and have been ashamed to have had in possession. Why, in the very heart of the close time one of their members on a Sunday had a small creel full of "baby" roach, and triumphantly and openly boasted of his "catch"—save the mark !—and was a proud and a happy man, and the envied of his brother members, with whom he is a "hero" to this day. And not only have they fished (?) through the whole of the close season, but have done so for small "sweepstakes." Yet, knowing this, "Piscator" has dared to censure other Liverpool associations, alongside which the "Central" is a veritable pigmy, and to assert that they have observed the spirit of the Act referred to, whilst in fact they have been trampling the whole thing under foot. Take advice, "Piscator," and in future avoid straining at a gnat after having swallowed a camel, and do not bid for popularity at the expense of others. Remember that "those who live in glass houses should not throw stones."—I am, &c.,

Isaak.

### LLANFAIRFECHAN.

Sir,—If "E. M.," who inquires about trout fishing at Llanfairfechan will write to me, I shall be pleased to give him considerable information on the subject, as I know the district well.—I am, &c.,

J. R. Roberts.

Molland, South Molton, July 17th.

### CARP AND TENCH FISHING.

Sir,—In your July 5th paper a Mr. Wall seems to think that worms are not the natural bait for tench. I could soon satisfy him to the contrary. For instance, all bottom feeding fish, such as carp and tench, require to be baited with whatever you intended to fish twenty-four hours before fishing. Some few years ago a friend asked me to fish his pond for tench. He said no one could catch them. I said, "I will." I got his man to dig a quart of worms and throw them in the pond all together. He did so about 8 a.m. I fished next morning, twenty-four hours after, with one rod and worm on the bottom in the spot baited, and before 3 o'clock in the afternoon I had seventy-two tench—stocked all the ponds in the neighbourhood, also the people's tables.

A knowing angler once challenged me to fish for carp in a friend's park, where he had permission. I took the liberty the day before of pitching a good bait of worms in the water unknown to him. Of course, I took care to stick to my spot while he wandered about. He had a big float, which frightened the fish. I, with a very light float and bait on the bottom, took forty carp ; he a goose's egg.

Of course, the secret in all bottom fishing is to feed the fish twenty-one or twenty-four hours before you try them, and then fish with same bait. Many persons will groundbait the night before fishing, which is a mistake, as the fish are gorged and off the feed. Myself and friend in March on the Hampshire Avon in one day took between eighty and ninety pike, *all spinning*.—I am, &c.,

Devizes.

R. Howse.

[Worm is a bait we frequently catch tench with, though they will take bread paste often just as well. Boiled potatoes, mashed up with some bran and stale bread, makes a capital groundbait ; plain boiled potatoes are also good.—Ed.]

### GOOD FISHING AT HUNTINGDON.

Sir,—I wrote you at the commencement of the year concerning the fishing on the Ouse, Huntingdon. I take the liberty of so doing again, as I was there at the opening of the season until the 28th, and wish to say (and call the attention of our London anglers to this river) that during the time stated I was continually on the water, and never have, or ever wish, to see a prettier sight of bream than I witnessed during that period, both in size and numbers. Thousands might have been seen going up stream just under the surface—enough to make tears come into your eyes, after being out at 4 a.m. and not getting so much as a smell, leave alone a fish. I saw one buster, weight I cannot say ; but length was not under 24in. (2ft.), and plenty from 3lb. to 5lb. are often taken. The weather during the past fortnight was not of the best, owing to the stagnation of the river from want of rain. I only obtained about 40lb. weight, consisting of bream, eels, roach, chub, bleak, and perch.

I saw some very fine perch and roach on the shelf over which the water runs from the river into what I believe to be called Houghton Pool (a fine place for jack), and I hear that some of considerable size are often taken from this place. If any of our London anglers should go down, they can fish from the towing-path of the right bank (from the town). On the left it is not always open to anglers without permission, on account of the growing grass, and therefore it would be best to take the towing-path. If boats are wanted, they can be obtained of Mr. George Childs, The Waterloo, High-street, within a stone's throw of the river, who will give every attention to visitors ; as will also the river-keeper, Mr. Henry Rout, 43, Great Northern-street, and anyone wishing for a day's outing with him can do so by appointment ; and I venture to say that he knows where " they " are.—I am, &c.,

Grosvenor-park, Camberwell. J. T. FOVARGUE.

## ONE DAY IN THE COUNTRY.

SIR,—Last year you led some of your readers generously to help us to provide a day's excursion into Epping Forest for 800 poor girls and boys who attend the Hackney Juvenile Mission Ragged Schools at Bruce and Lyme Grove Halls. The committee hope to be able to take as many children this summer, and provide them with at least one substantial meal, and would be glad if your readers will assist and practically participate with them in this pleasure by sending contributions towards this Thirteenth Annual Day in the Country Fund to either Rev. William Tyler, 247, Hackney-road, N.E. ; the hon. secretary, Mr. J. Newman, 120, Cheapside, E.C. ; or to —Yours, &c., ATHRO ALFRED KNIGHT, hon. treasurer.

Knightsville Ladies College, Lewisham High-road, Brockley, S.E.,
July, 1884.

[Anglers so well know the delight of the many days in the country they get, that we feel sure they will, many of them, be glad to help these poor children.—ED.]

## THE FISH-EATING BLADDER WORT.

SIR,—As there appears no doubt but that Mr. Simms, of Oxford, has made an important discovery possessing a vital bearing upon the question of fish culture, would it not be well, instead of spreading far and wide sprays of this piratical plant, the well-wishers of pisciculture should do their best to exterminate rather than distribute so noxious an instrument to fish development?

The disastrous consequences which followed the popularising the American Anacharis plant by the dealers in aquaria, and which aquatic plant, growing while floating at every joint, soon choked our canals and waterways, impeded navigation, and destroyed all chance of fly fishing, must be pretty fresh in the memory of many of your readers.

This vegetable thing—the bladder wort—having been convicted of the wholesale destruction of infant fish life, may, as " groups " of vegetables are familiar to botany, it is possible, be of a family the predilections of which are more or less piscivorous—an analogy naturally suggested by the fly catching and carnivorous species on shore, and the aqueous element may not be contented with a single example.

Nor is it surprising that this fish-destroying plant should be met with in ditches and water courses, which have hitherto been considered harbours of refuge for the fry of fish from the ravages of their predatory enemies. May not the failure of many thousands of newly hatched alevins, so confidently entrusted in the early part of our fish hatching campaign be attributable to this hitherto unknown source of extirpation?

In reading Mr. Simms' interesting and suggestive description of the bladder wort, I was much struck with the resemblance in several particulars to the Sargasso weed, an account of which Professor Gosse gives in his "Letters from Alabama." He writes :—

" Its own structure is most interesting and surprising, for though it may be conjectured to have had an original root, a local habitation at some remote age, no connection with the shores or the bottom of the sea subsists now, for it evidently shoots and increases as it floats free on the surface of the waves. It consists of a multitude of well-formed leaves, with a rib running down the centre, and notched edges, set alternately on angular stems, which bear a number of globular berry-like vessels, about as large as currants, the office of which is to float the plant. But to a voyager, glad of any source of amusement, the Sargasso-weed is most welcome, because of the shelter which it affords for hosts of small marine animals. Fishes of various kinds crowd around and beneath it, for the sake of preying on the invertebrate creatures which browse upon its leaves or play among its branches." (Pp. 9, 10.)

We shall, doubtless, now that scientific attention has been drawn to this poaching plant, hear more of its peculiar and nefarious attributes, and all fish breeders should at once closely inspect the vicinity of their redds and nurseries, to render all apparatus as secure from the presence and influence of this wily marauder as possible.—I am, &c., CREEL.

## THE RED RIVER GOLDEN EYE.

SIR,—The Macnee flies came to hand safely, and have been regarded as an object of curiosity. I have sent some to Mr. Orvis and to Mr. A. N. Cheney. I regret I cannot find trout here to use them with. I am out of " trout range." Your request concerning " golden eye " shall be complied with. I will send at once a drawing of one, giving life-size, classification, and description. I was out fishing last evening, and in spite of musquito bites, had some good sport with golden eyes. They take flies splendidly as the season is advancing, and I found them rising at every fly fluttering over the water. They are game fish, fighting to the last, and trying every move to pull off the hook when struck. They test fine gut pretty severely, and unless handled carefully, break away, taking fly with them.

The U.S. Customs opened the package containing Theakston's book, and made me pay duty on the same; but it is a valuable one. I presented it to Mr. Orvis's daughter, who makes his fine flies, and received " heaps of thanks " for it. The book contains information not found in any American work, hence is valued by a fly-tier.—I am, &c., W. DAVID TOMLIN.

Hallock, Minnesota, U.S.A.

### DESCRIPTION OF THE GOLDEN EYE OF THE RED RIVER OF THE NORTH.

| RAYS. | | TEETH. |
|---|---|---|
| Dorsal .................. | 10 | Single row on lower jaw. |
| Adipose .................. | 11 | 4 rows on upper jaw. |
| 2nd Adipose ............ | 7 | Vomer, pronounced strong. |
| Ventral .................. | 20 | Truncated teeth, 2 rows. |

SCALES (OVATE).

6 Rows above line.
10 Rows below line.
59 to 65 scales in longitudinal line.
Nostrils, clearly defined, and double.

[We are much obliged to Mr. Tomlin. The sketch shows the fish to be not unlike our chub in shape.—ED.]

[Several letters, including a long one on " Eyed Hooks " from Mr. H. S. Hall, are unavoidably crowded out.—ED.]

## THE HEIGHAM SOUNDS CASE.

MR. LARK, the Hon. Sec. of the Yarmouth Piscatorial Society, asks us to hold over until next week correspondence on this matter, when he will make a statement which, we believe, will be satisfactory, as showing the club is in no way to blame.

## SCOTCH FISHING NOTES.

THE EARN.—The Earn is affording some good sport now. On Thursday, Messrs. Morgan and Graham, Crieff, had baskets of seven and five dozen trout, respectively. On Monday, Mr. Gardiner, Crieff, had 6lb. of excellent trout on this river.

MIDDLE MISHNISH LOCH (MULL).—Fishing from the Western Isles Hotel, Tobermory, Mull, on Tuesday, last week, Dr. Dougall had 10lb. of excellent trout on this loch. Messrs. Harrower and Ferguson fished this loch on Wednesday, Thursday, and Saturday, and had 10lb., 11lb., and 12lb. each day, respectively. Mr. McLean, Lorne Cottage, fished Loch Frisa on Wednesday, and got five dozen trout weighing 18lb. Two of this catch weighed over 1lb.

LOCH TUMMEL.—Very few parties were out on Loch Tummel last week, on account of the water being very calm and clear. Good baskets have, however, been made since the rain began to fall. On Wednesday Mr. John Scotland, Pitlochry and Mr. Adam, Connacher, Ballyoukan, had splendid sport on this loch. Of their catch one trout weighed 2½lb., and another 1½lb. Three pike were also secured averaging 2lb. each. The river is in splendid ply, and some excellent sport is being got on the Pitlochry Hotel Water. A beautiful trout weighing 1lb. was captured by Mr. John McBeth, besides a number of smaller ones. The loch was in good ply for angling on Friday, and the weather was favourable. Fishing from one of the Loch Tummel Hotel boats, Messrs. McIntosh, McFarlane, and McNidder, Dundee, captured 12 beautiful trout. On Saturday the same party captured five trout averaging 2lb. each. Four pike captured by the same gentlemen weighed 6½lb. Mr. Wilson, Tummel Bridge, fished from one of the Loch Tummel Hotel boats, and captured a beautiful trout weighing 2¾lb., besides several other good fish. Mr. Finlay, Pitlochry, got a good basket of trout, averaging ½lb. each, while fishing on the Pitlochry Hotel water on Saturday. On Monday Mr. MacFarlane, Dundee, was out again in one of the Loch Tummel Hotel boats, and got three trout, 1lb. each. On Tuesday Major Carnegie, St. Andrews, and Mr. Lamb, Cupar Fife, fished the loch, and captured three trout weighing 6lb.

LOCH ERICHT.—Excellent sport is still being got on this loch. On Wednesday, Thursday, and Friday Captain Murray and Mr. Martin landed 53lb. of trout. Captain Murray had trout weighing 2½lb. and 2¾lb. each, and Mr. Martin killed a Salmo ferox with the fly weighing over 5lb. Mr. A. Harris, Dundee, killed three Salmo ferox weighing 2, 3, and 5lb. respectively. Mr. Kinnon, of Dundee, had a basket of 16lb. on Saturday. Rain fell heavily on Thursday and Friday, and the loch is now in good ply for fishing.

THE ORCHY.—This river is now in good fishing order, and fish are very plentiful. Rev. F. W. Peel, fishing on this river from the Inveroran Hotel, on Saturday, captured three splendid salmon weighing 16, 14, and 11lb. respectively. The same gentleman, on Tuesday, killed two salmon weighing 12lb. each. Mr. W. K. Gair fishing on the same river, landed two beautiful salmon weighing 13lb. each. Messrs. Townsend and M'Leod killed three splendid salmon weighing 9, 11, and 17lb. respectively while fishing on the Dalmally Hotel water on Wednesday.

LOCH RANNOCH.—Fishing from the Bun Rannoch Hotel water on Wednesday, Mr. Henry Ellis, Cheltenham, caught a splendid Salmo ferox weighing 10lb. Good baskets were also obtained by Messrs. Ferguson and Wilson, Glasgow, and Mr. Penman, Chesire, caught a trout weighing 4lb. ; and Colonel Latour, London, had one weighing 3lb. Several other good baskets were got. The water is now in good ply, and the fish are in splendid condition.

LOCH LAGGAN.—This loch was fished on Wednesday last by Rev. Dr. Anderson, Perth, and Mr. John Steele, of Blackpark, Perth, when good sport was obtained. Mr. Hunter, Pitlochry, fishing on the same day, secured a finely-shaped ferox of 10lb. after a keen run. Another of 2½lb. was landed, while one of about 6lb was lost. A ferox of 11½lb. was landed by Mr. Hunter in the evening of that day.

LOCH AWE.—Fishing on Loch Avich from the Taychreggan Hotel on Wednesday, Messrs. Millar and Turnbull got a basket of six dozen trout.

FORMATION OF AN ASSOCIATION FOR THE PROTECTIOM OF SALMON IN LOCH AWE DISTRICT.—On Tuesday a meeting was held in Loch Awe Hotel for the purpose of forming an association to improve the salmon and trout fishing in Loch Awe District. Mr. Bett, of Bolfrachs, presided, and among the other gentlemen present were: Colonel Allan ; Mr. Chub, Edinburgh ; Colonel Murray, of Polmaise ; Rev. Hugh Munro, Balnalean ; Messrs. Bruce, of Ederline, Hartley, McLaughlan, McKinnon, Frazer, Blythe, Munro, Baird, Cameron, and McIntyre. Letters of apology for absence were read from Sir H. Dalrymple, Messrs. Anderson, Caledonian Railway Company, Muir, Innistrynich, Murray, Taynuilt, and McArthur, Oban. These gentlemen expressed approval of the objects of the proposed association. It was agreed, on the motion of Mr. Hartley, seconded by Mr. Bruce, that an association should be formed for the protection and development of the salmon and trout fishing in the district of Loch Awe. On the motion of the Rev. Hugh Munro, the Earl of Breadalbane was unanimously appointed president of the association ; Mr. Hartley was appointed secretary and treasurer of a committee which was formed to carry out the objects of the association. Owing to the fact that almost the whole of the landowners, farmers, and others in the district have become members of this association, it is confidently hoped that by its work the fishing in Loch Awe and its tributaries will be greatly improved in the course of time.—P. MC.G.

## South of Ireland.

The long spell of dry weather we have in the South of Ireland has resulted in a complete clearance of all the rivers of everything in the shape of fish. Salmon fry and trout have been destroyed, all the rivers west of Macroom having been poisoned. A change has, fortunately, come. Rain has again appeared, and the waters of the Lee are swollen to their ordinary height. Peal and salmon have been utilising the high water in their ascent, and we may hear of some good angling during this and next month. The subject of the poaching of the river was discussed at the recent meeting of the Fishery Conservators. It was stated that immense quantities of fry, the product of last year's breeding, were destroyed. Some technicalities of the law with regard to poisoning were referred to, and it was shown that a man who was seen removing a salmon from a poisoned hole was liable to punishment, although he might be perfectly innocent of having placed the poison there ; while, if a number of poisoned fish were found in possession of the real offender a distance away from the river, there was no power to reach him by the law. This was considered an anomaly that should be rectified. It was stated that the poisoned salmon were not saleable at home, but were shipped to the Liverpool and Manchester markets, and sold there as good fish.—ANGLER.

POACHING ON THE LEADER.—During last week the river Leader was running low and clear. Still some very good baskets have been got with worm in the early morning. Between the hours of 1 and 4 on Saturday morning the river was netted by four poachers from Galashiels, who cleared upwards of 100lb. of trout. The amount would have been much larger had they not been interrupted close to Birkenside. The leader of the gang is known. This is the third time that the Leader has been netted this season.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen ; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(ADVT.)

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE, SALMON AND TROUT FLIES, SUITABLE FOR ALL PARTS OF THE WORLD.
Mahseer Tackle in Great Variety.
Makers of Split Cane Rods.
Improved Folding Trout Landing Nets
(Very Light).
New Patent Lever Salmon Winch
(Can be regulated to any stiffness at will).
Brown's Phantom Minnows.

CATALOGUES GRATIS. PRIZE MEDALS. IMPORTERS OF SILKWORM GUT.

JAMES OGDEN,
28, WINCHCOMB STREET, CHELTENHAM,
PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE.
James Ogden's Newly-Invented Premier Spinner,
Regd. Nov. 13th, 1883. This Bait is constructed upon an entirely new and improved principle. Salmon, 6s. 6d.; Trout, 5s.; smaller do., 3s. 6d.
SILVER OR GILT.
Also coloured, similar to the Devon Baits, &c.
JAMES OGDEN'S
MULTUM IN PARVO FLY RODS,
PRICE 21s.,
The enormous and increasing demand for which is a sufficient guarantee for the high estimation in which they are held by the leading anglers of the day.
All Standard Flies ordered, or dressed correct to pattern, will be despatched by return of post.

N.B.—NO CONNECTION WITH ANY OTHER PERSONS ASSUMING THE SAME NAME

A NEW PERFECT FLY AND SPINNING LINE.

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES; FREEDOM FROM IRRITATING ENTANGLEMENTS; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says:—"I find the Acme more valuable than all others."
Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction, will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. Samples, Post Free, 2 Stamps.

## THE TOURNAMENT AT THE WELSH HARP NEXT SATURDAY.

The arrangements for the Tournament at the Welsh Harp, Hendon, next Saturday, are now completed. Anglers will remember that it commences at 2 o'clock. The entrance fee to the grounds is 6d. One thousand programmes and show-bills have been distributed, and a splendid lot of prizes secured. Competitors can enter on the ground; they must bring their own rods and lines, but baits to cast and flies will be provided. Mr A. J. Little (one of the judges) does not intend to compete, we understand. Particulars of the competition can be had of the Editor of the Fishing Gazette, 12, Fetter-lane, London, and the programme will be republished in the Gazette next week. In the fly-casting it has been decided to allow time, if the fly should be whipped off.

So many well-known anglers have promised to be present, that there is every prospect of a large attendance, and a most interesting and successful meeting.

## RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | | |
|---|---|---|---|
| Add | 30 | minutes for | Chelsea. |
| | 40 | „ | Putney. |
| | 45 | „ | Hammersmith. |
| | 50 | „ | Barnes. |
| | 55 | „ | Kew. |
| | 75 | „ | Richmond. |
| | 80 | „ | Twickenham. |
| | 85 | „ | Teddington. |

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | Morning. | Afternoon. |
|---|---|---|
| Saturday, July 19 | 10.23 | 10.59 |
| Sunday, „ 20 | 11.37 | 12.0 |
| Monday, „ 21 | 12.10 | 12.41 |
| Tuesday, „ 22 | 1.8 | 1.37 |
| Wednesday, „ 23 | 2.3 | 2.27 |
| Thursday, „ 24 | 2.51 | 3.14 |
| Friday, „ 25 | 3.36 | 3.57 |

Note.—New moon, July 22; high tide, July 24.

### THE LOWER THAMES.

General Remarks.

The river is beginning to derive some benefit from the change. There is a great body of fish in the river, and some of the lower class of bank anglers are not content with rod and line fishing, but have been found infringing on the fixed line system, and several will be brought up as an example. The tidal waters from Teddington received a visit on Sunday afternoon last from Mr. Thomas Spreckley and Mr. W. H. Brougham, but they found nothing wrong; on the contrary, the punt anglers were taking plenty of dace eight or nine inches in length. On their arrival at Twickenham Ferry their attention was called to a dace that had been taken on the previous day of a golden bronze colour, and having black spots upon it similar to those on the golden tench. Some years ago a golden tench was caught at Twickenham by the late Dory Coxen, and being preserved, it is now to be seen at Mr. Walker's, the Two Sawyers Inn. The weather appears disturbed, and an increased supply of water in the Thames may be expected. A trout of about 8lb. was picked up dead at Teddington a few days ago, but the cause of its death was unknown.

**Richmond.**—Christopher Brown during the week has taken twenty-five barbel up to 5lb. each, and fifteen dozen dace. Henry Wheeler, in four days, 50lb. of dace. Henry Howard, in six days, 90lb. of dace. Job Brain, during the week, 80lb., one day alone getting 34lb. Henry Mansell, in one day with Mr. Kilrey of 355, Norwood-road, Lower Norwood, got twenty-four dozen of good roach and dace, and in three other days, four bream weighing 12lb., one brace of perch 3½lb., and forty-six dozen of dace. The barbel are reported to be well on the feed.

**Twickenham.**—Edward Finch, in a day and a half, three barbel, six dozen of dace, and a bream of 4½lb. Samuel Cole, in five days, seven barbel and twelve dozen of dace. C. Miles, in one day, three chub of 1lb. each. George Coxen, in two days, eight dozen of dace. H. Spiers, in two days and a half, eight dozen of dace and some barbel. John Spong, in four days, twenty-four dozen dace and one barbel. Mr. Walker's punts have been all engaged during the week with some very good takes of fish.

**Teddington.**—Charles Baldwin, in three days, ten dozen of roach and dace, and two barbel. Joseph Baldwin, in three days, fourteen dozen of roach and dace, two chub, and a couple of barbel. John Stevens, in two days, three dozen of dace, and five chub. The water in much better condition and a little higher. The bank anglers in the tideway have had a fair show of fish during the week during the time the tide has admitted of their fishing.

**Kingston.**—John Wilks, in one day, nine dozen of roach and dace, one bream, and one perch. John Johnson, junr., in four days, fourteen chub, eighteen brace of perch, and twelve dozen of roach and dace. John Johnson, senr., in two days, twenty dozen of roach and dace, and two bream. Mr. H. Dickinson, in one day, 7lb. of roach and dace. The bank anglers here and at Surbiton, in addition to roach and dace, have caught some good bream, barbel, and chub.

**Hampton Court.**—W. Milbourne, in one day, twenty-one barbel, and one chub, and in four other days twenty-five barbel, and seventeen dozen of roach and dace. J. Milbourne, in six days, twenty-four barbel, and twenty dozen of roach and dace. Thomas Davis, in one day, nine barbel and one chub. Charles Davis, a trout of 3lb., one chub, and nine barbel. J. Williams, in two days, eight bream, and four dozen of roach and dace. C. Stone, in three days, eleven barbel, five chub, and twenty-one dozen of roach and dace. John Smith has been out each day and had some good takes of barbel, chub, and roach. The bank anglers have done well, and those on "Tagg's Island Fishery" during the week have caught thirty dozen of roach and dace, and some good bream, perch, and chub.

**Sunbury.**—Messrs. Edward Clarke and Sons have taken, in three days, eight dozen of roach and dace, and some fine perch. The bank anglers have enjoyed capital sport amongst the roach, dace, perch, chub, and gudgeon. One bank angler got two and a half dozen of good roach up to 1½lb. each, and a bream of 4lb. 10oz.

**Walton.**—George Hone in four days, thirteen dozen of roach, fifteen bream, three chub, two perch, and four dozen of dace. John Hone, in five days, twenty-eight bream and eighteen dozen of roach; George Hone, jun., eighteen dozen of roach, seventeen bream, one brace of jack, three dozen of gudgeon, and seven perch; R. Watford, in four days, eighteen dozen of roach, fourteen bream, and a couple of barbel. Mr. Robinson, staying at the Swan Hotel, caught during the week seven trout, five being returned to the river again. The bream at Walton are very numerous, and the large ones are feeding.

**Halliford.**—George Rosewell, in two days, 19 bream; J. Strudwick, in one day, eight dozen of roach and dace, and some very good bream; and E. D. Rosewell, six dozen of roach and dace.

**Shepperton.**—David Hackett, in one day, six dozen of roach and three bream; W. House, a jack of 3lb., a bream of 2½lb., and three dozen of roach and dace; W. Rogerson, eight dozen; H. Purdue, fourteen dozen of gudgeons, one barbel, and three perch; F. Purdue, ten dozen of gudgeons, three perch, and three dozen of roach; James Haslett, seven bream, one perch, one chub, and five dozen of roach and dace.

**Weybridge.**—Mr. Hugh Marston, fishing with J. Poulter during the week, 18lb. weight of roach, one fish scaling 1lb. 2oz., six brace of perch, eight barbel, the largest 6½lb., and eight bream, the largest 5lb.; H. Cun, one day, two barbel, two eels, and six dozen of roach and dace, the largest dace 8½oz.; J. Upsdell, five barbel and four bream; W. Barrows, a chub of 2lb., one eel, and several fine dace ledgering.

**Chertsey.**—J. Poulter, one day, with Mr. Lea, three bream, three chub, one perch, and three large roach; and another day, with Mr. G. H. Thurston and his brother, two bream, four chub, one eel, and four dozen of roach and dace.

**Staines.**—G. Osman, in two days, three and a half dozen of roach and dace, and a couple of barbel; Mr. Clark, in one day, five barbel; F. Collyer, three jack, weighing respectively 13lb., 6lb., and 3½lb.; C. Hone, with Mr. Peach, in two days, a trout of 3½lb., and a fine show of roach and dace; John Keene, sen., in two days, twenty-two dozen of roach and dace, and one barbel; and another day, with Mr. W. Jones, of the Swan Hotel, two barbel, and a very handsome trout of 5lb. 13oz., which has been sent to Mr. Cooper for preservation. John Keene, jun., has been out five days, and made some good takes of barbel, roach, and dace.

## UPPER THAMES.

The condition of the Thames in the upper regions could not possibly be better for angling purposes, and in consequence of continuous rain is hourly improving. I hear of fair catches of roach and chub from nearly all stations between Staines and Oxford, but nothing, so far, of note as to be particularised. The Reading Association have turned into their waters some hundred brace of fine trout, two-pounders not being the least of the stock. This is the correct thing to do, for it is simply throwing money and good intentions away to put fingerlings into the Thames. At Hurley, two anglers have been busy amid the barbel, two of the catch going 11lb. odd. Mr. Parry, fishing from that comfortable angler's retreat, "The East Arms," Hurley, has been busy amid the roach; but Mr. P. has found the quality hitherto indifferent. Rain, which is falling heavily as I write, will improve matters in this respect, and anglers intending to pay a visit to Old Father Thames, cannot do better than do so at once.—Marlow Buzz.

### Thames (Datchet.)

The change in the weather has effected a change in the appetite of the barbel and knocked the dace off. On the 13th inst. I was trying the dace with patrons with very poor result. J. Hoare with patron, on the 13th inst., 30lb. of barbel; on the 14th, 30lb. again, largest 7lb., with greaves. Now that the rain has come, I hope to be able to do something with the barbel, with lobworms, as I have just had proof of their liking for them; greaves is very well in its way, but when those little pests of dace fall on to it, the moment it's down it is a nuisance. On the 11th, I gave a swim a feed of worms, and again on the 12th, but with no result to my patrons; I am sorry to say that it must be their fault for they will not stop anywhere. A good thing is always worth waiting for. On the 14th inst., with R. H. Lines, Esq., tried the barbel with worms for two hours in the morning—it was no go: went to another swim with worms, that was no good: as a last resort we had to return to our first love with greaves and soon hooked a good fish, played with him some time, then he took the hook. After that caught one, then another broke the line; the gentleman was going to drive back to town, it was time to be off, so very reluctantly we left them with the remark, that we ought to have got there first. Why did the fish bite here and not at the other swim? Because it had been baited longer and oftener, and I find that shifting about for barbel is a very bad plan; in fact, to get a swim in good order wants constant attention in the way of feeding which I am certain cannot be done. If you fish here one evening and there the next, they come and look for some bait next evening. Mr. Fisherman, he is away somewhere else; they cannot depend on him, so off they go disappointed of a tit bit. When I used to fish by myself I never thought of a second swim, and I think I can safely say, without fear of contradiction, nobody ever had greater success—in fact once I was given 2s. 6d. to give my swim up to another. Well, to conclude, I am not grumbling; for plenty of patronage I ought to be the happiest of fishermen, but I should like to see more fish. I had one hour and a half at the swim with lobworm, in the evening, to see if they would take them; when I arrived, it was being drilled from the bank; they had one fish—that riles me worse than anything. My eye! didn't they just about bite—six fish, about 20lb.—new swim, never had a fish out of it before; baited it well last season, but only fished it a little at midday when they went off bite at the other. Motto, "If they won't bite here, they won't bite there."

### Docket Point.

My two days' fishing—Seven bream, one chub, one perch, five dozen roach and dace. There are bream and barbel now to be had—only want trying for. There are two or three places here where they are lying pretty thick. Any gentleman wishing to try, please give two or three days' notice.—J. Haslett.

### Goring.

Water in good order for jack and perch. Gudgeons and perch biting very well. Two best days, five dozen gudgeons, two dozen roach, and three dozen very good perch. Prospects at present look good for the next few days.—John Rush.

### Sonning.

I have had several gentlemen out since Henley week; they have not done much. Mr. Baresford was out last Saturday, got a few barbel, none of any size, a few good perch, and a very nice chub. Mr. Haggett got a good many chub, taken with cheese. I went down to the landing-place last Friday, saw a large barbel over 8lb., which seemed hurt in some way, and got it out; it had life and that was all. There was another, much larger, just below they said; I had not time then to go and get it. There are plenty of worms to be got now; and if well baited there ought to be some good fish taken.—W. Hull.

### Thames (Oxford).

I do not think much of this wonderful Thames Valley drainage scheme; the only benefit which has resulted from it at present has accrued to the fish. On Saturday I had a run up the higher reaches, in company with Mr. W. Retson, the hon. sec. of the Oxford Angling Society. I have seen a few specimens of spade work in my life, in one shape or another, but I have never come across any that has so completely succeeded in spoiling a river. Every familiar landmark had disappeared. Noted chub haunts were gone altogether, roach holes, which in former days yielded good sport, were untenanted, and, after eight hours' hard work, we had to leave off without getting so many pounds weight of fish. The rains at the beginning of the week have done an immense amount of good, both to the land and the river. Perch have been going exceedingly well. On Friday Mr. Brightwell, spinning with an artificial bait, between Godstow and Medley, caught about 18lb. of them, and on Tuesday and Wednesday Mr. W. Retson, at St. John's Bridge, Lechlade, amongst a good bag of mixed fish, had twelve perch, averaging about ½lb. During the last month Mr. Retson, sen., has been enjoying excellent sport, several large roach having fallen to his rod, many of them going from 1lb. to 1¼lb. To-day the Oxford Angling Society hold their first fishing competition at Eynsham, and, judging from the preparations made by some of the members, there ought to be a dash of fish in that particular stretch for the next few months.—Cherwell Otter.

### Walton-on-Thames.

There has been a lot of rain here; the punts have been well engaged, and numerous large baskets of fish taken. Upwards of 800 roach have been taken during the week, and about 90 bream, tench, trout, barbel, pike, perch, and gudgeon. Trout are increasing in the Thames. Mr. Robinson, staying at the Swan Hotel, caught seven last week with the fly. Many more trout would be taken if the fly were more used, especially on windy days when there is a good ripple on the water. Large grouse fly and large brown hackle are the likely flies for Thames trout. Walford has had some splendid roach, many over 1lb., and one roach was nearly 2lb. weight. The fish are now biting very freely, the river here is simply alive with fish. A pretty sight was to be seen at the Swan Hotel on Thursday evening: five angling gentlemen staying at the hotel returned at the same time and had their fish displayed on dishes on the long dining-table. About 150 fish of one kind and the other, roach, dace, bream, and perch. Two gentlemen had caught, in about three hours, over six dozen roach of splendid average, many of them over 1lb. weight, and mingled with fresh grass, they presented a fine show.—Golfinch.

---

### Ancholme District.

The water is but little affected by the recent rains. I have been from home for some time past amongst the dace and chub of the great Ouse, so have not been able to secure the usual notes.—Thomas Ford Caistor.

### Ballynahinch.

Since last report there is a great improvement in weather and water. The former is mild and showery, the latter has risen about 14 inches. Trout are plentiful, but taken shy, as will be seen by the following takes this week:—Messrs. Eades and Houlgrave, thirty-six trout; Mr. Dudgson, fourteen trout; Col. Biam, two peal and seventeen trout; Mr. Hunt, one salmon, 6lb., and eight trout; and Capt. Warren, two days, one salmon, 7lb., and five trout. Every prospect of good trout fishing soon.—Walter Blackadder.

### The Bure (Norwich).

From this river the reports are just as encouraging as from the Yare. At Wroxham, Horning Ferry, Ranworth, South Walsham, Thurne Mouth, and Acle, anglers have, during the past week, been having some excellent sport, especially at Horning Ferry and Acle; several instances of one rod taking 3st. of fish in the day have been reported to me, whilst catches of from 3st. to 4st. per boat have been almost the general rule all down the stream. Above Wroxham, from Coltishall, I have not heard any particulars, but feel sure that what applies to the lower waters will no doubt apply to the upper reaches. On Wroxham Broad some heavy catches of fine bream have been caught by the gentlemen who spend the night on the water, ground-baiting very late, and commencing as early as possible, say between 2 and 3 a.m. Then they quietly row off at breakfast time, generally with several stone of good bream, whilst those who commence after that time, and fish during the day-time, hardly ever experience any good luck. Visitors to these parts cannot do better than choose either Wroxham, Horning Ferry, or Acle, at all of which, if not already full, they will be sure of excellent sport, and also of first-rate accommodation, with the additional advantage of being, at each place, within easy reach of the sea, if a day's change is required. Prospects very good, weather splendid, rain very partial and light.—Robert Moll.

### Chichester.

Sport has somewhat improved here since the heavy rains, yet fish are not feeding freely. Eleven and a half pounds of bream is the largest take I have heard of. Mr. Leversham, on Saturday evening, landed a brace of handsome tench scaling over 3lb.—the first tench worth notice that has been taken for some few seasons. I have been in one of the most charming spots in England—near the boat-house on the Medway, at Tonbridge—quite an angler's paradise. Reports from Selham have been meagre, but dace are taking fly well. Weather stormy.—George F. Salter.

### The Dee, Feugh, Dye, &c.

Within the past fortnight the fishing has improved somewhat, but not nearly to such an extent as could be wished. In the small streams the trouting has been fairly good. Mr. James Watt, the veteran trout fisher, in company with a few others, went out on the upper reaches of the Feugh and its tributary streams, and secured some splendid baskets. Gordon (of the Deeside Highlanders) also went out; but met with indifferent success. On the Beltie some fine takes with the worm have been reported to us. Mr. Hugh Mackenzie, on the Ebrie, near Arnage, had some pretty successful evenings. On the Don, in the vicinity of Kintore, we learn of good catches with the Palmer and black spider; but, otherwise, we wonder that our correspondents on that river have so utterly neglected us. Good trouting is being had on some parts of the Deveron, especially well up. This river, however, has silted up with shifting sand at its mouth, and grilse and salmon are not getting through. For well-nigh a fortnight it was almost completely choked, and its debouchment into the sea prevented. Flooding, in consequence, took place on the low-lying grounds and haughs; but with the recent heavy rains and the consequent spate, a clearance has been effected—at least, temporarily. The heavy rains of Thursday night and Friday morning raised the rivers more than they have been for the past six months. The Feugh came pouring down tornado-like, and all the crack worm fishers were soon at the pool, and Craven had two grilse and five sea trout; Wm. Dawson, six sea trout; A. Wright, three sea trout; Norman Leslie, two sea trout; Davie Nicoll, two sea trout. On the Invery water General Oliphant had a good basket of fine trout on Saturday. The Dee.—C. Wollaston, Esq., had a fine fresh-run grilse of 4½lb. on Kineskie. David Rae got one of 6lb. on Cairnton. Major Scott had no sport on Durris. And Craven went up the Banchory Lodge section of the Feugh on Saturday and got two fish. Nothing but a fly of Craven's own dressing could stir a fin. Every standard pattern was tried, but without success. The fish were coming short, with the result that out of eight fish that rose only two were banked. For the benefit of Feugh anglers we may state that the water was greatly peat coloured and the day bright. The fly used may be described as follows:—Tag, silver tinsel and yellow silk; tail, small topping; butt, black herl; body, black silk floss; ribbed, silver flatworm, five turns; hackle, cock, dyed yellow, a third way up body; head, black herl; wings, three toppings. On being shown this fly it so took our fancy that we had some run up forthwith. If improvement upon this fly could be made, Craven thinks it might be effected by placing a single Indian crow feather of the proper length below the toppings forming the wing. At Ballater I. Smith, Esq., has had some nice baskets of trout, and the Alt Davarie was said to have been in good ply recently. As yet, we have no record of heavy baskets from that famous stream. Messrs. Mackintosh and Ironside had some very superior takes on the Ugie, near Bracklay, and Col. Fordyce had a few fine Loch Leven trout on the Castle private water. On the Ythan, near Methlick, a few baskets of trout are being got daily, and the Little Water of Gight and Cairnbanno Burn are yielding fair sport. Sea trout are beginning to show in the Bervie, but in the Ythan at Newburgh the catch of these at present is at its lowest ebb. Worm fishing in the upper regions of Strathdon is producing good results. The trout are nice and plump, and quite ready to take. Some very indifferent anglers have had surprising success. The Nochty, Deskry, Spearach, Ernan, Bucket, and Kindie are affording the angler rare enjoyment. The recent rain, though it has improved the trouting, has done little yet toward bettering the salmon fishing all over. We confess we were never more disappointed with the result of any spate in midsummer. The rain we now see has been too long in coming. The great quantity of salmon, grilse, and sea trout that lay along the coast in June, but could not force the river owing to its smallness, shows little now. We, this year, have thus another proof that unless we have copious rain in June, the grilse fishing in our eastern rivers is certain to be poor. For one thing, they invariably move off the Aberdeen and Kincardine coasts after the first week of July. After that time, and until the second week of September, the fishing all over the river is at its lowest point. The autumn fishing, generally very fine, then begins, and continues for six weeks. About Kincardine O'Neil the sport has been inferior. Major Leith-Hay had a salmon of 9lb. from the Ballogie water. Chas. Farquhar Esq., a gilse of 4lb. on the Carlogie water. One or two have been got about Aboyne. David Rae, on Cairnton, had a salmon of 9lb. on Monday; and Wm. Dawson, at Bridge of Feugh, on Tuesday had one splendid sea trout. On Blackhall Castle water—J. T. Hay, Esq.—a grilse of 3½lb. was got on Monday. T. C. Gould, Esq., had one splendid sea trout on the Feugh on Tuesday. In the Tanar some fine baskets of trout have been got by Mr. Brooks' friends and guests, when these were out on that stream. The Culter Burn has been showing but indifferent sport of late. Heavy rain again fell last night, and the rivers and streams are to-day (Tuesday) in flood.—W. M.

In the Rose Pot G. Brenner, fisherman, ran a splendid fish. On the Aboyne waters Col. Keen has had a few grilse. On Glentanar only a grilse or two have been got. Some little sport is being had about Ballater and Braemar. The spate of Wednesday brought the Feugh into order, and some small fish were got. W. Dawson had two grilse, 3lb. and 3½lb. respectively, and five sea trout; J. B. Keith, Esq., had one finnock; and A. Wright, keeper, secured two finnocks and a sea trout. There are now few grilse on the coast to take the river. Our Banchory correspondent reports that, with one or two exceptions, all those got at the Bridge of Feugh have been "back-lying" fish.—W. M.

### Dove.

Our river has been running in improved condition this week, though the water has been by no means highly discoloured. There have been a great number of rods out along the entire course of the stream, but more good has been done on the bottom than on the surface. The maggot and cockspur worm have killed as well as anything. The tiny black gnats are on the water, and, as usual, they are proving very troublesome to fishermen. The caterpillar has been the most destructive lure in the twilight. Taken all round, the trout and grayling dishes have averaged about six brace per rod. Eels have been stirring freely, and the night-line fraternity have captured some heavy samples. The electricity in the atmosphere has no doubt been the cause of the eels moving about so freely. The weather is rather unsettled, and I think we shall have a wet autumn after the long, dry summer.—The Splodger.

### Eden (Carlisle.)

The common greeting amongst anglers just now is: "Are there any whiting astir yet?" The fact is that trout-fishing is about over, the river being much too big for night-work, and anglers are anxiously waiting for these satisfactory little fish, as they fill up the gap till salmon-fishing begins again in September. Whitings or herlings well deserve the epithet satisfactory, for they come up in large numbers; they can get through any net of legal mesh, they are very free takers, and they are delicious eating. We ought to have plenty of them as soon as the river runs down; but they won't run in full waters. Very few sea-trout have been taken with the rod this season. When the main run was on, the river was so low that they were nearly all stopped by the lowest nets. Grilse are showing up in the fishmongers' shops pretty well. River in high flood.—Silver Grey.

### Exe (Exeter).

Last week some fair coarse fishing was had near Exwick Field. 150 roach were taken by Messrs. Calardine, Whitelock, Ellis, Tucker, and Kelley respectively; bait, new bread. A few perch have been captured at Turf, one weighing 1¼lb. Trout have been taken with black palmer, with silver twist, and yellow duns. We have had some welcome rain, but not sufficient to improve the salmon fishing for rods. Yesterday, Mr. Greenslade, and one or two others, took a nice lot of roach with gentles.—J. A. Kelley.

### Lea (Waltham Abbey).

Good news from home at last. Some very good fish and very reasonable takes, late on in the evening, as a rule. Those who can fish the Lea with bran and bread can catch fish if they try. The best takes that I have seen have been 6½lb., after six o'clock in the evening; plenty of 4lb. and 5lb. during the latter end of last week and the beginning of this; and the best fish that I have seen were four over 1lb., the finest, 1lb. 11oz., being taken by Alfred Wheeler, jun., on Wednesday evening, which was sent to Mr. Cooper for preservation.—Bennett.

### Leicester.

We have had a comparatively fine week, causing an increase of the followers of the piscatorial art at the various resorts in this district. A few nice showers have helped to keep the fish well on the feed, and the sport has been really good. Each day lately I have heard of large catches of roach from the local society's preserves. Among a lot of roach caught by Mr. Perkins was an extraordinarily large specimen of this species, weighing 2lb., whilst several other anglers have been taking roach over 1lb. each. The season so far has been one of the most successful that we have had. The following are a few of the anglers who have had large baskets:—Messrs. Bird, Stafford, Hobbs, G. Hardy, and Marvel. Perch fishing has also been of a satisfactory kind, a number of catches, varying from 4lb. to 7lb., having been had, and in several baskets there were fish over 1lb. each. The fresh in the waters has caused the eels to bite, and quantities have been taken from the old river Soar, angling, and plenty of them weighed between 2lb. and 3lb. No large pike have been landed up to the present. The chub have been rising well in the evening at the fly, and Mr. A. J. Lee had a capital lot, the largest being 3¾lb. Sport down the Wreake and at Narborough has been good. Reports to hand show that well-filled baskets of roach and perch have been the reward of those who have tried their luck at these noted waters. The rivers are in excellent condition. At the time of writing (Thursday evening) the weather appears of a settled character, and there is every prospect of anglers having fine weather to pursue their favourite sport for some days to come. Thursday being the usual half-holiday, a great many were at the river side.

### Lodden.

Since my last report we have been abundantly supplied with heavy showers of rain, in so much that the rain-gauge showed nearly an inch for Thursday and Friday; but, strange to say, the river has not risen in the slightest, the water being as clear and bright as if no rain had fallen. But there is a marked change in the movements of the fish. Trout are rising and taking of an evening the brown, grey, and white moth. Several very fine trout have come to grass, and pike and jack have been giving some excellent sport. Chub and other coarse fish have not been so well on the feed. Most of the jack were caught with live gudgeon.—F. Gosden.

### Lugg and Arrow (Leominster).

Both these streams are still in good fly fishing order, still keeping clear but very low. Some slight showers of rain have fell in this part, but have made no difference to the colour of the water; the fish are now rising freely in both streams at the fly. The best flies on the water are the silver-twisted blue, red spinner, and green insect, and some very nice fish have been taken with them. In the Lugg, on Friday, a very good lot of trout were landed by a gentleman with the red spinner. A gentleman fished the Arrow the same day with the wasp grub, and took some very good trout, averaging ½lb. each. Some good trout were taken with the fly in the same stream. The Lugg was fished on Saturday with the green insect and twisted blue, and a very nice dish of fine trout were landed. On the same day the Arrow was visited with the fly, and a good dish of fish were landed. Some very good sport was had in the Arrow, on Monday, by a gentleman who took 4lb. of fine trout with the red spinner. In the Lugg the fish were biting well at the fly, and a gentleman with the green insect took a good dish of fine trout. On Tuesday a good day's sport was had with the red spinner and twisted blue, and some very good-sized fish were landed. A nice lot of trout were taken in the Arrow with the fly. Some very good fish have been taken in the Lugg at Aymestry with the fly this week. Good sport has been had in the Eardisland waters with the red spinner, and some good fish have been landed. In the Monkland district the fishing has been quiet. The Pinsley still keeps in good order for the fly, and the fish are rising freely. A nice dish were taken on Friday and some good trout were taken on Monday with the red spinner.—Gwynne.

### Medway (Tunbridge).

At last the rains have brought the fish well on the feed, and, as a rule, good bags have been made in all parts of the river during the week. Bream have been ravenously at the feed, worm being the killing bait, and with them have been taken a good number of perch, eels, &c., while roach have been feeding ravenously on gentles. Amongst the catches I have heard of, I may mention bream by Mr. J. M. Streeter, taken opposite The Castle; a bag of 18¾lb. taken on a swim-about turn, by Mr. F. Masters, of Maidstone, and a friend, a miscellaneous bag by Mr. Harvey and Mr. Ede, as well as many others. All that is required is a little more rain to make all kinds of fish feed ravenously.—Ye Medway Water Rat.

### Moy and Loch Conn (Ballina).

Since last report there has been no sport to speak of on river or lough. Although the river is full of fish they will not look at anything in the shape of fly or bait. The river is very low. The lough would give sport to the fair angler with rod and line, if it were not so overrun with otter fishing. Two otters to one boat are used, one each side. The men living by the lake side, who gain a good lot of money during the summer months from strangers coming to angle on the lough, use the otter. Some of your London anglers (I don't know what fishing club they belong to) who come out for their holidays, encourage their boatmen to use the otter, while they get the fish to send back to their friends. The beautiful 2 or 3lb. trout when he rises to the fair angler's fly, come short. You just feel that he touched something. The deadly otter, with its two or three dozen of flies, has passed over him more than once. He has been hooked and got off; he remembers the fly that tore part of his jaw away in trying to pull him to the net by the strength of man's arms. No wonder he came short to the fair angler's fly, for six fish hooked on the otter the average is about two killed.—Frank Hearns, Ballina, co. Mayo.

### Ouse (Huntingdon).

The recent rains have made the water in splendid condition, but the bream have been rather slow. The roach are on the feed, taking wheat. On the 15th, I saw some splendid roach taken; they were feeding very freely. Some very nice dace have been taken with red worms. I have no doubt but what the bream will be on the feed very shortly.—H. Rout.

### Severn and Teme (Worcester).

For general angling these streams are in good order, and some good takes have been landed. Some of the brothers of the angle have paid a little attention to pool and lake fishing since I last wrote, and many large baskets of perch, roach, bream, tench, and carp were taken. One of the Birmingham clubs got permission to fish the lake at Westwood Park, the home of one of England's great and good men—the late Lord Hampton. The fish taken were out of count, pike included. An old friend of mine (a member of the St. John's Amateur Anglers) landed one of the best lot of perch and trout last Friday, the total weight being 25lb. 15oz. There were about 70 perch, the largest fish weighing about 10oz., and 3½ brace of trout, the best brace being 1¼lb. There were fifteen members present, and all had a few perch. This was something like olden times, when all fish weighed in were forfeited and sent to those who could not fish. The Worcester Club held their third day's outing last week, and the following were the prizetakers:—1st, Mr. Wall; 2nd, Mr. Ghillam; 3rd, Mr. J. A. Griffin.—J. A. Griffin.

### South Level Cut (Littleport).

I am pleased to be able to tell you that fishing is looking up since last report, as the following will show:—July 12th: Mr. Hailstone, Anglesea Abbey, Bottisham, 23 nice perch; Mr. A. Lemaire, Newmarket, in about four hours, two dozen and eleven nice roach, and three small bream. This is the first take of roach of any consequence that has come under my notice this season, but I have heard, through keeper Benton, that several lots have been taken in the bream swim above the Branch. July 13th: Mr. A. Lemaire, Newmarket, fishing a couple of hours in the early morning, four bream (not large), and a few decent roach; Mr. J. Allen, Littleport, also a few roach. July 15th: Mr. Ward, Littleport, two good bream and a few roach; Mr. J. Cole, St. John's Wood Piscatorials, one bream, 3lb., and a few roach. July 14th: Mr. Hailstone, about one dozen very nice perch, largest 18oz.; and again on 15th, two dozen nice perch. This gentleman has had better sport among these fish than any other angler for years past, and it is a great pleasure to me and other anglers to find they are gathering in this water again, as five years back there was scarcely a perch to be taken. July 16th: My son, Tom, well known among the local anglers, four bream, 4lb., 3½lb., 3lb., and 1½lb; again, to-day, seven bream, 4¾lb., 4½lb., 4¼lb., 4lb., 3½lb., 3¼lb., and 2¾lb.—the finest lot it was ever my luck to see together in one catch. The mischief is they will only bite for an hour or two in the early mornings. I forgot to mention that Mr. Powell, of London, also had some very decent perch fishing.—Charlie South.

### Taw and Tributaries.

Water rose on the morning of the 18th four or five inches, and the peal, which were plentiful in the tidal rivers, have gone, much to the disgust of the driftmen, who are sweeping the rivers as if with small-teeth combs. The men have been averaging 50s. per week, and the takes very plentiful. Salmon and peal have been hawked through the streets at 11d. per lb. The rivers have been very low, so much so that no fishing has been got for six weeks. I see the conservators have consented to allow Sir W. Williams to take as a scientific frontier 200 yards each side of Weir, and stake the boundary, much to the injury of the navigation of the river. This weir has had the reputation of being the deathbeds of many men, besides other other accidents; yet the conservators permit this nuisance to the river Taw, besides being the trap for many tons of salmon and peal per year. I was sorry to see a miller turn out his stream the other day and allow men and boys to destroy many trout from 1in. long. Next week I trust to be able to send some good reports of salmon and peal taken with the minnow, there being no doubt we are on the commencement of a good season for the big fishermen. Any gentlemen who may want a month's salmon fishing would do well to see out his place; and this neighbourhood, unequalled for convenience, accommodation, and for getting necessary requirements, will be the best putting up. Railways abound to different parts, and unlike other places, the rail and the rivers accompany each other. When a rest is required the different watering-places are easily got, and return the same night, giving one up to 9 o'clock at the seaside, where some sea-fishing is to be had.—Rusty Game.

### Teme (Ludlow).

The streams about here are a great deal lower than might be expected, considering the rain that has fallen within the last week, but are still in good fishing order. The rain has caused the fish to bite well, both at maggot and worm, and anglers' fly fishing have met with fair success. The flies most used this week are the Marlow buzz, red spinner, and whirling blue. A gentleman with the latter fly killed, on Monday, in the Leintwardine quarter, 20 fish of various sorts, principally trout. Coming lower down the Teme the next day, he caught 17 nice fish, some of which weighed 2lb. each. A gentleman fishing down Steventon waters on Tuesday, caught a brace of perch with the maggot, upon placing them in the scale they nearly reached 5lb. the two; they were the best perch we have seen for some time in this quarter of the Teme. A fine trout 2½lb. was landed on Saturday in the Burway fields with the whirling blue. A gentleman down Ashford waters to-day caught a very good basket of fish with the red spinner. The Clun is very low, and the water very clear, and fishing in this stream has not been indulged in as much as it usually is at this period of the year. The Ony is low and very fine, the bottom of the stream being visible from the railway train near Onibury Station, still some very nice fish have been landed in this quarter in the deeper portions of the river. A gentleman from Worcester caugh nine very fine trout on Tuesday, near to Bromfield, with the green insect. The Corve is rather low, and to some extent coloured. Some fair sport has been had from the meadows near the Clee Hill Railway this week, one fisherman catching eight fine fish with the worm and maggot. There has been but little doing in the Letwyche waters, and the fish caught are rather small than otherwise.—S. Ludlow.

### Teme (Tenbury).

There have been some very sharp showers of rain had in this district the last few days, but they have made but little difference to the state of the water, which still keeps low, but clear and in good order for the fly. The fish are sporting well at the fly, and the best on at present are the red spinner, green insect, and whirling blue, and some very good lots of fish have been landed. A gentleman from Leeds, who was visiting Tenbury, had some very good sport with the fly, when he took a splendid basket of fine trout, averaging from ½lb. each. A member of the Fishing Club, who was fishing in the club water, at the end of last week, with the red spinner and green insect, took a very fine lot of grayling, all in prime condition. Some good sport was had in the club water on Friday evening with the wasp grub, and a gentleman took a very nice dish of grayling. On Saturday a gentleman took a fine lot of trout with the whirling blue. In the club waters several very nice lots of trout have been taken with the minnow. At the end of last week some good lots of eels were taken with the worm. A gentleman, on Monday, fished the water from Easton Court, and took a very good basket of fine fish with the red spinner and green insect. A very nice dish was landed below the town the same day with the green insect. The fish were biting well at the fly on Tuesday, and some very good dishes of trout were landed. The Kyre, Rea, and Ledwyche are all in good fly-fishing order but low; the fish are rising well at the fly, and some good fish have been landed. In the Rea, on Tuesday, some gentlemen from Ludlow, with the fly, took a splendid lot of fine fish. Some good fish have been taken in the Ledwyche and Kyre with the fly.—Worcester.

### Torridge (Torrington).

River had a nice rise one day this week, and the first peal and some good trout have been taken witb the fly in the free water near the town. Three men, float fishing, took over 100 mullet and a quantity of bass one day this week in the tidal water. There will be some good fishing now the rivers have had a clearing.—Practical Angler.

### Trent (Newark).

I quite expected last week, considering the quantity of rain that fell in this district, that we should have a heavy flood, but we did not get above three feet of extra water; and in two days it had cleared down nearly as low as ever. The parched and thirsty earth must have drunk it in with avidity; anyhow, let that be as it may, I fully expected a bank full of water, and I was disappointed; but still, we must be thankful for small mercies, for the change was very welcome, it has taken a lot of the flannel weed away, although there is plenty of it left yet. Before this extra water came down the bream, &c., were biting very nicely, but the sudden change seemed to knock them off the feed. At the time of writing (Thursday) the water is again very low and clear, and sport does not seem to be of a very brilliant character, although a few anglers have not done amiss among the bream, eels, flounders, &c., the worm seeming to be the most successful bait; and as far as I can judge, according to the present circumstances, the worm will be the best bait for this next week, but the bill of fare might be varied by gentles and a few wasp grubs, if the latter is obtainable. I hope to be at the Welsh Harp next Saturday, the 26th, and that there will be a successful meeting is the wish of the—Trent Otter.

### Trent (Lower).

There is a considerable improvement in angling in the lower reaches of the Trent, and capital sport has been had at more than one point. At Torksey there have been some really good catches, and, as an example, I may say a visitor from Sheffield caught 22¼lb. of eels, perch, roach, and bream at a sitting. Flounders, as well as eels, continue to give rare sport for those who like a little lively work, and there have been several barbel taken. The fresh that has come down the river has done a great deal towards enlivening the almost torpid fish. The worm will be found the best bait, I fancy, for these waters; but the maggot will take roach freely now that the thunder has moved away.—Trace.

### Trent (Alrewas).

During the past week some very good bags of roach and grayling have been taken with the gentle, one roach scaling 1¼lb. On Saturday some fine eels, chub, perch, and one barbel were taken with the tail end of a lobworm. Water in fine angling condition.

### Trent (Nottingham).

The river, so far as this district is concerned, is very low and fine, and barbel are still very backward in condition. Numerous swims have been baited with worms, but the fish do not appear to take at all kindly to them. Dr. Smith, of this town, has caught four very fine perch, the two largest weighing 2½lb. and 2¼lb. respectively. They have been forwarded to Mr. J. Stanley, taxidermist, Trent-street, for preservation. Twelve perch were killed at Trent Lock on Tuesday afternoon. Above the bridge, at Wilford, the barbel-would-be anglers have been doing a considerable amount of "snatching," and it is quite time that the Trent Conservancy Board took notice of it. At Burton-on-Trent and Willington the river has been practically depopulated of fish through the bursting of some tanks, alleged to be connected with the gasworks. Tons of fish were, in fact, destroyed, and amongst Nottingham anglers it is a well-known fact that no larger roach and dace exist than between Willington and Newton Solney.—The Man at the Clubs.

### Tweed and Teviot.

Both Tweed and Teviot have been more or less flooded since our last report, and have therefore been in good order for the angler. Many baskets of trout have been got with worm, minnow, and fly. On Friday last W. Reid had 8lb., and on the following day 8½lb., in the Tweed, with worm. On Saturday, on the same river, S. Wright had 7lb.; A. Hope, 5½lb.; and J. Cummings, 7lb.—the latter basket being got with fly, while six in this basket weighed 3lb. We believe that one large trout, about 3½lb., was killed in Jack's Plumb on Thursday. On Saturday Geo. Fairbairn had about 8lb., while good baskets were also got by Peter Jack, Jas. Chisholm, and others. A capital creel was obtained in the Kale by Mr. Bone, Edenside-road, the trout being in excellent order. The takes in Bowmont have been both numerous and excellent. On Friday Mr. George Weir, Cliftoncote, had 9lb.; on Monday Mr. W. Fleming, Wetholm, killed over 12lb.; while one of several other baskets is reported to have scaled 15lb. On Tuesday night on the Tweed, with fly, David Brown killed 6lb. In the Selkirk district R. Jack had 10lb.; David Hill, 8lb.; T. Mitchell, 7½lb.; W. Reid, 5lb.; J. Robertson, 5lb.; H. Kemp, 4lb. In the Wooler district Mr. John Bell had 15½lb., got with worm; Mr. Hindmarsh, 14lb.; and Mr. Maling, 13lb. Coldstream District.—With the heavy fall of rain all Sunday, the river was, both in regard to size and colour, in good condition for net fishing on Monday morning. The various stations here were fished nearly all day, and the following are some of the results:—Cornhill water, ten grilse and twelve trout; Lennel Haugh, two salmon, ten trout, seven grilse; the English waters, fifteen fish. Twizel boathouse had also a few salmon and a number of trout. Fishing at Twizel Mill has again been very successfully prosecuted, as the fish at this season take the till very freely. The takes here on Monday were heavy. The spate has also proved advantageous to anglers, some good baskets having been got with both worm and minnow. Tweed Net Salmon Fishings.—Consequent on the late flood, these fishings have greatly improved, and some large salmon have been got on the different waters. It is remarkable, however, that the best catches still come from the sea coast. The improvement is noticeable in salmon trout and grilse, but principally the latter. Prices are: Salmon, 11d.; grilse and trout 10d. per lb. At the corresponding period last year they were: Salmon, 11d.; trout and grilse, 9d.—Maxwheel, Kelso.

### Usk.

Frequent falls of rain have occurred during the last fortnight; but the soil being so dry absorbed all the moisture, and no perceptible rise took place in the river until Wednesday morning last, when the river rose between two and three feet. At an early hour, the Association keepers commenced to net the river; but after taking seven large salmon, were obliged to abandon their work on account of the rise of the water. On Thursday morning, the water fell about six inches, and being a good colour, the fishermen sallied forth. and at the time of writing have not returned. Since the rise yesterday a great many fish have been observed making their way up the river, and if more rain falls, which appears probable, some good angling may be obtained.—Argus.

### The Waveney (Norwich).

The vice-president of the Norwich Angling Club (Mr. C. J. Greene) and the president of the Norwich Piscatorial Society (Mr. Charles Daniels) on Tuesday tried their luck at Somerleyton, and, after patiently waiting for the flood, succeeded in landing (ledgering) some very fine bream, the largest weighing 4¾lb., whilst the remainder were all good fish—several between 3lb. and 4lb. Pity this spot is so difficult to get at, and boats so scarce; otherwise many Norwich anglers would pay it a visit. Prospects on this stream, I am told, are very good.—Robert Moll.

### Witham.

Angling in the Witham is now very good, and at many of the riverside stations there have been during the week plenty of visitors. Bardney, Dogdyke, Kirkstead, and other places have been favoured with anglers from Sheffield, Manchester, and other places at a distance, and from what have been reported they have done well. One angler from Sheffield took up 20lb. of roach alone. On Monday, at Kirkstead, the Fen drains have also had a lot of visitors upon them, and, in particular, the Cowbridge, near to Boston. Several anglers made up baskets running to 20lb., and some contained some excellent bream as well as roach, and in some cases tench. One man was noticed with a nice tench of just over 3lb. A great many anglers have had down there the maggot, wasp grub, and like baits; but worm has taken the most fish. The local paste has done a good deal of execution. The water is now in excellent condition, and now that the air is pretty well cleared of its electricity, there ought to be some good work done.—Yellow Belly.

The angling has been fairly good here during the past week, our old friend E. Cowley, of Sheffield, being amongst the most fortunate ones. He succeeded in landing 84 dace, four bream, from 2lb. to 3lb. each in weight, one tench weighing 2½lb., also one fine trout ½lb. weight, which is the first that has been caught in the Witham at Dogdyke to our knowledge.—Packet Hotel, Dogdyke.

### Wye and Derwent.

The bottom fishers, all up and down the Derwent, had excellent baskets of fish, both on Friday and Saturday last—viz., trout, grayling, roach, dace, and chub, some trout being 1½lb. each. The fish were killed mostly with wasp grubs and maggots for baits, and baskets, up to 14 brace per angler was made. Mr. D. P. Pearson, of the Wheatsheaf Hotel, Snainton, Nottingham, has been down here for a little fishing; he has had by far the largest baskets, besides killing the largest grayling that has been taken out of the Derwent for the past ten years; he killed it last Saturday and it weighed 1lb. 10oz. and was a most splendid well-fed male fish. This gentleman is about the most promising angler I ever saw for making a first-class fisherman all round; in fact we have very few local hands that can compete with him at either fly or minnow fishing. The fly-fishers have done well the whole of the week, and baskets of good-sized fish, both trout and grayling, up to 8 brace per angler, have been made. The killing flies have been yellow dun, light dun, bumbles, black gnat, and sand flies; and the first thing in the morning and the last thing at night are the best feeding times. There are a great many fishermen out on both the Wye and the Derwent just now. There have been some heavy trout killed by dibbing with the natural bluebottle flies, under the bushes and trees, on different parts of the Derwent. The trollers have killed some nice samples of trout on the Derwent, during the week with the artificial "Derby trout killer." Sport on the ponds, with both fly and bottom, has been first class. I heard of the small green drake killing a lot of good trout lately. Weather looks very wild, and more rain threatening,—George James Eaton.

### The Yare (Norwich).

Since my last report, day by day sport seem to have been improving. From Brundall, Buckenham, and Cantley the same news reaches me, that nearly every party of anglers have been successful; the heaviest catch I have heard of is 8 stone, composed of bream, roach, and perch; these were caught at Cantley, and the largest bream scaled about 4lb. and the largest perch 2lb., the size of the majority of the fish must, however, have been small, as I understand the number was large; in several instances 5 and 6 stone of bream have been taken at the same station, mostly, I believe, below Cantley, in the Hardley Reach, but I consider the Langley Reach would be just as likely to yield equal sport. Buckenham

Ferry is likely now to have a harvest, as several of the chief clubs in the city have arranged to hold their annual matches there this year. This is sure to cause many individuals to visit these waters previously, as some have a notion that it requires practice and knowledge of the different likely spots. Sport is equally good as Brundall, both above Flower's Fishing Station, and below down beyond Coldham Hall (Host Brown) to Rockland Dyke, all of which water may be said to be, either for roach or bream, some of the best on the stream. The low water and hot weather have had the effect of killing some large number of fish near Norwich. Prospects were never better than at present, as all circumstances favour the angler. —Robert Moll.

## CLUB REPORTS.

### AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Partrick, roach 4lb. 4oz., dace 6½oz. ; Mr. Say, roach 5lb. 8½oz., bream 9oz. ; Mr. Moir, from Dagenham, bream 1lb, 14½oz., roach 1lb. 9oz. ; Mr. Wicks, roach 1lb. ; and Mr. Carrington, perch from the Lea. The members are requested to attend the club on Wednesday, July 23rd, to arrange the prizes for the pegged-down match at Dagenham.—J. Worledge, sec.

### A NEW ANGLING SOCIETY AT GREAT YARMOUTH.

On Thursday evening, the 10th inst., a meeting was held at the Duke's Head Hotel, for the purpose of establishing another angling society for Yarmouth and the eastern counties. Dr. Mitchell occupied the chair, and E. J. Bonfellow, Esq., the vice-chair. Several gentlemen wel l known for their angling proclivities were present. The following business was transacted :—It was proposed by Mr. Turner, seconded by Mr. Freeman, and unanimously agreed to, "That a society should be formed to be called 'The Eastern Counties Angling Society.'" Proposed by Dr. Mitchell, seconded by Mr. Lowne, and carried, "That the subscription be 2s. 6d. for the first twelve months." Proposed by Mr. Archard, seconded by Mr. Turner, "That the fact of the society having been formed be announced in the public papers, and that a meeting be advertised for Thursday, the 24th inst., for the purpose of enrolling members and electing officers." Proposed by Mr. Archard, and seconded by Mr. Bonfellow, "That Mr. B. Seaman be appointed honorary secretary pro tem."

### BERMONDSEY BROTHERS ANGLING CLUB.

The club house having changed hands at last, the members propose to hold, on July 24th, a complimentary visit, to give our new landlord an insight of what the anglers are. Hoping as many anglers and friends as can make it convenient will attend, we shall take it as a great favour and return it in the future. Several of our members were out fishing on the 13th inst., Mr. R. Gafney, with 6lb. roach and bream ; Mr. Benningfield, 4lb. ; Mr. Dotson, 6lb. ; and several other members weighing in.—J. C., sec.

### BROMPTON ANGLING SOCIETY.

Very poor shows on the 13th inst. Messrs. Burbidge and Dutton, bream and roach ; Mr. E. Saunders, carp. Several of our members fished the Welsh Harp, and returned with blanks. They would like to know if the great takes of bream have been seen by any club members, as reported in the *Sporting Life*—namely, Mr. Hillier and friend, 65 bream weighing 196lb. It was given to me on good authority that the takes were : Mr. Hillier, 15lb. ; friend, 12½lb. ; 27½lb. in all. How they grew to the above weight I should like to know. Perhaps Mr. Hillier or friend would kindly let us know the particulars ; they would confer a favour on others as well as —W. Dutton, sec.

### BOSTONIAN ANGLING SOCIETY.

Our show of fish on the 6th was rather a poor one, the best take being had by Mr. Jennings, with 4½lb., from Amberley. Messrs. Constable, Elton, Brothers, and Jamieson weighed fish from Amberley. On the 13th our trays were well filled. Mr. Goodge weighed some good bream from Amberley, averaging 2lb. each ; Mr. Jennings, roach and bream. Mr. Brothers had a good show of bream from Dagenham Lake.—J. J.

### CITY OF BRISTOL ANGLING SOCIETY.

On Monday, June 30th, a special general meeting of this association was held for the purpose of electing the officers and committee for the years 1884 and 1885, and to hear the balance-sheet read for the year ending June 30th, 1884. The president, Mr. Henry Meller, presided over a large attendance of members. The chairman, after making a few remarks in opening the meeting, called upon the secretary to read the annual statement, which showed that the number of members on the books was 59, and that the income for the year was £8 2s. 6d., and the expenditure for the same time was £4 12s. 8d. ; total worth of the society was £5 9s. 4d., which was considered very satisfactory and was adopted. A vote of thanks was passed to the secretary, officers, and committee for their services. The election then commenced, when the following officers and committee, which was reduced to five instead of nine, were elected :—President, H. Meller ; vice-president, Mr. A. Sheppard ; treasurer, Mr. H. G. Lewis ; hon. secretary, F. H. Stantial ; committee-men, Messrs. F. H. Champion, H. Iles, W. Davis, J. Parrot, W. Beacham. A long discussion then took place on a minute passed some time ago, September 5th, 1883, which read "That the committee did not wish to do away with Sunday fishing, but that, on and after this date, no Sunday contest be allowed in connection with this association." The meeting upheld the decision of the committee and ordered that it be inserted in the new rules. A committee meeting was held on Wednesday week, July 9, when it was arranged for a contest to take place in the canal at Bradford, on Bank holiday next, August 4th, when prizes to the value of about £4 will be given. No member who has not taken out his new tablet is to contest. The secretary is pleased to say that there were 10 new members made at this meeting, and that more old members have taken out their tablets than any previous annual meeting. The committee then passed a vote of thanks to the Editor of the Fishing Gazette for his kindness in inserting our reports in that paper.—J. H. Stantial, hon. sec.

### CITY OF LONDON ANGLING SOCIETY.

The following weighed in on the 13th inst. : Mr. Castell, bream from Dagenham ; and Messrs. G. Blackwell and Chambers, roach, dace, perch, and gudgeons from the Thames at Wraysbury. Several visited Amberley, but returned with blanks.—Cas.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly meeting of this society was held on Wednesday last, Mr. Colls in the chair, when a considerable number of members attended. The minutes of the last meeting were signed. The secretary reported that he had attended the public meeting called to protest against the continued pollution of the Lea. He gave an account of the proceedings, and the action proposed to be taken by a committee formed (upon which he had been elected), and he hoped and believed that their efforts would have the desired effect of preventing further pollution at a very early date. The secretary brought under the notice of the members the Fishing Gazette Tournament, which would take place at the Welsh Harp, Hendon, on Saturday, the 26th inst., for the benefit of the Anglers' Benevolent Fund. He expressed a hope that the members of the Clapton would attend in numbers : from practical knowledge, he said he could promise them a capital afternoon's instructive amusement. Mr. Chillingworth had a splendid show of roach from the Yare, a dozen of which scaled nearly a pound apiece. Mr. Graham Bennett also showed roach and dace from the Lea. Mr. H. Short reported that a friend of his had been "well in" amongst the barbel, at Staines ; he himself had been "broken away," but only got a few small fish "in the well." Several members reported unimportant catches. Three new members were elected. A cordial vote of thanks was awarded to the chairman. Mr. Winterbottom, in his usual able style, officiated at the pianoforte, and some capital singing brought a very pleasant evening to a close.—Henry Howse, hon. sec.

### CLAPHAM JUNCTION ANGLING SOCIETY.

The result of our first roving match was—Mr. Wellman, 1st, with carp ; Mr. Starsmere, 2nd, bream ; Mr. Thomas, 3rd, bream. Takes were small. Total weight of winners, 5lb. 8oz. On Thursday last our worthy host, Mr. Speed, weighed in a nice show of barbel and dace from Stains, 9lb. 15oz. Our trays were well filled on the 13th inst., by the following members : Messrs. Starsmere, carp and bream, 7lb. 7½oz. ; F. Gomm, 2lb. 6½oz. ; W. Maslin, bream, 2lb. 12oz. ; E. Wilson, 1lb. 12oz., roach ; Thomas, 12oz., bream ; Moore, rudd and dace. A grand show of carp and eels was shown by Mr. Boisseau, about 20lb. in all.—Wm. Maslin, sec.

### CROWN PISCATORIAL SOCIETY.

A very important meeting of the above society was held on Thursday evening last, at the Crown Tavern, Clerkenwell-green, Mr. Mason in the chair ; the minutes of the last meeting having been read and confirmed, the question respecting the society's welfare was brought on for discussion, which several of the members took part in, and the following resolutions were proposed and carried unanimously :—"That this society change its quarters, and that the secretary be empowered to give the landlord a month's notice to that effect." As there are so many angling societies in the neighbourhood, it was proposed "That this society amalgamate with the Buckland Angling Society, at the Middlesex Arms, Clerkenwell-green." This, I am happy to say, was carried by the members of both clubs unanimously. "That the managing committee of this society be empowered to negotiate on the conditions of the amalgamation with the managing committee of the Buckland, on Wednesday, July 23rd, at 9 o'clock, for the purpose of electing officers and framing a code of rules." P.S.—On and after July 31st all communications to be addressed to the secretary, Middlesex Arms, Clerkenwell-green.—W. H. Burwash, jun., sec.

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

The following members weighed in on the 13th inst. :—Mr. Hockham, 1 roach, 1lb. 7oz. ; Mr. G. Watling, 6lb. 9oz. ; Mr. Hewitt, 4lb. 11oz. ; Mr. J. Cowper, 3lb. ; Mr. Stammer, 4lb. 7oz. ; Mr. Seeley, 2lb. 1oz. Messrs. Theobold, Graves, C. Watling, R. Hill, Baker, and King also had roach and bream. Mr. Graves took a fine roach on Saturday weighing 1lb. 10oz. Our annual excursion to Dagenham takes place on the 20th inst., starting at midnight on the 19th from the club-house. We have a few seats vacant.—J. Fitch.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held at the Mason's Hall Tavern, Mason's-avenue, Basinghall-street, on Tuesday evening ; Mr. Bentley in the chair. The minutes of the last meeting were read and confirmed. The secretary read letters from Mr. Elliott, of Blunham, inquiring whether the society had come to a decision with reference to his offer of a piece of water ; from the Second Surrey Angling Society, with an invitation to the Central return visit to be paid to their rooms on the 21st inst. ; and from the Editor of the Fishing Gazette, expressing the hope that the society would assist the Anglers' Benevolent Fund by giving a prize at the forthcoming tournament at the Welsh Harp. The consideration of Mr. Elliott's letter was referred to the committee, and Mr. Marston's circular was ordered to be brought before the next meeting. The chairman announced that he was in communication with some friends relative to the renting of a piece of water on the Ouse, and about which he hoped very soon to be able to make a proposal to the society. The chair was occupied during the later portion of the meeting by Mr. White, and votes of thanks to that gentleman and his predecessor, Mr. Bentley, concluded the business of the evening.—H.

### HIGHBURY ANGLING SOCIETY.

Our trays were well furnished on the 13th inst. with some capital barbel, roach, dace, and bream from the Thames and elsewhere, by Mr. Lewis, Mr. Highley, Mr. Shipley, Mr. S. Howell, and others.—James Edward Wheatley, sec.

### HOUNSFIELDS OTTERS, EDMONTON.

Our members were out on the 13th inst., bringing home a good show of roach and a very fine brace of bream ; also on Tuesday, from the Lea, bringing a good show of roach.—Otter.

### INDEPENDENT BROTHERS ANGLING SOCIETY.

Most of our members who went out this week had some very nice shows of fish, which well filled our trays, and which make us think that there are some still left in the waters to go out for. Mr. T. Leader had bream, roach, and dace, including one good specimen of bream. Mr. R. Clark had bream and roach, also one good specimen of bream ; G. Coomes, dace ; and H. Moore, a nice show of roach ; other members also weighed in. We are open to receive a few more gentlemen as members.—H. Moore, sec.

### IZAAK WALTON ANGLING ASSOCIATION, STAFFORD.

You, sir, will be pleased to hear of the successful formation of our club in the old county town, and the hearty responses to our circular inviting ordinary and honorary members. I inclose a copy of our rules, which, you will observe, are based upon those you so kindly sent to us. We have purchased the rights of angling in some excellent water at Norton Bridge and Shallowford, the same water that has in years gone by been angled by Izaak Walton (his house still stands in close proximity to our water). It is a strange coincidence that the club should at the very commencement obtain the water so much connected with the history of Izaak Walton, after whom we have named the club. During the week, several fine grayling and trout, also large dace and silver eels, have been taken, and there promises to be some rare good sport for lovers of the piscatorial art. We shall be happy to let you know occasionally how we are progressing. Hon. president, Mr. H. H. Gardiner ; hon. treasurer, John Gibson ; hon. secretary, B. Downing.—B. Downing, hon. sec.

### NORTH-WESTERN ANGLING SOCIETY.

On the 13th three members furnished the trays with good displays of fish. Mr. Marshall, 1 jack and a proper show of bream, weighing 39lb. Mr. Cross had a pretty take of tench and a brace of jack weighing 19lb. ; Mr. Alde, roach and tench—the heaviest tench 3lb. 6oz. Mr. Culpitt, on Tuesday, got a brace of jack, the heaviest weighing 7lb. 10½oz.—W. Hellier, sec.

### ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

On the 13th we had a fair show, only four members weighing in : Mr. Craffard, roach and dace, 10lb. 11oz. ; Mr. Kent, roach and dace, 6lb. 3oz. ; Mr. Roberts, roach and dace, 2lb. 3oz. ; Mr. Laundy also weighed in. Notice : On and after Wednesday, July 23, theabove society remove from their present address to the Three Kings, opposite St. James's Church, Clerkenwell-close, where all correspondence should be addressed to the secretary.—J. Obbard, sec.

### THE PISCATORIAL SOCIETY.

The usual weekly meeting of this society was held at Ashley's Hotel, Covent-garden, on Monday evening last. There was a large attendance of members. Mr. Thomas Huggett was voted to the chair. The previous meeting being the half-yearly one, no minutes were in order for reading on the present occasion. The first business of the evening was from the chairman, who called the attention of the members present to the date of the summer dinner, and that the tickets were ready, hoping that early and numerous applications might be made for same, so that the dinner on this, as on previous occasions, might be a great success. As previously announced, it will take place at The Ray Mead Hotel, Maidenhead Bridge, on Wednesday, 23rd inst. Members and their friends can leave Paddington as late as 3.45 on that day, and yet be in time to join us. Mr. Foreman hoped to see some show of fish on the day of the dinner, and that members would get up a prize for the occasion. Mr. Booker very generously made a present of twelve volumes of works in connection with the Fisheries Exhibition. The chairman, in the name of the society, thanked Mr. Booker for the very valuable and beautiful present, and moved that a vote of thanks be cordially given to the donor, the same to be recorded in the minutes of the society; Mr. Sachs seconded, and it was carried unanimously. Mr. Booker was very pleased that the books had been so well accepted, and could only say that he was always pleased when he could do anything for the benefit of the Piscatorial Society. Messrs. Harden and H. B. Brown have been fishing at Tempsford for chub, but they did rather badly, the water being so low and bright. They caught several, but our minimum limit being 1lb., and those taken not being up to this standard, were duly returned. Mr. Sachs (as one of the stewards) called the attention of the members to the dinner of the Thames Angling Preservation Society at the Star and Garter, Richmond-hill, on July 16th. Tickets, £1 1s. each. He regretted that the gentlemen did not carry out the good old German custom of having ladies present, which, in his opinion, would add to the grace and charm of the banquet. Mr. Goodger proposed "The Health of Mr. Huggett," as the successful angler, there being a show of chub on the table. Mr. Huggett replied, thanking the members present for the kind expressions, and also said that on this, as on many previous occasions, he had remarked that where you find large chub you do not as a rule find small ones, and *vice versâ*. Mr. Adlington also was of the same opinion. Mr. Sachs recommended the tail of crayfish as the best known bait for chub, and dainties for barbel. Dr. Brunton has gone to Scotland; he hopes to get one day on Loch Leven, and if he gets a fair, take to show the fish on the tables of this society. It was announced that Mr. E. Walker would read a paper on that style of angling called "Tight Corking" on Monday next. A personal friend of Mr. Lander (the hon. sec.) presented some interesting angling plates, which were much admired, and will be placed in our noted album. "The Continued Success of The Piscatorial Society," and "The Health of the Chairman," proposed by the Rev. G. Sumner, brought the business to a close.—T. H.

### PECKHAM BROTHERS ANGLING SOCIETY.

Several of the members of this club were out on the 13th, but the shows of fish were very small. James Stidolph, however, succeeded in capturing another carp on Tuesday, in the lake at Wimbledon; the fish, 14 hours after capture, weighing 5lb. A match for the President Cup will be fished for at Amberley on the 27th. Full particulars at the club house. Special meeting on the 22nd; chair taken at 8.30, sharp.—GADFLY.

### PHŒNIX ANGLING SOCIETY.

Messrs. Grist, Reed, Packer, Elbourn, Milton, Bartrip, Keen, Slater, Margetts, and the Brothers Ashley weighed in about 35lb. of roach, rudd, perch, and bream on the 13th. Members' Notice.—Rally up on Tuesday next for Bank Holiday prizes.—W. E., sec.

### PORTSMOUTH WALTONIAN ANGLING SOCIETY.

At the meeting of the above club on Thursday last, Mr. A. L. Emanuel in the chair, it was proposed and carried unanimously—"That Mr. Francis Francis, who is on a visit in the locality for the benefit of his health, should be made an hon. member for six months, so that he may at any time be able to fish any of the club waters." Messrs. Buck and Long had been at Durford the same day, and in spite of the drenching weather they managed to bag some very fine dace, scaling over 12oz. and 13oz.; also a brace of sizeable trout. Mr. Redward also during the week weighed in several bass, one 8lb. 6oz. from Portsmouth Harbour. The evening contest in the harbour, the first for the season, on Wednesday week, did not turn out a very successful affair. Although three boats went out, numbering over 22, the catch was very small; Mr. Hills taking first prize with whiting pout, and Mr. Brooks second, also pout. Mr. Mortimer, on Saturday morning, caught two very fair-sized carp at Baffins, a pond the club has stocked especially for the use of the members.—DAGGERWOOD.

### RICHMOND PISCATORIAL SOCIETY.

Mr. Powell took the chair and Mr. W. Abbott the vice-chair at the weekly meeting of this society, held at Station Hotel, on Wednesday. Several large dace were weighed in by F. Little, taken with the fly, and some fine bream taken by Mr. Dickinson, and Mr. C. H. Smith had a handsome take of barbel, chub, &c. Mr. J. C. Murray, the honorary president of the Central Association of London Angling Clubs, thanked the members for joining his association for the purpose of obtaining railway privileges. Later in the evening the chairman of the society, Mr. A. J. Little, attended the meeting, accompanied by the Mayor of Kingston (A. Nuthall, Esq.), Messrs. Senior, Sachs, R. B. Marston, H. B. Eyre, Wheeldon, Temple, Hatfield, Crumplen, Noyle, Huggett, and others, who had been to the dinner, at the Star and Garter, of the Thames Angling Preservation Society. Mr. Marston referred to the forthcoming Tournament, and hoped to see members competing at the Welsh Harp, and assist the cause of the Anglers' Benevolent Society. Mr. Powell offered to contribute to a prize, and the Mayor of Kingston giving two guineas, Messrs. Eyre, Little, and Smith soon made up a sum of five guineas. It was decided to expend the money in a cup to be won by the competitor making the greatest number of marks in either the Thames or Nottingham style for accuracy and distance, the cup to be called the Richmond Piscatorial Cup. Mr. Sachs also offered, through the society, three volumes (I think, called "Silver Trout"), by the late Frank Buckland, as a prize for the Tournament. Mr. Crumplen, in some lengthy remarks, criticised the management, and thought it was a great pity that the Tournament did not produce more funds to the Anglers' Benevolent Society, the persons benefiting most being those who competed for the valuable prizes, and he would like to see some scheme devised whereby a larger sum could be raised. Mr. Marston replied, and said the former tournaments had been unfortunate in the weather, and many gave prizes for specific objects, with the idea of attracting the public; but any suggestion to increase the funds of the Anglers' Benevolent would receive due attention. The Mayor of Kingston at once contributed a guinea towards the funds of the Anglers' Benevolent, and it was decided that the entrance fee for the cup should be 2s. 6d. for the same purpose.—G. H. HESTER, hon. sec.

### RODNEY PISCATORIALS.

On the 13th inst., Messrs. Smith, Grant, and Chantry visited Amberley; they managed to get a nice lot of bream and roach. Messrs. Pyne and Dodd had some fish, but did not reach headquarters in time to weigh in. At the meeting held on the 16th it was decided that all competitors for the competition on the 20th meet at "Plummer's" by 10.15 a.m. the same morning. Conditions of competition the same as that which took place on the 22nd of June last.—PIXIE.

### ROYAL GEORGE ANGLING SOCIETY.

A bigger display of big fish appeared on our try on the 13th inst. than we have had the pleasure of witnessing for some considerable time. The slaughterers of these big fish were Messrs. Palmer, Holden, Hughes, and Sinclair. Mr. Henderson had some fine dace and a large eel from the Thames. On the 20th inst., nearly the whole of the members are going out to fish a sweepstakes. There is also a silver cup to be fished for, presented by one of our honorary members.—W. H. RIDER.

### SOUTH-EASTERN ANGLING SOCIETY.

A nice show of barbel on 9th by Mr. Jas. Harris. On Tuesday, the 15th, at our regular meeting, about a dozen members were present. After the business was settled and the communications read, three extra prizes were added to the already goodly number—two by Mr. Thos. Keeble, and one by Mr. Jas. Smith, sen., for specimen perch, roach, and dace of the season respectively, and were received with thanks, after which the long-standing prizes of last season were distributed in order. Mr. Smith, sen., first prize, gross; Mr. Smith, jun., second prize, gross; Mr. Smith, sen., specimen trout; Mr. Smith, jun., gross for August; Mr. F. Allard, gross for February; Mr. J. Harris, gross for October; Mr. F. Allard, first prize, gross for 13th inst.; Mr. Smith, jun., second prize, gross for 13th inst. After a few remarks from the recipients, the meeting adjourned.—THOS. H. H. WESTON, sec.

### STOKE-UPON-TRENT ANGLING SOCIETY.

Messrs. Lee and Taylor, fishing on the evening of 10th ult., had a very nice catch of perch and roach, bagging altogether 72 fish in one hour and a half. Not much has yet been done by the members generally, as the club water is very low and fine. A fresh in the river would be very beneficial, as the weeds are getting very strong. A few bream, perch, and roach were taken last Saturday, and the veteran, Mr. H. Evans, succeeded in capturing a brace of very fine chub. The above society, having removed from the Pike Hotel, now holds its meetings at the Roebuck Hotel, where all communications may be addressed.—J. HOLLINS, hon. sec.

### TRAFALGAR ANGLING SOCIETY.

Members of this society are requested to attend on Wednesday night next, when business of much importance will be transacted.—R. GAZE, hon. sec.

### WALWORTH PISCATORIALS.

The members of this society had the third outing of the season on Thursday, July 10th, the competition being for three prizes. Although the weather and water were both against angling, the substantial weight of 23lb. odd was shown as the result of five competitors' pleasure; the first prize falling to the lot of Mr. S. J. Weatherhead, the second and third each being taken by Messrs. Delhaye, jun., and Beckett, the latter gentleman being run very close by Messrs. Gilbert and La Feuillade. The report of the conference of Fishery Boards, Angling Societies, &c., was read, and gave rise to an animated discussion, in which several of the members joined; the general result of this discussion being that, if coarse fish anglers desire to retain those privileges they have, or obtain more, their representation on the Freshwater Fishery Boards will be very essential. The report here spoken of was ordered to be entered on the minute book of the society for future reference.—J. BOALCH, sec.

### WESTBOURNE PARK PISCATORIAL SOCIETY.

Several members of this society fished a Thames competition on the 13th inst., resulting in the following prizes being won:—1st, Mr. T. Oatley; 2nd, Mr. H. Thompson; 3rd, Mr. G. Evans. Barbel in each instance were the fish weighed. Mr. Yarham had some good dace from the Colne, several going ½lb. each. Mr. H. C. Blatley also had a heavy bag of bream during the week from the Welsh Harp, two fish weighing nearly 4lb. each.

A FINE trout was taken in a net by Mr. Wright in the water rented by Mr. Gawthorn at the head of the Town Mill, Salisbury, on Thursday. It weighed 14lb. 2½oz., and was 30½in. long.

"HEATH'S FERN PORTFOLIO."—Unexpected, but unavoidable, delay has occurred in producing the continuing series of Mr. Francis George Heath's "Fern Portfolio." This has arisen in consequence of the elaborated nature of the work, and of the unusual size of the stones employed in the colour printing. Part VI., therefore, which should have appeared in July, cannot be ready until August. Meanwhile, the publishers, Messrs. Sampson Low, Marston, and Co., are issuing, bound, the first section of "The Fern Portfolio," including the five numbers already published.

FISHING IN THE RIVER CAMEL.—A QUESTION OF RIGHT.—At the Washaway Petty Sessions on Monday, Henry Hicks, of Nanstallon, was summoned for illegally fishing in the Camel on the 28th ultimo. Defendant pleaded guilty to being in possession of five peel, but not of catching them.—The chairman said the magistrates were determined to put down the illegal fishing in the Camel. Nothing previous was known against the defendant either by the water bailiff or the police, and he was ordered to pay a fine of 5s. and costs, together £1 9s. 6d.—George Phillips and Thomas Martin, both of Bodmin, were also summoned for illegally fishing in the Camel. This is the test case whether certain rights belong to the public or to the landowners, Flamanks estate and Molesworth estate.—Mr. R. Edyvean appeared for the Flamanks estate, and Mr. Venning (Devonport) for the Molesworth estate. It was ultimately decided that on Friday, the 17th, at 11 a.m., the magistrates would sit specially for the purpose of trying this case only.

THE AUTOMATIC

## THE AMERICAN ANGLER.

The Fisherman's Paper.
THE ONLY ONE IN AMERICA!
Devoted Solely to Fishing and Fish Culture.

The AMERICAN ANGLER is published on Saturday of each week, and each issue contains essays on Fish and Fishing; notes and queries relative to fishing and fish life; reports of fishing from all parts of the Continent, and an occasional engraving of a representative fish of American waters. Drawings of seventy-five of these fish have already appeared in the columns of THE ANGLER, which is the only paper published in America that is solely devoted to fishing and fish culture.

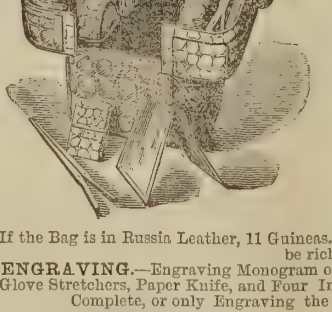
## Thornhill's Ten-Guinea Silver-Fitted Ladies' Travelling Dressing Bag.

(No. 68.) 14-inch Best Polished Morocco Patent Wide-opening Travelling Dressing Bag, with one outside Pocket, Stitched Handle, with Gilt Rings and Plates, Gilt Double-Action Registered Lock, and Thornhill's Improved Patent Stop-hinges; Bag lined with rich Moiré Antique Silk, with Thornhill's Improved Indestructible Pockets.



CONTENTS.

Set of plain cut Glass Fittings, with richly Engraved **HALL MARKED SOLID SILVER STERLING** Tops, consisting of—
- Oval Soap.
- Tooth Brush Roller, with two Tooth Brushes.
- Nail Brush Roller, with Nail Brush.
- Pomade Jar.
- Tooth Powder Jar.
- Two Scent Bottles, with Screw Caps.
- Ivory Hair Brush, in case.
- Ivory Clothes Brush.
- Ditto Glove Stretchers.
- Ditto Paper Knife.
- Writing Book, lined Silk, and fitted with Stationery, Penholder, and Blotting Book.
- Patent Portable Ink and Light Boxes.
- Card Case.
- Looking Glass.
- Dressing Comb in Case.
- Thread and Needle Case.
- Pincushion.
- Instrument Board, fitted with pair Nail Scissors, Ivory Nail Trimmer, Four Ivory-handle Instruments, and a pair of Tweezers.

**PRICE 10 GUINEAS.**

If the Bag is in Russia Leather, 11 Guineas. Ditto Crocodile Skin, 13 Guineas. The Silver Tops may be richly gilt for 21s. extra.

ENGRAVING.—Engraving Monogram of Two or Three Letters on the Silver Fittings, Ivory Brushes, Glove Stretchers, Paper Knife, and Four Instruments, and stamping initials in Gold on the Bag, 42s. Complete, or only Engraving the Seven Silver Fittings, and Stamping the Bag, 21s.

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage is 12s. 6d.

The Fishing Gazette.

SATURDAY, JULY 26, 1884.

# PROGRAMME OF THE FOURTH ANNUAL "FISHING GAZETTE" TOURNAMENT.

## IN AID OF THE ANGLERS' BENEVOLENT SOCIETY.

THE Tournament will be held at Mr. Warner's, Welsh Harp Fishery, to-day (Saturday), July 26, at two o'clock, and continue until dusk. The price of admission is sixpence. Tickets can be taken for the Welsh Harp or Hendon Stations from St. Pancras, and from the Metropolitan Underground Railway Stations—King's Cross, Snow Hill, Aldgate, &c. We advise anglers to make sure of the train times, and also to note that more trains stop at Hendon than at the Welsh Harp Station, and Hendon is only a few minutes' longer walk. The ground is close to the Welsh Harp Station. As there is a long programme to get through, competitors are requested to pay the entrance fees, and give in their names and addresses at the judge's tent, before 1.30.

The following Officers (who, of course, give their services gratuitously) have been selected by the Committee of the Anglers' Benevolent Society :—

General arrangements under the direction of Mr. R. B. Marston, assisted by the Committee.

The Salmon and Trout Fly-casting Competitions.—Judges: Mr. Geo. M. Kelson and Mr. J. C. Murray.

Thames and Nottingham Style Bait-casting Competitions.—Judges: Mr. Philip Geen and Mr. A. J. Little.

The "Go-as-you-please" Roach Anglers' Race, the Getting Ready for Fishing Competition, and the Two Hours' Peg-down Fishing Match under the direction of Messrs. R. Murphy and E. Chambers. Referee: Mr. J. Woodward (champion roach angler).

The following gentlemen have kindly consented to act as money-takers and gatekeepers, or in any other capacity that may be required :—Messrs. M. Dymond, J. Fitch, C. Watling, jun., J. Hotham, E. Tibbatts, and J. Jennings.

Clerks: Messrs. Field and Ghurney, who will be at the table in the tent to take the entrance fees for the Competitions and enter competitors' names.

### RULES FOR THE FLY-CASTING.

I.—Each competitor to be in readiness and to proceed when called upon by Mr. Kelson to do so.

II.—Five minutes will be allowed for each competitor to make his cast; the judges, however, may give further time if they consider it necessary for repairs.

III.—Each competitor must have some treble and single gut attached to his line.

IV.—Each competitor to use one of the flies which will be provided.

V.—Any competitor entering for Prize No. 2 who shall make a longer cast than any one of those competing for Prize No. 1 shall be entitled to his choice of any one of these prizes in exchange.

VI.—Gentlemen will be allowed to enter in assumed names, and an entrance fee of 5s. to be paid by all competitors.

### RULES FOR THE THAMES AND NOTTINGHAM BAIT-CASTING, &c.

The Committee have decided on the following Rules :—

I.—Competitors are at liberty to use their own rods, lines, and winches, except where otherwise specified, and subject to the undermentioned regulations.

II.—No rod shall exceed the following lengths :—

| | ft. | in. |
|---|---|---|
| Single-handed fly competitions ... ... | 12 | 6 |
| Double-handed „ „ ... ... | 16 | 0 |
| Salmon „ „ ... ... | 20 | 0 |
| Thames style bait „ „ ... ... | 14 | 0 |
| Nottingham style bait „ ... ... | 14 | 0 |

III.—No allowance in points (or distance) shall be made for difference in lengths of rods. The term rod shall be understood to mean a *bonâ fide* fishing rod.

IV.—Each competitor shall use the artificial baits and flies for casting provided by the management.

V.—Competitors shall draw lots to determine the order in which they shall cast, and must be ready to commence when called upon by the time-keeper.

VI.—In each competition five minutes will be allowed for casting; the judges, however, may allow further time, if they consider it necessary, for repairs.

VII.—The fly competitions will take place on the water, and each competitor will be required to cast from the same position, either from a punt on the lake, or from the bank (according to the wind), as may be decided by the judges.

VIII.—The bait castings will take place on the grass, and each competitor will be required to stand on the selected ground, which will represent as far as possible the floor of a punt.

IX.—In no case will three prizes be awarded in any competition unless there are at least four competitors.

X.—In the "Go-as-you-please" Roach Anglers' Race, also in the Getting Ready for Fishing Competition, and in the Peg-down Match, the competitors must submit their boxes, rods, tackle, &c., to the judges. The ordinary recognised roach angling rod, box, &c., will be used as in bank angling.

XI.—On discovery of any unfair act or attempt, the judges to disqualify the competitor at once.

XII.—The decision of the judges to be final in all cases.

### ORDER OF THE COMPETITIONS AND PRIZES FOR THE SAME.

#### FIRST COMPETITION.

AMATEUR FLY-CASTING COMPETITION WITH SINGLE-HANDED FLY-ROD.

Three Prizes. Entrance fee, 5s.

#### SECOND COMPETITION.

AMATEUR COMPETITION, WITH SINGLE-HANDED FLY-ROD, IN THROWING FLY WITH GREATEST ACCURACY AND LIGHTNESS UNDER BUSHES.

Two Prizes. Entrance fee, 5s.

#### THIRD COMPETITION.

AMATEUR FLY-CASTING COMPETITION WITH DOUBLE-HANDED TROUT FLY-ROD.

Two Prizes. Entrance fee, 5s.

#### SPECIAL COMPETITION.

Entrance fee, 5s.

Open to United Kingdom only. Fly-casting with single-handed, split-cane fly-rod, sent for the purpose by Mr. F. L. Andrews, of Uppingham. The prize to be a similar rod, 11ft.

#### FOURTH COMPETITION.

AMATEUR OVERHAND FLY-CASTING WITH SALMON ROD NOT EXCEEDING 16FT. IN LENGTH. Two Prizes. 1st Prize, Silver Egg Cup. Entrance fee, 5s.

#### FIFTH COMPETITION.

AMATEUR OVERHAND FLY-CASTING WITH SALMON ROD NOT EXCEEDING 18FT. IN LENGTH. Two Prizes. 1st, a Gold Egg Cup. Entrance fee, 5s.

#### SPECIAL COMPETITION.

AMATEUR SWITCH FLY-CASTING WITH ANY SALMON ROD. 6ft. only allowed behind the competitor for the rod or line to extend. Entrance fee, 2s. 6d. Two prizes.

#### SIXTH COMPETITION.

AMATEUR COMPETITION IN CASTING IN THE THAMES STYLE.

Three Prizes. Entrance fee, 2s. 6d.

#### SEVENTH COMPETITION.

AMATEUR COMPETITION IN CASTING FROM REEL IN NOTTINGHAM STYLE.

Three Prizes. Entrance fee, 2s. 6d.

#### EIGHTH COMPETITION.

AMATEUR COMPETITION (open to Thames and Nottingham style) in casting towards a fixed mark. The angler casting the bait nearest to the mark to take first prize; the next best cast made by another angler the second; and the third best cast by another angler to get the third prize.

Three Prizes. Entrance fee, 2s. 6d.

#### NINTH COMPETITION.

PROFESSIONAL COMPETITION IN CASTING IN THE THAMES STYLE.

Two Prizes. No entrance fee.

#### TENTH COMPETITION.

PROFESSIONAL COMPETITION IN CASTING FROM REEL IN NOTTINGHAM STYLE.

Two Prizes. No entrance fee.

#### ELEVENTH COMPETITION.

AMATEUR COMPETITION in casting in the Thames style, each competitor to use the same rod, line, winch, and weight, which, in this instance, will be 3oz.

Three Prizes. Entrance fee, 2s. 6d.

1st Prize—Handsome Pike Rod (Mr. Pugh, Friendly Anglers).

#### TWELFTH COMPETITION.

LEDGER BAIT CASTING TOWARDS A FIXED MARK.

Three Prizes. Entrance fee, 2s. 6d.

First and second prizes given by Mr. Hobden.

#### THIRTEENTH COMPETITION.

COMPETITION IN THROWING THE BAIT WITH FORKED STICK IN THE WELSH HARP STYLE.

Three Prizes. Entrance fee, 1s.

### SPECIAL COMPETITIONS.

1.—A "GO AS YOU PLEASE" Roach Anglers' Race. Entrance fee, 1s. Prizes will be given for the best time made over a given course by fully-equipped Roach Anglers with Rod in Bag and Roach Basket or Box.

2.—A "GETTING READY FOR FISHING" COMPETITION. Entrance fee, 1s. Prizes will be given for those who prove most expert in unpacking, putting rods and lines together, and plumbing depth.

3.—A TWO HOURS' FISHING MATCH (Peg-down), for which Prizes will be given. Entrance fee, 1s.

The prizes range in value from £5 5s. to 10s., and consist chiefly of gold, silver, and plated cups, first-class rods of all kinds, reels, lines, &c., &c.

We have to acknowledge more this week, and we propose to give a complete list of them with notices when we describe their presentation, and the names of the winners, probably next week.

In conclusion, we again remind our readers that the Tournament is to be held in aid of a most deserving Society—the Anglers' Benevolent Society—the object of which is to give help to cases of real distress amongst its members and their families. The small payment of one shilling per year confers membership in this Society on any club angler, and we confidently hope that a principal result of the Tournament will be a large accession of new members.

## ANSWERS TO CORRESPONDENTS.

R. S. M.—We think Messrs. Gillett and Co., of 40, Fetter-lane, can supply what you want if you explain to them.

Rod and Line, Eccles.—We see (in answer to your query) from the "Anglers' Diary" that there is both trout and coarse fishing to be had at Trowbridge in three miles of the Avon at 6d. per day, or 1s. 6d. per week for tickets, to be got at the railway station. The water is preserved by the Bradford-on-Avon Angling Association.

Lancashire Noll.—If you consult previous volumes of the Gazette, you will find information about fishing near Liverpool has already been often given.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

## EYED-HOOKS: THEIR EARLY AND SUBSEQUENT HISTORY.

Sir,—As you were one of the first to recognise the advantages of the eyed-hook for trout flies, and have so often recommended them and referred to them in the Gazette, I feel sure you will be anxious that your paper should be scrupulously correct in all its allusions to these hooks. I hope, therefore, that I may be allowed to reply to a letter of Mr. Bankart's on May 31st, in which there were some astonishing inaccuracies, while other statements, not absolutely incorrect in themselves, were so put as to be quite misleading. When that letter appeared, I at once wrote to Mr. Bankart, and pointed out what parts of his letter I held (and still hold) to be a misrepresentation of the case. I felt so sure of my facts that I was convinced that Mr. Bankart had written through inadvertence, and that on receipt of my letter he would immediately correct the false impression he must have created. But instead of this, it has led to a long and tedious correspondence, and no concession from Mr. Bankart other than that given on June 21st, which I consider most unsatisfactory and inadequate.

For reasons which need not be mentioned here (and, indeed, I could not divulge them without committing a breach of confidence in more quarters than one), it is particularly necessary just now that no uncertain and misleading account of the eyed hooks should be put forward in the angling papers. Hence, as Mr. Bankart declines to retract or alter his letter of May 31st, I am compelled—much as I regret the necessity of such a step—to give my own account in opposition to his.

I have been in the habit of writing from time to time about eyed-hooks and fly-tying on them both in the *Field* and Fishing Gazette during the last four years, or more. Many of my letters and articles have been in response to a definite request, and all have been suggested mainly by the wish to enlighten the angling community as to experiments and further developments of the eyed-hook as carried out by myself and friends. These miscellaneous letters have been scribbled off very hurriedly, with no intention of being sufficiently complete or consecutive to form a connected history; but I claim to have written quite truthfully and consistently throughout, without egotism or self-laudation. Now, if anglers accept Mr. Bankart's letter of May 31st, they must accuse me of systematically ignoring him altogether, and of putting myself forward in a manner quite unjustifiable. But the fact is, that since 1880 I have acted almost entirely independently of Mr. Bankart. All the correspondence and expense has been mine, and if Mr. Bankart has been in communication with the hookmakers, it has been to supply his own occasional wants, and little else; so that, as I wrote a long letter in the *Field* of July 3rd, 1880, to explain our joint work up that time, and as later in the same month I wrote a special letter to the Gazette to bring Mr. Bankart's name forward, and to give him his due mead of praise, and, further, as I still have Mr. Bankart's letter expressing approval of what I had done, where he said "I think you stated the case very well indeed,"—it is plain that anything to the contrary he may now say cannot, at this distance of time, be considered of much weight. If, therefore, in July, 1880, Mr. Bankart writes to me and says my published account of facts relating to our joint work up to that time has his approval, if he raised no question as to the accuracy of my statement, it is useless to do so now. This brings me to the consideration of his letter of May 31st, nearly all of which refers to a time prior to 1880, as I shall presently show. For convenience of reference, I quote in full four paragraphs, to each of which I shall refer by number.

1. "Eyed-hooks are not novelties, though they may be so to most trout anglers, and are undoubtedly so in the small sizes used for river trout-fishing.

2. "When we were first studying the question, and looking round for someone to undertake to make them, I first of all obtained from Messrs. Kelly and Son, of Dublin, patterns of Irish-made eyed-hooks; but they were all of large sizes, suitable for small salmon flies, or at smallest for sea trout flies—about No. 6 or 7 of the present make. The eyes were all formed straight with the shank, some placed horizontally, and some vertically to the bend of the hook.

3. "We were at that time both in frequent correspondence with Mr. Aldam on angling matters, and, on mentioning our ideas to him, he very kindly offered to get some made for us by a professional hook maker, and went to very considerable trouble to do so, for which he has our sincere thanks. Who the maker was I do not know, but the hooks did not turn out satisfactory, and we abandoned their use; and, eventually, I wrote to Messrs. P. Hutchinson and Son, of Kendal, with whom I had previously dealt in such matters, and persuaded them to meet our views, and make us a few gross of various sizes. How well they have done it those who regularly use these hooks know, and I hope that the notoriety they have now acquired will bring the firm their reward in a commercial sense for their trouble and courtesy to us.

4. "But it was only after considerable perseverance and correspondence that the hooks were got to be as correct as they are now made; and as the largest share of this subsequent correspondence was conducted by Mr. Hall, and the alteration in the bend (from the 'Sneck Bend,' or the flat 'Limerick,' to the present combination of the 'Limerick' bend with 'Sneck' side-twist, which Mr. Hall called the 'Snecky Limerick') was his idea, the hooks have properly been christened with his name, and he has probably ordered for himself, and friends to whom they were introduced, as many gross as I have used single hooks."

With regard to paragraph 1, I may mention that four years ago, Mr. Francis Francis stated in the *Field*, that "eyed-hooks, even with the eye turned up, have been made as long as hooks have," while my friend Mr. Marryat used eyed hooks, such as they were, before I knew him. Again, I was once told at Farlow's some years ago that eyed-hooks had been in use twenty years, so that we (Mr. Bankart and I) were not inventors or originators in any sense. That eyed-hooks have been long used in some form or other for trout flies is certain, but it is only during the last few years that their manufacture has been sufficiently delicate and elaborately refined to admit of their use in the smallest flies in vogue among chalk-stream fishers. This is the real secret of their present popularity and widespread reputation.

Before alluding to Mr. Bankart's other paragraphs, I give my own account of our joint work, and I glean my facts chiefly from Mr. Bankart's own letters.

We both simultaneously got into correspondence with Mr. Aldam in the spring of 1877, the idea of eyed-hooks being suggested by the drake-hooks in his "Quaint Treatise." On May 31st, 1878, Mr. Aldam supplied us with the first instalment of eyed-hooks; they were japanned Limericks, down to No. 17 of the Redditch scale. It happened that I had no opportunity of trying them myself before August, but I was very keen about trying their merits for dry-fly fishing, so I tied a few flies on No. 17 hooks (yellow duns and jenny-spinners), and sent them to "South-West," a well-known contributor to the columns of the *Field*, and an angler of much experience on the Test. This gentleman was quite unknown to me at the time; but his first trial was so favourable, and he was so delighted with the flies I sent, that it led to a most interesting correspondence, and subsequently to a pleasant acquaintance. I have several letters before me now for reference, and in one dated July 21st, 1878, I have a description of "South-West's" first experience on "a most unlikely evening, wind N.E. and down-stream, river very low, consequently plenty of weeds above water." "The first fish had it directly it went over him, but got off after a hard run." The next fish was safely landed and weighed 2lb. 7oz. Further on I find, "It seems almost impossible to whip off the eyed-hook, and I gave it the most severe trial a hook could have, to say nothing of being hung up several times in bushes behind. I may try this same fly to-morrow evening, but before doing so shall tie it to the gut afresh; it is not the least damaged." "I should like to refer to these flies in the *Field;* I am sure if anglers knew of them they would use no others." I mention this to show that *from the very first* I was desirous of working out the new idea on dry-fly principles, and spared no pains to get suggestions from those best qualified to advise, and that, whatever Mr. Bankart's views were, I was even thus early experimenting on the smallest sizes which have since become so valuable under repeated improvements.

In August of the same year I gave the hooks a good trial myself on both Itchen and Test, and although I experienced some convenience and comfort in their use, they were generally too heavy for floating flies, and on representing this to Mr. Aldam, he kindly offered to get some made of finer wire. Mr. Bankart and I were at this time in frequent communication, exchanging our views on this and other angling matters. In November, 1878, Mr. Aldam's second batch came, but they all proved untrustworthy for fish over half-a-pound, and as we were unwilling to trespass on his kindness any further, we resolved to do the thing ourselves.

A series of letters followed, and on November 13th, 1878, I said, "Don't write to Hutchinson yet, as I have long been thinking of doing so myself." One reason why I wanted to do it myself was because Mr. Bankart had little or no experience in the requirements of dry-fly fishing, and I wished to get the hooks made suitable for this style, and to attend to all the minutiæ myself. There was also another very cogent reason, which I need not mention here. On December 29th, 1878, I first proposed the alteration of bend (sneck had been thought of) to Limerick, with skewed out points. It was now definitely settled that Hutchinson was to be our maker.

On January 6th, 1879, Mr. Bankart wrote to me, seriously proposing that No. 1 should be the smallest size made "for the smallest duns, iron blue, olives, &c." In the next sentence he offers his suggestions for the "preliminary trial with Hutchinson's"; this is a point of importance, as showing that our choice of a maker was settled even in Mr. Bankart's own mind. It was a long letter, and six pages further on it referred to samples from Kelly and Son. Of these he says, "Quite unexpectedly they have sent me the enclosed patterns of eyed-hooks." The only thing which resulted from this Kelly incident was a long and tedious discussion (started by Mr. Bankart) as to how the eyes were to be placed, whether perpendicular to the plane of the hook or not. These Kelly samples were a mere accident, a private affair of Mr. Bankart's, which really had no influence on the question at issue. Mr. Bankart now attaches considerable importance to it; I attach none. Anyhow, *it is a significant fact that we were not induced to alter the position of the eyes in consequence of Kelly's patterns.*

On Feb. 7th, 1879, I got the first samples from Hutchinson; these were eyed snecks, and I at once gave an order for six gross. These came in March, and Mr. Bankart and I used them on the Usk in April. While there we agreed to have the eyes turned up in future; and the next order I gave was for eight gross of Limericks with skewed out points, and, in spite of Mr. Bankart's prejudice against small hooks, these ranged from 00 upwards. They came in June, 1879, and on July 10th Mr. Bankart wrote and asked for two dozen of each size. In the same letter he speaks of some large hooks he has ordered for loch fishing, which he is expecting in a few days, and here he first proposed the bronze colour, which improvement was most certainly due to him. I once wrote to the Gazette on purpose to say so, as people appeared to be giving me the credit due to another. Nevertheless, I may remark that opinions are divided as to the most suitable colour. Some of the best Hampshire fishermen still insist on having their hooks blue, and on the whole I rather incline to the blue myself, though I use both—it is purely a matter of choice and fancy.

From this point there is little more to be said, as far as our early joint work is concerned. In August, 1879, the eyed-hooks were fairly started by me in Hampshire, and the new patterns answered very well, far better than the old lot of the previous season. From that time to the present the whole of the eyed-hook question has been worked out on dry-fly principles, and all the correspondence I have had with Mr. Bankart is as nothing in comparison with what I have had with others whose constant experience among big trout on chalk streams has been most suggestive and valuable. Many improvements in shape and size have been made during the last three or four years, and I have discussed the details again and again, both verbally and by letter, with Mr. Francis, Major Turle, Mr. Marryat, Mr. Collins (of the Hungerford Club), and many others well known by name and reputation in Hampshire, but there has been little or no help and advice from Mr. Bankart in the later development of the hooks. As for the early history, I proceed now to discuss the account as given by Mr. Bankart on May 31st.

Paragraph 2 I have shown to be incorrect. We were not "looking round for some one to undertake to make them": we had fixed on Messrs. Hutchinson. It was not correct of Mr. Bankart to say, "I first of all," for the whole of this episode took place after Mr. Aldam's hooks were abandoned. Paragraph 2 is, therefore, not only incorrect, but out of place.

With regard to paragraph 3, Mr. Bankart has offered a correction on June 21st, where he credits me with having ordered the *first* lot, as if he still wished it to be understood that this was all I had done, and that the rest had been carried out by himself. Even with the correction, I still maintain that the whole paragraph is put in the most misleading language. For instance, take the sentence, "Eventually I wrote and persuaded them to meet our views." I don't know when Mr. Bankart wrote to Messrs. Hutchinson about our *joint* work, but it was very seldom, and certainly not until they had carried out the first two orders, amounting to fourteen gross. Again, "With whom I had previously dealt in such matters" leaves on the mind of the reader an impression quite at variance with facts.

Paragraph 4. Here, for the first time, I am alluded to as an active agent in the concern. After having set the ship afloat himself, Mr. Bankart allows me the largest share in "subsequent correspondence," as if I had never had any active share in the early transactions. Whereas I maintain that I had long before this done a great deal to advance the cause of the eyed-hooks by my correspondence with "South-West," Major Turle, Mr. Marryat, and others. As I sent a good many of these letters to Mr. Bankart, he could not have been wholly ignorant of what I had done, though it is probable that I have since had correspondence with a dozen or more of whom Mr. Bankart has never heard. As to the bends he mentions, he is again incorrect. We never had any "flat Limericks" from first to last, and I have already shown that I proposed the twisted Limerick before the original snecks were ordered. In Mr. Bankart's correction of June 21st, he again repeats the mistake about the flat Limerick.

With respect to the "considerable perseverance and correspondence" mentioned in paragraph 4, I may remark that one chapter of the history was practically closed with my letter in the *Field* of July 3rd, 1880, when the hooks were first fairly put before the angling public. The account there given is substantially the same as the one now offered by me, and it satisfied Mr. Bankart, for he wrote and told me so, and I have his letter still. From that time to the present Mr. Bankart has certainly been a sleeping partner, and though I fully and readily concede to him his due share in the original joint work, I claim to have done a little more in the early transactions than the account of May 31st gives me credit for. Nevertheless, it is only during the last three or four years that, by dint of "considerable perseverance and correspondence," eyed hooks have been brought to their present perfection, and in this part of the work my coadjutors have been my Hampshire friends, and not Mr. Bankart. We have not only had to refine and elaborate the hooks, but we have had, in some measure, to educate the fly dressers to the proper and neat use of them, and the consequence is, that whereas in 1880 eyed hooks were used by a very limited few, they are now sold by tens of thousands every year, and on some rivers their use is almost universal. One need only read "South-West's" Hampshire notes in the *Field* of June 21st, and "Red Spinner's" article in to-day's issue, to see that chalk stream fishing has been revolutionised since eyed-hooks came into use. "South-West" even went so far as to say, "Having once used them, to go back to ordinary gut hooks would be as bad as having to return to muzzle-loading after breech-loaders." However, in the North of England and in Scotland eyed-hooks are not much used, and I think it must be plain to every impartial person that it is the delicate small sizes used as dry flies that have made the whole system so widely popular. If Mr. Bankart thinks his account of May 31st fairly represents the early history, let me remind him of his own words on Jan. 6th, 1879, "My opinion is that smaller hooks than No. 1 are no use in holding a fish." And then let me refer him to the present ever-increasing number of devotees of dry-fly fishing, and see what they say. Let me ask them where their delicate duns and spinners would have been now if the whole thing had been left in Mr. Bankart's hands at first; if, in fact, I had been the sleeping partner as represented in Mr. Bankart's letter?

For every No. 1 hook used there are a hundred used of Nos. 0 and 00, and there is a smaller size still, known as 000, which, during the last two seasons, has been almost as popular and widely used as any size sold. Anyhow, I had upwards of 40 gross of this one size alone pass through my hands in the first three months of last year, and as for their not holding fish, it is simply absurd. Many and many a two-pounder has met his death on a 000, and I know of one case where a brace weighing upwards of 6lb. succumbed in one day to one of these tiny hooks.

However, enough has been said. It is of no importance whatever who gets the credit of the present eyed-hooks; but, as already stated, besides one's ordinary regard for truth and accuracy, there is a special reason why no erroneous notions about this question should be allowed to stand uncontradicted in the angling press. I hope readers of the Gazette will not mistake me. I don't care a button whether I get my share of credit or not; but anyone who accepts the inaccurate account of May 31st must begin to think that all my scattered writings during the last few years are singularly one-sided, egotistic, and unfair to Mr. Bankart, and this is a stigma I cannot accept in silence, for I maintain that I have been strictly truthful and consistent from beginning to end.

If the Fishing Gazette is to preserve a history of the eyed-hooks—and no paper has shown more interest in their introduction and development—it should, at all events, fairly represent the facts, and not mislead its readers. Such an account I have endeavoured to give, and I really don't see how Mr. Bankart is going to upset it until he repudiates his own letters now in my possession.—I am, &c.,

June 28th. H. S. Hall.

[We must say we quite agree with Mr. Hall as to the desirability of strict accuracy in the question now under discussion. Knowing, as we do, what Mr. Hall has done and written during the last few years, we were not a little surprised at the description given by Mr. Bankart on May 31st, especially as that part which Mr. Hall has now criticised seemed to be a somewhat aimless digression, and hardly relevant to the main purpose of the letter.

We have been specially interested in the eyed-hooks from the very first, and have done all in our power to make them known and popular. We have noted and appreciated Mr. Hall's frequent communications to our columns, and we can assure him that we have no charge of inconsistency to bring against him. Whatever Mr. Bankart's share may have been, we are certain that Mr. Hall's work has been neither light nor unimportant. As he has been in the habit of catering for several of the most celebrated anglers of the day, the trouble and correspondence he has undertaken on behalf of friends alone must at times have been very heavy, to say nothing of the letters from all parts of the kingdom, which are frequently being forwarded to him through the Gazette Office.

[We regret that through pressure on our space the appearance of this letter has been delayed.—Ed.]

## FISHING IN THE BLACK FOREST.

Sir,—Another good trout stream is the "Ens," that runs through Wildbad, Wurttemberg. It is a rapid, rushing stream, and contains fine trout. I did not fish myself in it, but saw others. Permission may be obtained, I believe, from Mr. Klumpp, of Hotel Klumpp, Wildbad, the best hotel in the place. Mr. Klumpp, I am sure, would give any other information on the subject.

The scenery is beautiful, mountain walks abundant, and the fishing really good. I should think that any flies, dressed on hooks No. 9 or 10, would do. Wading is in some places requisite, and a fly rod 10 to 12ft. long will answer admirably. Mr. Klumpp's hotel is very comfortable, and some English anglers are to be met on the Ens.—I am, &c., A Russian Angling Enthusiast.

St. Petersburgh, July 16.

## AN UNFORTUNATE DOSE OF CASTOR OIL.

Sir,—In reply to Major Turle, I should be inclined, were the boots mine, to try the following experiment:—

Fill them with well-dried sawdust or bran, saturate the outside with petroleum, and place them before a fire at a safe distance to prevent burning. The petroleum will dissolve the oil in the pores of the leather, the fire will drive it through, and the sawdust will absorb it; afterwards dress with a waterproofing that can be depended on.

If Major Turle does not know of one, I shall be happy to tell him where it may be obtained.—I am, &c., Bittern.

Cardiff.

## HOW TO KEEP LIVE-BAITS ALIVE.

Sir,—I have a tank for keeping baits in, but, although I give them fresh water often, I am unable to keep them alive more than six or eight hours. Can you kindly explain the reason?—I am, &c., Thos. C. Neath.

Nuneaton, 19th July.

[This question of keeping live-baits is an important one. Mr. W. B. Adlington, of 6, Weymouth-street, Portland-place, exhibited at the Fisheries a very simple invention of his, which he found answered admirably when every other dodge he tried failed. Of course, in hot weather it is almost impossible to save *all* the fish—especially dace, which are a race of wanderers and impatient of confinement. Mr. Adlington will, we are sure, give any particulars we have overlooked; but, as far as we remember, his tank can be constructed in about five minutes by punching two holes 1in. in diameter on the same level about two-thirds up (*i.e.*, one-third from top edge) of a large tin footbath or wooden wash-tub. The water must run in gently, but continuously, and flow out through the holes. The top should be covered. Mr. Adlington has had a bait reservoir of this kind constructed of zinc with double perforated hinged lids.—Ed.]

## FIELD'S AERATING BAIT CAN.

Sir,—In reply to Mr. Bentley's letter in your issue of the 19th July, I hasten to say I make no claim to be the inventor of the principle of the inside perforated can. Its application as an auxiliary bubble distributor in combination with its other uses is, however, new.

I first saw the principle applied to the minnow compartment of a punt well forty years ago. Shortly afterwards I saw it applied to a bait can, a ladies' work basket serving as an inner chamber.

In another instance, the inner chamber was made of net extended on a wire frame—a cheap and useful makeshift which I can recommend to your readers.

I myself made an internal can out of a biscuit tin twenty-eight years ago, and cut my hand badly to wit with the edge while boring the holes.

I have no doubt Mr. Alfred first introduced the idea in the trade, but I should imagine the invention was nearly as old as live-bait fishing itself.—I am, &c.,

Basil Field.

P.S.—I have not yet received either of the Diplomas awarded to me. I do not know whether this is the case with other successful exhibitors. If so, I am sure you will raise your voice in our behalf.

[We cannot get our own Diploma! Only promises that it is "coming"—so is Christmas. The excuse given for this absurd delay is that the affair is simply "too-too," and to hurry it will spoil it.—Ed.]

## HEIGHAM SOUNDS FISHING CASE.

Sir,—We should like to make a few remarks upon the paragraph which appeared in your paper of last week relative to the above case, and to the case itself, so as to inform the public of the exact position of the case, as your paragraph appears to us somewhat misleading.

After Mr. Simms Reeve (who defended Mr. Crowther before the magistrates) applied for a case, we wrote the clerk to the Smallburgh magistrates and asked him to allow us the privilege of drawing our own case, and we also informed him *that no statement of the case would enable us to get a decision on its merits unless a copy of the evidence given at the hearing was appended to the case.* We further offered to furnish him with a copy of our shorthand writer's notes to append to the case, and we may also add that the shorthand writer was employed by us to take down the evidence adduced before the magistrates expressly for that purpose.

Our request to the magistrates' clerk was not acceded to. The magistrates drew their own case.

The case as sent to us by the magistrates was set down for argument in due course, but had unfortunately to be sent back to them for a further statement.

The magistrates upon this added a statement which on technical grounds had the effect of entirely preventing the question of right and the real merits of the case being discussed or decided in the proceedings as they stood in their altered form.

Under these circumstances, the appellant was strongly advised by counsel (who was very emphatic on the point) that the case, if proceeded with, could only end adversely to him; that it would leave the real question in dispute entirely undecided; that while thus really deciding nothing, it would probably prejudice the rights of the public when again asserted before a legal tribunal; and that therefore it would be better not to proceed with it, but to take an early opportunity of again opening the matter, and that in a form in which it would be impossible to evade a decision upon the question of right which the Piscatorial Society and its friends so anxiously desire to vindicate.—We are, &c., Harmer and Ruddock.

Sir,—Having seen your remarks on the question of Heigham Sounds, I thank you for your expression of confidence still in me, as no doubt readers of your Gazette (seeing that Dr. Mitchell, our president and treasurer, had resigned the day after this case was given against us with costs) might have some misgivings as to the prominent part I took, especially with London supporters, as to what has become of their subscriptions, and how it is that the case so suddenly collapsed, more especially when you consider that I received assistance from some who were going to use their money for pleasure but handed it to me on my representations; and it is to the members of the Silver Trout Society and to Prixe's twelve Rodneys, as well as to those of higher grades in society, that I say duty compels me to give some little explanation independent of what other course might be pursued by other members. In the first place, my presence in London was because I had stated (which proved correct) that we could get substantial assistance; but, on our solicitor applying (to one amalgamated society in particular), no encouragement was held out. Therefore, as a last resource, I left business and home to personally ask; and I am confident that neither you, sir, nor any other anglers' friendwho has seen me go from City house to City house, society to society, almost without introduction, can have but one idea, viz., that I did believe I was pleading a good cause, and I believe so still.

Well, I received your money, paid it to our treasurer, and received more than once the vote of thanks from all for so doing. Believing all would end well, I gave promises that all who gave to the fund would have a voice, and even if we gained and had costs, what would be done with the surplus. All recommendations I faithfully laid before this society. Well, the case came on for trial, and I was there, and heard all, with many London subscribers. What was neglected there I am not responsible for. But I do say this: that myself and many others had no idea but that the case could have been won. I send you copy of my report made on 29th April, and I send you copy of minutes granted me at our last meeting from the minute book of the society, and whoever is to blame must plead their own case. Our accounts are now being audited, and when the report is in you will say that those gentlemen forming this society now are not to blame. It may be the judges were wrong, the magistrates wrong. One I know must have been wrong—myself, not to spend time, money, &c., in a more profitable way. I do not even now regret it.

The copy of minutes bearing upon the points at issue I inclose, which you, sir, as a member, are entitled to use at your discretion, and all subscribers are entitled to a copy who doubt any act of mine.

I shall now most patiently wait and see what anyone else has to say before I really conclude for good. I wish those who were so very strong in urging on law cases would be compelled to spend time, money, let alone worry, as I have done; if they were they would not, when a case like this was muddled away, want to start another, but leave it alone. Another secretary can take a lesson if he chooses; if he does not, I fancy subscribers will. I trust I have not trespassed too far on your space; but you pleaded for us, Mr. Marston, at Ashley's Hotel, and I have an Englishman's right to show you and those who followed you that I did not deceive you, if I was deceived—more shame for the deceiver. I never yet have seen the letter you once called attention to in the *Norwich Argus* when I was in London in January, or the end of December. The author of that letter must have known more than I do, or many of my members either; if what has been told me since was really the contents, there must be some meaning in all this. Let those that know explain. I was once insulted for telling the truth in my own dwelling in respect of this case, therefore I am in no mood for trifling with now. As far as in my power I will clear up every point to satisfy my friends, with your sanction.—I am, &c.,

James Lark, Secretary Great Yarmouth Piscatorial Society.

Great Yarmouth.

[It is quite clear to us from the minutes, and from what we have seen of the matter, that Mr. Lark has acted in a perfectly straightforward manner throughout; after employing legal advice it can be no fault of the club or Mr. Lark if the case is lost through some legal quibble or blunder. The solicitors to the club, Messrs. Harmer and Ruddock, appear to cast the blame on the local magistrates, though one would hardly have thought gentlemen in their position would do anything but aid in gettingthe matter definitely settled, for it is still debatable whether the water in question is free or private, tidal or non-tidal. We are glad to see that Mr. Lark is heartily supported by his club, who recognise how hard he has worked for anglers greatly to his own loss in both time and money.—Ed.]

## FISHING AT SCARBOROUGH.

Sir,—I should feel obliged if some of your numerous readers would oblige a brother angler with some information as to the river fishing—coarse fishing for roach and dace—in the neighbourhood of Scarborough, and how and where it is to be obtained, whether by payment or special privilege?—I am, &c.,

Birmingham, July 22. H. Barber.

## FISHING NEAR KINGSBRIDGE, S. DEVON.

SIR,—In answer to Alfred Brewer, if he intends going direct to Kingsbridge from the South Devon line, Foales' coach from the King's Arms, Kingsbridge, meets the train at Kingsbridge-road station, a distance of about nine miles. It will pass through Loddiswell at the foot of the hill about two miles from Kingsbridge, will cross the river Avon, in which there were, 25 years since, plenty of good trout. The river has been preserved ever since. It should contain plenty of good trout now. Tickets can be had at Kingsbridge, or of the keepers on the river.

Salcombe is about five miles from Kingsbridge. Good bass in season about Saltstone Rock, pollock of Tosmynose Point, smelt at the new bridge—all in the estuary. The stream that runs under the new bridge has some good trout above the mills. Good sea-fishing outside Salcombe Bar for bream. Drop anchor in a line with Jones's wall.

There is no difficulty in getting accommodation anywhere in the neighbourhood.

I should like to go with him; then could show him all the corners. Or, half an hour's conversation would explain things much better.—I am, &c.,

W. H. THOMAS.

58, Brunswick-road, West Green-road, Tottenham, July 22.

## LIVERPOOL ANGLERS AND THE FENCE MONTHS.

SIR,—In your last issue I notice a letter signed "Isaak," in which he makes a most unwarranted attack upon the Liverpool Central Angling Association, and accuses them of fishing for small sweepstakes in the close season, which I beg to deny; and he also accuses a member of taking a creel full of "baby" roach in close time, and says that this member is looked upon as a *hero* to this day. I may say that the first time I heard about this was when my attention was called to his letter.

I allow that a few of our members were out several times during close season, myself included, but not for the purpose of taking "baby" roach, but for taking fish and stocking fresh ponds; and on every occasion that I was out I heard of members of the Liverpool Angling Association being out, and their catches consisted chiefly of "baby" roach; and one day, upon coming to the station, I met three anglers—two of them members of the Liverpool Angling Association—and they were cursing their luck in no measured terms that they had not caught more than a dozen "baby" roach, while their companion had some one hundred and fifty, which I understood they bought of him. And he further on calls the Central Angling Association a "pigmy"! Now, I think this too bad, considering that this Association has made more progress than the Liverpool Angling Association ever did in the same time, and we have more good working anglers on our books than they have, so I don't see why he should call us a "pigmy," when compared with his Association; and if his Association was the only one in the city, I would go and do my bit of fishing by myself rather than associate with "Isaak" and the other members who instigated him to write the letter.

Now, away from this sort of talk of "baby" roach, &c., let us see what is the object of "Isaak" in making these charges against the Liverpool Central Angling Association. It is this: In a report of a supper which we had on the opening day of the season, attention was called to the fact that this Association was the only one in Liverpool that observed the close season. It has taken "Isaak" four weeks to reap up all the bad about this Association they could find, and *a precious lot they have found.*

I am heartily glad to see that the members of the Liverpool Angling Association are not content to rest under the stigma cast upon them, and I trust that this correspondence will attain its object—namely, the proper observation of the close season by the other clubs in Liverpool.

Hoping that I have not intruded too much upon your space,—I am, &c.,

QUILL FLOAT.

SIR,—In reply to the letter of "Isaak" in your issue of the 19th inst., I should like to say a few words on the same. He accuses the Liverpool Central Angling Association of fishing for small sweepstakes in close season. The Association has done no such thing, and you, Mr. Editor, or anyone else, are at liberty to examine our books, and will find no record of any such thing; whilst another association in the district fished a match recognised by the club, and that in the only river of any note in the district which is open to fishermen, whilst "Baby Roach" was fishing in waters which do not come under the Act.

Talking of our members going out Sunday after Sunday, I feel sorry to have to mention that members of other associations in the city do likewise, and are not satisfied with angling for "baby" roach, but poach waters which the majority of our members hold season tickets for. "Forty Winks" should not manufacture bullets for another person to fire.—I am, &c.,

PISCATOR.

SIR,—I see in the GAZETTE of the 19th inst. a letter signed "Isaak," which I think is not quite correct.

If members of the Central Angling Association fish in the close time, they do so in private water (which does not come under the Act, and also not with the consent or recognition of the Association), and not in the only decent river in the vicinity—viz., the Verniew, in which a local "giant" Association fished a recognised match in the close time. Why, the very members who supplied "Isaak" with his information trespass on land which is preserved for ticket holders, on purpose to fish for *baby* roach and perch which, nevertheless, they are unable to catch. The member of *our* Association who had the baby roach gave up a good day's sport in private water (on account of the close season) to fish in a place which is notoriously overstocked with *old*, *small*, and degenerate roach, and would be all the better for being thinned out. On the very same day that the small roach were brought away, the member met three other members of another Association (one of whom, in all probability, supplied "Isaak" with his "stones"), who had been out and caught three or four small rudd.—I am, &c.,

BABY ROACH.

## THE PERFORATED HOLDER IN BAIT CAN.

SIR,—Noticing the correspondence in last week's FISHING GAZETTE, it may be interesting to you and your readers to know the first live-bait can made to draw up or out in any form was made twenty-five years ago by the late Mr. F. T. Williams, F.S.T.A.S. It was made to carry on the shoulder. It was purchased of Mr. Williams by the late F. W. Shervill, Esq., of Lincoln's Inn-fields, I believe I have it in my possession at the present time.—I am, &c.,

SELINA WILLIAMS.

10, Great Queen-street, W.C.

[Mr. Alfred, of Moorgate-street, informed us that his late father invented the principle of this bait can; now Mrs. Williams claims it for her late husband. We fear as it is no patent both would experience difficulty in proving their claims, and we advise them not to try, either in a court of law or in a newspaper.—ED.]

## THE RESCUE AT STAINES.

SIR,—No doubt some of your readers will remember a gallant rescue, by Mr. John George Sames, of the Beresford Angling Society, of an angler from drowning on the 19th August last year at Staines, where Mr. Sames was fishing. He had to jump out of his punt and swim half-way across the river to the rescue of the young man who had fallen from the bank into deep water, and sank to the bottom, from which Mr. Sames brought bim by diving for him, and after great difficulty succeeded in getting him ashore. This was the second occasion on which Mr. Sames had been fortunate enough to save the life of a brother angler, and his bravery was recognised by the Royal Humane Society awarding him, after the first occasion, in 1879, their bronze medal, and, after the second occasion, a testimonial on vellum. These awards were publicly presented to Mr. Sames at our club-house, and were duly reported in your columns at the time. After the last rescue a few friends, members of various angling societies, suggested that Mr. Sames deserved some mark of esteem from those who appreciated his gallant conduct, but Mr. Sames was very averse that anything should be done in the matter; but I am happy to say, thanks to the efforts of Mr. James Gafney, late of the Anglers' Pride, but now of the Peckham Brothers, a fund was raised which the committee invested in a handsome gold watch, made by Benson, of Ludgate-hill, and this testimonial was on Monday last presented by our friend, Mr. Beckett, of the Good Intent, to Mr. Sames, at our club-house, in the presence of a company of anglers and friends assembled for the occasion.—I am, &c.,

E. G. ELLIS,

Camberwell Grove. Chairman of the Beresford Angling Society.

[It is not often a testimonial is presented in recognition of a braver act than this.—ED.]

## BARBEL SNATCHING IN THE TRENT.

SIR,—I beg to acknowledge the receipt of your GAZETTE of last week. With reference to "Barbel Snatching at Nottingham," the Conservators are only too well aware of it, and have a case in hand. If only anglers would *first* report to the Board, and *then* to the paper, we could have an inspector on the spot in a few hours.—I am, &c.,

42, Lowndes-street, London, S.W., July 23. ALAN BAGOT, R.S.A.

## JOE HEATH'S WATER AT WRAYSBURY.

SIR,—A Mr. Hawkins used to rent a piece of water close to my station known as "Old Joe Heath's." Mr. Hawkins' time was up in June last, and that fact was known to dozens of people, no doubt.

Some few weeks before the lease was up, someone, so it is stated, put an advertisement in your paper to the effect that the water was to let; the consequence of that was, the water being so well known, many persons bid for, and Mr. Hawkins lost it.

Mr. Hawkins accuses me of having caused this advertisement to appear in your paper, and has told everybody he comes in contact with that such is the case.

Now, Sir, will you kindly insert this in your next issue?

You can vouch for the truth of my statement to Mr. Hawkins that I did not put, cause to be put (or know at the time who did), the advertisement in your paper. I know now who it was. Mr. Hawkins had the misfortune to insult one or two gentlemen, and they did the amiable, while I have received the credit.—I am, &c.,

J. HOOLE.

[We can vouch for the truth of Mr. Hoole's statement.]—ED.

## NECESSITY OF JUDICIOUS GROUND-BAITING.

SIR,—You are quite right about tench taking paste or boiled potatoes (provided they have been fed with them beforehand); but the feeding is the secret! For instance, a few years ago, a friend asked me to fish his trout preserve, where he had scarcely ever before allowed any one to fish. I tried with my spinner, and in two hours had 11 trout, none under 2lb.; but he told me there was one that never would take minnow or worm—he was lying at the back of the premises where the garbage was thrown. I asked the cook what she gave him; she said she often threw him out bread. I cut a piece of bread, and threw it in, and he took it in a minute—near 6lb.

I also know of a case at Newbury, where a splendid trout fed, and no one could entice him to take their bait; but at the last, the cook said that whatever was thrown out—cabbage or potatoes—he took it. My friend took a small potato, boiled, and with a large hook nailed him—11lb.—I am, &c.,

Devizes, July 19. R. HOWSE.

## THERE ARE STILL GOOD FISH IN OPEN WATERS.

SIR,—A friend of mine, Mr. F. Malcom, caught, last Saturday, a roach; it turned the scale of 2lb. when taken, and measured 16½in., or exactly 15in. from eye to fork. —I am, &c.,

J. F. H. BAKER.

Clapham.

## TENCH.

SIR,—There is a pond in this neighbourhood near Erle Stoke Park, where there are an immense lot of tench, beautiful fish, but no scales. Have you ever seen anything of the kind?—I am, &c.,

R. HOWSE.

Devizes, July 22.

[The scales are minute, and the slime, as it were, varnishes them over, as in the scales on the eel.—ED.]

## FAILURE IN FISHING PONDS.

SIR,—R. Howse, Esq., will also find that baiting a pond 24 hours before fishing where there are *bream* is a good plan.

Depend upon it, going down to a pond late one evening and throwing in 800 or 1,000 worms, and then going to fish early next morning is a mistake, and only too often ends in failure. The fish are gorged to repletion. I have often asked anglers how they got on when they have obtained permission to fish in such-and-such a private water, and the answer has been, "Oh! there were plenty of fish, but they would not bite: *they were off the feed.*"

Can you wonder at it?

Many years ago, old Bentley, of Newark, asked me to bait a place in Monspool. I went down with a friend the night before, and we threw in over 1,000 worms, and the result of that baiting was a few small rudd.

Two days after I, myself, had a splendid take of bream out of the same place; and R. Howse, Esq., truly says "the secret of all bottom fishing is to feed the fish, *and then fish with the same bait.*" Sound advice which should not be lost sight of. —I am, &c.,

MARK ANTONY.

**THAMES FISHERY CONVICTIONS.**—George Stapely, of Isleworth, was brought before the Brentford Bench on Saturday last, on the charge of laying a fixed line in the River Thames at Isleworth. The case was proved by head river-keeper Alfred Thompson. Mr. W. H. Brougham prosecuted on behalf of the Thames Angling Preservation Society, and asked the magistrates to impose only a nominal fine as an example. Fined 5s., including costs.—Richard Lee was convicted by the Richmond Bench on Wednesday last for laying a fixed line containing a number of baited hooks in the river near to Richmond Bridge, upon the evidence of head river-keeper Alfred Thompson. Mr. W. H. Brougham prosecuted on behalf of the Thames Angling Preservation Society, and the defendant was fined the sum of £1, including costs.

**ANOTHER COMMITTAL FOR FISH POISONING IN WARWICKSHIRE.**—At the last Petty Sessions, at Coleshill, near Birmingham, before R. E. J. Croxall, Esq. (Chairman) and a full bench of county magistrates, William Wilson, of Stockinford, was brought up on a warrant, charged by Mr. E. H. Rawlings, of Hockly Hill, Birmingham, jeweller, with putting a certain noxious thing into Arley Brook with intent to kill and destroy the fish therein. Prisoner, who had absconded, was in company with another man named Timms, who was sentenced last Quarter Sessions, at Warwick, to eight months' hard labour for the offence. Evidence was given of the prisoner being in possession of the fish, and of the quantity of fish found dead and poisoned. Prisoner admitted to the sergeant of police that he met Timms and Hall, and went with them to the brook, but with no intention of poisoning the fish; he got into the water with Timms. Several times during the hearing he was about to make statements, but was cautioned by the bench against criminating himself by so doing. On his own confession he was committed for trial at the next Quarter Sessions for the County of Warwick.

## ON THE DESCRIPTION OF SALMON FLIES.

BY MR. GEO. M. KELSON.

MAJOR TRAHERNE'S PATTERNS *(Continued)*.

### No. 7.—THE "NEPENTHIAN."

"FOR if it wobbles the least atom there will be no recognition." These words have reminded me of a promise (Feb. 2nd), and I now propose to deal with that subject as we advance. I hope I have already said all that is necessary for the student to be able to make a good selection of hackles, and I suppose he is sufficiently skilful to be able to double them. He should endeavour to arrange his work for the tinsel to guard the feather ; so the former should be fixed first, and the latter follow alongside it on the head end of the hook. Unless the hackle is tightly wound, it will cause the fly to wriggle; and if very loose, not only will it wobble, but skirt the water.

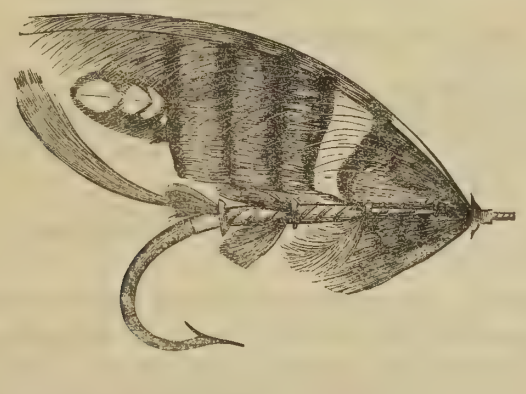
Again, if the shaft of the feather—the elastic part which contains a whitish, dry pith—is very stout, the last turn at the throat will create a shoulder, and this must be cured by forming a taper from it with the tying silk.

It is a common error to reverse the fibres ; not that it signifies much; but they soften and blend with the silk or seal's fur, and play better when pointed to the barb.

I need scarcely say that all the downy, flocculent strands should be stripped from the quill end, otherwise they would cling to, torment, and "purse up" the good ones.

With an exhibition specimen, the hackles and body may be protected during the afterwork by a length of swan's quill used as a tube, which can easily be displaced by cutting a slit lengthways with a sharp penknife down the *opposite* side of the body to that intended to be shown, because if a single point be cut off the hackle, it could be detected at once under the magnifying glass. Let the hackle be fastened at the head *under* the hook, then it will not interfere with the "set" of the wings ; and after two turns of the tying silk, taper the rest of it with the knife.

Neither should treble gut be used on hooks three-quarters of an inch long and under. With it, especially if the angler loops his fly to the single gut cast, the most careful manipulation is required in mounting to secure regularity and balance in the water. In preparing the single gut for this purpose, choose the very best and roundest strands, cut off the length required, and keep it in your mouth to get it thoroughly soaked, as hot water injures it. It should be tied perfectly straight under the hook, with one of its ends a trifle in advance, both having already been pared to a fine point, and *not* applied to a candle to make an excrescence or protrusion.



When the gut is thus made soft, the silk, in addition to the following safeguard, will furrow its way.

Use gossamer silk double (I find claret-coloured the best), and wind it as closely, evenly, and tightly as possible ; do not allow the silk to twist, for every ridge, however diminutive, is an obstruction. Begin with four or five turns of it spirally along the bare hook, the gut having been dented with the teeth, say every one-sixteenth. Leave the hook bare at present for the wings and head, and also about as much exposed space on the body side of the butt ; a touch of shellac varnish over one half hitch will be all that is required.

Gossamer silk, as I have said before, is superior to any other for fly-dressers. There is a proper hook attached at will to the cabinet, which will be described in a future issue ; saddle the silk twice over it, hold the four pieces at the end to prevent them untwisting, and the process of waxing will be an easy one. Use cobblers' wax, which should be fresh. While the gut is still soft, shape the projecting loop by pushing a stiletto, sold by Wilcox and Gibbs, through it from the under side, pinching the gut with the nails of the thumb and forefinger of the left-hand at the extremity of the iron. As well as for other obvious reasons, this will bring the gut close and straight at that end of the hook under the wing, where each piece would struggle to get when in use to the detriment of the upper work if neglected now. Salmon fishermen will find this particular probe very serviceable not only for this, but for other requisites, and particularly useful while fishing.

Turning to this week's illustration, we have another gorgeous and magnificent pattern from our accomplished autocrat, and one well worthy of its scientific denomination.

Nepenthe, from the Greek νη, not, and πενθος, pain, is, I believe, used as a figurative and poetical expression for something that affords consolation to the mind ; so I take it a Nepenthian is not only to neutralise the sting of daily disappointments to which all salmon anglers are exposed, but to compensate them, as well as to soothe their misfortunes.

Happily they are not born without feelings, and, with due respect to the honoured opinion of Wellington—an opinion which might touch into sympathy even the coldest nature—to them victory is *not* the saddest of all things after defeat. Who was it that wrote, "A victory is doubled if the achiever brings home full numbers"? Surely it is a triumph for a gentleman to set out late one afternoon, and catch in well-thrashed pools more salmon than one man could carry home. This fortune, followed by the misfortune of losing the fly in the fifth fish, was an adventure last week of Col. Richardson's on the Tweed, and one, with his permission, well worth recording. "I shall never forget the famous Nepenthian," he writes : "Do please make me another, &c."

These two pools had been worked by well-known anglers ; but in the whirligig of Time, is it not curious how the see-saw of Fashion is strikingly illustrated—coaxed into swing by the winning, wheedling ways of one or another of our tiptop and meritorious members to picture the beauty and the outcome of experience ?

The Colonel's memory of the Nepenthian now is uncommonly like moonlight,—only reflected rays from a light no longer seen ; however, it is pleasant sometimes to rake up the past, and carry one's thoughts back ; for remembrance, unlike expectation so often defeated, is the only Paradise out of which we cannot be driven away.

As we have the illustration I can describe the fly.

Tag : Gold twist and gold silk (same shade as toppings).

Tail : Topping and two red crows, as placed.

Butt : White ostrich herl, dyed the same colour as dark blue chatterer.

Body : In three equal sections. The first light blue silk, same shade as light blue chatterer, with four dark chatterer feathers, as illustrated, back to back, and butted with the same coloured herl as before. The middle division, light orange silk, the same shade as the toucan above and below, and butted similarly. The rest, red orange silk, resembling in tint of the three red crow's feathers situated on either side as engraved, from under the throat.

Throat : Red macaw.

Ribbed : Oval gold tinsel.

Wings : Six tippets, back to back, with two jungle projecting.

Cheeks : Summer duck extended, and blue chatterer, two strips golden pheasant tail above, with topping over.

Horns : Red macaw.

Head : Blue herl, as above mentioned.

## THE PISCATORIAL SOCIETY'S SUMMER DINNER.

THIS annual event took place, as previously announced, at the Ray Mead Hotel, Maidenhead, on Wednesday last. Several of the members and their friends arrived at Maidenhead early in the day, and enjoyed themselves either in boating, fishing, or attending a regatta which was taking place there on that day. The sound of the dinner bell about six o'clock gave general satisfaction, and the company took their places at the tables. The chair was occupied by Mr. T. R. Sachs, and the vice-chair by Mr. H. B. Brown. The dinner was served up in most excellent style by Host Deacon, and ample justice done to it by those present. The Chairman, having filled his glass from a magnum of Boll's extra "sec," challenged the company to take wine with him, which was accordingly done. The Chairman proposed the first toast, "The Queen, Prince and Princess of Wales, and rest of the Royal Family," which was right royally responded to. He next gave the toast of the evening, "The Piscatorial Society." In the course of an amusing speech he said that as a society we were all thoroughly sociable, and we increase and multiply. (Cheers and laughter.) He would not say more, as they knew all about it. (Loud laughter). Mr. Huggett proposed "The Thames Angling Preservation Society," and said that no society could be more interested than our own in the really good work done by the T.A.P.S., that had, no doubt, in a quiet and unobtrusive manner done great work in keeping up the stock of fish, and at last had succeeded in that portion of the river under their charge. Brougham's babies used to be laughed at ; but they were no longer babies—they were splendid trout, many of which had been captured this season. It was to be hoped the re-stocking process might still continue. The name of Mr. Brougham was coupled with this toast. Mr. Brougham replied, and said they not only stocked the Thames, they prosecuted successfully all unfair anglers or poachers. He had been connected with that and the Piscatorial Society for 25 years, and hoped so to continue for many years to come. Dr. Coates, M.D., gave "The Press," and pointed out what an important position it had taken throughout the world. He coupled the toast with the name of Mr. Wheeldon. Mr. Wheeldon, in reply, said he was proud to have his name coupled with the toast of the press. He had reported a good deal for the angling press, and hoped to do so in the future. The Chairman next proposed "The Kindred Preservation Societies," and called upon Mr. Lemann to reply. Mr. Lemann, in his usual kindly manner, replied, and thought all those who fished the Thames, no matter in what position of life, should each subscribe at least 5s. per annum, and there would be a large and sufficient fund for all purposes. The Vice-Chairman proposed "The Health of the Chairman," Mr. Sachs, who briefly replied with his best thanks. Mr. Andrew proposed "The Vice-Chairman," and Mr. H. B. Brown duly replied. "The Visitors" were proposed by Mr. Foreman, who said that enjoyable as those meetings always were, they were rendered more so by the presence of one's personal friends, and thanked those gentlemen for attending. Mr. Kent, on behalf of the visitors, gracefully replied. "The Host' was proposed, and Mr. Deacon returned thanks. The utmost cordiality and good will prevailed, and after dinner the gentlemen adjourned to the large tent to enjoy the fragrant weed and some harmony.

## AUGUST BANK HOLIDAY ARRANGEMENTS, 1884.

THE Great Eastern Railway Company announce Cheap Excursions for three or six days on Saturday, 2nd August, from London (Liverpool-street) by their new line, *viâ* the cathedral cities of Ely and Lincoln, to Sheffield, Huddersfield, Oldham, Ashton, Manchester, Warrington, Liverpool, &c. A special booking office will be opened at the Liverpool-street Station from the 28th July to 2nd August for the issue of ordinary tickets, and of Tourist, Fortnightly, and Friday to Tuesday tickets to the Seaside for use on forward dates. Tickets may also be obtained at the Company's West End booking office, 44, Regent-street, and at the City booking offices, as under :—Blossoms-inn, Lawrence-lane, Cheapside ; 48, Lime-street, City ; Spread Eagle, 3, Whittington-avenue, Leadenhall-market ; Swan with Two Necks, Gresham-street ; Messrs. Cook and Son, Ludgate-circus, Fleet-street ; Messrs. Cook and Son, First Avenue Hotel ; Messrs. Gaze and Sons, 142, Strand ; 16, Holborn ; Golden Cross, Charing-cross ; 70, St. Martin's-lane ; 28, Regent-circus, Piccadilly ; Spread Eagle, Piccadilly-circus ; 34, Albert-gate, Knightsbridge ; 33, High-street, Kensington ; Mr. Whiteley, Westbourne-grove ; 241, Oxford-street. Additional trains will be run on Friday and Saturday to Colchester, Ipswich, Norwich, Clacton, Walton-on-the-Naze, Yarmouth, Lowestoft, Cambridge, Lynn, and other principal towns on the Great Eastern district ; and on Bank Holiday a Special Excursion will leave Liverpool-street for Clacton, Walton, and Harwich. Excursion tickets will also be issued by all trains to Epping Forest, Broxbourne, and Rye House. A special service of trains will run from Liverpool-street every ten minutes to Chingford, every half-hour to Loughton and to Woolwich, and at frequent intervals to Broxbourne and Rye House. There will also be a special half-hourly service of trains from Fenchurch-street to Chingford and Loughton.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices : Point Flies, 2s. 6d. per Dozen ; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(ADVT.)

SALMON & TROUT-FISHING.

**CHAS. FARLOW & Co.,**
**191, STRAND, London, W.C.,**
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE, SALMON AND TROUT FLIES, SUITABLE FOR ALL PARTS OF THE WORLD.
**Mahseer Tackle in Great Variety.**
**Makers of Split Cane Rods.**
**Improved Folding Trout Landing Nets**
(Very Light).
**New Patent Lever Salmon Winch**
(Can be regulated to any stiffness at will).
**Brown's Phantom Minnows.**

CATALOGUES GRATIS. PRIZE MEDALS. IMPORTERS OF SILKWORM GUT.

JAMES OGDEN,
28, WINCHCOMB STREET, CHELTENHAM,
PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE.
James Ogden's Newly-Invented Premier Spinner,
Regd. Nov. 13th, 1883. This Bait is constructed upon an entirely new and improved principle. Salmon, 6s. 6d. ; Trout, 5s. ; smaller do., 3s. 6d.
SILVER OR GILT.
Also coloured, similar to the Devon Baits, &c.
JAMES OGDEN'S
**MULTUM IN PARVO FLY RODS,**
PRICE 21s.,

The enormous and increasing demand for which is a sufficient guarantee for the high estimation in which they are held by the leading anglers of the day.

All Standard Flies ordered, or dressed correct to pattern, will be despatched by return of post.

N.B.—NO CONNECTION WITH ANY OTHER PERSONS ASSUMING THE SAME NAME.

**A NEW PERFECT FLY AND SPINNING LINE.**

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES ; FREEDOM FROM IRRITATING ENTANGLEMENTS ; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by ? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says :—"I find the Acme more valuable than all others."

Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction, will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. Samples, Post Free, 2 Stamps.

**D. and W. A. FOSTER,**
SOLE MANUFACTURERS AND INVENTORS,
**ASHBOURNE.**
None are genuine without the word PATENT affixed to label.

SPIERS AND POND'S
**GAIETY RESTAURANT,**
**STRAND.**

THE HOME DINNER DAILY at 5.30 till 8 p.m.
Consisting of Soup, Fish, Joint, Vegetables, Bread and Cheese, *ad. lib.*
**2s. 6d.**
GRILL ROOM for Suppers open till Midnight.
SPIERS and POND, Limited.

PAINTINGS OF FISH,

By T. G. TARGETT, Wilton-road, Salisbury, now hanging in the Aquarium at the Health Exhibition, are offered to any members of the various Angling Societies at 25 per cent. off the undermentioned marked prices :—Specimen Trout, 7gs. ; ditto Pike, 7gs. ; ditto Grayling, 7gs. ; Group of Devon Trout, 10gs. ; a Fine Group of Trout, 12gs. ; a Brace of Trout, 12gs. ; a Brace of Grayling, 12gs. ; a Group of Perch, 15gs. ; Salmon Trout, 15gs. ; Putting on the Brake, 10gs.

Schweppe's
These Waters are supplied
To the Queen.
Table Waters

"Art, empire, earth itself, *to change* are doomed."—The Hermit.

# EXCHANGE.

## Things Wanted—to BUY, to SELL, or to EXCHANGE.

:o:

N.B.—We take no responsibility whatever in connection with advertisements inserted in this or other parts of this paper ; but beg our readers to expose any case of imposition. The prices for inserting advertisements in this "EXCHANGE" Column are 6d. per line for one, or 4d. per line for more than one insertion.—Address, Manager, Fishing Gazette, 12 and 13, Fetter Lane, London, and send stamps with the order, or the advertisement cannot be inserted.

WANTED.—Particulars and Prices of Second-hand Books on Angling and Fish Culture. Must be in good condition.—Address Editor, Fishing Gazette, 12 and 13, Fetter-lane, London, E.C.

A Walnut Oblong Centre TABLE, 60 by 40 inches, with moulded shaped edge, supported on the tails of four beautifully carved dolphins ; wanting room will take 6 guineas ; worth double.—T. G. Targett, Piscatorial Artist, Wilton-road, Salisbury.

For Sale.—18ft. BAMBOO LEE ROD, with winch fittings, only used once ; cost at Civil Service Stores, £1 2s. 6d. ; price 15s. Also Landing Net and Handle, 2s. 6d. Will be sent to any address on receipt of P.O.—Apply, F. R. Ohlson, 44, Westminster-bridge-road, London, S.E.

For Sale.—Some young BLUE COCKS, different colours, price 5s. each.—J. Rowy, Barnstaple.

## ADDITIONAL PRIZES FOR THE TOURNAMENT.

Several additional prizes have been promised. They will be duly acknowledged and noticed. In the mean time we beg to ask all those who have sent or promised prizes, but who have not indicated their value, to kindly do so at once. All prizes not yet sent in should be sent at once to the Editor of the Fishing Gazette, 12, Fetter-lane.

## THE INDEX FOR VOL. VIII. OF "FISHING GAZETTE," JANUARY 1 TO JUNE 30, 1884.

With each copy of last week's Fishing Gazette was given a four-page index to the above volume. Covers for binding can be had of the Publisher, 12, Fetter-lane ; price, 2s. 6d. This volume contains Mr. Kelson's illustrated articles on the various salmon casts, &c. Only a few copies remain on hand, price 6s. 6d., bound in handsome cover.

# RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | | |
|---|---|---|---|
| Add | 30 | minutes for | Chelsea. |
| | 40 | „ | Putney. |
| | 45 | „ | Hammersmith. |
| | 50 | „ | Barnes. |
| | 55 | „ | Kew. |
| | 75 | „ | Richmond. |
| | 80 | „ | Twickenham. |
| | 85 | „ | Teddington. |

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | Morning. | Afternoon. |
|---|---|---|---|
| Saturday, | July 26 | 4.20 | 4.40 |
| Sunday, | „ 27 | 5.1 | 5.19 |
| Monday, | „ 28 | 5.39 | 5.38 |
| Tuesday, | „ 29 | 6.19 | 6.40 |
| Wednesday, | „ 30 | 7.3 | 7.25 |
| Thursday, | „ 31 | 7.51 | 8.18 |
| Friday, | August 1 | 8.51 | 9.29 |

Note.—August 4, Bank Holiday.

### THE LOWER THAMES.

General Remarks.

The river does not appear to derive any strength from the occasional storms, but the angling in the tidal waters is considerably on the improvement, and the anglers are getting some of the old-fashioned takes of twenty dozen of fish in the day. One of the fishermen, remarking on the quantity of fish in the river, said "It was just like an aquarium." As the angling has become improved for the punt anglers, it has somewhat degenerated amongst those who fish from the banks. The enormous stock of fish in the Thames has tempted some of the bank anglers to violate the by-laws against the use of fixed lines, but it is hoped the examples that have been made will prevent any further attempts at such unsportsmanlike and illegal practices.

### Angling Results.

**Richmond.**—Christopher Brown, in six days, fourteen barbel and forty-two dozen of dace; F. Brown, in two days, fourteen dozen of dace; Henry Wheeler, in three days, 50lb. of dace; Menry Mansell, in one day, with Mr. T. H. Boulton, of Turnham-green, twenty-four dozen of good roach, and a few dace—another day, with Mr. Mahern, of Twickenham, twenty dozen of roach and dace, two barbel, and one carp; in three other days, seventy-two dozen of roach and dace, and in half a day, with Mr. Fleming, six dozen of roach and dace, and one barbel; Henry Howard, in one day, with Mr. Liffen, sixteen dozen of roach and dace; and another day, with Mr. Liffen, a similar quantity; and in five other days, fifty-two dozen of roach and dace, and six barbel; Job Brain, in six days, 128lb. of good roach and dace, and thirteen barbel; and in one other day, with Mr. John Wotton, eleven dozen of good dace, and three barbel.

**Twickenham.**—Henry Spiers, in four half-days, eighteen dozen of dace, and one barbel; Charles Miles, in a day and a half, nine dozen of dace; Pert Hammerton, in one day, with Messrs Walker and Johnson, seven dozen of roach and dace, and a bream of 4½lb., and another day 14lb. of dace and one barbel; Joe Debbin, in two aad a half days, twenty-eight dozen of dace, and one barbel; George Coxen, in three days, twenty-two dozen of dace and roach, and one perch; R. Coxen, in one day, six dozen of roach and dace; John Coxen, jun., five dozen; John Coxen, in three days, twenty-three dozen of roach and dace; another day with Mr. Steinhart and lady, 24lb. of dace; and another day with Mr. Harwood, seven dozen of dace; Samuel Cole, in two days, with Mr. Francis, fifteen dozen of dace and seven barbel, and the remainder of the week, thirty dozen of roach and dace, and six barbel; Edward Finch, during the week, twenty dozen of dace and one barbel. The anglers in the Deep one day got a jack of 4lb., and another of 3½lb., and a chub of 2lb. 7oz.

**Teddington.**—Joseph Baldwin, in four days, twenty dozen of roach and dace, one bream and seven barbel; Charles Baldwin, in the same time, sixteen dozen of roach and dace, and three barbel; John Stevens, in addition to some good takes of roach during the week, has taken five chub.

**Kingston.**—John Johnson, sen., writes, "I have been getting some nice quantities of roach up to 1lb. each, and some good dace, one of the latter 10in. in length, and a few nice bream up to 4½lb. My best day was ten dozen and four fine bream. John Johnson, jun., has got nineteen barbel in one day, a brace of perch, and a dace over 11in. There has been a great quantity of fish taken at the Sewers, some fine roach. A fair lot of eels have been taken from the bank up to 1½lb. each. I saw two good chub taken at the Bridge by a private boat. A few barbel have been taken here and there on the bank, and a few good perch trailing by private boats. Mr. Bond, of the Sun Hotel, in one day, got seventeen barbel; Mr. H. Dickinson, in one day, 20lb. of roach and dace.

**Hampton Court.**—Charles Stone, in one day, three and a half dozen of roach and dace; John Smith, in four days, twelve barbel, one dozen of chub, six perch, and three dozen of dace; Thomas Davis, in the same time, eleven barbel and twenty-three dozen of roach and dace; Charles Davis, in two days, sixteen dozen of roach and dace, and three chub; W. Milbourne, in three days, fifteen dozen of roach and dace, and five barbel; Thomas Milbourne, in the same time, fifteen dozen of roach and dace, and six barbel, the largest 6lb.; Thomas Wheeler, eighteen dozen of roach and dace, and two barbel. The anglers on "Tagg's Island Fishery" have taken during the week twelve dozen of roach and dace, in addition to some good bream, roach, and chub.

**Sunbury.**—Messrs. Edward Clark and Son, during a period of six days, have caught twenty-four dozen of gudgeon, seven barbel, the largest 5lb., sixty dozen of roach and dace. and three chub. The bank anglers have done good business amongst the roach, dace, gudgeon, barbel, bream, perch, and chub.

**Walton.**—George Hone, one day, with Mr. Cababe, six dozen of roach—another day, a similar quantity and three bream—another day, ten dozen and one bream, and another day, with Mr. Mackrill, eight dozen of roach, one barbel, and one bream. D. Watford and George Hone, jun., have had similar takes.

**Halliford.**—E. D. Rosewell, in one day, five dozen of roach and dace, and one brace of jack, and another day, four dozen and three jack.

**Weybridge.**—Herbert Curr, one day with Mr. Boyton, nine dozen of good roach, and dace—another day with Mr. Christian, in three hours, two dozen of roach and dace—another day with Mr. Barrow, in two hours, three dozen; and in two other days with Mr. Spalding and Brother, twenty-eight dozen of roach and dace, two bream, and one barbel.

**Shepperton.**—David Hackett, in four hours, five dozen of gudgeon and three perch. F. Pandue, in one day, ten dozen of gudgeon, two dozen of roach and dace, and four perch; and another day, twelve dozen of gudgeon and five perch. W. Rogerson, in four hours, six dozen of gudgeon and five dozen of roach and dace; and another day, five barbel, a brace of tench weighing 4½lb., seven eels, and three dozen of roach. James Haslett, in two days, five barbel, one bream, and three perch. James Hastlett, jun., one barbel, two perch, and four dozen of gudgeons.

**Chertsey.**—J. Poulter, one day, with Mr. L. Buckland and Mr. R. G. Thurston, staying at the Woburn Park Hotel, four bream, four chub, two barbel, two brace of perch, and some dace; another day with Mr. L. Buckland and Mr. C. O. Thurston, 50lb. of bream and one chub; and another day with Mr. S. H. Thurston and his brother, eight bream, one brace of perch; the largest bream 4¾lb.

**Staines.**—E. Keene, in one day, five dozen of roach and dace. John Keene, one day, 24lb. of barbel; another day, 18lb., the largest 5lb.; another day, 14lb. of roach and dace, and two barbel! and another day, four dozen of roach and dace, and three chub. John Keene, Jun, in one day, with Mr. Bartlett and Mr. W. Jones, 42lb. weight of barbel, chub, and roach. G. Osman, one day, three dozen of roach and dace, one barbel, one perch, and one eel; and another day, six barbel and one chub. Charles Hone, in one day, seven dozen of roach and dace; and another day with Mr. Pugh and Mr. Mason, nine barbel, six bream and twelve chub, weighing altogether 45lb., the largest bream 5lb.

## UPPER THAMES.

The river is now in first-class summer trim, although perhaps a little too bright for roach and chub. I have had some four days' hard work on the river this week with various friends, and have found my old method the best one—viz., sticking to one swim, even for the whole day. This remark, of course, more particularly applies to roach. At Sonning and Henley some excellent takes of chub and perch have been had, the best bag being had by Mr. Foster, a bank angler, 10½lb., consisting chiefly of roach and perch, all being had from one eddy with tail of lob. At Hurley, Messrs. Parry, Sheffield, and White, fishing from the East Arms (which, by the way, is an excellent swim) on Friday and Saturday last in a bright water, caught some three dozen roach, two dozen perch, a chub or so, and a pope thrown in to make up a respectable basket. Mr. Detmar, at Hurley, has had some three dozen roach and perch in one day's doing, and another angler belonging to a house boat has been training the chub to feed. At. Marlow, Mr. Huish has had a trout of exactly 6lb., and Mr. C. Angler (happy name) tells me that in the Marlow waters J. Rockell has had some good trout, "and that all-round fishing is excellent, chub, jack, and perch being taken freely." Thursday evening: river in fair order for good all-round work.—Marlow Buzz.

### Dockett Point.

Two days' fishing, five barbel, two bream, three chub, three perch, roach and dace, ledgering—two chub and perch back. Wednesday, with Mr. P. Geen, nice lot of fish, all put back but one barbel about 6lb.; J. Haslett, jun., one barbel, roach, and dace, ledgering, four dozen of gudgeon, two perch.—James Haslett.

Thursday. The water is very low. We have had some heavy thunderstorms to-day; very little doing. J. Hoare has been among the barbel, but am not able to learn the exact amount of his catches. My best day this week has been with the dace, 14 dozen and three chub, 2lb. each. G. Keene, one, jack and two more runs. By the way, this is the first time this season anyone jack fishing has come to my notice. With respect to the barbel, we live in hopes.—G. Lumsden.

### Thames (Goring).

Water in good order for all-round fishing, perch and jack coming on better. Two best days, five jack and four dozen of perch, and a good lot of gudgeons. Prospects good for the next few days.—J. Rush.

### Thames (Oxford).

Throughout the week there has been an uninterrupted run of good sport. Sufficient rain has fallen, varied to-night by a heavy thunderstorm, to keep the water in good order and the fish well on the feed. In the affluents the takes have been equally good, and for a summer's season even the most cavilling disciple of "old pater Izaak" could not find cause to complain. Several very large bags of chub have been made about Oxford since Saturday, notably one of 50lb., which was taken by Mr. Payne in two days at Radcot Bridge. On Monday a gentleman with the fly landed 28lb. above Medley Lock. My informant says the work of unhooking the fish at length became so monotonous that he was compelled to desist from sheer weariness. The best fish weighed nearly 5lb. The preceding day also showed good results. Mr. Osmond, by Black Jack's, brought to land about 15lb.; and yesterday (Wednesday) Mr. Brightlock grassed another 26lb. of chub and perch. On Thursday the Oxford Angling Society held their first competion of this season at Eynsham. Several prizes were offered by the Society for jack, roach, perch, and chub. For the jack Mr. Munday, jun., showed four fish, which came in top-weight. The roach competition was won by Mr. Quarterman with 17¾lb., Messrs. English and Vincent following closely with 13¼lb. and 12½lb. respectively. The largest fish weighed 1lb. 2oz., and several went from ½ and ¾ to 1lb. In the Cherwell, at Tackley, Mr. Turner, of Tart-street, captured a brace of jack, going 7½lb. and 4½lb. Mr. Barney, in the vicinity of Gibraltar (not that shop in the Mediterranean) had 11lb. of roach on Monday week. On Tuesday Mr. Fell, who refused to tell me the locality, showed me a fine barbel, a trifle over 4lb. I must certainly say I have seldom seen one with finer points, either for shape, size, or colour; its contour in every respect was perfect. On Wednesday, Mr. Knowles, fishing for perch in the Evenlode, landed two beauties, of 1¼lb. and 1½lb. During the last week Mr. Kelson, at Lechlade in Gloucestershire, caught 50lb. of roach, and in the month his average takes have been from 12lb. to 15lb. per diem, the best fish amongst the lot being two trout, 2½lb. and 1½lb., and a perch of 2¾lb. The police have effected a grand coup; by their own unaided efforts, they made a seizure of some crayfish nets.—Chirwell Otter.

### Walton-on-Thames.

Fishing this week not equal to last week, although a fair quantity of fish have been taken and a few large barbels. Bream have been quiet, but roach very plentiful. D. Watford, one day, 15lb. roach, 8 bream, 1 barbel 3lb.; D. Watford, four other days, average 6 dozen roach, few bream; J. Hone, in three days, 16 dozen roach and 12 bream; G. Hone, jun., one day, 6 dozen roach and some very fine dace; G. Hone, sen., in 3 days, 30 dozen roach. There appears to have been some disappointment here about the fishermen engaging themselves to two persons on the same day; but from enquiry on the spot, I find that it was a misunderstanding, and the fishermen not altogether to blame. The proprietor of the Swan Hotel, Walton, has kindly undertaken to see that the wishes of gentlemen coming to Walton are properly carried out, if they write to him naming the man they want and what they wish done; this will save any misunderstanding in future, as the proprietor is always on the spot, and he is an expert angler and takes much interest in the sport.—Goldfinch.

### Thames (Wraysbury, Bucks.).

Water too low and bright for fishing. Nothing doing that I can ascertain. The Old Fleet is, apparently, as full of barbel as ever. Talking of barbel, here's a chance for Ye Clever Piscatorial. The Waste Gate Hole of the Mill, just outside this station, contains no end of big barbel. I guess I know how to fish a little, but I cannot entice these fellows to bite steel. I have tried almost every bait I know, and have failed to capture one, although I can see the bait is close to their noses. I know you have a few clever piscators amongst your readers; let them give this hole a good ground-baiting and try it. I will bet, if they can only get them to feed, they will bag a fine lot, and few under 4lb. If there is any doubt as to these fish being there, ask the man in charge of the mill, his boys, or the station-master.—Roach.

---

### Ballynahinch.

Since last report weather has improved greatly for fishing, as will be seen by the following takes:—Colonel Biden, in six days, five salmon, 33lb., and 35 sea trout; Messrs. Eades and Houlgrave, in five days, 57 trout; Mr. Dudgeon, in three days, 18 trout; Mr. Wardle, in five days, three salmon, 25lb., and 15 trout; Mr. Shaw, in four days, 31 trout; Mr. Bailward, in two days, nine trout; Mr. J. C. Mecreedy, one salmon, 8lb.; Mr. McNeil, in four days, 65 trout; Mr. Morris, in four days, 32 trout; Mr. Chapman, in three days, 20 trout; Mr. G. Sutherland, in three days, one salmon, 13lb., and five trout; Mr. Nevill, in two days, nine trout. Total for the week, five salmon, 71lb., and 296 sea trout. Every prospect of trout fishing improving.—Walter Blackadder.

### The Bure (Norwich).

I have not heard anything extraordinary from any of the stations on this river, but from what I can gather from independent sources, sport has been fairly good all down from Cottishall to Acle. Some who have visited Wroxham, and also Horning Ferry, describe the outing as being everything an angler could desire, bites plentiful, fish (mostly middle size and small), occasionally good size, but the scenery is worth a visit from the most distant parts of the kingdom. I should still urge any anglers who are visiting our watering places, to visit our famous rivers and try their luck (if they want any particular information with regard to any favoured spot, write to R. Moll, Norwich), as I am sure the sport will repay their trouble and enhance the fame of Norfolk rivers. Prospects are excellent on this river, as the storm waters do little to disturb this stream. I fully expect to hear of heavy catches of bream, &c., during the ensuing week.—Robert Moll.

### Chichester.

During the past week some fair takes of fish have been recorded. A London angler, fishing with Mr. S. Young, on the 20th, landed a handsome tench of 2¼lb. between Hunston and Dorrington. Messrs. Cardy and Son had good sport among the bream, landing 60 fish, Mr. Cardy, sen., taking the majority. Mr. Spink, of Brighton, also had good sport. For the numerous visitors to the Canal during the Goodwood week, I may remark that between Hunston and Donnington will be found the most remunerative fishing, and gentles the best bait.—George F. Salter.

### Dee (Aberdeenshire).

Last week few fish, especially grilse, sought up the river, and few fell to the angler's rod. The blue charm and silver doctor secured most. George Branner had a grilse 3½lb. and a sea trout 4½lb. on Kineskie; D. Rae, a salmon 10lb. and a grilse 5½lb. on Cairnton; Mr. Dawson, of Minonie, had a grilse on Tuesday at Bridge of Feugh, and a grilse of 2lb. was got up the stream; A. Muirhead Aitken, Esq., has been having good takes on the Don at Parkhill, getting baskets of trout, 20 or thereby a day, averaging a pound in weight. On the waters attached to the hotels at Alford the sport is continuing.—W. M.

### Dove.

We have had a favourable fishing week as regards the weather, but we should have been better suited if there had been a deeper shade of colour in the water. Sunshine and shower have alternated at intervals daily, but the rain has been by no means heavy enough to seriously affect the condition of the river. Until we get a really good rise on, I don't think coarse fishing prospects will greatly improve. There is any quantity of natural food in the stream just now, and the fish look very shy upon the artificial, no matter how deftly it is placed before them. The black gnats continue very troublesome. The little chap is still the best fly to use when they are on. I hear of several nice brace of trout having been killed in the Manifold by means of the Derby killer. Coarse fish have been biting moderately well, and that only. Roach and dace are taking the maggot the most freely, though I hear that in the lower parts of the river creed wheat and malt have been found quite as effectual. Perch, eels, bream, chub, and barbel are best on at the cockspur and lobworm. The wasp-grub is now fast coming into use, and this will kill roach, dace, and chub better than anything else up to the end of September.—The Splodger.

### The Dove (Derby).

Anglers visiting this neighbourhood will be glad to learn that Mr. Dennis Whitney has become the piscatorial host of the old and respectable inn called The Old English Gentleman, in Grove-street, and as he is a good fisherman and well known on the Trent, Derwent, and other rivers, he can give them the right information. Mr. Whitney has been for some years traffic canvasser on the Midland Railway, and an old piscatorial friend of mine who is personally acquainted with him, says, "the anglers will find at his hostelry all they can wish for."—B.

### The Exe (Tiverton).

Showers have been frequent, and to-day the water is slightly coloured, and risen only a little, and if no more rain it will soon drop back as low as before. During the past week fish have sported very well in the evening for a short time, six and eight brace falling to a rod.—Wm. Mudford.

### Exe (Exeter).

The fishing has not shown much improvement since my last report, the river still being very foul, and the mill heat having been let out at Exwich lately, when numbers of large trout were caught wholesale, and all small fry slaughtered indiscriminately by men and hoys armed with pieces of hoop-iron, &c. (I inclose full particulars from *Exeter Gazette* of July 22), and think ticketholders and anglers generally have great cause to complain, the stream being spoilt for some time. A testimonial is also to be got up by the ratepayers and others to the Home Secretary, referring to the salmon dying between Trews Weir and Salmon Pool, and asking for netting to be allowed. Mr. Blackburn, of Trews Weir, has written all he can to get matters improved for the salmon rod fishermen, and has our united and warmest thanks; but to no purpose, and if they are not treated better I fail to see the use of their procuring tickets and licences.—J. A. Kelly.

### Exe and Barle (Dulverton).

The continuous rain of Wednesday rose our rivers nearly one foot, and so fouled it as to almost line the banks in places with worm-fishers. The water is now in good minnow-fishing condition, and to-morrow will probably be in good order for the fly; but sport is not so easily obtained now as in the spring months. Mr. Collier, with his otter hounds, will probably hunt these rivers within a fortnight, when good sport may be expected, the quarry known to be plentiful; it is, however, a mistake to suppose that otters live largely on trout. Mr. Collier has assured me (and he is an ardent and most successful trout fisher) that eels are the principal food of the otter, and it is only as a last resource that trout are eaten, and as eels do more to destroy trout spawn than any other fish, the otter is really a protector of the trout.—C. W. Nelder.

### Eden (Weldon Bridge).

Last Friday the following gentlemen visited Weldon Bridge:—E. A. Mailing, Esq., creel full, with woems; T. W. Kirk, Esq., eight trout, two 1½lb.; Collin Smart, Esq., one dozen, with fly. I saw two salmon off the Bridge on Saturday night last. Water in good trim.—F. Brown.

### Ilfracombe.

Sea fishing still continues very slack. Parties fishing from their boats have been very unsuccessful, for after fishing their tide they return with only a few lbs. of bream and whiting. Mr. Turner on Monday caught a crab 6½lb. and several lobsters. The fishing from the pier head and jetty with rod and line has been good, Mr. Mengo on Thursday evening, caught several pout and codling, and Mr. Gratte a ling weighing 18½lb., others had similar catches. Weather, at present, squally.—E. Comer.

### Lakes of Killarney.

Since the last report there has been a good deal of peal and salmon come into the lake. The Glena net got about sixty salmon last week; Cahamane, 50 salmon. The weather is not fit for angling at present. The lake is going down fast; it will be down to low-water mark in a few days more. On the 18th, Tim M'Carthy, four salmon, 41lb., with a gentleman named Mr. Coldsman, of St. Francisco; Daniel Hayse, one salmon, 13lb.; Tim Cournane, one peal, 5lb. On the 22nd, Mr. John Noonan, three salmon, 33lb.; John Robert, one salmon, 10lb.; Mr. J. D. Curtayne, 2½ dozen trout; Eugene Cournane, one salmon, 10lb. Several dozen trout have been taken with small flies—namely, the silver hair, coch-bondy, small alder with black hackle; green with black hackle is good also. There will not be much fishing until the dog days are over, about the 20th of August, as the fish are gathering the roe, and don't care for flies.—Tim M'Carthy.

### Lark and Cam.

Roach feeding well, Weeds gone away nicely. One gentleman from London fishing at Mildwhall, took on Thursday and Friday last 43 fine roach, several of them close on 2lb. each. Mr. Howlett, of Newmarket, has also been amongst the bream in the Cam. They are not well on feeding—better near Littleport, the water being more suitable there for them. Some gentlemen fishing at Upware on Saturday, took four dozen splendid dace fly fishing. Mr. Howlett and A. Antony are going to-night to try for bream in the Ouse, near Ely.—H. M.

### Lea (Waltham Abbey).

The roach have been feeding "all over the shop," and some very fine takes at this time of the year—10lb. and 12lb. of fish every evening. During the week Alfred Wheeler, Mr. Thompson, Mr. Walter Kay, and Mr. B. Smith have shown some very fine trays of roach—two fine trays of roach from 12lb. to 14lb., sent to the Good Intent Society, and very much admired by the members. The lot taken on Tuesday, after five o'clock; 14lb. on Wednesday, 12lb. after five o'clock. Both takes by Alfred Wheeler, jun.—Pencil.

### Leicester.

The weather lately has undergone frequent changes, and a considerable quantity of rain has fallen during the past four or five days, but not enough to materially change angling prospects. Sport in the waters adjacent to Leicester has been, on the whole, of a fair character, and in several instances takes of roach have been heavy. It has generally been noted that the roach taken this season have been very fine, and in most baskets there have been fish of this species weighing from 1 to 1½lb. The waters at Aylestone are also in excellent condition for angling, and takes of both roach and chub have been satisfactory. Some nice perch have also been had by the bottom fishermen. In these waters the roach have begun to take the wheat freely. From the Wreake and Barrow-on-Soar reports are of a most encouraging kind. Some capital takes of bream have been had at the last-mentioned place, whilst a large contingent of Leicester rodsters daily visit the Wreake, and invariably return with good baskets. On Wednesday rain fell incessantly throughout the day, and Thursday was showery, one heavy shower being accompanied by hail. The waters hereabouts are in good condition.—Alert.

### Lugg and Arrow (Leominster).

These streams still keep in splendid order for the angler, being clear but low. There has been plenty of visitors to these streams this week, and some very good baskets have been taken, as the water is in prime order for fly fishing. The fish are sporting well at the fly, and the best killing flies on at present are the whirling blue, black gnat, and coachman. Some very good sport was had in the Arrow on Friday, as the fish were rising well; one gentleman, with the black gnat and coachman, landed a good dish of fine trout. The Lugg was tried the same day, and some very good trout were taken with the whirling blue. On Saturday the Lugg was tried with the fly, and a gentleman took a very good dish of fine fish, and when landed some scaling ¾lb. each. In the Arrow some very good fishing was had with the coachman and whirling blue, when a gentleman took a very good basket, weighing 5lb. the lot. The fish were sporting freely at the fly on Monday in the Arrow. A gentleman tried it with the whirling blue and black gnat, and took a splendid lot of fine grayling. A very nice lot of trout were taken with the wasp grub the same day. In the Lugg, a gentleman, with the fly, took a good basket of fine trout. The Lugg was tried on Tuesday, and some capital fish were taken with the coachman. Some very good trout were landed with the fly in the Arrow the same day. The Pinsley is still in good fishing order, but low; the fish are biting well at the fly. On Saturday a very good lot of trout were taken with the black gnat, and another nice dish was taken on Tuesday with the fly. Some capital sport has been had in the Bodenham waters, and some very good fish have been landed with the fly. There have been some good fish taken in the Ivington water with the fly. Some few trout have been taken in the Lugg at Aymestry.—Gwynne.

### Ouse (Huntingdon).

The bream and roach are being brought to land very freely. Since my last report several fine takes have been made. On the 21st inst. I took 32½lb. bream and 5lb. roach, making a total of 37½lb. Another take has been made of near 3st. One gentleman with me from London, took on the 22nd inst., 13lb. of bream and about 5lb. of fine roach. Several takes have been made, but the weight I have not heard. The water is in very good condition; I don't think it can be any better than it is now. The roach are well on the wheat, and great takes may be made during the season.—H. Rout.

### Perthshire Rivers.

The rivers in Perthshire are all in splendid condition. Numbers of large fish are running and are taking pretty freely. Last week Mr. Robertson killed two fish on Cargill, 17lb. and 13lb. Mr. McIntosh killed two fish on Stobhall on Monday. The nets on Tuesday had 70 fish at one shot—one 50lb. Two fish were got in the nets last week over 50lb. each. *The Tay.*—Sir W. Eliott, Bart., and Mr. P. D. Malloch fished Stobhall water, and killed two fish, 33lb. and 21lb. Mr. Robertson killed one, 28lb., on Cargill, and lost two others. *Loch Tay.*—Trout-fishing on this loch has been exceedingly good this season. Mr. D. G. Howat, of Glasgow, from Killin Hotel, was out on Friday and Saturday last, taking on Friday 18 trout, which weighed 11lb.; and on Saturday, 21 trout, weighing 15lb. Mr. Johnstone and friend, from Edinburgh, had one day 2½ dozen fine fish, which weighed 18lb.; and the following day, a basket of 17, which scaled 10lb. Other gentlemen had fair baskets. The river and loch is now in fine ply, and trout are very plentiful, affording excellent sport.

### Pickering.

Although we have had a few nice showers this last ten days, streams are all very low in this district. The dry and parched ground has swallowed all that has fallen, and hardly a drop got into any of the streams; consequently, the fish have never yet got thoroughly waked up. Nevertheless there is a decided improvement in their humour, and a few good fish, both trout and grayling, have been got. Of the former a trout of 1lb. 10oz. is the best we have seen taken by a red tag after refusing five or six other flies. Of grayling 2lb. 1oz. is the best fish we have seen taken lately. Weather dull—very like rain, and a great absence of flies for the last four five days. We hear that a few grilse and sea trout have got over the lower dam on the Yorkshire Esk; but, so far, none have been taken by rod. There was a large take by the sea nets last week, and we know of some havirg been retailed at 9d. per pound.—North-East.

### Severn (Kidderminster).

There is not much angling news to report round about our part of the Severn. Although there has been a good quantity of rain, it has come only in such showers that the soil has absorbed it as it fell, so that the rivers have been affected but very little by the fall: let us hope on—our turn will come some time. One of ours—The United Brothers—E. Hartiwell, had 5lb. of roach and dace from the Severn; Mr. Redding, president, had two eels, 5¼lb.; Mr. Yeomans, 6lb. including a bream 2½lb; Mr. Cooper, hon. member, a trout 1¼lb. amongst his catch; Mr. Titley, hon. member, 5lb. roach from a pool. This includes the best catches for the past week. I have done nothing myself on account of the low state of the river. To be the least successful, the rod must be used at early morn or late in the evening. I spent last week at Burton: it is the first time I ever saw the Trent. The anglers on that river ought to be proud of such a water to wet their lines. I never saw a river better adapted for fish culture, nor am I surprised at the good takes of fish that occasionally fall to a rod. How the anglers will fare now it will be hard to say, seeing the mishap that has befallen the waters belonging to the Burton Club, an account of which I have sent you, taken out of the *Burton Chronicle*, while I was there. On leaving the station—Burton—and before going up the steps that leads into the town, I happened to turn myself to look about there, I saw hung up against the end of station, the telegraph end I think, a case of flies belonging to Mr. Howarth, of Station-street; I thought most of them were made quill bodies. I had not time to give them the inspection they deserved, but anglers of the fly fraternity cannot do wrong in making Mr. Howarth their confidant.—E. Carp, hon. sec.

### The Suir and Tributaries.

The peal and salmon are swarming up the river, and although the water remains low, notwithstanding the late and still continuing showers, considerable sport has been had on the waters below Clonmel. On the upper waters the case is very different, for the fish cannot pass the weirs while the river remains so low. However, one day's heavy flood will do a good deal, for the mill streams and other resting places are simply boiling with rising fish; any evening you could count a hundred in as many yards, all only waiting for water enough to enable them to travel. Some sport has been had with these; the *few* rod men on the lower waters seldom return empty-handed. I say *few*, for—over twelve miles of the best angling waters of the Suir has been licensed to "snap nets," and that, too, in the fresh-water portion of the river—these "snap nets," not satisfied with their legitimate fishing, sweep the mill races and other places reserved for rod fishers, night after night with impunity, and thus what fish they fail to catch are so disturbed by the nets that they will not look at a fly the next day. This ought to be put a stop to. The net-men, who only pay a license of, say, on an average, six shillings per man per annum, whereas the rod-man pays £1, and his take during the whole year would not nearly equal one month of the net-man's. The Fishing Commissioners ought surely to look to this, and try to protect men who pay such a comparatively exorbitant sum from the misdeeds of men who pay only a trifle, and, not satisfied with that, want to have all the monopoly to themselves, on a fishing where they are only by sufferance of the riparian owners, and if the law were rightly enforced should not be allowed at all. A rod-man's rights should be respected, and on no rivers more than the Irish (especially the Suir), for many a poor man who has lived all his life by the product of his rod, and who now has only a few yards to depend on, where formerly he had as many miles, now he has to pay a pound license, when formerly he had to pay none. Is it not hard on such a man when he depends on a few hundred yards for his chance of killing a solitary fish for his and family's daily sustenance, to see all his hopes destroyed by a lot of avaricious poachers, who, not satisfied with a free, or almost free, *netting* of ten or twelve miles, grudge a poor man (or a rich man who would fish there for sport) his couple of hundred yards, which, by law, are strictly reserved to him. "Dudley's" generally yields a fish or two per day per rod, but then it is not quarter fished. The "Bridge stream," if properly worked, would give a fabulous amount of sport—for instance, Mr. John Gillies, on Thursday, killed a 7lb. peal. Next morning he killed two salmon and another peal before breakfast, and in the evening still another peal. Same day Mr. G. Quinton killed his first fish in "Dudley's," and Ned Farrel a 6lb. peal in the "Bridge stream." There is good trout fishing every evening at nightfall, at which time there is a very taking rise for about an hour.—RICHD. BRADFORD.

### Teme (Ludlow).

This stream and its tributaries are in good order, though the water continues low. The occasional showers we have had lately have put the fish upon the feed, and anglers have generally met with fair success. The flies that have been the most killing this week are the black gnat, the silver-twisted blue, the coachman, the whirling blue, and the Marlow buzz. A gentleman, on Saturday, fishing in the Teme in the Trippleton waters, caught thirty-two fish with the coachman and the whirling blue. Twenty-one of the fish were trout, and when weighed all together averaged nearly 1½lb. each. A fisherman named Nash landed three trout and one eel up the Park waters on the same day. A gentleman fishing on the Ludford side of the stream on Monday, with the black gnat, caught seven trout, two perch, and about half-a-dozen roach. On Tuesday, two gentlemen from Birmingham were fishing down the Ashford waters, and had a very successful day; one gentleman (Mr. Parkes) caught 18 fish, including nine good trout; the other gentleman (Mr. Judd) landed fourteen fish of various sorts; the flies used were the silver-twisted blue and Marlow buzz. There has not been much fishing in the Clun, the water being too low at present, and very clear. One gentleman, on Tuesday, caught about a dozen fish in the upper part of the stream; but they were not large ones. The Onibury waters have been netted lately; but the trout and grayling were all returned to the water; large quantities of "rough" fish were taken. A fisherman near Bromfield-bridge caught some nice trout on Saturday. Up the Corve some good catches have been had, though the water is low at present. The Marlow buzz has been used several evenings towards dusk up this stream, and was taken freely.—S. LUDLOW.

### Teme (Tenbury).

This stream is still in good order for fly fishing, still remaining clear and low; the fish in all parts of the river are rising well at the fly, which are on the water in good numbers. The best killing flies on the water at present are the coachman, whirling blue, black gnat, and the silver twisted blue, and some very good lots of fine trout have been taken with them. On Friday the fish were sporting well. A gentleman landed a good basket of fine trout with the whirling blue and coachman, in the water below the bridge. The water near Little Hereford was tried the same day, and a splendid lot of fine fish were taken with the silver twisted blue. Some very good sport was had on the water above the bridge, where a gentleman took a splendid lot of trout and grayling with the fly. There were some very fine fish taken in the water below the town, with the coachman. Good fishing was had on Monday in the water below the Little Hereford bridge with the fly, and one gentleman landed a nice basket of grayling, weighing 4lb. the lot. Some very good trout was landed in the water above the bridge, with the wasp grub, averaging ½lb. each. On Tuesday a gentleman, fishing the water above the town with the fly, took a splendid dish of grayling and trout. A very good lot of trout have been landed with the worm this week. Some very good dishes of trout have been taken with the fly in the Association waters this week. The Ledwych is in good fishing order, and the fish are rising well at the fly; some very nice trout having been landed. The Kyre and Rea are both in fishing order, being clear and very low; the fish are sporting well, and some very good dishes have been taken. In the Kyre, on Saturday, a gentleman took a splendid lot of trout with the fly. The Rea was tried on Friday, and a nice dish of fish were landed. On Tuesday a very good lot of trout was landed with the whirling blue.—WORCESTER.

### Trent (Lower).

The sport on the Trent is improving. The recent rains have done a vast deal of good to the water, and made the fish move about freely and stirred up the supplies of food. Eels and flounders are especially plentiful, and some anglers have had many bream. There have been many visitors at Cottam, Torksey, Laneham, Dunham, &c., and to all appearances many have done well. Among the best records I have to hand is that of Mr. Trickett, staying at Cottam, who made up a basket of 34lb. odd, including a nice jack of nearly 3lb. The take was made up of flounders and eels chiefly. Worms are considered the most taking baits at the present time, but these may be well supplemented by maggots and wasp grubs. Barbel are not so easy to be obtained, still several have been reported as killed.—TRACE.

### The Trent (Nottingham).

There was a rise of a few inches in the Trent in this district on Thursday, and prospects of sport seem, at length, more hopeful. During the week anglers have been busy not only in the lower lengths, but at Sawley, Shardlow, Weston, and Willington. At the first-named place, on Wednesday, one of the subscribers caught in a very few hours upwards of 30lb. of bream; and more of these fish than usual have been secured at Weston—one turning the scales at 5¾lb. A very fine tench of 4lb. was also bagged by Mr. H. Benson, of this town. Tench are seldom caught in the Trent, and the fish in question came in the light of a surprise to the piscator. Considerable activity has prevailed in the Holme Pierrepont water amongst the barbel, and on Saturday a take of five large fish was followed on Monday by one of three. Since the bursting of the tanks at Burton-on-Trent, as already reported, scores of dead fish have been taken out of the river at Swarkestone, Weston, and as low down as at Shardlow. Whilst perch fishing, on Tuesday, in Trent Lake (permission for which may easily be obtained from Mr. J. H. Widdowson, the proprietor), Mr. A. Bull, fishing tackle maker, Sussex-street, Nottingham, succeeded in capturing two really magnificent fish, weighing within a few ounces of 5lb. Many very large perch have already been taken out of the lake, which is situated within ten minutes' walk of Trent Station on the Midland Railway.—THE MAN AT THE CLUBS.

### Trent (Newark).

Sport has not been at all amiss this week. The bream have been on the feed very nicely, and several very nice bags of those fish have been made. The Corporation Fishery at Winthorp has been productive of several good specimens of the "bellows fish," the two biggest weighing 4lb. 11oz. and 4lb. 7oz. respectively—four anglers, on the 20th inst., getting about 4st. among them from there. From what I have heard from different localities up and down the river, sport has been equally good at several of the well-known bream holes. Tail end of lobworm, with the hookpoint just garnished with a lively wriggling cockspur, has been the most successful bait. Eels and flounders have also been taken in very fair quantities; also roach and dace, with an occasional barbel and chub. Water very low and clear, and, as an old and well-known angler said to me the other day, "While the water stops as it is, the bream will still keep on the bite: but we have had some very heavy thunderstorms this last day or two, so probably we shall have a disturbance in the water by the end of the week. Mr. J. Corah, of this town, has been very lucky this last week, getting on the 19th, 20th, and 21st, some very good bream, and a nice few of them—and finishing up on the 21st by spinning a small roach, and nobbling a jack weighing 11lb., and had the misfortune to lose another of about 6 or 7lb. Prospects on the whole look very favourable for the angler next week, unless the very heavy rains of this week cause the river to rise high and thick.—THE TRENT OTTER.

### Trent (Alrewas).

The river is now in grand condition. Few fisherman have, however, been down; but these have been rewarded with good baskets of roach and dace, and some fair perch, a few of the latter over 1lb. each. Some good grayling have also been taken with the maggot, but at the present they are not rising freely at the fly. The recent rain has brought more water into the river, and has slightly coloured it, which will improve the prospects of anglers. July 24th.—To-day and yesterday's rain ought to put the fish well on the move.

### Taw (N. Devon).

Water thick and peal plentiful, but not much doing. On Saturday we shall have good time with minnow.—RUSTY GAME.

### Tweed (Berwick).

The river is now much more clear of weed. The catches of the salmon net fishers, though improved, is still far from what it should be at this time of year. Though the price is moderate, ranging from 1s. 2d. to 10d. per pound, it is not owing to any abundant catch on the Tweed. At Marshall Meadows and Goswick they are doing better. There is abundance of salmon in the sea; but until there is a fresh they seem shy of entering the stream. There is not much angling going on just now. Berwick salmon ought to be cooked *Berwick fashion*—viz., salt the water to be used for boiling the fish until it will float an egg; notch the fish to the bone, at distances of about 3in. apart, give one minute to each pound weight, reckoning from time of commencement to boil—a trifle more if not quite fresh—preserve some of the water or gravy to be served up with the fish. This is, I am told, the ancient Roman way of cooking salmon, and is the only right way, so they say here.—JOSEPH JOHN HILLS.

### Upper Medway (Tunbridge).

During the week some good sport has been had amongst bream and roach, where swims have been judiciously baited; but where not, takes have been very small. Above the town, Mr. J. M. Streeter has caught some very fair-sized roach, while Mr. G. Payne, fishing with a friend, in one day secured no less than 64 fish—bream, roach, perch, and eels. On Wednesday there were some good takes of roach, boiled wheat and gentles being the taking lure. To-day (Thursday), we have had a nice thunderstorm, which certainly should make things look up. I forgot to mention that last week we put in 3,000 fish of various sizes into the river from a stream some distance off which was being mudded.—YE MEDWAY WATER RAT.

### Usk.

The water has been very low during the week until to-day (Thursday), when the heavy rains of yesterday caused it to rise about 18in., consequently the anglers have not met with much success. On Friday last the Rev. C. Mogg landed five fish, two of which were 15 pounders, and Mr. Cole took two. On Saturday Mr. Cole and Mr. Pride took one each; on Monday Mr. Pride landed two; on Tuesday, Mr. Browne two; Wednesday, Major Bowyer Lane, two. The river was netted on Tuesday, and 74 fish were caught, the largest weighing 18lb. On Wednesday the water was again netted, and 37 were caught, the largest weighing 24lb. Some heavy storms have fell to-day, which may cause a further rise.—ARGUS.

### Waveney (Beccles).

The weather has been very favourable for anglers during last few days, and some good catches (of roach especially) have been made. The recent rains have had a good effect, and the water is now a nice colour. Jack have been feeding well during this week, and yesterday (Wednesday), during the competition which took place with members of the Waveney Angling Club, the general complaint was that as soon as they had collected the fish together in the swim the pike put in an appearance and scattered them in all directions, consequently no large catches were made. I hope now to see some strange anglers trying their luck on the Waveney, and can hold out to them hopes of good catches of fish. But they must take care and get the deep waters—that is, anywhere beyond the Swing Bridge. Wind S.W., and weather looks very fishy. N.B.—The friendly return competition between members of Caxton and Waveney Clubs takes place next Saturday, results of which will be sent you.—A WAVENEY ANGLER.

### Witham.

Angling in the Witham is now first class. Almost everywhere anglers are doing well, and some prime bags have been made up. At Dogdyke, Tattershall, and Kirkstead, especially, have they done well, and many takes have run up to 35lb. to 40lb. per angler. At the first-named place a splendid lot of dace have been taken. One fisherman, Mr. Stevens, of Sheffield, had altogether about 40½lb., made up chiefly of this fish, along with roach, perch, bream, &c., and F. Watkin had 20lb., chiefly dace, with a few roach and bream at the same place. At Tattershall some fine bream were taken, one angler named Lee having a lot, six of which ran from 2lb. to 3lb. each, the total, including a few roach only in addition, weighed 37½lb.; and a Sheffield fisherman, at the same place, got about 21lb. of fish of the same sort. At Kirkstead, also, some very fine bream were taken. The bag of Harry Bell, of Sheffield, contained three, scaling 8lb. 12oz., besides about 7lb. of good roach. Another angler had a bream of 3lb. 10oz., along with a lot of smaller, and roach, perch, &c., to the gross weight of 30lb. Other anglers whose bags were weighed scaled 28lb., 24lb., 28lb., 20lb., &c. Most of these contained good bream. A nice pike, 8½lb., was taken between Kirkstead and Tattershall, along with a lot of other fish. At the end of the Sleaford Canal, near to Dogdyke, there was a match between two known anglers, John W. Tomlinson and John Rotherham, of Sheffield, for £10 each, and though it was raining most of the time they caught many fish. Tomlinson in the three hours took 84 fish, scaling exactly 8lb., whilst Rotherham had 78 fish, weighing 7lb. 13oz. On the drains near Boston anglers have done well also, and, among other fish, there seemed to be plenty of very capital bream. From the Cowbridge drain, a Mr. Eaves took a fine bream which turned the scale at 2lb. 13oz. This was part of a take, including also perch and roach to a total of 24lb. Several other takes were equally good, but few presented more special features than a good weight. The fishing all over the Fen district of Lincolnshire has been improved by the recent rains, and those who desire to go afar may make sure of plenty of sport. Large numbers of people continue to come into the district weekly, inasmuch as the railway companies are offering the facilities of special trains every Monday, with the privilege of starting on the Saturday and returning on the Wednesday. Almost anything by way of bait will now take.—YELLOW BELLY.

Angling has been very good of late here, plenty of fish and well on the feed—some very good baskets have been made. One Sheffield gentleman caught 2st. of fish of all kinds; one other gentleman caught two bream weighing 3lb. each, also some very nice roach; Mr. Thomas Morton, of Sheffield, had the good fortune to hook a very fine jack weighing 8¼lb, and bream from 1¼lb. to 2lb. each. On the 21st, our old friend, Mr. Robert Spells, of Sheffield, brought two friends down to fish for £5 aside—time allowed for fishing, 3 hours. When time was called and the fish weighed, one gentleman had caught 84oz., the other 81oz.; so the 84oz. won the £10.

### Wye and Derwent.

Both the above rivers are very low at the present time, consequently only small baskets of fish are the order of the day; in fact, we have had thunder and rain on most days, but not enough of it as to disturb the rivers. I have not heard of a good basket of fish being killed anywhere this week, with either bottom or fly-fishing. Fish never feed well on any of the Derbyshire rivers while thunder is hanging about. We want a regular good downpour on these rivers before fishing is good. I heard that the Darley Dale water, between Matlock Bridge and Darley, has been netted by the poachers lately, and that they killed a good lot of both trout and grayling. Several eels have been killed on night lines lately, baited with lob-worms for baits, the fish running a good size, some of them over 3lb. each. The following flies have all killed fish:—Bumble, dotterel, yellow dun, orange dun, black gnat, and sand flies.—GEO. JAS. EATON.

### The Yare (Norwich).

The fishing on this river during the past week has been marked by its uncertainty; some have had good luck, and others have had almost a blank. I was speaking just now to a friend who has been down to Brundall to-day (Thursday), and he says that there were several boats out, but nobody did anything worth record. Most of them caught a good number of small roach, but nothing of any size. From another source I hear that a member of the Champion Angling Club was at Cantley on Tuesday, and was successful, as he landed (he and his partner) 5st. of bream. This looks very much as if Cantley is the station to visit for bream. From Buckenham Ferry encouraging reports arrive every day. The roach are now well on feed; the late rains have had the effect of freshing the water, and no doubt if the downpour is not overdone excellent sport will be had at Buckenham on Tuesday next, when the Champion Angling Club hold their annual match. I hope the noted *Jumbo* steamer will not spoil sport. Prospects not so good, as very heavy rains, accompanied by thunder, have prevailed to-day.—Robert Mole.

## CLUB REPORTS.

### AMICABLE BROTHERS ANGLING SOCIETY.

On the 20th inst., Mr. Moir, roach from Dagenham; Mr. Wicks, roach from the the Lea; Mr. Say, roach and bream, 5lb. 14½oz.; Mr. Partrick, roach, perch, bream, and dace, 5lb. 2½oz.; Mr. Dwelly, perch and roach, 1lb. 1oz. The members will fish a pegged-down match at Dagenham, on August 10th, to start from the club-house at 12 p.m. on August 9th.—J. Worledge, sec.

### ALEXANDRA SOCIETY OF ANGLERS.

The members of the above society were out on the 20th, and had a very good show of fish. Mr. E. Wicks had some very handsome roach from the Lea; Mr. Tom Gripton, bream from Dagenham; Mr. Flanse, perch; Mr. Dabbs, perch; Mr. Luciorie, perch. Being too late last week for publication, I wish to state that Mr. Wells had a good show of roach and perch; Mr. Wilson, 11lb. 10oz. of bream and 4¼lb. of roach from Dagenham.—F. Wagner.

### ANCHOR AND HOPE ANGLING SOCIETY.

We have had very poor shows of fish since our last report, the following being the only members weighing in: Mr. Shakel, roach 2lb.; Mr. Clark, sen., roach and carp 4lb. 3oz. (one carp scaling 2lb. 12¼oz.); Mr. T. Bowling, bream.—D. Davis, sec.

### THE ANGLERS' ASSOCIATION, FORESTERS' HALL, CLERKENWELL-ROAD.

The committee will meet as above, until further notice, on the *first Monday* in each month (Bank Holiday excepted), and the general delegates meeting on the third Monday in each month, at nine o'clock. N.B.—The new instruction cards and lists of angling clubs will be completed immediately after the next delegate meeting.—R. Ghurney, sec.

### THE BERESFORD ANGLING SOCIETY.

On the 21st, far from the excitement of the political demonstration, which seemed to attract "all the world and his wife" to one part of London, in the snug and comfortable quarters of the above society, at The Grove Tavern, Camberwell Grove, another kind of demonstration was taking place among some of the anglers of London—viz., presenting Mr. Sames with a handsome gold watch for the bravery he displayed in rescuing from drowning two brother anglers, some time back. "Bravery and virtue always meets its reward," and it was acknowledged that by the energy of Mr. J. Gafney, P.B., in placing the case before the members of various angling societies, he succeeded in collecting sufficient funds to purchase the above gold watch, which was presented to Mr. Sames this evening. Mr. Beckett, of the A. Association, presided, assisted by Mr. Ellis. Among the gentlemen present were Messrs. Welsh, Hopkins, Smith, Page, Watkins, Hotham, &c. Mr. Beckett presented the watch to Mr. Sames, with an able address appertaining to the subject, to which Mr. Sames responded, and thanked the donors one and all for their presentation that evening. Harmony and recitation now prevailed, between which the healths of Messrs. Gafney, Beckett, and Ellis were drunk with musical honours. This having been responded to by those gentlemen, "The Health of the Visitors" was proposed, coupled with the names of Messrs. Page, Hotham, and Smith. Time now drew nigh to the parting hour, and, with the National Anthem, we brought to a close a very pleasant evening. Among those that contributed towards the evening's amusement were Messrs. Watkins and friend, Page, Smith, &c.—Pixie.

### BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

Mr. Tippitt was out again on Saturday last, at Highbridge, and had a very nice bag of roach and dace, scaling 17lb. 9oz. Mr. Withers, on Monday, had a very nice trout and some nice roach at Kelston.—Lewis Wride, sec.

### BROMPTON ANGLING SOCIETY.

Some very nice fish on the 19th inst. Mr. Sparrow, trout & chub; Mr. Stonebridge, dace; Messrs. E. Saunders, C. Saunders, Burbidge, and Dutton, roach. On Wednesday, the 18th, Mr. Ducker, a nice show of bream—some of them very fair fish.—W. Dutton, sec.

### CLAPHAM JUNCTION ANGLING SOCIETY.

Messrs. Wilson and Speed had a nice show of roach and dace on Thursday last, from the Thames—18lb. Several members had fish on the 20th inst., but small takes were the order of the day. I beg to remind members that a match takes place at Walton on the 27th inst.; all start by first train.—W. Maslin, sec.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly meeting was held on Monday last, Mr. Wood in the chair, when the proceedings at the last Wednesday's meeting were confirmed. The secretary was absent the early part of the evening, attending a committee meeting of the Lea Protection Society, after which he recounted what had occurred at that meeting. Mr. Tidbury showed some fine roach in capital condition from the society's waters at Tottenham; Mr. J. Ellis and Mr. H. Short barbel, club, and dace from the Thames. Five new members were elected, and a vote of thanks accorded to the chairman. Gentlemen who may wish to join this society will please note that the meeting on Monday, the 28th inst., will be the last opportunity ere an entrance fee of 10s. 6d. each will be required.—Henry Howse, hon. sec.

### CITY OF LONDON ANGLING SOCIETY.

The following weighed in on the 20th:—Messrs. Nitz, Chambers, and Castell bream and roach from Dagenham, and Mr. G. Blackwell gudgeons from the Lea—Mr. Nitz winning Mr. Chambers's prize for the heaviest single roach, 13½oz.—Cas.

### COBDEN ANGLING SOCIETY.

The members of this society fished their first club match of the season on the 20th inst. There were seven prizes to be competed for, ranging in value from £1 to 6s. The first was taken by Mr. Dunn, with bream from Wimbledon; the second and third were divided between Messrs. Fomison and Webley, each having an identical weight of fish; Mr. W. J. Giles took fourth, Mr. Sharland fifth, Mr. Hallowes sixth, and Mr. Wilkinson seventh. Nearly the whole of the members joined in the match, and the greater part weighed in fish. There was, of course, a full attendance of members to witness the weighing in, and the trays of fish were completely filled, nearly the whole of the freshwater finny tribe being represented. The heaviest fish was a jack of 3lb. taken by Mr. Fomison; Mr. Webley had a bream of almost the same weight. Mr. Giles weighed in a small barbel and several nice dace. Mr. Wilkinson also had a good show of roach and dace; Mr. Sharland had some fine roach from the Thames, as also did Mr. Hallowes. Taken altogether, it was the best show of fish that has been weighed in this season.—C. Reeves, sec.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening at the Mason's Hall Tavern, Mason's Avenue, Basinghall-street; Mr. Field in the chair. The minutes of the last meeting were read and confirmed, after which a very fine tray of dace was weighed in by the chairman. On the motion of Mr. Field, seconded by Mr. Young, it was resolved to contribute a guinea prize for the forthcoming Anglers' Tournament, the conditions, &c., to be left with Mr. Marston, who is so ably managing the whole affair. A letter was read from Mr. Crumplen regretting his inability to be present owing to a severe accident, and offering a prize to be given on Tuesday next, or on the following Tuesday if not taken on the 30th. The prize, which is Knight's "Rambles by Rivers," Cabinet Series, 4 vols., is for the best tray of any fish, or best specimen fish of any kind shown at the society's room. Any water may be fished, but the society's measurements (or weights) will be taken as the minimum. After transacting some routine business, the meeting was closed with a vote of thanks to the chairman.—H.

### GLOBE ANGLING SOCIETY.

The sixth annual excursion and dinner of the above society will take place on the 27th inst. at the Black Dog Inn, Bury, near Amberley, Sussex. A break will start from the club house at 5.45 a.m., in time to catch the first special train, which will leave London-bridge at 6.45 a.m. The secretary will be in attendance on Saturday evening for the purpose of booking any member's or friend's name that have not already been entered for the above conveyance to London-bridge. On the 13th and 20th inst., the following members weighed in roach, bream, chub, perch, dace, and gudgeon:—Messrs. C. Ellis, H. Jeffries, G. Jeffries, S. Howell, W. J. Davies, J. Titmus, C. Franklin, S. Orrow, H. Luke, D. Thomas, J. Ballard, J. Harman, F. Lawrence, J. J. Holmes, L. Harrington, J. Philpot, and W. Whatcott. Three new members were elected on our last meeting night. There are still a few vacancies left.—J. J. Holmes, sec.

### GUILDFORD ANGLING SOCIETY.

We have received the report of this young but flourishing little society, which was established last year. The society is very fortunate in having the assistance of Mr. T. Andrews, the pisciculturist, whose help we see they gratefully acknowledge. It is also well supported by the neighbouring landowners who possess any fishing rights; in fact, the Guildford Society is in a very enviable position, and has an energetic staff of officers.

### HIGHBURY ANGLING SOCIETY.

The following members weighed some capital specimen fish on the 20th inst., viz., Mr. Frank Temple, barbel, chub, and dace from the Thames; Mr. Shipley, bream and roach; Mr. White, a fine take of roach and bream; Mr. Howell, jun., roach, dace, and gudgeon; Mr. Edwards, roach; and Mr. Highley, bream.—Jas. E. Wheatley, sec.

### INDEPENDENT BROTHERS ANGLING SOCIETY.

Our show of fish on the 20th inst, was not very large, as there were only a few of our members out. Mr. Roberts was the most successful with a few nice perch. Hope for a better show next week.—H. Moore, sec.

### IZAAK WALTON ANGLING SOCIETY.

The week-day members dined at Mr. Lyndsell's, The Pied Bull, Stanstead, St. Margarets, Herts, on Wednesday, the 16th inst., when a most excellent dinner was provided by the worthy host. After dinner, the usual toasts were given and responded to, then followed a very interesting ceremony which consisted in presenting Mr. H. Butt, the secretary, with a very handsome marble clock and a very pretty silver teapot for Mrs. H. Butt. This testimonial was subscribed for by the members without the knowledge of the recipient, who, when it was presented by the chairman (Mr. G. Riches), was so greatly surprised that he was almost unable to express his thanks for these splendid presents, and hoped they would excuse a long speech, being so unprepared to reply appropriately; but thanked them all heartily, and hoped to be in their midst for many years to come. The company then dispersed, some rambling in the picturesque neighbourhood, and others boating on the river, returning to town in the evening, after having spent a very enjoyable day. On Saturday, the 19th inst., Mr. G. P. Rolt had 23½lb. of fine bream, Mr. G. Rolt had bream and roach, Mr. W. Wilkinson bream, Messrs. A. Bass, W. H. Mecham, T. Ward, and H. Butt had shows on the 20th inst. Messrs. G. Bliss and G. Wood had some good bream on Wednesday, the 23rd inst.

### LINCOLN ANGLING SOCIETY.

Our members were out in full force on the 20th inst. The Thames, Welsh Harp, Elstree, and Lea contributed to the takes. Mr. Bingle, 6lb. 7oz. roach; Mr. Pearce, 3lb. roach; Mr. Johnson, 2lb. 14oz. tench; while Messrs. Love, Blyth, Greenwin, Embleton, and Ulph contributed largely to the gross weight, which amounted to nearly 20lb.—Bingle, sec.

### NORFOLK ANGLING SOCIETY.

On the 20th, Mr. Tattenhall had a very fair show of roach, dace, and gudgeon from the Lea, and also a grayling. Is it not rather remarkable to get them from the Lea; we have not heard of any before? Could you inform me if this is a rare case?—Thos. Buckingham, sec.

### NORTH-WESTERN ANGLING SOCIETY.

On the 20th, several members of this society got a nice lot of fish, Mr. Underwood a nice lot of bream, Mr. Marshall also got amongst the bream again, Mr. Cross had some nice tench, and Mr. Grindley had the pleasure of making acquaintance with a nice carp, 7lb. 11½oz., which afforded him some capital sport. The members of this club are reminded that Thursday evening, the 31st inst., is the general meeting night to decide important business. I notice in last week's Fishing Gazette that several members of a certain society had been paying the Welsh Harp water a visit from having read in the *Sporting Life* the result of a day's fishing by two gentlemen. Mr. Hillier and a friend succeeded in capturing sixty-five bream, weighing 196lb. I am sorry it was not my friend and myself who met with this good sport. Who this Mr. Hillier is I have not the faintest idea. Perhaps some relation of mine.—W. Hillier, sec.

### PATRICROFT SOCIAL ANGLERS' SOCIETY.

The fourth annual match of this society took place on Saturday last in the Bridgewater Canal, where 238 anglers competed for the £10 offered by the treasurer (Mr. Adam Oldfield) and the society. This amount was divided into 12 prizes. The draw for places took place in the club-room of the society, the Golden Cross Hotel, Patricroft, and the match commenced at 5.40, and continued for two hours. About 120 weighed in, but many took fish, who, knowing they had no chance, did not stop to weigh. Wigan, Bolton, Manchester, Salford, Oldham, Ashton, Duckinfield, and Denton were represented, whilst Liverpool sent two competitors, Wigan and Bolton being our warmest supporters, and, as usual, the Wigan section taking the bulk of the prizes. The winners were as follows:—1st prize, C. Clark, Platt-bridge; 2nd prize, J. Smalley, Salford; 3rd prize, P. Clark, Platt-bridge; 4th prize, Makin, Wigan; 5th prize, S. Bennett, Ashton; 6th prize, O'Niell, Plank-lane; 7th prize, J. Fish, Patricroft; 8th prize, Heaviside, Wigan; 9th prize, W. Wilson, Monton; 10th prize, J. Clarke, Dover-lock; 11th prize, T. Parr, Wigan; 12th prize, Molyneaux, Wigan. The fish taken consisted entirely of roach and gudgeon, the latter predominating, maggot being the most successful bait. The fish ran small throughout, and I account for the gudgeon being taken in quantities by the dredging, which has been going on for some time now. The weather being fine, a number of residents and visitors witnessed the match, and with their jests and crowding round every fortunate angler, considerably annoyed and bothered them. Taken altogether, it was the most successful match the society has had, as it ran smoothly from the commencement to the end, and everybody appeared satisfied.—THE SECRETARY.

### PECKHAM BROTHERS ANGLING SOCIETY.

Amongst the members who weighed in fish during the week were Messrs. Stidolph, bream from Wimbledon; Griffiths and Page, bream and roach from Amberley; and Parsons and Phipps, dace from the Thames. At a special meeting, on Tuesday last, £8 10s. was voted from the club funds for prizes, and upwards of £20 promised from members and friends. Our host came of age on the 22nd, and therefore it was a gala day at the club, Mrs. Reed and "Amy," who visited the club-room during the evening, having a grand reception. They certainly deserve it, for I am certain they do everything in their power for the comfort of our members. The following gentlemen, amongst others, sang during the evening:—Mr. Durant, "Dawkens's Night"; Mr. Reed, "Half-mast High"; James Stidolph, "The Kissing Song"; The Duke, "One More Glass"; Mr. Page, "Sailing"; Mr. Pitts, "The Bugler"; and Mr. White, "The Cork-leg." The time for closing arrived a great deal too soon to suit the members.—GADFLY.

### THE PISCATORIAL SOCIETY.

The usual weekly meeting of this society took place at Ashley's Hotel, Covent-garden, on Monday evening last. Present: Messrs. Gillatt, Meyer, Jesse, Pattisson, Grey, Lemann, Foreman, Adlington, H. H. Brown, T. Huggett, Booker, Batt, Butler, Hill, Rev. J. Sumner, Bennett, H. B. Brown, Blundell, Dr. Coates, Galloway, Goodger, Russell, Walker, Lander (hon. sec.), &c. There were also visitors present. Mr. Booker was unanimously voted to the chair. The minutes of the previous meeting were read and confirmed, and when that portion was read announcing the splendid gift of books last week made by Mr. Booker, there were loud cheers. Mr. E. Walker next read his promised paper upon "Tight Corking," and treated on the subject most exhaustively. His remarks were listened to with perfect attention, and at the end of the reading he was loudly cheered. Mr. Adlington, in support of the paper, knew a very successful angler in the West Drayton waters who sometimes used to take as much as 40lb. weight in a single day. The benefit of the system was that you generally took larger fish than by floating down the swim in the ordinary conventional manner. Messrs. Huggett and Pattisson also made some remarks on the subject. Mr. Walker's health was proposed and drank with enthusiasm. The chairman announced the summer dinner for Wednesday next, also the barbel competition on Monday next, and he trusted some good shows of fish would be on the table. Mr. H. H. Brown and his friend have been fishing at Maidenhead; they took twenty-three barbel in one day, fishing with Wilder, jun. Mr. Huggett weighed in a fine show of bream from public waters, and some dace, all taken with lob. The two largest bream here this evening weighed 5lb. 10oz. and 5lb. 8oz. respectively, and they had lost weight considerably, having been taken on Saturday last. Mr. Walker showed some fine roach. The healths of Mr. Huggett and Mr. Walker were proposed, and in response Mr. Huggett said that these bream had lately been in a certain deep eddy, and had been fished for by the natives, early and late, for some time past. It was his good fortune to angle in the middle of the day, and to capture them. He, however, kept the matter perfectly quiet, and the locals are a good deal puzzled to know why the bream do not show these last few days as usual. Mr. Walker also replied. The Piscatorial Society was fully represented. At the Thames Angling Preservation Society's dinner at the Star and Garter, Richmond, the following members were present:—Messrs. Spreckley, Brougham, Marston, Wheeldon, Sachs, Eyre, Huggett, Godwin, Brown, Crumplen, Lemann, Hatfield, and Murray, and the Mayor of Kingston, and Mr. Knetchli and Capt. Alfred as ex-members—about one-sixth of the total number present. "The Continued Prosperity of the Society" was next duly honoured, and Mr. H. B. Brown proposed "The Health of the Chairman," who briefly responded, and the meeting terminated.—T. H.

### RODNEY PISCATORIALS.

On the 20th, the members competed for several prizes given by Messrs. Canton, Halmon, Arnsby, and Hotham. The Upper Thames was appointed for the place of contest, members being allowed to start away on Saturday afternoon, the contest to commence at 10·15 a.m. on the 20th, all fish taken previous to that time to be handed over to the secretary to be counted and marked, which was done to the satisfaction of all members present. Mr. E. Pyne had five nice perch—the largest turned the scale at 1lb. 1oz.—all taken in about 15 minutes from the towing path. Mr. R. Smith had some chub, dace, and gudgeon; Mr. Grant, roach and dace; Mr. Friedel had roach and chub. The word was given to start for the contest, and each one made his way to his fancied swim—some down stream, some up to the lock, while others made across the stream to the backwater to get out of the way of those delightful friends of bank anglers—"two-legged donkeys," tow-lines, boats, and small boys who exclaim, "Please put a penny in a poor boy's hat!" each time they see an angler. Seven o'clock was the time appointed to leave off fishing, but before that time we managed to get within easy sound of one another, and no fear of being pestered by our "friends." At seven sharp, time was called, and the result was as follows:—Mr. Grant first, with perch and roach; Mr. R. Smith, second, a nice lot of dace, taken with a fly of his own pattern; Mr. G. Dodd, third, dace and roach; Mr. J. Hotham, fourth, roach. Messrs. Pyne and M. Friedel also had fish in the competition. Members are informed that the next return visit of the South-London United will go to the South London, the George and Dragon, Camberwell-road, on the 28th. Let us give our old friend, Mr. Field, a bumper.—PIXIE.

### ROYAL GEORGE ANGLING SOCIETY.

On the 20th, the whole of our members went out to fish for a cup and a sweepstake. The cup stands over for another outing in consequence of the take not being up to weight specified. The sweepstake was won by Mr. Palmer; Mr. Wood, second; Mr. Chart, third; Mr. Holden, fourth; Messrs. Hewett and Healey followed. A committee meets next Tuesday to decide with regard to the said cup, also another that is given and waiting to be fished for. I might add that the above society is now in a most flourishing condition; but we are still open to elect a few respectable fishing members.—W. H. RIDER.

### SOUTH LONDON ANGLING SOCIETY.

On Monday, the 14th inst., the following members went as far as Wateringbury to fish for a number of good prizes:—Messrs. Morris, Head, Bate, Price, Brown, and Goody. They had a most delightful day and a very fair take of fish. The result of the match was that Mr. Rate was first, Mr. Morris second, and Mr. Brown third. We had also a nice outing to Woking on the 20th to fish for a number of prizes, given as follows:—Mr. Whittaker, 10s. 6d.; Mr. Sames, 10s. 6d.; and an additional 5s. by the secretary. Mr. Secretary had previously sent a note to Mr. Fox, proprietor of the Crown and Anchor, and until recently a member of the Walworth Waltonian Society, to send a conveyance to meet us at the station, and we were not disappointed, for it was there sure enough. Brother anglers would do well to support Mr. Fox, as he is a good angler and ever ready to give all information in his power. The result of the outing was as follows:—Mr. Delhaye first, Mr. Goody second, and Mr. Buck third. We have a visit on Monday, the 28th inst., from the clubs on the South-London Visiting List, when we hope to have a large number of anglers present.—J. KIRWAN, sec.

### SOUTH-EASTERN ANGLING SOCIETY.

Our Messrs. Smith, sen., J. Harris, F. Bennett, and J. Smith, jun., were out on the 20th inst. at Brand's Bridges, Medway, and succeeded in taking some good fish, comprising bream, roach, barbel, perch, chub, and dace, making a fine show. They are making hay while the sun shines for the prizes, and it behoves others to be on the alert. Messrs. Allard and J. W. Smith were too late for weighing in, owing to their train being delayed. It is wished that the committee attend on Tuesday next, early as possible, for the arranging of prizes given. Members please take notice, new rules are in hand, and will be strictly enforced.—THOS. H. WESTON, sec.

### SMETHWICK ANGLING CLUB.

On the 18th, Mr. W. Keen, fishing in the club waters at Penkridge, a nice lot of perch and roach. On the 19th, Messrs. Bate and Guy, roach and dace, some of the roach over 1¼lb. On the 21st, Messrs. Draper and Bannister, roach and dace.—THOS. BANNISTER, hon. sec.

### UNITED BROTHERS, DEPTFORD.

The above society fished a roving match on the 20th inst., at Weybridge association water, but I am sorry to say there was not much sport, only one prize being taken by Mr. F. Watts; other members had fish, but not enough to take prizes. Mr. W. Tyler, fishing in the old way, weighed in bream and roach; Mr. Richardson, roach and dace.—H. T.

### WALTONIANS.

July 20th, Mr. Burton, roach 6lb. 12¼oz., dace 1lb. 3¾oz.; Mr. Grace, bream 5lb. 1¾oz., and a tench 1lb. 14¼oz.; Mr. T. Watkins, roach 5lb. 5¾oz., dace 4lb. 10¼oz.; Mr. Morris, dace 3lb. 3oz., roach 1lb. 1oz.; Mr. J. Dodge, roach 2lb. 11oz., dace 1lb. 13¼oz.; Mr. Malcom had a fine roach 1lb. 14oz.; Messrs. Morgan and Marriott also weighed fish.

### WALWORTH PISCATORIALS.

The members of the above will have an open competition on the 27th, for three prizes, given by Messrs. J. Walker and M. Delhaye, jun. Members are requested to attend on Thursday next to decide where and how the bank holiday competition shall take place.—PIXIE.

## SCOTCH FISHING NOTES.

TAY.—Sir W. Elliot, Bart., and Mr. P. D. Malloch, Perth, killed two beautiful fish weighing 33lb. and 21lb. respectively, while fishing on the Stobhall water on the Tay on Tuesday.

LOCH TAY (KILLIN).—The trout fishing on Loch Tay has been exceedingly good this season. Mr. D. G. Howat, of Glasgow, fished from the Killin Hotel on Friday and Saturday. On Friday, he had eighteen trout weighing 11lb., and on Saturday twenty-one trout weighing 15lb. Mr. Johnstone, and friends from Edinburgh, had forty-seven trout weighing 28lb. on the Killin Hotel water. Good baskets were obtained by other gentlemen, and the river and loch are now in excellent fishing ply, trout being very plentiful, and affording good sport to anglers.

ORCHY.—On the Orchy on Saturday, the Rev. F. W. Peel, from Inveroran Hotel, caught a salmon weighing 12lb. Good sport was got on this river on Wednesday, Rev. F. W. Peel had two salmon, Mr. J. R. Boyd one, Mr. McKerchar one, and Mr. Shepherd one, the average weight being 14lb. On the Orchy, on Thursday, Rev. F. W. Peel landed five salmon weighing 14lb., 13lb., 13lb., 12lb., and 10lb. On Friday, the same gentleman landed two salmon weighing 11lb. and 8lb.

SPEY.—Since the rain we had last week, fishing has greatly improved. This river is running in good size and colour. On the West Elchies water during the week, Mr. Lethbridge killed a few grilse. On the section opposite the village of Aberlour, Mr. John McDonald caught a grilse. On the Aberlour House upper water, Mr. John Thomson's fisherman landed a fish. On the Craigellachie water, Captain Grant landed four grilse and a salmon. On the Arndilly water, Mr. Myburgh's fisherman killed a grilse; and on the same water Mr. Hendry, Tillicoultry, caught 6½lb. trout. On the Arndilly water, on Thursday, a grilse was caught by Mr. Myburgh's keeper. On the following day the same party caught a salmon weighing 14lb., and a grilse weighing 5lb. On the Carron Cottage water Mr. Smith landed, on the 17th inst., a salmon weighing 15lb., and a grilse 5lb.; and on the 19th a salmon weighing 6lb. On the Pitcroy Lodge water, on the 18th, Mr. C. M. P. Burn killed a grilse; and on the same section Mr. Campbell also secured a grilse. On the Knockando House water, on the 19th, Mr. Mellor landed a grilse. On the Fiddoch, on the 18th, Kev. K. O'Nell, The Orphanage, Aberlour, caught 135 yellow trout; Mr. George Mitchell, 40 trout; and on the 19th Mr. John Laing, 35 yellow trout, the heaviest ¾lb.

THE EARN.—On Tuesday, in several of the hill streams—tributaries of the Earn—Mr. G. Morgan, Crieff, and Mr. A. Kippen, Dundee, had a fine basket of trout weighing 20lb.

THE TUMMEL.—The river is at present in fair angling order. On Tuesday the weather was favourable, and Mr. Thomas Purdis, keeper, fished the Bonskeid water for a short time, and caught a beautiful salmon weighing 15lb.

LOCH RANNOCH.—The weather here was very unsettled on Monday, but two boats were out from Bun-Rannoch Hotel. Mr. Sargent and Colonel Latour fished from one of the boats, and Mr. J. M. Steele fished from the other, and they had excellent baskets of beautiful trout. Canon Holden fished the river Tummel and got a splendid basket of trout, one of which weighed close on 2lb. On Tuesday the weather continued very unsettled, but notwithstanding the above-named gentlemen were out in the loch and got good baskets. Trolling for large fish is not much indulged in, the fly fishing being invariably a success.

LOCH LUBNAIG.—On Thursday Mr. Clark caught a trout weighing 8lb. in this loch. Major Chalmers hooked a trout weighing 5lb., but lost it through the handle of his rod giving way. Since the recent rains fishing has greatly improved on this loch.

TO SALMON ANGLERS AND OTHERS.

JAPANNED FLY-MAKER'S BOX, complete. Four trays, divided and sub-divided, with bottom space. To hold and preserve collection of feathers, hackles, hooks, and all requisite materials: Card board partitioned Box for seal's furs in lid, as supplied to Mr. Kelson.

18 inch by 12 by 10½ high, price £3 10s.
12 inch by 9 by 8 high, price £2 10s

ALL ORDERS TO BE ACCOMPANIED BY A REMITTANCE.

USK.—THREE SALMONS FAMILY and COMMERCIAL HOTEL, under New Management. ANGLERS may be BOARDED on reasonable terms, and special accommodation afforded if taken by the month.

## MR. DENISON'S SALMON FISHING SCORE.

Mr. Denison, whose renown as a slayer of salmon is as great, though it may not be so durable, as his fame as a collector of books, has been good enough to send us his catch of salmon and grilse during the past thirteen years, which will greatly interest our readers. It may be premised that Mr. Denison fishes the Ness and the Tweed, having had a water on both rivers for more than twenty years, and that the score includes the produce of both. It will be noticed how the years vary owing to floods, bright dry weather, and not least, the supply of fish. "The year 1873," he tells us, "was the best year of my life both in the number and size of the fish in both rivers. In the Tweed, in six consecutive days I landed 54 salmon, and all my Tweed salmon that year averaged 22lb. 15oz. For the last two years, owing to the disease which has carried off the big kelts, the average has fallen to 18½lb. and 18lb.

"The best day I ever had in my life was in the same year, 1873, in the Tweed, the second week in October, when I ran 20 salmon, losing three at the mouth of the net, and landing 16, which weighed upward of 280lb."

"The Ness," he adds, "is, as a rule, more a grilse than a salmon river, and the fish run from 8lb. to 12lb.; but this last year (1883) there was a considerable number of large salmon. I killed 10 fish there in one day, three of which weighed 28lb. each. One year in the Ness, after a long drought, when the sewage of Inverness accumulated in the river, rain came, and the salmon, long kept out of fresh water, rushed up, but meeting the sewage, turned tail, and during the two months I was there none came up, and I only landed 10 fish the whole season; after the season was ended they came up late in the close time."

| Year. | Fish. | Weight. lb. |
|---|---|---|
| 1871 | 170 | 2043 |
| 1872 | 188 | 2180½ |
| 1873 | 357 | 4487 |
| 1874 | 175 | 2169 |
| 1875 | 74 | 1085 |
| 1876 | 196 | 2240½ |
| 1877 | 228 | 2364 |
| 1878 | 80 | 1882½ |
| 1879 | 141 | 1515½ |
| 1880 | 94 | 1243 |
| 1881 | 293 | 3377 |
| 1882 | 191 | 2265 |
| 1883 | 243 | 2770½ |
|  | 2430 | 29122½ |

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage is 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

# The Fishing Gazette.

SATURDAY, AUGUST 2, 1884.

## THE TOURNAMENT.

### DISTRIBUTION OF THE PRIZES.

IT has been decided to distribute the prizes on Friday, the 22nd inst., at the Meeting of the Anglers' Benevolent Society, at Foresters' Hall, Clerkenwell. In the mean time, we beg to ask those who have promised prizes, but have not yet sent them, kindly to do so, addressed, Mr. R. B. Marston, Editor FISHING GAZETTE, 188, Fleet-street, London. A letter stating value should accompany each.

It will also help the committee if those who have given prizes, but have not indicated their value, will kindly inform Mr. Marston. It was, of course, impossible to apportion the prizes before we received them, or even knew their value. When the programme was published last week, nearly half the prizes had not been received, and we have a great many fresh acknowledgments to make this week, but still require to know their value in many cases. By keeping the list open as we have done, the prizes have been greatly increased.

### LIST OF WINNERS

IN THE VARIOUS COMPETITIONS, CASTS MADE, &C.

"IT rained on St. Swithin's day, and has rained every day since. You surely do not think St. Swithin will go out of his way for the sake of an angling tournament! Anglers afraid of wet? I never heard of such a thing!" Such were the semi-sarcastic remarks on Friday last of an old friend who believes about as much in St. Swithin as he does in the Man in the Moon. But when the rain came down and steadily soaked us all on Saturday, it was refreshing to note how everyone put it all down to the old Saint. The weather "upset the applecart" as usual; but in spite of it, we had an extremely interesting meeting, and one or two results which will become historical were attained.

On Friday several of the officers spent most of the afternoon in arranging matters, and Mr. Kelson being present had a cast or two from the bank with his 15ft. 6in. rod, and made casts of forty and forty-one yards, which were measured with the tape by Mr. Murray and Mr. Marston, who fully expected to see Mr. Kelson beat this record next day; but the strong wind and rain which favoured the lighter lines were against his heavy one.

By two o'clock the ground was marked out and the fly-casting stage and the measuring line fixed ready; but the wind continued to increase and veer round, necessitating the postponement of the fly-casting, while the stage was floated over to the other side, the measuring line was again fixed, and before the competitors were ready (Mr. Malloch wished to compete in the Nottingham Amateur Competition) the wind changed again and rendered the measuring line useless.

It was then reluctantly decided by the judges that, it being already so very late, the measuring should be done in the old-fashioned way—viz., by measuring each competitor's longest cast with the tape. (The casts were made over the water, and the judges then took the rod and line and carefully measured the length thrown on the grass.) The plan originally arranged would have been more satisfactory; but it was impossible, owing to wind, weather, and time, to carry it out.

The great feature of the fly-casting was the extraordinary record made by Major Traherne. Forty-five yards one inch with one of Farlow's spliced 17ft. 4in. rods is, we venture to say, the longest cast authenticated. It was the opinion of some old salmon anglers present, as well as of all the spectators, that never was a more "fair and clean" cast made.

In the bait-casting in the Thames style, the wonderful distance of seventy-two yards was covered by Mr. Hobden, who actually threw two yards further than the ground was measured for. This is the longest cast of the kind on record.

Mr. Powell won the Richmond five-guinea cup with some casts which were greatly admired, and had it not been for an unfortunate catch in his second attempt, his total would have been much higher. The 65 yard cast actually fell on the ticket of the centre measuring line, which will indicate the accuracy of his aim. Mr. Alfred, jun., son of Captain Alfred, made some most excellent throws in several competitions. Mr. Malloch's new casting winch excited much curiosity. The reel does not revolve as the line is thrown off: the action is somewhat like holding a reel of cotton at one end, and pulling the cotton off the other. The Peg-down Match was quite a success, everything considered, and the "Go-as-you-please" Race caused much amusement, and resulted in the really wonderful performance of Mr. Tucker, who accomplished the 2½ miles of ploughed fields, fences and furrows, carrying his kit on his back, in the short time of 21 minutes, arriving at the tent as fresh as possible. Mr. Osborn was close behind.

Mr. Ramsbottom, 81, Market-street, Manchester, kindly provided the gut traces, which were beautifully finished; and not a flaw could be found after so severe a test.

We cannot conclude these few remarks without most heartily thanking the judges, timekeepers, and other officers who so kindly stuck to their work in spite of wind, rain, mud, and slush. Mr. Warner, as usual, did all he could to help us in bringing this, our fourth Tournament, to a successful issue, and we can only hope that next year the weather may for once give us all a fair chance.

AMATEUR OVERHAND FLY-CASTING, with salmon rod, not exceeding 16ft. in length (1st prize, Silver Egg Cup; 2nd prize, Painting of Pike, by Targett).—Mr. P. D. Malloch, 39 yards 2ft., 1; Mr. Kelson, 37 yards 1ft. 3in., 2; Mr. Thomas, 30 yards 1ft. 6in., 3.

AMATEUR OVERHAND FLY-CASTING, with salmon rod not exceeding 18ft. in length (1st prize, Gold Egg-Cup; 2nd prize, Guinea Card of Artificial Baits, presented by Miss Campbell).—Major Traherne, 45 yards 1in.; Mr. P. D. Malloch, 43 yards 2ft. 3in., 2; Mr. Kelson, 39 yards, 3 (unfinished); Mr. Thomas, 36, 0.

AMATEUR SWITCH FLY-CASTING, with any salmon rod; six feet only allowed behind the competitors for the rod or line to extend (1st prize, Salmon Landing Net; 2nd prize, Carpet given by Messrs. Treloar).—Mr. P. D. Malloch, 37 yards 1ft. 9in., 1; Mr. Kelson, 32 yards 2ft. 8in., 2; Major Traherne, 32 yards 2ft. 6in., 3; Mr. Thomas, 29 yards, 2ft. 5in.

AMATEUR FLY-CASTING COMPETITION, with single-handed fly-rod.—Mr. P. D. Malloch, 30 yards 2ft., 1; Mr. Marston, 23 yards, 2; Mr. Thomas, 21 yards, 3.

AMATEUR FLY-CASTING COMPETITION, with double-handed trout fly-rod (1st prize, Silver Cup, value £3 3s., presented by Mr. W. Thomas; 2nd prize, a "Francis" Pattern 14ft. Fly Rod, best finish, value £2 10s., presented by Messrs. Farlow and Co.).—Mr. P. D. Malloch, 32 yards 1ft., 1; Mr. Thomas, 30 yards, 2; Mr. Marston, 28 yards 2ft., 3.

SPECIAL COMPETITION, open to United Kingdom only, fly-casting with single-handed split-cane fly-rod, bent for the purpose by Mr. E. L. Andrews, of Uppingham. —Mr. P. D. Malloch, 28 yards 2ft., 1; Mr. Marston, 24 yards, 2; Mr. Thomas, 23 yards, 3.

SIXTH COMPETITION.—Amateur competition in Casting in the Thames style. Three prizes. Entrance fee, 2s. 6d. Each competitor to be allowed five minutes. Best cast to win.—Mr. Alfred, jun., 46yds, 52yds, 23yds, 1; Mr. Hobden, 46yds, 23yds, 2; Mr. Simpson, 44½yds, 40½yds, 44yds, 38½yds, 44¾yds, 3; Mr. Grandfield, all wides, 4.

SEVENTH COMPETITION.—Amateur Competition in Casting from Reel in Nottingham style. Five minutes each. Three prizes. Entrance, 2s. 6d. Best cast to win. —Mr. Slater, 38yds, 43yds, 49yds, 49yds, 47yds, 46yds, 1; Mr. Malloch, 47yds, 47½yds, 2; Mr. Hobden, 47yds, 38yds, 41yds, 45yds, 3; Mr. Grandfield, 40yds, 45yds, 44yds, 4.

EIGHTH COMPETITION.—Amateur Competition (open to Thames and Nottingham style) in casting towards a fixed mark. The angler casting the bait nearest to the mark to take first prize; the next best cast made by another angler the second; and the third best cast by another angler to get the third prize. Three prizes. Entrance fee, 2s. 6d. Mr. Simpson, 3ft. from mark, 1; Mr. Grandfield, 3ft. 7in. from mark, 2; My. Alfred, jun., 7ft. from mark, 3. The other competitors were Messrs. Slater, North, Hobden, and Powell.

NINTH COMPETITION.—Professional Competition in Casting in the Thames style. Two prizes. No entrance fee. Best cast, Mr. Andrews, Maidenhead, 48yds, 23yds; Mr. Martin, Nottingham, all wides.

TENTH COMPETITION.—Professional Competition in Casting from Reel in Nottingham style. Two prizes. No entrance fee. Best cast to win.—Mr. Martin, Nottingham, 38½yds, 41yds, 41yds, 44yds; Mr. Andrews, Maidenhead, all wides.

ELEVENTH COMPETITION.—Amateur Competition in Casting in the Thames style. Each competitor to use the same rod, line, winch, and weight (which, in this instance, was 3oz). Three prizes. Entrance fee, 2s. 6d. Best cast to win.—Mr. Hobden, 50yds, 69½yds, 72yds (the longest cast ever made at our Tournaments), 1; Mr. Alfred, jun., 50yds, 59½yds, 46yds, 57yds, 2; Mr. Simpson, 57½yds, and wides, 3; Mr. Gibson, 53yds, 57yds, 4; Mr. North, 54yds, and wides, 5; Mr. Sawyer, 53½yds, 57yds, 51yds, 6; Mr. Holman, wides, 7.

TWELFTH COMPETITION.—Ledger Bait Casting towards a fixed mark. Three prizes. Entrance fee, 2s. 6d.—No competitors.

THIRTEENTH COMPETITION.—Competition in throwing the Bait with Forked Stick, in the Welsh Harp style. Three prizes. Entrance fee, 1s. Best cast to win. —Mr. Sawyer, 54yds, 58yds, 63yds, 1; Mr. North, 60yds, 46yds, 2; Mr. Holmes, 49yds, 45yds, 46yds, 3; Mr. Holman, a wide, 29yds, 47yds, 4; Mr. Grindley, 40yds, 40yds, 45yds, 5.

SPECIAL COMPETITION for Silver Cup, value 5 guineas, given by the Richmond Piscatorial Society for the competitor making the most points in three casts, either Thames or Nottingham style. Mr. Powell, 65yds, 42yds, 61yds—168 points, 1; Mr. Slater, of Newark, 38yds, 44yds, 44yds—126 points, 2; Mr. Simpson, 41yds, 45yds, and a wide—86 points, 3; Mr. Malloch, 50yds, a wide, 4; Mr. Alfred, jun., a wide; Mr. Hobden, a wide. Mr. Powell, of the Richmond Piscatorial, won by 42 points.

### SPECIAL COMPETITIONS.

TWO HOURS' FISHING MATCH, pegged down.—Mr. Mavory, Good Intent, 3lb. 12oz., 1; Mr. Osborn, Hoxton Brothers, 1lb. 5oz., 2; Mr. Gadbury, 1lb. 3oz., 3. Eight competed.

GO-AS-YOU-PLEASE ROACH ANGLERS' RACE, competitors to be fully equipped, with rod in bag and roach basket or box (course about two miles and a half).—A. Tucker, Cobden Club, 1; Osborn, Hoxton Brothers, 2; Castell, City of London, 3; Monrow, 0. Tucker ultimately won. Time, 21min.

## LIST OF PRIZES SENT FOR THE FOURTH "FISHING GAZETTE" TOURNAMENT,

WITH NOTICES OF THE SAME.

WE have now the pleasure to give a complete list of the prizes promised for the Tournament, with notices of such as have been sent. The total value amounts to about £60.

A FIVE-GUINEA SILVER CUP, given by the Richmond Piscatorial Society, and won by Mr. E. V. Powell, of the Richmond Society. We congratulate Mr. Powell on winning this first-rate cup in such first-rate style. His second cast was coming on beautifully straight, when an unfortunate kink cut off twenty or thirty yards of its flight.

A GOLD EGG-CUP, won by Major Traherne, with a superb cast of the salmon fly over forty-five yards with a rod under 18ft. The line extended well behind, and then went out "straight as a line" to its full extent.

A SILVER EGG-CUP, won by Mr. Malloch, of Perth.

Money prizes (out of which the egg-cups and one or two other prizes have been purchased) have been given by Mr. T. Spreckley, the Gresham Society, Mr. P. Geen, Mr. and Mrs. R. B. Marston, Mr. E. Marston, Messrs. Sampson Low, Marston and Co., Mr. Field, Mr. W. Clarke, and Mr. W. Murdoch.

Mr. MARRIOTT gives Macaulay's "England," and Mill's "Political Economy," Victor Hugo's "History of a Crime," and Darwin's most interesting work on "Earth-Worms."

Messrs. W. WATSON and SONS, 308, High Holborn, send a "Tourist's General Rod," value £1 10s. For those anglers who object to carrying a bundle of different rods about with them, this rod will be just the thing, as with it you are prepared for fly, spinning, or bottom fishing of any kind. It is very nicely made, and put together with much judgment, and well suited for any one going on an angling tour where different kinds of fish are to be met with. We may also mention that they are having a great demand for their superb fly-lines, which, for strength, beat anything in the Fisheries, and gained them first prize. The dressing is excellent. They will send samples free on application.

Mr. Robert Ramsbottom, 81, Market-street, Manchester, sends a hank of his long gut as prize. Our readers will remember the splendid show of gut made by Mr. Ramsbottom at the Fisheries. Of late years he has paid very great attention to the gut department of his fine business, and this has resulted in anglers being able to obtain far better gut than was possible previously. His catalogue—descriptive of the various kinds of gut he imports from Spain from his own manufactory—is the most complete thing of the kind we know. The gut sent is of unexceptional quality and great length.

Mr. A. Bulmer, of 62, Wandsworth-road, sends a landing net, and a very excellent one it is. By the way, we have lately been using one of Mr. B.'s gossamer gut lines stained the sorrel colour, so dear to the hearts of anglers with hair lines, and succeeded in the clearest of still water on the Wandle in deceiving some wary, old, hard-fished trout. Have any of our readers tried this gut dyed sorrel colour? We should be glad to hear their experience, as we think very highly of them. The dye does not affect the strength in the least.

Messrs. Cassell, Petter, Galpin and Co. are good enough to send us three most interesting works as prizes—viz., "Cassell's Illustrated Sports and Pastimes"—a perfect cyclopædia of the subject; their "Domestic Dictionary"—certainly the best published at the price; and their "Wild Animals and Birds" (illustrated)—a charming work.

Mr. T. R. Sachs, of 22, Hyde Park-place, who made the beautiful silver cup presented by the Richmond Piscatorial Society, writes to us: "Having presented the Friendly Anglers, the Gresham, Silver Trout, and Piscatorial Society with three copies each of 'The Natural History of British Fishes,' the last work of my much esteemed friend the late Frank Buckland, I present three more as prizes for the Tournament, and feel sure the winners will gather much valuable information from them." We are quite sure our friend Mr. Sachs is quite right in his supposition, and beg to thank him for his generosity.

A new fishing-tackle firm, Messrs. John and C. Christie, of 3 and 5, Mansell-street, Aldgate, and 2, New Broad-street, send us a very handsome prize in the shape of one of their East India Mottled Cane General Rods, five joints, 14ft., bronzed ferrules, German silver double-brazed, value 50s. Messrs. Christie are just starting in the fishing-tackle trade, and at their Broad-street branch have a capital stock of fishing-rods and tackle of all kinds. Being so close to the G.E. Railway, they are right in the track of anglers, who will find their shop extremely convenient. Their principals are members of the Gresham, the Bonâ Fide Anglers', and other leading clubs. We wish them every success.

Messrs. Charles Farlow and Co., of 191, Strand, one of the oldest firms in the trade, and who have a world-wide celebrity for the sterling quality of their goods, write:—"We are in receipt of your favour, and have pleasure in sending you one of our 'Francis' pattern, 3 joint, 14ft. trout rods, value 45s., similar to the one you had." In a recent article on Trouting in the Darenth, we spoke very favourably of this rod; its action is perfect—*i.e.*, as far as our ideas go, and we do not for a moment pretend that what suits us will suit everyone. Mr. Senior, fishing editor of the *Field*, borrowed it to try on a Hampshire stream, and expressed himself as delighted with it, and we need not say more than that. In getting a rod from Messrs. Farlow you may be perfectly certain that nothing has been left undone to make it as sound and perfect as possible, and anglers know how exasperating it is to find the ferrules getting loose, after fishing with a new rod, as too often happens from careless workmanship.

Mr. Henry Bawcombe, of 2a, Victoria-road, Holloway-road, sends us as a prize one of Mr. Basil Field's most excellent Aërating Bait Cans, value 12s. 6d. This can has been recently noticed in the Gazette. Its chief feature is an apparatus for aërating the water. As you carry the can, you have simply to press a spring in the handle, and this forces air into the water at the bottom.

Messrs. Woodfield and Sons, of Redditch, send one of their new patent joint folding landing rings, with net and telescope landing handle. This ring is one we designed some time ago to meet the requirements of those anglers who want a cheap ring, which will go into half the space of the ordinary wooden hoop ring. It folds over on a hinged joint, and can be easily carried in the creel. The advantage of wood is its lightness, and its not rotting the net, as an iron ring does.

Ye Medway Dace, one of our correspondents, kindly sends a valuable work in two volumes as a prize.

Mr. Wm. Brown, 36, George-street, Aberdeen, says:—"I send you half-a-dozen of my phantom minnows as prizes for the Tournament." "Brown's Phantom Minnow" has got a deservedly high reputation among anglers in all parts of the world, and the increasing sale shows that it maintains it. These are most excellently coloured, to represent minnows, samlets, &c. Messrs. Farlow are the London agents, and will be happy to show them.

Messrs. H. Schweitzer and Co. very kindly send us twelve tins of their plain Cocoatina, and twelve flavoured with vanilla, value 30s. The qualities of Messrs. Schweitzer's goods are too well-known to need mention on our part: we have been practically acquainted with their cocoatina for we do not like to say how many years past. As a most delicious and quickly-made beverage it strongly recommends itself to anglers.

The following prizes, which were not won, remain over from last year:—"British Sportsman," given by Mr. Day. Plated Tankard, given by Mr. Parker, of the Good Intent Anglers. Three Spinning Baits, given by Mr. Wrigley, of Cheltenham. Three Spinning Baits, given by Mr. Bullock, of Derby.

Messrs. Geo. Routledge and Sons, The Broadway, Ludgate Hill, send us as prizes one copy each of Pennell's "Angler Naturalist," "Modern Angler," and "Book of the Pike." These books are well-known to our readers; we hope to give them separate notice later on. They are new editions, at greatly reduced prices, and no angler who aspires to be well up in the knowledge of his art can afford to be without them. The "Angler Naturalist" is a mine of information about fish, flies, insects, &c.

Mr. Treloar, of Ludgate Hill, has kindly sent one of his guinea carpets as a prize, and the winner will find that he has secured a beautiful and valuable, as well as useful article, which will please his "better half" mightily.

Messrs. Gillett, 40, Fetter-lane, send one of their solid cane fly rods, two tops, bronzed ferrules, bound cane handle, landing handles, and bag and spear, value 21s. Messrs. Gillett have sold a very large number of these whole cane rods. We frequently use one of their make, and as we have often done before, can with confidence recommend them. They make them of varying build—they throw a fly well, and kill fish quickly.

Mr. H. Booth, 13, Chariot-street, Hull, who was present at the Tournament, kindly accepted our hint, and instead of a fly rod sends us two of his capital "cheap roach rods," which—as a *cheap* road—we have often spoken well of; he has sold an immense number of them. Mr. B. has recently, he tells us, brought out an improved end ring for the top joint, and Mr. Slater, of Newark, a thoroughly practical angler, says it is a really good idea. We have not seen it, but understand it entirely prevents the line catching round the top ring.

Mr. T. L. Andrews, of High-street, Uppingham, sent one of his capital split cane rods as a prize for the angler making the longest cast with it, and a reference to the list of competitions will say more for it than anything we can. Mr. Malloch, of Perth, won it with a cast of nearly thirty yards, and both Mr. Marston and Mr. Thomas made much longer casts with it than with their own hardwood rods of the same length. It is very nicely made, extremely moderate in price, and well worth the notice of all who use split cane rods. It has patent lock-fast ferrules.

Mr. W. Clarke, of 23, Devonshire-square, when renewing his subscription to the Gazette the other day, very kindly added 10s. 6d. as a prize for the Tournament.

Mr. W. T. Maddock, Pharmaceutical Chemist, of Pulborough, Essex, says:—"I have great pleasure in sending you as prizes a set of breakfast cruets, a one-dozen case of old English lavender water, and a postal weighing machine which will serve also to weigh the fish caught." We feel sure that Mr. Maddock is an angler—at any rate, he deserves our hearty thanks for this generous contribution. His Old English lavender water has been used in several households we know for some time past, and the unanimous verdict is that it is the best in the market. We have also found his "anti-midge" preparation most valuable in preventing midge and gnat bites, or in allaying the irritation. It is quite pleasant to use.

Messrs. Baxter and Co., Waterproof Goods Makers, of 192, St. John-street-road, promise us some prizes, which we shall notice when they arrive.

Our Correspondent, Mr. W. Murdoch, of Aberdeen, who has given us such interesting articles on Aberdeenshire rivers and flies, kindly asks us to put him down for half-a-guinea towards the prizes.

Mr. J. W. Martin, the "Trent Otter," sends us a couple of his rods—an 11ft. stiff roach rod, and a 12ft. jack or Nottingham spinning rod, value 7s. 6d. each. We have seen several letters from anglers who speak very highly of rods they have bought of Mr. Martin, who spares no pains to meet the requirements of his customers. We were glad to see Mr. Martin at the Tournament. The rods look very useful ones: made for plenty of hard work, and not for show.

Our old friend, Mr. Warner, of the Welsh Harp, has very kindly again given a two guinea season, and three guineas-worth of day tickets as prizes. These are always greatly appreciated. There have been some wonderful takes of heavy bream and carp at the Harp lately—carp up to 9lb. and 10lb., and bream over 3lb. The water being very low now, there is more chance of getting at the fish in this fine sheet of water. Hundreds of day-long pegged-down matches have been fished with much less result in the shape of fish than in the two hours' match last Saturday.

The Gresham Angling Society kindly contribute a guinea towards the prize list. These cash prizes are most acceptable, and enables us to get those cups which are so much valued by the winners.

Mr. David Slater, of 8 and 9, Portland-street, Newark, who, we were glad to see, was again present at the Tournament, sends us a best Nottingham rod, a patent 4in. combination reel, and 80 yards of silk line, value 20s. He is a practical angler, and says, "I consider this the best outfit to be had for bottom fishing, spinning, or minnow fishing for trout. I make them lighter or stronger the same price. I also send a greenheart fly-rod, value 10s. 6d. They can be had from 8 to 12ft. either two, three, or four joints at the same price, made any action, in partition bag. I have sold over 250 of these rods since May last year. To this prize I add 30 yards of my best braided waterproof silk line, at one penny per yard." Fancy a 12-foot greenheart fly-rod for 10s. 6d.! And Mr. Slater guarantees the wood to be well seasoned. As far as we can judge without actually using it, the rod sent is in every way excellent, and Mr. Slater deserves encouragement for putting such a good article within the reach of all. We hear nothing but praise of his "Combination" Nottingham winch, the price of which has been greatly reduced since it was first patented.

Our old contributor, Mr. J. Paul Taylor, says: "If you consider so trifling a thing of any use I shall be glad to give a copy of my book, "Dot's Diary," price 3s. 6d., as a prize in the Tournament." Many thanks, Mr. T. Your book will undoubtedly delight some juvenile piscators.

Mr. Henry Richardson, of 77, Finsbury-pavement, who has recently commenced business in the fishing-tackle line, asks us to accept a 12s. 6d. telescopic gaff as a prize. Mr. Richardson's place is close to the club-room of the Bona Fide Anglers, and we feel sure some of the members will find it convenient to give him a call, as well as anglers generally who may be in the neighbourhood. We intend to do so when next we are that way. Anglers are increasing to such an extent that there is plenty of room for more fishing-tackle makers, and we wish the sign of "Ye Plucky Perch" success.

Messrs. Hardy Brothers, of Fenkle-street, Alnwick, write that they have much pleasure in giving as prizes one of their new pattern "Carry all" creels, the size to be chosen by the winner. This is the best creel of the kind in the market, and if we are not mistaken, Messrs. Hardy brought it out in answer to several inquiries which appeared in the Gazette for a creel in which fish, tackle, lunch, &c., could be conveniently carried without getting mixed up. The hole for passing the fish through is at the side, much more convenient to get at, and it is fitted up with knapsack arrangement of straps, with straps at back for a light waterproof. The lid forms a separate compartment for the tackle book, lunch, &c. It has been improved since we noticed it at the Fisheries, and now leaves nothing to be desired. Messrs. Hardy are thorough practical anglers, and Mr. J. J. Hardy the other day got a creel of trout in the Alne, twenty-eight fish weighing 17lb., with Hardy's No. 1 Halcyon Spinner—the best dish of trout taken in the Alne for many a day, and speaking volumes for the bait used.

Miss Campbell, of 2, Cecil-terrace, Maynard-road, Walthamstow, Essex, sends a card of different kinds of baits, value about 25s.; also a great curiosity, which will indeed be a prize—viz., a very little dog about 4in. long and perfect in form, mounted in a case; it lived three months. The baits on the cards are all extremely well made, and consist of various kinds of fish with the new automatic sole-skin fins, frogs, chub flies, &c. We notice these cards in most of the best tackle shops, and are glad to hear that they are having a large sale. The automatic bait should be fished in the way we described when noticing them recently. The little dog will certainly be greatly appreciated; as a curiosity in natural history it is worth some pounds.

Messrs. D. and W. Foster, naturalist anglers and tackle makers, Ashbourne, write: "We will send 100 yards of salmon line, value £1, as a prize." Messrs. Foster have recently vastly improved on their "Acme" line. We used one last week on the Darenth, and were delighted with it, a tapered 40 yard line. They have entirely got rid of the roughness of the old line, and by using plated wire there is no danger of the silk being affected. They will send a sample of this line post-free to any address, and we recommend anglers to write for it.

Messrs. S. **Allcock** and Co., of Redditch, send as prizes one of their new patent standard fly books, value 15s., and two fishing straps made from Col. Mawson's design, value 3s. 6d. each. The fly book is arranged to hold floating flies so that they cannot possibly get crushed; each page has a raised rim—it is an excellent idea. The fishing straps are made from the design of Col. Mawson, of the Manchester Anglers' Association, and enable the angler to carry a heavy creel comfortably, and without strain on the lungs, as is the case with the ordinary strap.

Mr. **Reuben Heaton**, of Hospital-street, Birmingham, sends one of his patent reels, value 34s., and a spring balance up to 40lb., in case, value 10s. We have once or twice spoken most highly of Mr. Heaton's new silent check strike-from-the-winch reels. It is a delight to fish with it, and a practical angler needs only to see it to appreciate it. We struck a 2lb. trout off it the other day (using Messrs. Foster's new "Acme" line), which at once rushed off with between 30 and 40 yards. With an ordinary check the very fine gut would have been smashed. The balance is beautifully made, and most useful.

Messrs. J. **Bernard** and **Son**, of 5, Church-place, Piccadilly, write: "We shall have much pleasure in giving one of our 10ft. brazed greenheart fly rods as a prize for the Tournament." We know many first-class salmon and trout anglers who never think of using any but Messrs. Bernard's goods, and shall have pleasure in noticing the rod when it comes.

Mr. **James Macnee**, of Bohally, Pitlochry, N.B., writes: "Enclosed please find three dozen of my pike scale flies as a prize for the Tournament. We ought to get one up in Scotland." The selection Mr. Nacnee sends is an excellent one, and our high opinion of his flies—from practical results—is well known.

Mr. **Wm. Hodgson**, of Stable-yard, Saltaire, Yorks, sends us one of his steel collapsing landing net rings as a prize, value 7s. 6d. Mr. H. is a mechanic, and his ring is a most excellent one. We bought one early in the year, and for trout fishing have used nothing else ever since. It would be worth the while of some large wholesale firm to come to an arrangement with Mr. Hodgson. The joint is extremely strong and simple. We have had our ring nickel-plated, which prevents rust. Many anglers we have met when out fishing have admired this ring.

Mr. **Bigg**, of Russell-street, Covent-garden, sends us a very excellent cane punt rod as a prize.

If we have omitted to notice any article sent us it is quite unintentional on our part, and we will gladly do so in a future number. We beg to thank all those who have so generously contributed most heartily, both in the name of the Anglers' Benevolent Society and on our own part, and we feel sure the fortunate winners of these prizes will do the same. It is, of course, impossible to do justice to all the articles sent—it would occupy whole numbers of the GAZETTE; but we feel sure it will be recognised that we have done as much as was possible. It has been pointed out that the value of the prizes given is out of proportion to the actual cash results to the Anglers' Benevolent Society. Granted; but it must be remembered that nearly, if not quite, all the prizes—except, perhaps, the money prizes—are given to us in return for the offer of a notice of them in this paper. The weather has again prevented a good return from gate money; but we maintain that though these Tournaments have given an immense amount of publicity to the Anglers' Benevolent Society for the last four years—publicity which it could not otherwise have got—our primary object in instituting these Tournaments was to bring anglers from different parts of the country together to obtain an exhibition of the different styles of casting, and it is agreed on all sides that they have been not only most interesting but most useful, and we sincerely thank all those who have so heartily cooperated in work which, though a labour of love, has by no manner of means been a light one.

## AN AMATEUR ANGLER'S DAY IN DOVE DALE.

We have much pleasure in giving our readers the following extract from a private letter received from the "Izaak Walton" Hotel the other day:—

" . . . But I am here to *angle*, not to write letters about business. Though old in years, I am a young, and, therefore, most enthusiastic disciple of "Old Izaak" ('*The* Izaak,' as they call this hotel). You will have a faint idea of my enthusiasm when I tell you that I started this morning in a steady downpour, at a little after eight, to commence operations on the trout and the grayling of the Dove. I started equipped in the best style possible; I had walked five miles yesterday to Ashbourne to buy me a mackintosh. I had a flybook that Izaak himself would have envied. Every blessed fly that ever flew over the waters of the Dove is represented in that book. I have a rod of the newest patent, and a crack reel, with patent self-acting machinery inside of it. I have a line so strong that nothing can break it, and yet so light and pliant that it is supposed to fall upon the water like the gentle zephyr. I have a landing net strong enough to land a 30lb. salmon, and yet so light as to add no perceptible weight to my equipment.

"Thus equipped I started, commencing operations at the lower end of my three miles of water—the southern entrance of the Dale. I had received verbal advice as to my method of procedure from one of the most deadly slayers of trout of modern days. I was told to fish with a *dry fly*, and with a dry fly I commenced. First, however, I examined the water with a critical eye, to see what sort of a fly the fish were taking; but after long and patient watching I could discover neither fish nor fly, so I selected as a leader a blackish fly, with white wings, called, I believe, 'The Coachman,' then two others, a dun and a brown, whose names I forget.

"Before I had thrown a dozen times, a man in brown velveteens turned up, and asked for my license; having satisfied him, and rewarded him besides with a shilling, for his kindness in demanding my passport to the Dove, he asked to see my flies. He pronounced them splendid—deadly; with such flies I may be sure of getting back to the 'Izaak' with a fine dish for dinner. Thus encouraged I started afresh, and not forgetting the injunction of my piscatorial Cromwell to keep my flies dry—wet fly fishing being exploded—I began to thrash the Dove. How to keep your flies dry in a torrent of rain, and whilst throwing on the water, was a problem which puzzled me a good deal. The way to do it, I was told, was to swing the line backwards and forwards constantly, and then to drop your fly gently on the top of the water, and let him sail quietly down, looking as like nature as possible. Bearing these instructions in mind, I swung away splendidly, and got over a mile of water in ten minutes, but not a rise could I get, not a fish could I see. By this time I thought it as well just to examine my flies to see if I had kept them *dry* or not. To my surprise, when I drew the line up pretty close to my eyes, which are by no means what they were, not a fly was there to be seen. I suppose I must have swung them all off! I resolved to be more circumspect in future, and after half an hour, in the still pouring rain, spent in adjusting a new and splendid cast of flies, I threw again; but unluckily I had not considered the spreading branches of an oak behind me—my leader was firmly fixed in a lofty bough. There was nothing for it but to tug away, and chance it. I had found, by previous experience, that sometimes the boughs gave way—sometimes the flies. Alas! In this case my new cast was left floating to the breeze on the top of the oak, and I had to set to work once more, under the oak's friendly shelter, to construct a new cast. This feat being accomplished in course of time, again I set to work. It was now twelve o'clock. I had been at work more than three hours already without so much as a single bite or rise to afford me the slightest encouragement, and yet I believe I had done everything that an angler could do to insure success. I had been told to keep my eyes steadily on the flies when I threw them into the water so as to strike in about the sixtieth part of a second after the fish had given the slightest indication of a desire to swallow my fly, but I never once saw such an inclination on the part of any fish; in fact, I cannot honestly say that I *did* keep my eyes on my flies, for, although I tried my best, no sooner had I consigned the flies to the water than they disappeared from my ken altogether, so that whether or not any little fish ever came up to look at them I am quite unable to say. Now, if you will believe me, on my first throw with my new cast my attention was distracted by a beautifully-plumaged bird, a king-fisher, I believe, which flew up the stream, and whilst following this charming specimen of the feathered tribe, instead of watching my flies I felt a tremendous tug at my line. 'Here you are at last,' thought I, 'perseverance is being rewarded—I at one end of the line and a vigorous trout at the other. That young fellow at 'The Izaak' boasted to me this morning that, with his young bride to help him, he had *hooked* two tremendous big ones (which, however, somehow managed to 'hook it' from him) will no longer be able to crow over me. This, and many another exciting thought, rushed through my brain, at this supreme moment. Here I am with my trout fast enough; but how am I to get him out is now the problem which exercises me. I am quite aware that the landing net is the proper thing, but how am I to get it around him? How can I manage my rod, my line, and my fish with one hand, and pass my net under the fish with the other, and at the same time prevent myself from tumbling down a steep bank into a deep hole? This was a puzzle. I had been told, and I well remembered it, always to keep the point of my rod *up* when landing a fish, but how the deuce could I do all these things at once? How could I wind up, let out, play my fish, keep the rod up, have the net ready, protect myself from slipping down the bank, the rain coming down worse than ever? How could one pair of hands attend to all these things? Alas! I found myself sliding; down went the point of my rod, and when I lifted it again the line was no longer taut—my fish had broken his hold, and I was left disconsolate. If this were not an isolated fact I should have been inclined to argue from it that, instead of keeping your eyes *on* the fly, it is better to keep them off it. The fish evidently has his eye on you and the fly, and the moment your eye is off, dash he goes at your fly! I am sorry I have only this one fact to support my new theory; whilst against it I am bound to adduce the, perhaps, condemnatory facts that I tested my theory by subsequently perseveringly keeping my eyes off my flies; but I am sorry to say the trout of to-day would not be done by that deep ruse. I think I shall write to the FISHING GAZETTE for some discussion or confirmation as to this new theory of mine. I should not have been a true disciple of Izaak had I given in. Hitherto I had fished and walked rapidly; now I decided to confine myself to one spot and fish that thoroughly. Away across the stream I saw a trout on the look-out; the water was clear, and he was the first I had really seen *on the feed.* Now, thought I, for a battle royal. All the arts I have ever been taught and all the native skill I possess shall be brought to bear upon that trout. First, I will throw a yard or two above him and let the bait flow gently down into his mouth, as it were. I threw, but somehow my three flies had got mixed up, and instead of reaching him, they fell in a heap far short of him. It took me nearly half an hour to disentangle those precious flies—the way they have of hooking on to each other, of catching hold of a knot, of doubling up on themselves, and when at last fairly disentangled, of getting hold of your hat, or your arms, or your trowsers is something really wonderful; but using my most powerful glasses, I did at last succeed in fairly straightening them out, and got another throw at at my friendly trout, who was still there waiting for me. This time I did get above him, and it was really curious to see how he turned up his eye, winked at it, in fact, wagged his tail, and allowed my tempting flies to pass on. I had been advised that it is an excellent plan sometimes, when the occasion serves, to cast your fly over to the opposite bank, and then humour it gently and innocently down off the bank, so that it may fall just like a natural fly softly on the water within a foot or two of your trout's nose—that is certain death; the wisest and most cautious old trout that ever was has been caught by such a stratagem as that. Well, here the occasion did serve admirably. My trout was just a yard from a gently sloping bank, and all I had to do was to follow the above given advice. I threw accordingly, and with my usual luck caught fast in a sturdy thistle! I did not wish to risk another cast by having a fight with the thistle and be worsted as I had been by the oak, so I took a quarter of a mile walk to some stepping stones, and when I got up to my thistle, I was not a little chagrined to find that he had already let go my fly, which was quietly dangling down the water waiting my return.

"I am sorry to say that I could do nothing to allure that sarcastic trout, though I persevered still for many anxious minutes. For the present, however, I have given him up, though I hope on another occasion to have a try at him again. I must now give up. I have had from five to six hours of angling in a pelting, continuous storm of rain, and I begin to think myself a worthy disciple of the great master, especially as my courage is not a whit abated; but the inner man craves for what is not here. So absorbed have I been in my occupation for the last five hours, that it only now strikes me that Nature and I are here alone together in the midst of her most lovely scenery, with only two water wagtails to keep us company. Here I could remain for hours were it not for that inward monitor already mentioned. So now I have reached 'The Izaak.' Luncheon waiting me for hours. I could not touch it. My feet as wet and sloppy as water could make them, my new felt hat spoilt, myself shivering with cold, and with a feeling of collapse and congestion which entirely prevents my eating or doing anything but write these incoherent lines to you, and I daresay you will long since have considered me crazy, and thrown the sheets unread into the fire; but what can one do? It is all very well for poets to talk about 'taking one's ease at one's inn;' but it is not so easy a thing to feel comfortable even there, when the rain is pouring and everything is so depressing, from the draggled hens and geese outside to the grumbling of our better halves inside for bringing them to such a place and calling it a *holiday*."

[We shall be at the Izaak Walton in a day or so, and perhaps be able to give "Amateur Angler" a few practical hints; in any case, we hope our venerable correspondent will continue his graphic notes.—Ed.]

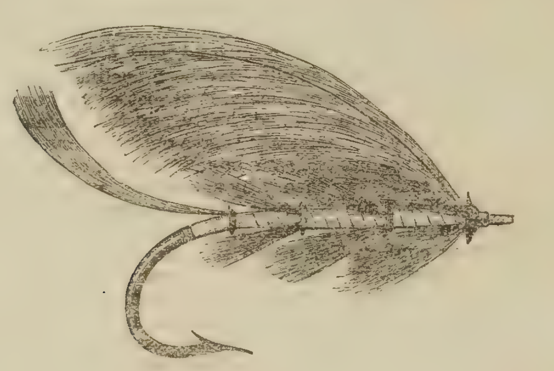
## ON THE DESCRIPTION OF SALMON FLIES.

By Mr. Geo. M. Kelson.

### Major Traherne's Patterns *(Continued).*

### No. 8.—The "Emerald Gem."

From the earliest to the latest records in fly dressing I believe there has been no stress laid upon the importance of underwork. I venture to assert that it is impossible to make the body correctly tapered, neither is it likely the wings will "arch" properly if we have to steer over bead-like lumps in the silk caused by unnecessary knobs,—ridges, produced by winding over preceding turns of silk, or rutty points occasioned by the incorrect management of the treble before it is bound on the hook. There need be no knots whatever in fixing the gut, and the half-hitch in completion can be levelled by the one touch of varnish as previously directed. Renew the silk for fastening the tag, and unwind or divest the twist of the silver or gold, thereby exposing the internal part of it, which is to be evenly and closely bound over as you work towards the barb of the hook: the twist, then, has a smooth space to cover in its finishing return over the well-waxed tying silk. If floss silk follows the twist which is generally directed, the first coil of the tag should be immediately above the point of the barb, depriving it of its silver at the other end; the same care being taken with the tying silk, as in the former instance, in preparing the way for the floss to have a uniform surface to encircle to the tail. If all the tag is twist, as with "Sylvia," "Col. Rocke," "Kingfisher," &c., it should not extend so far on the hook, but started at such place supposing you took an upright line midway between the root of the barb and the point of the hook; too much tag on the bend causes rudder-action in some streams, and the fly wobbles. When you have cut off the required length of floss, suspend it from the thumb and forefinger of the left hand to get any curl out with the same fingers of the right hand, by manipulation at the other extremity; stretch and flatten it, but in so doing be careful that the hands are clean, especially the thumb and finger, when they are drawn down the shreds afterwards to smooth it. Wind it closer as you progress to insure a gentle taper to the tail, continuing the smoothing process with each turn, and fix it under the bare hook up to the gut, where another half-hitch can be made and touched with varnish; this, in a minute or two, will be nearly dry, then level it with the stiletto. If silver or gold twist, ribs the tag, either of them can be made secure with the floss under the hook, also to meet the gut, stripping it again under the tying silk.



Before continuing with the tail of topping, toucan, summer duck, ibis, or whatnot, I may remind the pupil of the importance of protecting his feathers against insects and moths. Mr. Rollason's cabinet is adequately suited, not only to preserve these valuables, but because the whole of it can be packed or unpacked in a minute. I have tried no end of dodges, but have never found anything else so convenient and complete as one of these boxes, which for some years I have had in use. All amateurs should be provided with a bottle of naphthaline crystal. Sir John Lubbock writes: "It is the best antidote, I believe, and this opinion is kindly endorsed by the authorities at the British Museum." The ingredient can be purchased of Mr. Thomas, chemist, 103, Talbot-road, W. I have tried other preventives, but find this the most pungent; some in a diminutive pillbox with pinholes in the lid, is a convenient way of distributing its odour, which is neither redolent nor offensive. As evaporation takes place the pillboxes will require replenishing; but where moths or insects actually exist benzoline should be employed.

The Emerald Gem which I have the pleasure of describing this week is made as follows:—

Tag: Gold twist and purple silk (same shade as throat of chatterer).
Tail: Topping.
Butt: Black herl.
Body: Of gold tinsel in three equal sections, butted with black herl.
Hackle: Green macaw at the termination of each division.
Wings: Golden toppings.
Horns: Blue macaw.
Head: Black herl.

We have in this "Gem" an unusual effect; there is a deal of show for very little work. The iridescent hues in the hackles are heightened in bright water, and although in coloured water they are entirely extinguished, their other qualities are rendered more effective.

Painters—at least, some of them, with all their fame in the restless track of their wanderings, with all their talent, their growing wealth, their adoration of their art—are liable to be misled by friendly or perhaps biased criticism: they can blend with their colours, "touch up," and more or less imitate Nature's most beautiful tints to the satisfaction of those customers for whom they angle. But we—we who incite that which to us is more precious perhaps than the eloquence of speech— are only guided by the compensative instinct or information occasionally conferred by the shy recognition, the downright refusal, or the honoured reception by well-educated and "bona-fide judges," "customers" in *their* element ten times more difficult to please.

Fly-dressers as well as anglers have, perhaps, little idea how they must encounter misfortune, or of the time they must spend before attaining the golden fruit of knowledge; the recompense, though tardy, may be eventually secured by forging hard in the flame of adversity the power of endurance to wrestle with the waters of disappointment—those debatable fords through which they reach the shores of wisdom.

My readers have not looked in vain for variety and frequent contrast in these magnificent patterns—in these inimitable specimens of inventive ingenuity; indeed, if I may candidly express my opinion, an artist more fertile in device it would be hard to find.

I shall be happy to notify in next week's issue the address of any firm who keeps a stock of these flies.

## THE FRIENDLY ANGLERS' SOCIETY'S SUMMER DINNER.

It has been the custom of this venerable Society for some years to hold its summer dinner at the New Inn, Eton, Windsor, on the last Saturday in July, and accordingly on Saturday last this annual event took place under the most favourable auspices.

Mr. George Gillatt occupied the chair, and Mr. T. Allard the vice-chair. Amongst a company numbering about fifty, there were present Messrs. T. R. Sachs, T. Gillatt, C. M. Le Good, C. H. Woodall, Thomas Cliff, H. Mitchell, W. H. Brougham, J. P. Wheeldon, W. Taylor, G. Newsom, G. Batson, W. Dawson, F. Berry, T. Barwell, L. Brown, J. Page, F. Hoblyn, R. Hoblyn, G. Giffard, W. Hodgkinson, F. Craggs, and A. Hunt.

The dinner, placed upon the table by Mrs. Goddard, who is her own *chef*, was the perfection of good English cookery.

The first toast was "The Queen, the Prince and Princess of Wales, and the rest of the Royal Family," and in proposing it, the Chairman remarked Her Majesty was the most constitutional monarch in Europe, and that as a wife, a mother, and a grandmother, her life had been a very long and useful one.

The Chairman then gave "The Continued Prosperity of the Friendly Anglers," observing the Society was now in its forty-fourth year, and was never in a more successful position. It had plenty of funds; it had its full number of members, and plenty waiting to fill up vacancies; the shows of fish were good, as no fewer than twelve large Thames trout had been weighed in, one member alone having three scaling respectively 13lb., 10lb., and 7lb. The same friendly spirit was maintained at the meetings, and the value of its museum was shown in the fact it had secured the highest honours at the International Fisheries Exhibition last year. The toast was drank with great enthusiasm.

The Chairman, in giving "The Press," said he should associate the names of Mr. W. H. Brougham and Mr. J. P. Wheeldon with it, as they were both highly respected by every member of the club, and in reference to Mr. Brougham, in addition to his connection with the press, they all knew how he had worked for a quarter of a century for the preservation of old Father Thames, and what the Thames Angling Preservation Society had done, and was doing now. After highly commending the literary labours of Mr. J. P. Wheeldon on angling subjects, the toast was most cordially drank.

Mr. W. H. Brougham and Mr. J. P. Wheeldon replied.

Mr. F. Hoblyn gave "The Visitors," observing that no convivial meeting was perfect without visitors, and he thought on that occasion they could go away with a good opinion of the Society.

Dr. Panck, in a humorous speech, replied, and expressed a hope that he would become a member—not that he desired any of the members any harm, but he was looking forward to entering the ranks of the club as soon as a vacancy occurred.

The Vice-Chairman proposed "The Officers of the Society," coupling with it the names of Mr. C. H. Woodall (treasurer) and Mr. C. M. Le Good (hon. sec.), both of whom briefly returned thanks.

Mr. Woodall, in complimentary terms, gave "The Chairman and Vice-Chairman," which was replied to by Mr. G. Gillatt and Mr. T. Allard.

The Vice-Chairman gave the last toast, "The Respected Hostess," and said all present were more than satisfied with her ample board. Mrs. Goddard was called into the room, amidst great applause, and when informed by the Chairman of her health having been drank, she heartily thanked them.

There was some capital singing. Mr. T. Cliff gave "Ring the Bell, Watchman," the chorus having glass accompaniments. Mr. T. R. Sachs sang "Baron von Big." Messrs. T. Allard, Brewer, Berry, Wheeldon, and C. M. Le Good also gave some excellent songs.

## THE NATIONAL FISH CULTURE ASSOCIATION.

### THE ANNUAL AND SPECIAL MEETINGS.

The First Annual General Meeting of the members of the National Fish Culture Association was held on Friday afternoon, the 25th ult., at the Offices of the Association, Exhibition Grounds, South Kensington, and there was a large and highly representative attendance. The Marquis of Exeter was in the chair, and his lordship was supported by the Earl of Romney, Lord Abinger, Edward Birkbeck, Esq., M.P. (the deputy chairman), T. J. Mann, Esq., A. Jardine, Esq., W. Senior, Esq., T. Andrews, Esq., H. Ffennell, Esq., S. B. Sharpe, Esq., the Rev. J. J. Manley, E. Jex, Esq., O. J. Carrington, Esq., J. Schrieber, Esq., — Stollard, Esq., the Rev. Mr. Steward, R. Barclay, Esq., and W. Oldham Chambers, Esq., F.L.S., the secretary. The annual meeting was preceded by the holding of a special general meeting, for the purpose of considering and adopting a number of revised rules which a special committee of the Council had been appointed to draw up.

At this, Mr. E. Birkbeck, M.P., said he had formally to bring this matter before the meeting, which had met for the purpose of taking into consideration certain alterations which had been made by a Committee of the Council. In many cases, it was found by experience that some of the rules did not work well, and it was decided that an alteration must take place. A Sub-Committee was appointed, and several meetings were held, and the result was now presented to the meeting. He might remark that these rules were unanimously adopted by the Council, and it was now asked that the general meeting should adopt them. It was believed the alterations would aid the work of the Association, and he would therefore conclude by formally moving that the rules should be adopted.

Mr. T. J. Mann seconded the motion, and remarked that the new rules before the meeting were the result of careful consideration and long discussion, and there was not the slightest doubt that they would work for the good of the Association.

After a brief discussion the motion was unanimously carried.

The annual general meeting was then proceeded with. Mr. Oldham Chambers, as secretary, read the notice convening the meeting and the minutes of the adjourned annual general meeting, and then proceeded to read the report of the Council. This was of an important and interesting character. It dealt with the foundation of the Association and of its early history, and recorded the fact of the commencement of actual work by the arrangements which were entered into with the Executive of the Health Exhibition, by which the management of the aquarium in the grounds of the Exhibition at South Kensington was transferred to the Association. The Council could not help feeling that they should specially congratulate the members upon the transfer of the management of the Aquarium, with all the tanks, cisterns, and marine and freshwater services into their hands, as they are now enabled to carry out practical operations and experiments in fish culture. (Hear, hear.) A department devoted to Fish Culture had also been established. The report proceeded:—"In order to increase the interest of the public in the proceedings of the Association in the various ways enumerated above, the Council have caused a popular work on British Fishes and a handbook of the aquarium to be issued, giving a detailed account of the fish exhibited in the tanks of the Fish Culture Department and of the Loan Exhibits, together with articles of interest in the science of Pisciculture generally. Arrangements have also been made for the periodical publication of a journal, which will contain reports of all matters of interest in relation to the operations at South Kensington. It is the intention of the Council to institute conferences and to invite papers and discussions upon subjects akin to Fish Culture. Notice of these conferences will be given from time to time to the members of the Association. It is under the consideration of your Council, during the year, to make arrangements to have constructed, within a convenient distance of London, a series of fish-ponds, and to develop an establishment upon the most approved principles for the Culture of Salmonidæ and river fishes generally. The members of the Association will then have the opportunity presented to them of purchasing fry at a reduced rate, and other facilities will be offered for the stocking of public and private waters. The Council, in concluding what they feel must be a satisfactory report, would urge upon the members of the Association the necessity for thorough support, and would venture to remark that, considering the valuable work which has been taken in hand, and the absolute necessity of increased co-operation in its promulgation, the number of members of the Association is most inadequate; every possible effort should be made in this direction, and the Council would press upon the members the advantage of individual exertion. So important a subject as that which is contained in the simple words 'Fish Culture,' should not, in these enlightened nineteenth century days, escape notice; and certainly such an Institution as the National Fish Culture Association, founded with such excellent objects, ought not—your Council venture to consider—fail in its object for want of members. It is the earnest belief of your Council that the mere fact of the existence of the Association has but to become known for it to become a very substantial and beneficent Institution." (Cheers.)

The report was signed by Lord Exeter as President of the Association.

The noble Chairman, in rising to move the adoption of the report, was received with cheers. His Lordship said: My Lords and Gentlemen,—In moving the adoption of the report, I am sure you will not wish me to detain you at any length; but I believe it is the wish of some, at least, of those present that a little should be said by me upon this motion in reference to matters connected with the Association. (Hear, hear.) It is not necessary for me to refer at length to the great progress which has been made in fish culture in recent years in breeding, and in inventions and improvements of apparatus, from the time of Jacobi in 1763, who made use of wooden boxes with wickerwork ends and sand, in which to lay the ova; or of the Spanish naturalist who, I believe, first discovered that ova could be compressed from the female fish and artificially fecundated by using the milt of the male, up to the present time. Most of us in this room are aware of all this; but I may be permitted to refer to the great and rapidly increasing interest taken in everything connected with the natural history of fish; with fish hatching; fish breeding; their habits and haunts; their food; and, in point of fact, with fishing in all its branches, from fly-fishing down to the often destructive net. (Hear, hear, and cheers.) All these, however, in their way, are sources of instruction, interest, and amusement; but the remarkable success with which the Norwich Fisheries Exhibition in the first instance, and the still greater Exhibition of last year in these grounds met with, set thinking men and naturalists to try to obtain some permanent good out of the interests which were raised by these exhibitions. This, perhaps, has been mainly the cause of the foundation of the National Fish Culture, almost, as you know, a unique Society, and one which, we trust, when it becomes more widely known, will rise into greater importance and prominence, and be of real use to the country. (Cheers.) America, Canada, Australia, France, Germany, all have in some shape or another their societies or associations for the development of fish culture and fisheries; all, more or less, under the supervision or protection of their respective governments; and I think we have a right to hope that, sooner or later, we shall be officially recognised, and that Government will see the advantage of encouraging fish culture, and will lend that aid which other Governments have lent to associations of this kind. (Cheers.) The great success which, from the first, the National Fish Culture Association has met with, is proof of how it is appreciated as supplying a want which has long been felt. All we want now in addition, of course, to the ordinary sinews of war, is that the existence of this society should be made more widely known, and, if such were the case, I believe that a very large number of persons in the kingdom, and every angler who loves his art, as well as all those interested in the culture and preservation of fish, would join, or would lend their aid in one way or another to promote the welfare of this Association. (Cheers.) Of course, it is very necessary that the income of the Association should be increased largely, in order that the objects we have in view may be carried out. It is of the utmost importance that funds should be forthcoming, and I hope, therefore, that our members will do their best to persuade their friends to join us. The annual subscription of a guinea has been put purposely as low as possible, so as not to be the least burden upon members, and I do hope that the next year, and the results of this meeting, will bring about a large increase in the number of members. I may say, for the information of the public, that we are desirous, as is mentioned in the report, of extending our operations to the establishment of rearing ponds, and hatching and fish breeding apparatus in the country. All this, of course, will require money, time, and organisation, but there is no reason, I think, why the Association should not eventually succeed in its objects. The report our excellent secretary has read is, I hope, and feel confident, a satisfactory one, and I am sure you will join with me in congratulating Mr. Chambers, the manager, and our staff upon the very efficient manner in which they have carried out the orders and wishes of the Council as regards the aquarium in this part of the Exhibition. (Hear, hear.) That aquarium, as most gentlemen here are probably aware, has been handed over to us by the executive of the Healtheries, and I think we ought to thank them for the great assistance they have rendered the Association by allowing us a percentage out of the takings at the doors. (Hear, hear). I shall ask you by-and-by to pass a vote of thanks in relation to this matter. Before I sit down, I would suggest that experiments should be made to find out the exact state of the water in the aquarium as regards hardness or softness and temperature, in order to ascertain which is the best suited for different kinds of fish. (Hear, hear). Well, gentlemen, I believe I have dealt with all matters of interest in the report, and so I will conclude by moving formally the adoption of the report.

Mr. E. Birkbeck, M.P., who was received with cheers, said: My lords and gentlemen,—In seconding the motion, I will only express my conviction that every member of the Association must entirely approve of the work that the Council has carried out throughout the past year, and I refer especially to the portion of the report which alludes to the arrangements with the Fisheries and Health Exhibitions' Executive Councils. I can assure any gentleman present who has any doubt in the matter that, being constantly here, I have every opportunity of forming an opinion, and I know that the public are grateful to us for having concluded an arrangement which has enabled this beautiful aquarium to be kept up in the way it has been and is being kept up. (Cheers.) And this fact is so palpably self-evident that I may inform the meeting that I am on the point of bringing the matter before the Executive Council of next year's Exhibition of Inventions, with a view of renewing the arrangement. (Cheers.) And I have reason to believe that at the next Council meeting of that Exhibition a resolution will be passed approving of a contract with this Council as regards the future. I can only add, in conclusion, that perhaps the time of the Council has been very much taken up with reference to the aquarium this year; and also that time has been taken up in the same way of our excellent and energetic secretary, Mr. Oldham Chambers—(cheers)—to admit of time being given to carry out all the objects of the Association; but in the interval between this year's and next year's Exhibitions our time will be freer, our secretary will be freer, and our finances will be in a better position, so that altogether we shall be able to carry out more fully the objects of the Association. (Cheers.) I beg to second the motion for the adoption of the report. (Cheers.)

The motion was then put and carried unanimously.

The report from the special meeting on the alteration of the rules was brought up and adopted.

Lord Abinger said: I have great pleasure in proposing as President and Chairman of this Association for the year the most honourable the Marquis of Exeter; Mr. Edward Birkbeck, M.P., as Deputy Chairman; and Mr. W. Burdett-Coutts as Treasurer. (Cheers.)

The Earl of Romney seconded the motion, which was put and carried unanimously.

Mr. Birkbeck: The next matter to be brought before the meeting is the election of the Council. The number of gentlemen which the rules of the Association allow to serve as members of the Council is 36, and the following are the gentlemen proposed. I beg to propose that they be elected members of the Association:—Chairman, the Most Hon. the Marquis of Exeter; Deputy-Chairman, E. Birkbeck, Esq., M.P.; the Earl of Romney, the Earl of Annesley, Lord Abinger, the Right Hon. Sir W. Hart Dyke, Bart., M.P., Sir P. de Grey Egerton, Bart., Sir John St. Aubyn, Bart., M.P., the Prime Warden of the Fishmongers' Company, the Maclaine of Loch Buy, T. Andrews, Esq., R. Barclay, Esq., C. Bates, Esq., J. Brunton, Esq., M.D., C. L. Buxton, Esq., C. C. Capel, Esq., T. J. Carrington, Esq., J. H. Crossman, Esq.. Lieut.-Col. Custance, H. Ffennell, Esq., Francis Francis, Esq., C. E. Fryer, Esq., P. Geen, Esq., Dr. Günther, F.R.S., Professor Huxley, F.R.S., A. Jardine, Esq., H. Lee, Esq., Rev. J. J. Manley, M.A., T. J. Mann, Esq., R. B. Marston, Esq., O. T. Olsen, Esq., J. L. Sayer, Esq., Col. Seddon, W. Senior, Esq., S. B. Sharpe, Esq., T. Spreckley. Esq., J. Willis Bund, Esq., Lt.-Col. Stuart Wortley.

Mr. Jex seconded the motion, which was unanimously agreed to, and the following gentlemen were elected vice-presidents:—The Duke of Portland, the Duke of Manchester, the Duke of Wellington, the Duke of Sutherland, the Marquis of Ailsa, the Marquis of Hamilton, the Earl of Pembroke, the Earl of Ducie, the Earl of Onslow, the Earl of Eldon, the Earl of Annesley, the Earl of Romney, Lord Suffield, Lord Waveney, Lord Lovat, Lord Abinger, Rt. Hon. Sir W. Hart-Dyke, Bart., M.P., Sir J. Gibson Maitland, Bart., Sir John St. Aubyn, Bart., M.P., Sir Samuel Wilson, the Prime Warden of the Worshipful Company of Fishmongers, E. Birkbeck, Esq., M.P.. W. Burdett-Coutts, Esq., Col. Teesdale, Lieut.-Col. Custance, Major Genl. Goodlake, W. Fuller Maitland, Esq., E. Jex, Esq., Chairman of the London Fish Trade Association, Professor Huxley, F.R.S., &c., Inspector of Fisheries, Archd. Young, Esq., Inspector of Scotch Fisheries, the Inspectors of Irish Fisheries.

The Marquis of Exeter thanked the meeting on behalf of himself and fellow-members of the Council for their election.

Mr. T. J. Mann: I beg to move that our secretary for this year, Mr. Oldham Chambers, be re-elected for the ensuing year. I have seen a good deal of the time he has spent here, and of the good work he has done, and I am sure we cannot do better than re-elect him. (Cheers.)

Mr. S. B. Sharpe: I beg to second the motion, and in doing so I may say I feel sure we might go a very long way before we could get as good a secretary as we have got now in Mr. Oldham Chambers, or one whom we shall so willingly re-elect. (Hear, hear.)

The motion was put and carried unanimously.

Lord Abinger: The affairs of the Association had been so ably and lucidly brought forward in the report, and by our noble chairman's speech, that his lordship has really left nothing that could be said. But I can emphasise a portion of the report by requesting your special attention to this resolution, which is, undoubtedly, one of very great importance, and one, too, which, if we can only see it officially carried out, will very greatly tend to further the efficiency of the Society. I will move:—"That this meeting, believing that the National Fish Culture Association, by its formation, rules, and objects, is best calculated to advance the nationally important questions connected with fish hatching and culture, and the encouragement and development of sea and inland fisheries, is of opinion that more general attention should be drawn to a Society whose work is so valuable and necessary in the interests of the nation." (Cheers.) Lord Abinger, in the course of a few remarks, urged the need of amalgamation with small local societies.

The Rev. Mr. Steward seconded the motion, and in doing so said he must make a suggestion to the Council. As to taking the temperature of the water, &c., he knew of a piece of water near where he lived, in Suffolk, in the vicinity of the Norfolk Broads, where he thought it might possibly be of some assistance to the Association if he were to try and take the temperature of the water, and also to try and get a piece of the water at a small rent, which might be useful as a sort of nursery to turn fish into when they had come out of the breeding places. He should be glad to be of any assistance to the Council, and if they would signify their wishes to him, he should be glad to do all he could in that direction.

Mr. Jardine suggested that there should be a printed list of the names and addresses of the members of the Association. This would be a great benefit to the members themselves, as well as the Executive.

Mr. Jex said he should be very happy to second any proposition of the kind.

The President put the resolution of Lord Abinger's to the meeting, and it was carried amid cheers.

The Earl of Romney proposed a vote of thanks to the Chairman, for the very efficient manner in which he had conducted the affairs of the Association, and for the very great interest he had taken in its work. (Cheers.)

This was seconded and carried unanimously.

The Marquis of Exeter: I am exceedingly obliged to my noble friend for the exceedingly kind way in which he has proposed this vote of thanks. I cannot take to myself all that has been so kindly said,—that I have been the chief worker in carrying out all that has been accomplished by this Association; but I may say with truth that I have been happy to do all I can in this matter. But there are so many other matters which require attention that I must confess I have not been able to give all the time I should have liked to have been able to give to the work of the Association; and Mr. Birkbeck, Mr. Chambers, Mr. Mann, and other gentlemen have worked so very hard that I feel that the credit of any success we have achieved is due to their exertions, and not to my own. Before I sit down I think this is a fitting opportunity to ask you to pass a vote of thanks to Mr. Jex and other gentlemen of the London Fish Trades Association for the great aid they have given this Association in carrying out with efficiency the arrangements of the management of the aquarium by supplying us with fish, and by assisting us in all sorts of ways. We have been so much engaged with the aquarium this year, that we really have not had time to direct our attention to the carrying out of all the objects for which the Association was originally started. I have, therefore, two resolutions to propose before I sit down: one is, that a vote of thanks be passed to the Executive of the Health Exhibition; and the other, that a vote of thanks be passed to Mr. Jex and the London Fish Trades Society for their kindness to the Association in contributing fish for the aquarium. (Cheers.)

The motions were put to the meeting, and carried by acclamation.

Mr. Jex, on behalf of himself and brother members of the Society, thanked the meeting for the votes.

Attention was drawn to the satisfactory state of the tanks at present, and it was generally agreed that everything in that portion of the Exhibition under the management of the Association was in excellent condition. The deaths of a large portion of the young fry was regretted, and it was hoped that the probable cause—the hardness of the water—would be prevented in the future by the application of Maignen's system of rapid filtration.

The proceedings throughout were most unanimous, and terminated with votes of thanks to the secretary and staff.

A TROUT of an unusual size was taken out of the Lion water at Farningham last week. It measured 2ft. in length, and 13½in. in girth, and weighed 6lb. 1oz.—a very fine specimen for the river Darent.

SALMON & TROUT-FISHING.

**A NEW PERFECT FLY AND SPINNING LINE.**

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES ; FREEDOM FROM IRRITATING ENTANGLEMENTS ; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by ? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says :—"I find the Acme more valuable than all others."

Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. Samples, Post Free, to all Applicants.

# RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | |
|---|---|---|
| Add | 30 minutes for | Chelsea. |
| | 40 " | Putney. |
| | 45 " | Hammersmith. |
| | 50 " | Barnes. |
| | 55 " | Kew. |
| | 75 " | Richmond. |
| | 80 " | Twickenham. |
| | 85 " | Teddington. |

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| Thursday, | " | 7 | 2.8 | 2.24 |
| Friday, | " | 8 | 2.41 | 2.59 |

Note.—August 4, Bank Holiday.

## THE LOWER THAMES.

### General Remarks.

Although there is a deficiency of water, the grand old river (G.O.R.) continues to give proof of its stock of fish, and Mr. M. H. Blamey, who has recently gone to reside at Richmond, has just given evidence that when barbel are fished for in that neighbourhood, plenty can be found. He writes as follows : "Fishing on Monday last with Kit Brown, at Richmond, I caught eighty-eight barbel, from 1½lb. to 4lb. each—the total must have been considerably over 160lb., by far the largest take of fish, Brown says, he ever knew taken by one rod in a day. I baited the swim myself the day previous, and was fairly pleased with the sport. I returned thirty-eight fish to the river at the end of the day." If there are such persons as lucky and unlucky anglers, Mr. Blamey is a wonderful good type of the former class. On the 19th of September last, he had a take of 110lb. weight of bream and barbel at Shepperton.

**Richmond.**—Christopher Brown, in addition to the take of Mr. Blamey's, has taken on other days a total of twenty-three barbel, and forty dozen of roach and dace. Henry Wheeler, in seven days, 140lb. of roach and dace, and a couple of barbel. Henry Mansell, in five days, eighty dozen of roach and dace, and nine barbel. Job Brain, during the week, 114lb. of roach and dace, fourteen barbel, and two chub. Henry Howard, in five days, fifty-six dozen of roach and dace, and twenty-one barbel.

**Twickenham.**—Samuel Cole, during the week, fifty-nine dozen of roach and dace, seven barbel, and seven perch. John Coxen, jun., in one day, six dozen of roach and dace. Madame Sarah Bernhardt, in one day, with John Coxen, sen., five barbel and three dozen of dace. Mr. Walker, in three days, with William Spong, 34lb. weight of roach and dace, and one barbel. Edward Finch, in five days, 80lb. of roach and dace, and six barbel. Charles Hennessey, in one day, eight dozen of roach and dace. Job Dobbin, in six days, thirty-nine dozen of roach and dace, four barbel, and one chub. John Spong, in three days, twenty-six dozen of roach and dace, and four barbel ; Pert Hammerton, in one day, 22lb. of roach and dace, and one barbel ; and in two other days, thirty dozen of roach and dace ; H. Spiers, in one day and three half days, 22½ dozen and five barbel ; George Coxen, in two days, eleven dozen of dace and one barbel ; and C. Miles, in one day, eight dozen of dace.

**Teddington.**—Joseph Baldwin, in two days, sixteen dozen of roach and dace, and five barbel ; John Stevens, in half a day, three dozen of roach and dace ; and Alexander Kemp, during the week, fifteen barbel. The tidal water is now in good condition for angling, and it will be seen that barbel are plentiful at all the fishing stations.

**Kingston.**—John Johnson, sen., writes : "I have been roach-fishing, and have got some fine ones up to 1¼lb. each ; they have been taken from six dozen in the half day to 20lb. in the day. One day I got four barbel and two chub. John Johnson, jun., has been getting a nice lot of fish. Great quantities of fish have been caught at the Surbiton Sewer—there is a great mass of fish there—roach, bream, barbel, and perch, and occasionally a jack. The private boats have done very well, and trailing with the spoon bait, a few good perch and jack have come to grief.

**Hampton Court.**—Thomas Wheeler, during the week, has taken twenty dozen of gudgeon, twenty-two barbel of 2½lb. each, eighteen dozen of roach and dace, and three bream ; Thomas Melbourne, in five days, ten dozen of roach and dace, seventeen dozen of gudgeon, and a barbel of 5lb ; John Smith, in four days, twenty barbel, six chub, and twenty-four dozen of roach and dace.

**Sunbury.**—Messrs. E. Clark and son, in six days, have taken eighty dozen of roach and dace, sixteen dozen of gudgeon, three barbel, twenty-five bream, six brace of perch, and one brace of jack.

**Walton.**—John Hone, one day, six dozen of roach ; another day, four dozen and three bream ; another day, five dozen, and six bream ; and, another day, four dozen. George Hone, in three days, fourteen dozen of roach, and one barbel. S. Rosewell, in two days, fourteen dozen of roach and dace, and seven bream. R. Whatford, in three days, eighteen dozen of roach and dace, two barbel, and a perch of 1½lb.

**Halliford.**—Edward Rosewell, in four hours and a half, seven dozen of roach and dace. E. Rosewell, jun., in one day, four dozen. E. D. Rosewell, in three hours, three dozen, and an odd perch. T. Strudwick, in one day, nine bream, one perch, and some fine roach and dace.

**Shepperton.**—F. Purdue, in two days, eighteen dozen of gudgeon, and one brace of perch. W. House, in one day, a brace of jack, and another day, eight dozen and a half of roach and dace. W. Rogerson, in one day, eighteen dozen of gudgeon, and one brace of perch. H. Poulter, fishing from the bank, has taken a fine trout of 7lb. J. Upsdell, in one day, six dozen of roach and dace, three barbel, and two eels.

**Staines.**—John Keene, in one day at the end of last week, five barbel, one weighing 11lb. 2oz., two others 5lb. each, and two more 3lb. each. E. Keene, in one day, six dozen of roach and dace, the largest roach 1¼lb. John Keene, jun., in one day, five barbel, and one chub ; another day, six barbel, and another day seven chub, the largest 4lb. 6oz., and six dozen of roach and dace.

**Chertsey.**—John Poulter, one day, two bream, two chub, one barbel, and one perch ; another day, 20lb. of barbel and bream ; another day, 40lb. of barbel, the largest 7lb., four eels, three chub ; another day, fifteen barbel, three perch, one chub, and one eel. Mr. Wastell, in one day, 11lb. of roach, and two bream.

## UPPER THAMES.

The river, notwithstanding continuous rain, is very low and bright, and angling in upper reaches of the Thames seems to be of a very indifferent description. Roach and jack seem to be well into the weeds, from whence they decline to be attracted. Perch have been feeding a bit late in the evening, Mr. Detmar getting about two dozen fair ones in the Horley district on one occasion with brandlings for bait. Three good barbel have been had in the Marlow waters by Coster, with a patron, and a 10lb. bag of roach have been taken by a "banker," at Bourne End. I have just interviewed "Father Thames" (Thursday evening), and find him still in a low and sinking condition ; so anglers, river-side bound, have little chance of sport except amid the gudgeon.—Marlow Buzz.

### Datchet.

Slight improvement in the water. There has not been much fishing this week. Mr. Austin, of Datchet, in the Fleet, on the 23rd ult., caught 13 chub, largest 4lb. ; on the 24th ult., one chub, 4lb., with greaves ; Mr. Clark, of Datchet, in the Fleet, three barbel, 8lb., with greaves. A trout was caught trailing, near Victoria Bridge on the 25th ult., 5lb. I notice they have begun to move again. Mr. Parsons, Thames-street, Windsor, tried the barbel on the 30th ult., and caught one, and two broke away—early morning. The dace are biting best at present ; have not tried the barbel this week, keeping them in store for next.—G. Lumsden.

### Dockett Point.

Two days last week, five dozen of fine roach and a few dace ; two chub put back; one perch. Monday, Mr. J. L. Meyers, three barbel, one chub, two dozen of roach over half a pound each, with tail of lob worm. Tuesday, Mr. P. C. Hatfield, 60lb. of bream, one trout 3lb. Wednesday, Mr. P. Geen, eleven bream, three barbel, two chub, and two perch. Plenty of fish to be had with fine tackle.—James Haslett.

### Thames (Goring).

Water in good order for all sorts of fishing, gudgeon and perch biting very well. I hear a trout and a tench were taken with the worm, weighing 4lb. each. My two best days were 20 dozen gudgeon, two dozen of very good perch, and a few good perch. Prospects at present look well for the next few days.—John Rush.

### Thames (Shepperton).

Water in very good condition for all-round fishing. The sport is very good, provided the fishermen were employed a little more. In two days 21 dozen of gudgeon and four perch were taken. There was a mistake made in my report last week. I caught two trout, not tench, as stated in the report. I have been a fisherman for fifty years, and never caught a tench when barbel fishing in the Channell, for it is more of a pond fish.—W. Rogerson.

---

### Ancholme District.

Owing to illness, I have been unable to report for the last week or two. I send an account of what has been done in the meantime. Sport on the Ancholme proper has been very good, and catches of 5 or 6st. of fish have, by no means, been uncommon. Roach of 1lb. are very plentiful, and bream of 3 to 4lb. are quite numerous. Gentlemen obtain from 18 to 20lb. of fish in an evening after tea.—J. Ford, Caistor.

### Ballynahinch.

Since last report the following baskets have been made :—Col. Biden, 63 trout and 1 salmon, 6lb. ; Mr. Bailward, 50 trout ; Mr. and Mrs. Power, 36 trout, 1 salmon, 8lb. ; Mr. Smith, 58 trout, 1 salmon, 6lb. ; Mr. McNeil, 45 trout ; Mr. and Miss Chapman, 76 trout. In five days Mr. Taylor, 22 trout and 1 salmon, 14lb ; Mr. Middleton, 20 trout, 1 salmon, 12lb. In four days, Mr. Morris, 17 trout, 1 salmon, 11½lb. In three days Messrs. Eades and Houlgrave, 31 trout and 1 salmon, 13½lb. ; Mr. Wardle, 13 trout ; Mr. Shaw, 16 trout, 2 salmon, 9 and 10lb. ; Mr. Sutherland and Mr. Nevill, 43 trout. A party of three, the Earl of Malmesbury, Col. Harris, and Mr. Gould, in six days, caught 14 brown trout, 46 sea trout, and 1 salmon, 10lb., taken by his lordship. The totals for the week are 536 sea trout, 10 salmon, weighing 100lb. Weather improving well for fishing.—Walter Blackadder.

### Bure.

Anglers are busy on this stream at every part, and with the best of success. I am told that large catches of bream flats have been had. Of course, Acle is the most convenient from Yarmouth, or, if the Thurne is preferred, Potter Heigham ; Host Lawes, Waterman's Arms, Eastern and Midland Railway, is very handy, and capital sport amongst perch and rudd is to be expected here ; but returning to the Bure, Wroxham and Horning Ferry are equally good. The fish run small, but there are plenty of them. Large catches of bream continue to be made on Wrexham Broad, and also below Salhouse on the river. Prospects excellent.—Robert Moll.

### Chichester.

Visitors to the water side have, this week, been numerous, the quiet evenings being most enjoyable after the excitement of glorious Goodwood. The odds have been against anglers, takes being few. Sport generally has been very unsatisfactory during the week, nothing worth recording coming to hand. From Selham, Mr. Willison writes : "There are some fine roach and dace in the water, Mr. Budd landing a dozen good roach in half an hour, angling with gentles as bait. Weather, this Thursday evening, close and stormy.—George F. Salter.

### Dove.

The weather has been very favourable to sport this week. The copious and frequent rains have improved the condition of our river immensely, and the fresh has removed nearly all the masses of flannel weed which had accumulated, and which were proving so destructive to anglers. The killing flies just now are the July dun and the brown or golden Palmer, while excellent remuneration has also followed the use of the whistler and other gold-bodied lures. The average dishes of trout and grayling have been quite seven brace each to the expert rods, while nearly everybody has got something or other to reward them for their efforts. Bottom fishermen have been extremely busy all the week, and any quantity of barbel and bream have been captured, the best bait having been the lob worm. The wasp grub and maggot have also accounted for many good samples of roach, dace, and chub. Prospects of a continuance of good sport are just now first-rate.—The Splodger.

### Eden (Carlisle.)

The whitings are not showing in any great numbers as yet ; but the break of the tides this week ought to hurry them along, the river being in fine order for their running. A few are killed every evening below Carlisle. The best catch I have heard of was 8lb., taken by a man near Rockliffe, right in the tideway. Several salmon were killed with the rod last week in the upper waters, near Lazonby and Nunwick ; but there has not been a fish killed in the lower waters for many weeks, though the nets have been getting cartloads of salmon and grilse. The price, 10d per lb., shows they are not scarce.—Silver Grey.

### Exe (Exeter).

Since my last report, in which I referred to the fish destroyed in the Mill heat at Exwick, four persons have figured in the police-court and had to pay £7 and costs for a salmon improperly taken, and this I hope will have a beneficial effect ; but the wholesale way night lines are laid in open daylight in the Exe, near the railway station, is a bit of a caution just now. Weather very sultry, and nothing doing.—J. A. Kelley.

### Flanders Weir Fishery (Chingford).

On Saturday evening last, at about 8 o'clock, I hooked and landed a beautiful bream of 6lb., ledger fishing with a marsh worm. He is in magnificent condition, and has gone to Sanders to be set up. I had to get the fish across 6ft. of weeds into a friend's landing net. He played gamely for a bream ; but, fortunately for me, lay perfectly still while I slid him along over the weeds into the net. The fish will be on view at the fish-house after being set up.—W. F. Payne.

### Fens (Boston.)

The large Fen drains in the neighbourhood of Boston have this week been yielding immense takes of fish of the rough class. Roach and bream seem to be very plentiful, and they are now well on the feed. The Hobhole has turned up an immense quantity. At Old Leake, Mr. Geo. Hancock got six beautiful tench, as well as about 2st. of roach, and Mr. Fred. Wragg 24lb. of good roach scaling up to 1¼lb. each. At Frieston, on the same drain, B. Wilde got 28lb. of roach, bream, &c. ; and another angler at the same place 35lb. of roach. The great catch, however, was made by a party of Sheffield anglers, viz. :—T. Brown, W. Frost, J. Wilson, C. Turner, and H. Downs, who returned home with a total draught of 13st. among them. They were mainly roach, and of an excellent quality and size. Many of them ran up to nearly 8lb. each, and some turned the scale at 1½lb. each. From the Cowbridge drain, near to Boston, W. Higginbottom got 9lb. 7oz. of bream and roach, and several other anglers did well. Whilst from the Aqueduct water, I hear of an angler named Frith getting 12lb. of roach, along with a tench of 1lb. 12½oz. ; and another, B. Baker, 12lb. roach. From the Kelsey drain also there were good sakes, among the best being J. Wilkinson, with 18lb. of nice roach. The water is in fine trim, and at the present time prospects are very favourable.—Y. B.

### Ilfracombe.

Sea fishing has greatly improved this last week. Saturday, thick misty rain ; however, several boating parties were fishing off the Torrs, and all had good catches of bream, codlin, and ling. They report water thick, fish in prime condition, and biting free. Monday, some fine bream were caught by parties fishing off Lee. Fresh water—Tuesday and Wednesday, good catches of bream, whiting, codlin, and ling. There is fine sport from the rocks for hand-line fishers for pout, pollack, eels, &c., and those fishing from the jetty with rod and line have hooked some large fish. One gentleman caught a ling, another hooked a large skate and brought it to the surface when it broke its hold, and, having no gaff, it disappeared, much to his annoyance. Weather fine and prospects good.—E. Comer.

### Leicester.

A large number of anglers continue to visit the Leicester Society's waters at Leicester and Aylestone, and some fine lots of roach and perch have been taken. Among the regular frequenters at these waters, Messrs. Bird, Hobbs, Aarven, and Richards have been the most successful, their takes varying from 10lb. to 12lb. per day. Those who have fished during the evenings have been well rewarded. The roach, perch, and chub have been well on the feed. A few pike have been caught, varying from 4lb. to 6lb., and several good eels have been taken from the river Soar and canal during the latter part of the day. These have been taken with good-sized lobworms. The best of the roach and perch have been caught with straw-worms and the large brown earth-grub, the latter being a specially taking bait for perch. Excellent reports continue to come to hand from the waters at Narborough, Barrow-on-Soar, and the Wreake. On Thursday the weather continued fine, and prospects of sport during the holidays next week remain satisfactory.—Alert.

### Lodden.

We are having a splendid time of it. Fish of all kinds plentiful, and show plenty of sport, although the weather has been, and still continues, terribly showery. We had a hailstorm on Friday last lasting nearly half an hour, the stones were very large, and lay on the ground nearly an hour before they had all dissolved. The flower gardens and root crops suffered considerably, the latter were riddled through the leaves as though they had been shot through, and a piece of onions presented a most remarkable appearance, the standing stalks being knocked completely through from side to side ; and with all the rain we have had, the river has not risen half an inch. The average weight of trout taken being ½lb. ; chub, up to 4lb. We intend starting on trout to-morrow at 6 a.m.—Frank Gosden.

### Lugg and Arrow (Leominster).

Both these streams are now in good fishing condition, and have been freely visited this week. Rain fell heavily in this district, but made but little difference to the colour of the water. At the beginning of the week the waters were coloured, but they soon ran themselves clear again, and are now in prime condition for the fly, which are on the water in good numbers. The wasp grub has been used here freely, and some very good fish have been landed, the best killing flies on the water being the coachman and the black gnat. On Friday the fish were rising well in the Lugg at the coachman. A gentleman tried the Lugg, near the station, and took a splendid lot of trout. In the Arrow the same day a gentleman, with the black gnat, took a fine lot of trout, some scaling ¾lb. each. The Arrow was tried on Saturday with the fly, and a good dish of trout and grayling was landed. The Lugg was tried the same day, and a very good lot of trout was taken with the coachman. A very nice dish of trout and grayling was also taken with the wasp grub. On Monday some very good sport was had in the Arrow, a gentleman with the fly taking a splendid dish of trout, the lot weighing 5lb. A few very nice grayling were taken in the Lugg with the black gnat the same day. In the Arrow on Tuesday a very good basket of trout was landed with the wasp grub. The Lugg was tried and some very good sport was had, one gentleman with the fly taking a fine dish of trout and grayling, averaging ½lb. each. Some very good fish have been taken in the Eardisland water this week, and a few very nice fish were landed in the Monkland waters. There has been some good sport in the Lugg at Aymestry. The Pinsley is in good fishing order, and the fish are rising freely; some very good fish have been landed this week with the fly.—Gwynne.

### (Maidenhead).

Whilst fishing from early morn this day (Saturday), I caught and successfully landed a barbel of nearly 7½lb. The fish is a very fine specimen indeed, having the largest wattles I have ever seen. I was fishing with Clarke of Maidenhead.—N.B.—Can you give the highest authenticated weight for this particular fish since the commencement of the season?—D. Warren.

(We cannot say what is the largest barbel taken this season, but this is certainly one of the best yet.—Ed.)

### Medway (Tunbridge).

As I anticipated when I wrote last week, a freshet of water would bring fish and food, and so it has proved. The best takes I have heard recorded were on Tuesday: Mr. E. Greenwood and Mr. J. M. Streeter, fishing High Bridge Hole, caught no less than 120lb. of bream, many of them prime fellows weighing 3½lb.; while on Wednesday Mr. W. Ede, above the town, took no less than 186 roach, weighing nearly half a hundredweight. This was undoubtedly the best catch of roach made in the river for some years.—Ye Medway Water Rat.

### Ness (Inverness.)

The above water is now in splendid condition for angling, and good sport is being obtained on both the upper and lower waters. On Friday, the 25th ult., Mr. Denison, a few hours after his arrival from London, landed a salmon of 19lb. and one grilse of 7lb. He also hooked a third fish, but lost it. On Saturday, the 26th, Mr. Denison killed one grilse of 9lb. On Monday, the 28th, Mr. Denison killed five grilse, 19, 9, 9, 9, and 8lb. each. Monday, the 28th, was observed as a free fishing day, and a number of the local anglers were out early, and several good baskets of sea trout were made. Mr. Paterson killed one grilse of 9lb., and Mr. James Scott one grilse of 8½lb. At the four netting stations on this water the average catch is about fifty fish daily.—D. Watson.

### Ouse (Huntingdon.)

Bream and roach are well on the feed. During the last week several good takes have been made. On the 27th, I took 31½lb. of bream; on the 29th, 15¾lb. of fine roach, and 7½lb. of bream. On the 30th, 28 bream were taken by one gentleman; but the weight I have not heard. On the same day, 19 bream were taken by another angler. On the same day, 32 bream were taken by another angler. Weather fine, and water in splendid condition. I think the London anglers are very backward this season.—H. Rout.

### Ouse (Yorkshire).

During the past fortnight or three weeks there has been very little doing by the boats engaged in salmon fishing on the river Ouse between the lock at Naburn and Selby. Indeed, the fishermen have returned almost every ebb up to a few days ago without a single catch, nor will matters improve much until we have some heavy downpour of rain to bring down fresh water from the hills, and on which the river is dependent for its purification. If rain does not soon come, the season will be one of the poorest experienced for some years past. From Newbray to Goole more favourable reports come to hand, but the catches on these fisheries are due to the use of the "bow" or "click" nets, and not to that of the long nets, as the present state of the river renders the latter almost useless. As has before been pointed out, this river is known as a late one, in fact, one of the latest salmon fishing rivers in the kingdom. This is to be accounted for by its great length, the distance from the spawning grounds to the sea being fully twice as great as that of any other fishing river. It is a well-known fact that the fish do not all get down to the feeding ground until some time after the season has commenced, and consequently these do not return until after the 30th August, which is the last day of the fishing season. The fishermen throughout the whole length of the river, with probably but one exception, are in favour of waiving two months at the opening of the season for a month's extension for closing; and this, they urge, can be done without any serious effect upon the future of the fisheries, as urged by the conservators at the inquiry held a year or two since by Mr. Walpole, the commissioner, who attended on behalf of the Home Office authorities. The feeling amongst the fishermen generally on the Ouse is that the extension must be granted them, and it is their intention to agitate the matter until something is done on their behalf. The granting of bow-net licenses to persons other than recognised fishermen is another great source of complaint amongst the latter, as in their case it is without doubt a great hardship; so much so, indeed, that many of them, owing to the unfavourable season, are unable to spare the means for both the long nets and the bow net. The greater number of persons taking out the latter cannot be recognised as fishermen, as it is only in seasons such as the present dry one, when the fish appear at the top of the water, that they venture to risk their £5 in a license. The question of an extension of the close time is also being agitated by the fishermen on the river Trent, and with combined action the men all along the two rivers are sanguine in the end that some accession will be granted them.—H. T. Gardiner.

### Severn (Shrewsbury).

Notwithstanding the lowness of the river, the banks have been well patronised by the local anglers. During the week I have seen several bottom fishers, but their takes have been generally small, ranging from two to half a dozen dace and roach. A friend of mine who fished the lower waters last week, caught a fine chub, weighing 4lb. He has been very successful during the season on the Uffington Ford, not having to leave, as a general rule, without having taken at least one trout. Mr. Morris, on Wednesday, visited the Verniew, and although the water was rather thick, he managed to get a good basket of fish; and had the misfortune to hook and lose a very good trout, after a long and hard tussle.—Severn Salmon.

### The Shannon (Castleconnel.)

Sport during the week has been bad owing to lowness of river and fish not being on the take, as is always the case at this time of year. Trout fishing is good, and some large baskets have been made.—John Enright and Son.

### South Level Cut (Littleport.)

The following is a list of the best takes for the past week: July 24th, Mr. F. Drew and Captain Ward, Cambridge, 10½lb. good roach in about three hours. July 26th, Sergt. B. Brashier, Littleport, 6½lb. roach; Mr. F. G. Tuck, New Barnes, Ely, 15lb. roach; Mr. J. Gallon, Newmarket, 3½lb. in 1½ hours; Mr. F. Drew, Cambridge, 4½lb.; Mr. Rostans, Newmarket, 4½lb. July 28th, Mr. and Mrs. N. Gurner, 8lb., nice roach; Mr. F. G. Tuck, New Barnes, 17lb. very good; Mr. H. Lea, Cambridge, 5½lb.; Mr. F. Drew, Cambridge, 14lb., largest 1lb.; Messrs. Ward, Scott, and Rutter, 14lb., largest fish taken by Mr. Ward, a perch of 18oz. July 29th, Messrs. T. Hone and G. Stevens, Cambridge, 18lb. good roach; Mr. H. Lea, Cambridge, 20lb; Master Fetch, Cambridge, 3½lb.; Messrs. Tillett, Trindal, and sons, 13lb.—Charlie South.

### Teme (Ludlow).

All the streams around here are in good condition for top or bottom fishing, and the waters have been pretty fairly patronised. For bottom fishing the wasp grub has proved a most attractive bait, and amateur fishermen have not been slow to avail themselves of it. Some good catches have been had up Leintwardine district; one gentleman, on Saturday, caught five brace of trout, two grayling, and some dace, with the whirling blue and black gnat. Lower down the Teme, at Bromfield, a gentleman, on Monday evening, used the wasp grub and landed fifteen trout, four perch, and one small eel. I saw a nice dish of fish on Tuesday night, which were caught (nearly at dusk) in the Castle Pound. Down Ashford and Steventon waters some very good fish have been caught; one gentleman caught a couple of perch which weighed 4lb. the couple. Up the Clun some good fish have been caught with the wasp grub. A well-known fisherman informed me that on Saturday evening in one hour he landed twelve trout, one eel, and two dace with the wasp grub from the Clun. Another gentleman, in the same water, on Tuesday, caught twenty-seven fish. Wasp grub is hawked about the streets of Ludlow remarkably cheap by a fisherman known by the name of "Old Humphries." Up the waters of the Ony (in the Onibury district) fishing has not been over brisk this week; some fine chub have been caught up these waters. Up the Corve the wasp grub has been very successful. We saw twelve very nice fish which were caught up that stream on the night of Tuesday. The Letwyche has not been much visited this week.—S. Ludlow.

### Teme (Tenbury).

There is but little difference in the state of this stream, it still keeping low, but in good order for the fly or bottom fishing. Some heavy storms of rain fell in this district at the beginning of the week, but they made but little difference to the colour of the water. The best flies on the water are the coachman, whirling blue, and black gnat. There has been some good sport had with the wasp grub and red worm, and some very good lots have been taken with them. In the water below the town a gentleman with the black gnat took a very good basket of trout and grayling. Fishing at dusk with the wasp grub, a gentleman landed a nice dish of trout. On Saturday the fish were rising well at the fly. A gentleman near Easton Court with the coachman took a splendid lot of trout, averaging ½lb. each. Some very good trout were landed below the bridge with the worm the same day. A gentleman tried the water above the bridge on Monday with the whirling blue, and took a very good basket of fine trout. In the evening a few very nice fish were taken with the worm. There was some very good sport had in the water below the town; one gentleman with the coachman and black gnat landed a very good dish of fine trout and grayling. Some very good-sized trout have been taken in the Association waters this week with the fly. The Kyre and Rea both keep in good fishing order, and the fish are taking the flies, and some very nice lots have been taken. A very nice dish of trout was taken in the Rea on Saturday, and a few trout were landed on Monday with the fly. Some very good trout were landed in the Kyre on Friday with the coachman, and some nice fish were taken with the wasp grub on Tuesday. The Ledwyche is in good fishing order, and a few very nice trout have been landed.—Worcester.

### Trent (Nottingham).

Whenever in our district we shall be blessed with a rise it is difficult to conjecture. Rain this week has fallen almost daily; but the wet, excepting a few inches, makes no difference to the height of the river, which remains as clear as when I last wrote. The barbel swims in the Holme Pierrepont (Colwick) length have again been baited, and Mr. H. Cooper, of the Waltonians, has captained five fish, whilst a friend has taken three or four. Plenty of eels continue to run, and in the lower districts flounders have afforded sport. Bream, though not in large quantities, have been killed at Weston, where recently the salmon have again been seen disporting themselves. The fact, however, remains that they will not be caught, pending what is urgently required—a big rise, so as to wash into the lower estuaries the vast accumulations of "flannel" weed. Mr. A. Price writes that in the canal at Hickling—fed by the Trent—an employé of Mr. T. Bissill, of Kinoulton Grange, has caught a remarkably fine carp, with the worm, of 6lb. 10oz. There are plenty of fish in this water, and permission to angle for the same may be obtained from Mr. Price, of the Plough Inn at the village named.—The Man at the Clubs.

### Trent (Newark).

I have been very busy this week, so have not had time to look round and see what has been done in the way of sport this last few days; anyhow, the water is in capital condition, and good sport should be had; chub should now come on, both at fly and wasp-grub; bream and barbel should bite at worms, and roach and dace can be taken with both gentles and paste. Thursday night: water in capital condition, and weather very much improved.—The Trent Otter.

### Trent (Lower).

Sport on the Trent is now very fair. The water improves; but still we could do with a flush, as some continue to complain of flannel weed and other obstructions. Whilst the present condition of things holds we may expect takes of bream when the anglers come across them. There are many well-known holes on the river, but strangers cannot always expect to drop into them. There are occasional barbel got hold of, but these are fast betaking themselves to their winter quarters. Eels are running and causing sport now and again, and the flounders are to be had freely from Torksey. Among the takers of flounders here may be mentioned Alfred Vickers, who got about 10lb. of them, and roach in the meadows there. The recent thunderstorms have affected the water but little.—Trace.

### Trent (Alrewas).

River slightly risen, but in good condition; weather much unsettled. Baskets of roach, during the past week, have been shown at the Pan and Pig, averaging 12 to 13lb. each; some very fine samples of the same scaling 1lb. 7oz. Good perch have been landed, using the dead minnow as bait. Members should avail themselves now the water is slightly coloured.

### Tweed (Berwick).

There has been a slight falling off in the number of salmon caught by the net fishers from some cause or other, though at the Crabwater there has been a decided improvement. This fishing is situated just within the pier, on the north side of the Tweed. Perhaps this may be taken as a sign of an approaching general improvement. Though the river is in fair condition, yet a flood would make a difference for the better in the catches. Salmon, grilse, and trout 1s. to 11d. per lb. The harbour is full of herring boats, with tugs in attendance on them.—J. J. Hills.

### Waveney (Beccles).

Roach have been well on the feed during the week, and many nice baskets have been taken. In our competition, Mr. J. Rouse had upwards of 7lb. of fish in four and a half hours' fishing; Mr. J. Hooker upwards of 6lb., and Mr. W. R. Buck also had upwards of 6lb., all takeable fish, over 7in. in length, and many of them weighing ½lb. and ¾lb. Mr. Holland captured a splendid rudd weighing 1lb. 9¼oz., a fine specimen of what kind of fish there are in the Waveney. Mr. W. Piper has also had some good catcees of bream and roach. I have not heard of much being done with the pike or perch, but to-day news reached me that a 17½lb. pike had been taken, spinning with the natural bait, but at present cannot speak as to the correctness of the report. Wind at present rather unfavourable, being due east, but water in good condition.—A Waveney Angler.

### The Wharfe (Yorkshire).

During the past week the atmosphere has been very heavy and oppressive, consequently the fish have risen "short," as is usually the case when thunder is hanging about. Saturday was a very wet, miserable kind of day, but the water was in nice condition, and I caught eight trout, a couple of them weighing ¾lb. each; stone bloa, small red ant, and the black midge have answered best so far as my own experience goes. On Tuesday evening, just before dark, the river was completely alive with rising trout, some of them very large ones. What they were taking I could not ascertain: but I fancy it was a minute spinner, the image of one of the pale duns now so strongly on the water. The grayling have not yet commenced to rise freely, and I am not at all sorry, for I consider that if the close time was extended to August 15 it would give this beautiful fish a far better chance of getting into condition. The Kirkstall Angling Club held their annual fishing match at Tadcaster last Saturday; the fish were well on the feed, and good catches were the result. On the Monday one of the members caught a splendid dish of dace and roach, weighing, I believe, close upon 14lb. This also was at Tadcaster.—Francis M. Walbran.

### Witham (Dogdyke).

We continue to be favoured with the presence of many of our angling friends, some of whom have done very well indeed, getting from 14 to 28lb. each for a day's sport. Roach, perch, and eels are now well on the feed, We heard the other day of one fisherman catching a fine trout weighing 7lb.—Packet Hotel, Dogdyke.

### Witham.

A rare lot of fish have been taken from the Witham this week, and the different stations along the riverside have had many visitors. Tattershall and Kirkstead have been particularly well patronised. Bream, roach, perch, and other fish are being caught very freely. Among the best takes at the former place may be mentioned 32lb. of bream and roach, by A. Crofts, of Sheffield, whilst Wilford Crofts in the same water caught 16lb. of roach along with a few perch. More dace have been taken in the neighbourhood of Dogdyke, whilst at Kirkstead, Mr. Darwin showed 29lb. 5½oz. of bream and roach, one of the former scaling 2lb. A take of 19lb. of bream and roach was placed to the credit of J. Wilson, and 18lb. to that of T. Brown. Both these anglers hailed from Sheffield, as did also an angler named Arnold who managed to land 28lb. of roach and bream from a point about half-way between Stixwold and Kirkstead.—The Yellow Belly.

### Wye and Derwent.

On Saturday last there was a greal deal of thunder, and rain fell all over Derbyshire, which discoloured both rivers a little ; in fact, the Derwent has had a beautiful nut-brown colour on it the whole of the week. A very killing water and good sport has been had up and down the Derwent, both with trolling, bottom, and fly fishing ; and baskets up to ten brace per angler have been made. The largest baskets have come off the Darley Dale Club waters, the fish being killed mostly by bottom fishing with wasp grubs and maggots for baits. The small honey dun bumble, ash dun, and little black gnat, and sand flies have all taken fish during the week off both the Wye and Derwent. Sport on the ponds has been first-class both with the bottom and fly fishing, and large baskets have been killed. The night line party have taken some large eels up the Derwent between Darley and Matlock Bath, some of the fish being nearly 4lb. each. Weather very close and hot.—Geo. Jas. Eaton.

### The Yare (Norwich).

Reports from all the fishing stations on this river are as encouraging as it is possible to be. At Cantley some very fine bream have been taken, as well as some good roach. Buckenham Ferry seems again to be to the front, as the chief clubs have again decided on this spot. At the annual match of the Champion Angling Club, 22 of the members caught nearly 17st. of roach. The weather, although now and then threatening rain, has been just the right thing for angling. On the match-day a gentleman from Norwich, fishing with Professor Day, caught a very fine lot of roach, weighing upwards of 30lb. The river all down from Norwich now seems alive with fish; both roach and bream. At Brundall, reports are nearly as good, but I do not get so well informed as in the case of Buckenham ; still, visitors staying on our coast, and wishing for a few days' sport, may make sure now at almost any of the three places I have mentioned. If they prefer bream, they had better go to Cantley and row down to Hardley Dyke. If they fancy roach, I would strongly recommend Buckenham Ferry or Brundall ; the latter place is very handy for the boat station, if only a day's angling is in view, as Messrs. Flowers' boating and yachting station adjoins the station ; but at Host Brown, Coldham Hall, every attention is bestowed on visitors, and very good accommodation afforded. The catches all the way down vary from 2st. to 4st. per boat, fishing only the middle of the day. Now would be the time for a sensational catch, if someone would start at daybreak and fish until sunset. I have had several letters from gentlemen intending to visit these rivers, and I shall still be pleased to answer any that wish for information about any waters in the Eastern Counties. Prospects never better.—Robert Moll.

### THE DEE, DON, FEUGH, UGIE, EBRIE, &c. (ABERDEENSHIRE).

At present fishing for salmon is less inviting than fishing for trout. On the Dee fish are slow to take. In the lower waters they are scarce, but from Aboyne upwards they are still plentiful. About Banchory the following takes have been reported since our last notice :—Blackhall Castle water, Mr. Frank Farquharson, one grilse ; Riverston water, Wm. Dawson, one grilse ; Invery water, A. Wright, keeper, one grilse ; Crathes, no report ; Woodend, Cairnton, and Invercannie, Mr. W. Farnell Watson, one salmon, one grilse, one sea trout. The Dee is in beautiful angling order just now.

In the Kincardine O'Neil district the sport, we hear, is improving, but no report in confirmation of this has been received from our correspondents in that quarter.

A little is doing at Aboyne. The pools there seem to be well stocked with fish. Colonel Keen is having some sport almost every day. The flies being used are small. To those living in the hotel the fishings attached to the "Huntly Arms" (five miles of tip-top river) is free till the end of August. Fish on the hotel water are being got regularly. The water is streamy and pleasant. On the Cambus O'May and Glen Tana reaches a few fish are got weekly.

The Invercauld private Dee water at Braemar is always showing good sport when tried. A fish or two are landed from the hotel waters there occasionally. The Invercauld Arms water at Ballater is now open to those staying at the hotel—eight miles of splendid water—suitable to all tastes. Fish are plentiful, and when out from the hotel, gentlemen are usually successful. Mr. George Smith, saddler and tackle-maker, Ballater, reports that on this reach Mr. Sturton had one fish 8lb. on Saturday ; Mr. McKinnon, Monday, one sea trout, 3lb. One very fine fish was landed on Wednesday. Monaltrie water, Saturday, Tom Kinnaird, one fish, 8lb. ; George Morton, Cambus o'May, Friday, one fish, 7½lb. ; Tom Grant, keeper to Kintril, landed one fish, 15lb., on the Pananinch Section on Thursday. Some very good baskets of trout are got every day. The following lets for the autumn fishing are recorded :—Carlogie, Admiral Farquhar ; Borrowstone, Walter Evans, Esq., Derby ; Norton House, Wm. Lamond, Esq. ; Kineskie, Jas. White, Esq., of Overtown ; Crathes, General Kane ; Knappach, Col. Flamstead ; Durris, Wm. Knowles, Esq., banker, London ; Park, S. L. Scheuster, Esq. ; Glen Tana, W. Cunliffe Brooks, Esq., M.P. ; Cambus o'May, H. L. Gaskell, Esq.

The Don is at present affording fine sport. The recent rains have helped matters a good deal. On the Parkhill beat, Mr. Muirhead Aitken, barrister, and Mr. Brown, of Orchards, are getting first-rate sport. At Kintore, on the open water, Mr. Phillips and others are doing fairly well. Some good takes are had about Inverurie. At Alford, on the hotel's sections, the lakes are encouraging. Inverkindie Hotel water is in fine ply, and the trout rising freely. Farther up the Don the sport is immensely good.

Heavy trout are being had occasionally on a few of the Urie sections. The Feugh, Aan, and Dye, particularly the first and last-named, are not doing so well this year as usual. Baskets from six to twelve dozen have been got at times on the Aan this season.

Trouting is encouraging along the greater part of the Ythan. Sea trout and finnock have begun to run, though as yet to no great extent. Between Fyvie and Methlick the best sport is perhaps being had. The Ebrie is still continuing to maintain its reputation as a trout-producing stream. Mr. Mackenzie, of Aberdeen, and the Rev. Mr. Mintz are having heavy catches when out. The Cairnbanno Burn and the Little Water of Light are declining somewhat.

V. Twining, Esq., and Mr. Jameson are basketing some splendid sea trout at Strathbeg Loch.

The angling clubs from Peterhead are not doing much on the Ugie at present. Dark brook trout this year are very abundant in the Gonar, Strichen Water, and North Ugie, and some heavy takes with the Professor and red hackel have resulted. About Hythie the trout are showing very well indeed.

"Finnock" are again beginning to take in the tidal waters of the Dee, Don, and Ythan. An occasional good capture was had in the Dee last week.

The Culter Burn is over-fished, and the average per angler is consequently small. The Tana is in fine volume, and the trout got in it by Mr. Brooks' permits good, numerous, and of fine quality.

The Sheoch has been little fished this summer, but it appears well stocked with goodly-sized trout. Several gentlemen have lately fished the Beltie, and had much success. The Crathes Burn has produced some fine trout this year, of which a few, about a pound weight, fell to a Granite City angler.

The Muick and Gairn are doing indifferently, the Clunie pretty well, and the higher streams better.

There is yet little improvenent as regards the Deveron. The silting up at its mouth is not yet cleared away, and as a natural result no salmon are getting up, Trouting on it, the Bogie, Kirkney, and Mossat are good.

Our little "Blue Charm" is *facile princeps* the best Dee fly at present. Weather pretty dull in the main, cold somewhat, and wind shifty. W. M.

## CLUB REPORTS.

### AMICABLE BROTHERS ANGLING SOCIETY.

On the 27th ult., Mr. Moir, roach and bream from Dagenham ; Mr. Dwelly, roach, perch, and bream. Mr. Partrick, bream, roach, and dace. Mr. Partrick won Mr. Marshall's prize for the gross weight of fish during the month. Members are requested to sign the book for the pegged-down match at Dagenham, on Wednesday, August 6th. We start from the club house on the 2nd August, at 12 o'clock p.m., and commence fishing at 4 o'clock a.m. next day.—J. Worledge, sec.

### BIRMINGHAM AND DISTRICT AMALGAMATED ANGLING ASSOCIATION.

Angling is going on briskly among the members of the above club, and some good catches have been reported, two members of the West-End Club taking 60lb. of roach and bream at Westwood. Mr. Thomas Coles, our president, took 10lb. of roach and bream in Orford Brook at Fearnall Heath. I should like to remind the Birmingham anglers that the Severn licenses cover Orford Brook, and these can be obtained at 1s. each at the Old Green Man, Lancaster-street, Birmingham. I think if it was better known how much water can be fished with these shilling licenses, a great many more would be taken up ; and I would advise the anglers of Birmingham to call at the above house and examine the map of the Severn fishery district, kindly sent there by Mr. Stallard, clerk to the Severn Conservators Board.—James T. Allen, hon. sec.

### BROMPTON ANGLING SOCIETY.

Not many shows up. On the 23rd ult., Mr. Ducker, bream. On the 27th ult., Mr. Dutton, roach and bream ; Mr. C. Saunders, bream ; and Mr. E. Saunders, bream. Mr. Editor, I am very much surprised at Mr. Hillier's reply to my question. I should have thought it was his duty to the anglers in general to contradict a statement he knew to be false, given, as it was, to decoy them to spend their money, as many did. I hope Mr. Hillier's recollection will enable him to remember that there were several club members present when his friend produced the report cut from the journal, and also heard the remarks passed on the same by both parties.—W. Dutton, sec.

### BURDETT ANGLING SOCIETY.

We have had fair shows of fish at this club during the past three weeks, the following members having weighed in on the 13th ult. :—Mr. Hadkiss, 13lb. 4oz. bream ; Mr. Shervill, 15¼oz. tench ; Mr. Eaton, 1lb. 3¾oz. roach ; Mr. Brook, 1lb. 1oz. roach ; Mr. Britt, 4¼oz. roach, and 2¾oz. dace. On the 20th, Mr. Reeves, 4lb. 14oz. chub ; Mr. Wilson, 8½oz. roach ; Mr. Searle, 1lb. 11½oz. tench ; Mr. Hadkiss, 6lb. 12¾oz. bream, and 15¼oz. roach ; Mr. Smith, 4lb. 7oz. roach, and 4¾oz. dace. On the 27th, Mr. Smith, 3lb. 10½oz. roach ; Mr. Eaton, 1lb. 6oz. roach.—T. G. Walker.

### CHAMPION ANGLING CLUB (NORWICH).

The annual match of this club was held on Tuesday at Buckenham Ferry. The members assembled at their head-quarters at half-past six in the morning, and were conveyed by the Norwich Omnibus Company to their destination. The journey was accompanied with a downpour of drizzling rain, which made it very disagreeable, but on arrival at the fishing station the weather cleared ; a fine, though dull, day ensued, the wind, which at starting had been south, veered round to N.E. and N.W., gradually settling into N.E. The 22 competitors started for the struggle at 9.30, and at 10 o'clock sharp they were to commence, as they had the choice of three miles or more of water. I expect some were hardly ready by that time ; still, from what I can gather, they all found their favourite spots and commenced the slaughter as quickly after 10 o'clock as possible, and, I am happy to record, it was one of the grandest roach days I ever remember, especially on a match day, as they are usually noted for the smallness of the individual catches. Between 6 and 7 o'clock the boats all arrived at Host Garrett's, and the weighing in took place with the following result : 1st prize (challenge cup, value £25) and piece of plate, Mr. G. G. Whincop, 30lb. ; 2nd, R. Moll, 28lb. 11oz. ; 3rd, Mr. Goreham, 20lb. 7oz. ; 4th, Mr. Spratt, 18lb. 4oz. ; 5th, J. Rice, 16lb. 15oz. ; 6th, T. J. Hook, 16lb. ; 7th, T. J. Lapthorne, 15lb. 10oz. ; 8th, G. Daniels, 14lb. ; 9th, J. Youngs, 13lb. 6oz. ; 10th, W. Chettleburgh, 11lb. 6oz. ; 11th, Mr. Wells, 10lb. 8oz. ; 12th, Mr. Sidell, 9lb. 13oz. ; 13th, T. F. Howitt, 7lb. 8oz. ; 14th, Mr. Skinner, 7lb. 4oz. ; 15th, Mr. Jeffries, 6lb. 12oz. The total catch was 16 stone 8lb. 6oz., which, I believe, is one of the largest, if not the largest, catches ever known at a match, considering that nearly all were roach ; only a very few flats were amongst the take. After the declaration of prize winners, the members partook of a capital spread, which Hostess Garrett knows so well how to provide, and the health of the cup winner was proposed and responded to.—R. M.

### CITY OF LONDON ANGLING SOCIETY.

We had a poor show of fish on the 27th ult. Mr. Chambers, bream, roach, and dace, from Amberley ; Mr. Nitz, bream, 1lb. 10oz., from the Welsh Harp ; and Mr. Castell, bream, 1lb. 4oz., from the Harp ; Mr. G. Blackwell, a few roach from the canal at Brentford.—Cas.

### CLAPTON ANGLING SOCIETY.

The weekly meeting of this society was held on Monday last, Mr. Colls occupying the chair. The minutes of the last meeting were signed. The weighing in of a handsome perch, 1lb. 15oz., was reported as taken by Mr. Colls ; Mr. Soundy, dace and perch, from the society's water at Tottenham ; and Mr. Beck reported being broken away, whilst fly fishing there, by a heavy chub. This gentleman had some splendid dace and chub from Waltham ; several other members reported small catches. Satisfaction was expressed that so many members of the Clapton attended the Fishing Gazette Tournament at the Welsh Harp on Saturday last, and regret was expressed that the unfavourable state of the weather precluded much enjoyment on that occasion. Seven new members were elected, and a cordial vote of thanks was accorded to the chairman.—Henry Howse, hon. sec.

### COBDEN ANGLING SOCIETY.

A large number of our members were out on the 27th ult., and those that had the courage to face the weather were well rewarded. There was a beautiful display of fish at the Society's room in the evening, consisting of bream, roach, dace, and perch. Mr. W. Jenkins caught some very nice bream at the Welsh Harp, one of them scaling just over 3lb. ; Mr. Tucker also took several large bream from the same place ; Mr. Stead weighed in a beautiful lot of roach, some of them being over 1lb. ; Mr. Sharland also weighed in a nice lot of roach, dace, and perch from the Thames ; Mr. Hammons had a similar lot of roach to those weighed in by Mr. Stead, but not quite so heavy ; Messrs. Andrews, Hallowes, and several other members also weighed in some very nice fish, the total weight being nearly 50lb.—C. Reeves, sec.

### THE CROWN AND BUCKLAND UNITED PISCATORIAL CLUB.

The Crown Piscatorials and the Buckland Angling Society have amalgamated and have adopted the above name. The club house is the Middlesex Arms, Clerkenwell-green. Members are particularly requested to attend next Wednesday evening at nine o'clock, for the purpose of electing all new officers, &c.—W. H. Burwash, jun.

### EASTERN COUNTIES ANGLING SOCIETY.

A large and influential meeting in connection with this newly-formed society was held in the Duke's Head Hotel, Quay, Great Yarmouth, on Thursday evening, the 24th ult., for the purpose of electing officers and enrolling members. For the ensuing twelve months Dr. Alexander Mitchell was elected president; Thomas Freeman, Esq., vice-president; E. J. Bonfellow, Esq., chairman; Messrs. John Lee and B. Seaman, honorary secretaries; Messrs. Bonfellow and Archard, auditors. The following gentlemen were appointed as a committee of management, viz.:—The president, vice-president, chairman, secretaries, auditors, and Messrs. Crowther, Bacon, Lowne, Hannant, and Bond. A meeting of this committee was held on Tuesday evening, the 29th ult., for the purpose of examining into, and, if necessary, revising, certain rules suggested by the president for the future guidance of the society. Many gentlemen were enrolled, and amongst them we notice the names of the Rev. T. Williams, J. McKinlay, Esq., M.D., Mr. D. S. Bayfield, &c. Fish in this district are now well on the feed, and several good catches have been weighed in during the week. Messrs. Mitchell and Freeman weighed in one catch amounting to 50lb., all bream, many of them scaling well over 2lb. Since the recent rains the Broads have been simply in excellent condition.

### EDMONTON AND TOTTENHAM ANGLING SOCIETY.

The above club had a very fine show of fish again on July 27th, the following members weighing in:—Mr. F. Fowler, roach; Mr. G. Crane, trout, dace, and roach—he also had a nice eel going 2¾lb.; Mr. O. Wade, roach and dace; Mr. Warner, roach and dace; Mr. F. A. Gray, roach and dace; Mr. J. Collyer, roach.—F. Gray, sec.

### FITZROY ANGLING SOCIETY.

The following members were out on the 27th ult.:—Mr. Mitchell, with roach and dace; Mr. King, with roach and dace; Mr. Ramsley, with roach, dace, and chub; Mr. Streetham, with bream. Mr. Kemp's prize of a water mill was fished for at Shiplake on the 27th ult., and won by Mr. A. Ensberg, of the Golden Barble; Mr. Henri second, and Mr. Trowbridge third, of the same club. Mr. Kemp and Mr. Ramsley were out on Tuesday, and caught 20lb. of dace with Mr. Wheeler, of Richmond.—G. A. Harris, sec.

### GLOBE ANGLING SOCIETY.

On the 27th ult., the following members weighed in fish from Amberley:—Messrs. H. Jeffries, G. Jeffries, J. Ballard, G. Brown, L. Harrington, and C. Ellis, the first-named winning the treasurer's prize with 9lb. 3oz. Members will please to note, if they wish to stay at Pulborough or Amberley till the Bank Holiday (Monday), they can do so by paying one shilling extra at the booking office at London Bridge at starting.—J. J. Holmes, sec.

### GOLDEN BARBEL.

Messrs. Green, Allen, Stanton, and Whitehead had some nice fish from Sussex, mostly roach; Mr. Whitehead had one that turned the scale at 1lb. 9oz.; Mr. Green had the next largest, 1lb. 7oz.; J. Stanton had bream from the Harp.—Pixie.

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

On July 20th, a considerable number of the members went by road to Dagenham Lake to fish for four prizes. A most enjoyable day was spent. Mr. Hewitt, 1st, 5lb. 15oz.; Mr. Page, 2nd, 2lb. 5oz.; Mr. C. Watling, sen., 3rd, 2lb. 1oz.; Mr. F. Watling, 4th, 2lb.; Messrs. Keys, S. Baker, G. Watling, and King also weighed fish. From Amberley, Mr. J. A. Fitch, 5lb.; Mr. Theobald, 4lb. 4oz.; Mr. J. K. Fitch, 9lb. 2oz. roach and dace. From Welsh Harp, Mr. Stammers, 5lb. 11oz.; Mr. Juker, 1lb. 15oz. On the 27th inst., from Amberley, Mr. G. Watling, 8lb. 8oz.; Mr. S. Baker, 2lb. 8oz.; Mr. Cooper, sen., 4lb. 5oz.; Mr. J. Hewitt, 5lb. 11oz.; Mr. Juker, 6lb. 8oz. From the Thames, Mr. F. Watling, 8lb. 8oz., nice roach; and Mr. C. Watling, sen., 5lb. 1oz.; Messrs. Theobald, Stammer, and E. Smith also had fish.—J. Fitch, sec.

### GOOD INTENT ANGLING SOCIETY.

There was a good show of bream, roach, and perch brought in by Mr. Holmes on the 27th ult. Our annual dinner will take place at the Rye House on August 25th. Chairman, P. Geen, Esq.; vice ditto, H. J. Tibbatts. The members are getting up walking and running matches for that occasion. I will give more particulars next week. There will be a handsome four-horse brake start from the club-house at 9 p.m. on that day; all members desiring to go by it must give in their names at once. At the Fisheries Society Meeting on Monday last, some of the committee had to leave the room, as the Amalgamation disagreed with them; I hope they have recovered by this. The Welsh Harp Tournament.—Peg-down match, only eight entered, Messrs. Bowdell, Grant, Spencely, Gadbury, Maybury, Osborn, Dodd, and Manow; the winners being Maybury, 1st; Osborn, 2nd; Gadbury, 3rd; Manow, 4th; the first and third being members of the Good Intent. The Go-as-you-please match, only four entered; but as I gave my notes to a gentleman to copy, and not returned, I cannot give the name of the first man, but will do so next week. Mr. Osborn was 2nd, Mr. Castell 3rd, and Mr. Manow 4th. The winner's time for the two miles and a half was 21 minutes, the others close up.—R. Murphy.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening at the Masons' Hall Tavern, Masons'-avenue, Basinghall-street. The chair was taken by Mr. Chambers, and there was an exceedingly good attendance of members and visitors. The minutes having been read and confirmed, several letters were read, and the routine business disposed of. Notice was received from the Central Association that the next Delegate Meeting would be held on the 1st prox. A letter was read from Mr. Godwin (hon. solicitor) reporting the progress of negotiations for a piece of water. At the suggestion of the chairman, the subject was deferred to the next meeting, when it is hoped a still larger number of members will be present, and the subject will then be thoroughly discussed. Mr. Crumplen gave an interesting account of the Tournament at Welsh Harp in aid of the Anglers' Benevolent Fund. It is to be regretted that the weather was so unfavourable, as the assistance of so deserving a charity was the object of the meeting. During the evening some very fine fish were weighed in, Mr. Oscar Warren taking Mr. Crumplen's prize with an especially fine barbel of 6lb. 4oz. Mr. Warren had several other remarkably good specimens of the same fish, and Mr. G. H. Young had an exceedingly handsome tray of roach, eight of them scaling 81¼oz., or an average of nearly 10¼oz. each. The largest was a fine specimen, and carried down 16½oz. The toast of "The Successful Anglers" was duly honoured, and Mr. Warren, in replying, expressed his pleasure in being able to weigh in such fish, and his thanks to Mr. Crumplen for the prize. He also proposed for membership a friend, Mr. Charles King, whom he said had been induced to take up fishing and join an angling society by witnessing him capture his prize fish. Mr. King will, in accordance with the by-laws, be balloted for on the 12th August. Mr. Thomas, who has just returned from a three weeks' holiday in the North, gave a very fine account of the fishing in Sutherlandshire. In eight days, and with one rod only, he had succeeded in capturing 310lb. of splendid trout. He strongly recommended Sutherlandshire lochs to any London angler desirous of obtaining a fortnight's capital sport. Plenty of free fishing could be obtained in waters literally teeming with fish; indeed, to such an extent that the angler would tire of taking them. The hotel accommodation was remarkably good and the charges particularly moderate. In conclusion, he recommended any angler in search of a fortnight's splendid sport to pay a visit to the places he had been to, and expressed his willingness to afford any information in his power to any member of the Gresham contemplating a trip in this direction. A vote of thanks was accorded to Mr. Thomas for his pleasing account; and in replying, Mr. Thomas expressed the pleasure it would give him to read a paper on the subject, an offer which was accepted with thanks. Mr. Harding relieved Mr. Chambers of the duties of the chair during the later part of the evening. Under his guidance, a very pleasant "after part" was spent, and the meeting brought to a close with votes of thanks to each of the gentlemen who had so ably presided over it. The barbel competition (being the second in the society's list for the year) takes place on Tuesday next. A keen competition is expected, as several of the best rodsters of the society have intimated their intention of taking part in it.—H.

### HIGHBURY ANGLING SOCIETY.

There was a capital display of jack, roach, bream, barbel, chub, and gudgeon in our trays on the 27th inst., and among the most successful may be mentioned Mr. Lewis, Mr. Shipley, and Mr. Howell, jun. We have several valuable prizes to be angled for Bank Holiday, including the previous day, both days to be included as one weighing, and the result is being looked forward to with great interest. Will you permit me to acknowledge through your journal the receipt of a very handsome specimen bream from C. Harcourt, Esq., taken by him at Hampton on the 27th inst., scaling 6¾lb., which he has kindly presented to the society, and is now in the hands of Mr. Saunders for preservation.—J. E. Wheatley, sec.

### HEARTS OF OAK ANGLING SOCIETY.

We had some nice shows of fish on the 27th ult., Mr. R. Ford filling up one of the largest trays with bream and roach; Messrs. A. Fish, Walford, Pleydell, jun., Glover, and Layton showing roach, and Mr. Rider, perch.—C. J. Millie, sec.

### INDEPENDENT JOVIAL ANGLING SOCIETY.

Several of our members were out on the 27th. F. Conroy, two barbel weighing 5¼lb., together with some dace; H. Cann, some fine dace and two barbel; D. Keep, roach and dace, and one barbel.—C. Smart, sec.

### INDEPENDENT BROTHERS ANGLING SOCIETY.

Our members were well rewarded for their labour on the 27th ult. with a capital show of dace, roach, perch, and bream. We also hope for a better next Monday, as all have the allowance of an extra day.—H. Moore, sec.

### IZAAK WALTON ANGLING SOCIETY.

Mr. G. P. Rolt has been well amongst the bream and roach this week, having weighed in 31lb. 13oz.; Mr. G. Rolt, 11lb. 8½oz. of ditto; Mr. W. Wilkinson, 3lb. 6¼oz. of the same kind; Messrs. Bass and Butt had roach on the 27th ult.—H. B.

### KIRKSTALL ANGLING CLUB.

Saturday last was a red letter day with our members, as it was our 10th annual competition. We had played a cricket match the week previous to augment our prize list, Old versus Young, the latter winning by eight runs, showing they can defend their wickets as well as land a fish. On Saturday 46 members entered to compete for a lot of valuable prizes. A beautiful 15 miles' drive brought us to our old trysting place, Tadcaster, where Mr. Smith kindly allows us to fish in the River Wharfe. Here we found a very fair water, rather too dark if anything. After partaking of refreshment a start was made. After three hours' fishing we found 35 had killed fish, 28lb. 10oz. in all. A few hours' harmony at our host's, Mr. Hodgson's Railway Hotel, and a drive home brought a very agreeable day's sport to a close. List of winners:—1st prize, A. Miller, 3lb. 4oz.; 2nd, J. Wright, 2lb. 1¾oz.; 3rd, F. Myers, 2lb. 1¼oz.; 4th, J. Cook, 1lb. 13oz.; 5th, J. Annal, 1lb. 11½oz.; 6th, W. Lofthouse, 1lb. 11¼oz.; 7th, F. Chadwick, 1lb. 11oz.; 8th, Jos. Walker, 1lb. 6oz.; 9th, E. Mountain, 1lb. 5½oz.; 10th, W. Peate, 1lb. 3oz.; 11th, J. Armitage, 1lb. 1¼oz.; 12th, S. White, 15oz. On Monday one of our members, G. Scarbro, went to try the Wharfe where we had fished the match on Saturday, and after three hours fishing he had caught a splendid lot of roach and dace, 14lb., a very fine lot.—Thomas Booth, sec.

### LIVERPOOL ANGLING ASSOCIATION.

Over 30 of our members fished in the lake at Combermere Abbey, on the 24th ult. We travelled to Wrenbury in one of the L. and N. W.'s saloon carriages, and had a fairly pleasant journey. On our arrival, however, it commenced to rain heavily, and during the whole day rain squalls were almost incessant, whilst the thunder rolled about on every side, and the consequence was an almost total eclipse of our best talent and a complete failure so far as taking fish was concerned. Only two out of five prizes were won by Messrs. Harrison and Ellinger, and this surely was bad enough considering the preparations that had been made, and the anticipations indulged in, by the competitors. Well, better luck on Monday next, when we fish in the River Vyrnwy, at Llanymynech, for prizes. This river can always be depended upon for more or less sport, and as it is well stocked with both fine and coarse fish, every class of angler is suited.—R. Woolfall, hon. sec.

### NORTH-WESTERN ANGLING SOCIETY.

On the 27th ult. the trays again looked well, and the following members weighed in fish:—Messrs. Underwood, Marshall, Grindley, and Hillier bream; Mr. Underwood's being a beautiful lot, weighing 35lb. Mr. Aldis got among the roach; one a real picture, weighed 1lb. 12oz. E. Cross showed jack and roach, and W. Roxbie roach and dace.—W. Hillier, sec.

### ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

Very few fish have come to the scale of late. On the 20th. Mr. Roberts, 1lb. 15oz. of dace; Mr. Richardson, perch and bream, 2lb. 15oz.; Laundy, bream. On the 27th, Mr. Roberts, roach and dace, 5lb. 15oz.; Mr. Obbard, chub and roach, 4lb. 8oz.; Richardson, 1lb. roach; Mr. Laundy, 12oz. Members are requested to attend on August 11th, when all contributions must be paid. All communications to the above society should be addressed: Secretary, care of Mr. Birk, the Three Kings, Clerkenwell-close. J. Obbard, sec.

### PECKHAM BROTHERS ANGLING SOCIETY.

The match fished at Amberley on the 27th ult. had the following result:—W. Gardham, J. Gafney, F. Beard, and W. H. Page, finishing in the order named. A match for a number of club prizes will be fished at Pulborough on the 3rd. All members are informed that by paying an extra shilling at the booking-office when they get their railway ticket they can return on Monday. The South London United visit to this society will take place on Monday, Aug. 25th.—Gadfly.

### RODNEY PISCATORIALS.

Our worthy host, Mr. T. Hughes, is having a turn among the roach and dace at one of his favourite places, just to keep his hand in. On the 27th ult. he exhibited a very nice lot of roach, many of them turning the scale 1lb. 6oz. On the same day Mr. R. Smith had some sport among the chub in the upper Thames, but he failed to grass any, his tackle being too fine and not strong enough to hold some of the beauties he had to deal with. He managed to get a few roach and dace. Messrs. Chantry and C. and A. Grant visited Mr. Hoole's district, where they managed to get some roach, dace, and eels. Mr. G. Dodd visited the Harp in search of bream. Members are informed that the next South London United visit will go to the Peckham Brothers, the Prince Albert, East Surrey Grove, Peckham, on the 25th inst. I am requested by the committee of the Rodney Piscatorials to inform the members of that society that their presence is required on Wednesday next to decide the where and how the next monthly competition shall take place.—Pixie.

### THE PISCATORIAL SOCIETY.

On the present occasion this report is from memory, as I have unfortunately mislaid the notes taken by me at the meeting. Mr. Adlington, chairman. There was a good attendance of members present to witness the result of the barbel competition, open to be fished for in any public water, the minimum size allowed to be weighed in being 2lb. The efforts of those members who competed were devoted to the Thames, and Messrs. Blamey and Beasley gained 1st and 2nd prizes respectively. The tables were well filled with trays of fish, principally barbel, there also being chub and roach. Mr. Blamey showed nearly 40lb. from Richmond; he also took many others nearly up to the 2lb. standard, the principal part of the same being returned to the water. Mr. Beasley, fishing at Maidenhead, had the honour of gaining the second prize, and the largest fish of the competition; also showed some chub. Mr. Huggett, also at Maidenhead, captured barbel and chub; early in the evening it was thought he had gained the second prize, but Mr. Beasley showed up later on, beating him by 5oz. Mr. Meyer weighed in barbel from Shepperton, and Mr. Lemann a tray of nice chub. The healths of Messrs. Blamey and Beasley were proposed as the successful anglers. Mr. Blamey, replying, graphically described his day's sport, and sat down amidst the loud cheers of those present. The result of the competition proves the statement made at our summer dinner—viz., that the Thames Angling Preservation Society had well stocked their portion of the river. Mr. H. H. Brown and other of our members visited the Tournament and said, that although the attendance was poor, the castings, both with fly and weight, were exceedingly good, some of the distances cast being wonderful. Rev. G. Sumner gave his opinion that long casting was very often prejudicial, and that many persons acquired the habit of long casting and thereby lost efficiency. The discussion was also continued by the chairman, Mr. Goodger, and others. The chairman, in a few appropriate remarks, announced the death of one of the oldest members of the society, Mr. J. Mann, and proposed a vote of condolence to the deceased's relatives, which was unanimously approved, and the hon. sec. requested to write same. "Continued Success of the Piscatorial Society" and "The Health of the Chairman" brought the first of our competitions to a close.—T. H.

### SMETHWICK ANGLING CLUB.

On the 26th ult. Messrs. Guy and Lynch, roach, dace, and perch. On the 29th ult., Messrs. Godfrey and Keen, roach and perch.—Thos. Bannister, hon. sec.

### STOKE NEWINGTON ANGLING SOCIETY.

The fourth annual dinner takes place at the Pied Bull, St. Margaret's, Herts, on August 10th. Members and friends intending to be present, please give notice to the secretary not later than Wednesday, August 6th, this being quarterly night.—Thos. Gretton, sec.

### UNITED BROTHERS, DEPTFORD.

Several of our members were out on the 27th, and I must say had some nice takes of bream and roach. Mr. J. Payne weighed in 9lb. 10¼oz. of bream from Weybridge; Mr. Beak, 6lb. 13oz. of roach from Pulborough; Mr. Belton, 4lb. 1¾oz. of roach and bream from Pulborough; J. Currans, 1lb. 11¼oz. of roach and bream from Pulborough; F. Watts, 7¼oz. of "faries" from Dagenham.—H. T.

### WALTONIANS.

July 27th: Mr. Roland, roach, 7lb. 12¾oz.; Mr. J. Dodge, roach, 3lb. 13oz.; Mr. Juker, roach, 3lb. 10oz.; Mr. Clarkson, 2lb. 12oz.; Mr. Rushbrook and Mr. Morgan also weighed in fish.

### WALWORTH PISCATORIALS.

The members of the above society met at Sawbridgeworth, on the 27th ult., the result being Mr. Delhaye, sen., 1st; Mr. Bedford, 2nd; Mr. Delhaye, jun., and Mr. Griffin, dead heat; Messrs. Piolaine and Cain also had fish. In consequence of the wind and rain the takes of fish were small, eight members only competing. Since last report Messrs. S. J. Weatherhead, C. A. Beckett, Delhaye, sen., J. Boalch, and T. Gilbert weighed barbel and dace from Richmond, weight about 59lb., the greatest weight falling to Mr. Weatherhead—namely, about 24lb. in two takes.—J. Boalch, sec.

### WOOLWICH INVICTA ANGLING SOCIETY.

The annual dinner of the above society, which had been unavoidably postponed from the 11th June last, took place on Thursday evening, the 24th July, at the Golden Marine, Woolwich. The chair was taken by Mr. F. Latham, faced by Mr. J. Perry; and after the usual loyal and patriotic toasts had been given, Mr. C. Jolly proceeded to award the prizes to the successful competitors. The 1st prize was taken by Mr. G. Pycroft; the 2nd, C. Foster; 3rd, F. Latham; 4th, G. Knight; the remaining prizes being taken by Messrs. J. Perry, C. Jones, G. Walker, J. King, H. Gardner, and Jenner. Prizes for largest fish were taken by Mr. G. Knight, chub; Mr. J. Perry, perch; Mr. F. Latham, roach; Mr. F. Latham, bream; Messrs. F. Latham and C. Foster, dace. Messrs. Latham and Foster tied for the dace prize, after a most spirited competition by all the members. After the thanks of the members had been given to the donors of last season, a new prize list was opened, which was heartily responded to by the members and their friends, a handsome list of prizes being thus furnished for the ensuing campaign with the finny tribe. The health of the visitors was then drank, and responded to by Messrs. Levitt, Ray, and Lomas, &c; and a vote of thanks awarded to our worthy host, Mr. W. Davis, for the excellent dinner he had provided. The remainder of the evening was devoted to harmony.—F. Latham, hon. sec.

---

**Great Eastern Railway.**—This company have lately established a new and admirable train service, and made some especially good arrangements for the issue of Cheap Tourist and Excursion Tickets for the convenience of the public. Yarmouth, Lowestoft, Cromer, Hunstanton, &c., can now be reached in a little over three hours, and tickets are issued enabling the holders to spend Friday till Tuesday at either of these truly excellent seaside resorts for the moderate charge of 10s.; while Fortnightly and Two-Monthly Tickets are likewise issued at a similar low rate. A Fast Express Train Service is also running between London and Doncaster, opening up a new and important route to Leeds, Bradford, Halifax, Manchester, Liverpool, Hull, York, Scarboro', Edinburgh, Glasgow, and all parts of Lancashire, Yorkshire, Scotland, &c., and Tourist and Excursion Tickets are issued to all the favourite seaside and inland places of interest in these districts. The company have also very greatly improved the service between England and the Continent, viâ Harwich, and Rotterdam or Antwerp, this route being now the best, cheapest, and the most direct of all existing routes. The steamers have been specially constructed for this service, and are among the finest running. There are no steward's fees, and the special express trains from and to London, Doncaster, &c., and Harwich, run alongside the steamers.

**Secretaries** and other gentlemen having subscriptions on behalf of the widow and family of the late S. Morgan, chairman of the United London Anglers' Central Committee, will oblige by sending them in on or before Monday, August 18th, 1884, to R. Ghurney, Secretary, 10, Baches-street, Charles-square, Hoxton, N.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### LIVERPOOL ANGLERS AND CLOSE TIME.

Sir,—Three letters appeared in last week's Fishing Gazette, signed respectively "Quill Float," "Piscator," and "Baby Roach" (what a bore these assumed names are!), in which the writers, under cover of replying to "Isaak," make a feeble effort to disparage the Liverpool Angling Association, and say things which cannot with propriety or credit be discussed in the columns of a public journal. But in a general sense, I should like to say some few things by way of reply to these letters.

We have fished two competitions in the river Vyrnwy this year during close time, did so last year, and hope to do so next. These contests took place on the two great Bank Holidays—Easter Monday and Whit-Monday. Now, it is just as *right and legal* to fish in this river during the close season as it is to fish for *old, small, and degenerate* roach in the few little ponds rented by the "Central," or in *so-called* private waters preserved for ticket-holders. The Freshwater Fisheries Act, 1878, gives power to Boards of Conservators to exempt any waters from the close time clause of the Act, and the Severn Board of Conservators have exercised this power by exempting the Vyrnwy. Therefore, anglers in fishing in it during the close season are clearly observing the *letter* of the said Act, if not the *spirit*, as "Piscator" put it. My own opinion is that the *spirit* of the Act is not observed either in fishing exempted or rented waters. And it is surely better to go to a *decent* river if you do fish than to potter about from one insignificant pond to another, taking infant fish of about 40 to the lb. "Quilt Float" says he would not belong to an association of which "Isaak" was a member. Perhaps he means what he says; but I would remind him of the answer given by the milkmaid to the gent who rudely said he could'nt marry her: "Nobody asked you, sir." I am afraid "Q. F." is too particular by half. As to progress and working members, it really is pleasing—if true—to learn that in these critical times for angling clubs, there is one which is doing well, although there are no outward and visible signs of the fact. But in their prosperity, this one Association does not appear to be doing much for the general benefit of either angling or anglers, for when we were endeavouring to induce the railway people to restore us our lost privileges, and the Central were spoken to on the subject of helping the movement in any way, the reply was, "What is the use of our going to any trouble or expense, for if you succeed we shall share the success and save our pockets?" and this reply was accompanied by a smile that was *childlike and bland*. And these are the people who desire to impress upon the many readers of the Fishing Gazette their superiority, morally and piscatorially. I believe there are some members in the Liverpool Central Angling Association, who originally were members of the Liverpool Angling Association, and I beg to ask these gentlemen if they left the latter Association in a manly or straightforward manner—*i.e.*, did they give the notice required by the rules or any notice at all, and did they pay up their subscriptions? We have managed to get along so far without them or their money, but it is not pleasant to have members on whom you cannot depend. The Chancellor of the Exchequer frequently has "conscience money" sent him, and there is a goodly amount of this due from previous members of the Liverpool Angling Association—strictly *moral* obligations which I hope will now be discharged. I am somewhat doubtful, Mr. Editor, whether you will spare me space for this letter, for I have written more at length than I at first intended; but these sly hits at this Association, which is the oldest, the best, and most influential, and which has always been in front when there was anything to be done for the benefit of angling in this city and neighbourhood, have somewhat "riled" me.—I am, &c.,

R. Woolfall,
Hon. sec. the Liverpool Angling Association.

### PRESERVING WASPS AND GRUBS.

Sir,—If you know of any sound system of curing and preserving wasp grub, and will kindly reveal same through your valuable columns, you will confer a favour. I remember reading some time ago how to render a line waterproof. Would you kindly supply your latest information on this process and very much oblige?—I am, &c., A Newcastle Angler.

### TROUT FISHING ON THE WHARFE.

Sir,—Would you, or one of your readers, kindly inform me whether I should get better trout fishing on the Wharfe or in Wensleydale, and, also, which are the best places to stop at? I do not object to high charges for daily or weekly tickets so long as the fishing is good. Can you also tell me of a good guide to Yorkshire?—I am, &c., J. A. Hutton.

P.S.—Would Mr. Walbran kindly answer this either through your columns or by letter?

### MR. HOTSCHIS.

Sir,—Mr. Hotschis will oblige me by kindly forwarding his address.—I am, &c.,
13, Colville Mansions, W. G. M. Kelson.

### FISHING IN THE DARENTH.

Sir,—Could you inform me if there is any free fishing in the neighbourhood of Eynesford? The river Darenth runs close by, and I should like to know those portions that are public in order to avoid trespassing. Information on the above will oblige.—I am, &c., J. Hotham.

[Visitors to the Lion Hotel, Farningham, can fish the open water there in the Darenth.—Ed.]

### ANGLERS' BENEVOLENT SOCIETY.

Sir,—Since my last report I beg to acknowledge with thanks the receipt of £1 1s., annual subscription, from Mr. A. J. Little (Richmond Piscatorials).—I am, &c.,

R. Ghurney, sec.

### AN APPEAL TO ANGLERS FOR LIVE SPECIMEN FISH.

Sir,—It is very difficult for us to obtain, by love or money, certain species of freshwater fish—chiefly pike, trout, chub, roach, tench, and gudgeon—for our aquarium here. Would you kindly insert, in your next issue, a note stating that if any angler who gets hold of specimens of these fish, sufficiently important in size and numbers, will wire me here, I will send him down immediately carriers, and will pay all expenses in connection with the transit of the fish to South Kensington. By doing so you will oblige.—I am, &c., W. Oldham Chambers, sec.

National Fish Culture Association, Exhibition Grounds,
South Kensington, London, July 19.

### ACCOMMODATION AT HEIGHAM.

Sir,—I should be glad if you, or some of your readers, can give me any information as to staying accommodation at Heigham (Potter), on the river Thurne in Norfolk, as I think of staying there a few days, fishing, during next month.

There is, I believe, an inn at the bridge. I should like to know if a bedroom can be obtained there, and whether the charges are reasonable; also if rowing or sailing boats are procurable in the immediate neighbourhood?

Can you tell me, too, if the shooting of wild fowl on the river and its banks is allowed. Thanking you in anticipation,—I am, &c. Ignoramus.

## FLY-FISHING FOR DACE IN THE THAMES.

There has been some remarkable sport in fly-fishing for dace in the neighbourhood of Twickenham this season. Mr. Wright, of the White Swan Hotel, at the waterside, who is a member of the Thames Angling Preservation Society, gives me the following account of what he has done at the point of the island opposite to his hostelry: On four occasions of one and a half hours' each he made a total of 158 fish, nothing under 7in., and some 9½in.; and if he could have remained at any one time for about seven hours, he would have produced the same total. They were all caught with the red ant and the black gnat, and I am quite sure if any fly-fisher will call upon him, he will give him every possible assistance. Mr. Nicholls, in four hours' fly-fishing last week, took five dozen of splendid dace; and this gentleman, who got the second prize at the Richmond Piscatorial Society Competition for specimen fish, caught all his fish with the fly, and had he not accidentally left one of his fish in the bag at the time he weighed in, he would have secured the first prize. I spoke to one of the fly-fishers on Thursday in last week opposite to the above hostelry, and he told me he had been getting some capital sport this season.

B.

Thames Fishery Conviction.—Mr. Augustus Davenport was summoned before the Hampton Bench on Monday last, July 28, for taking a quantity of unsizeable roach at Staines. Mr. W. H. Brougham prosecuted on behalf of the Thames Angling Preservation Society, and the charge was proved by head river-keeper, Alfred Thompson. The defendant was find £1, and 8s. costs.

An Angler's Hat Knocked off by a Trout.—We quote the following account of a curious freak on the part of a trout from the *Norwich Argus*:—"Two local anglers—Messrs. Lapthorne and Pepper—whose word has never yet been doubted, had scarcely settled down to business at Loddon Reach, Cantley, the other day, when off went the hat of the former; and just as the piscatorial gun-maker was on the point of pulling ashore to look for the culprit who had thrown a stone (as he supposed) his condimental colleague discovered in the bottom of their boat a splendid trout weighing nearly 4lb. We have heard of tall salmon leaps, but never of a fish that had larks with a man's hat before. When those black bass and other game fellows are introduced, Broad visitors and anglers generally may prepare for sport indeed; but they might bring the new Yankee tell-tale hook along which registers the weight—it saves trouble and prevents disputes. By the way, a goodly number of gentlemen are arriving at the various fishing-stations hereabouts."

TO SMOKERS.

HONEY COMB, Pure Flaked Virginia.

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage is 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

# The Fishing Gazette.

SATURDAY, AUGUST 9, 1884.

## THE "FISHING GAZETTE" TOURNAMENT.

IN our list of prizes sent in for above-named, printed in our issue of last week, we accidentally omitted to name Messrs. C. L. Matthews and Co., of 1A, Wynyatt-street, St. John-street-road, London, who kindly sent three of their No. 1 black "Adjustable Rod Holders," and six nickle-plated do. ; also three of their No. 1 black "Boat Clips," and six nickle-plated do. These are good, genuine articles, and very useful to anglers. We also omitted to mention the very handsome three-guinea Silver Cup, given by Mr. W. Thomas, which was won by Mr. Malloch, and a most excellent cash-box, sent by Mr. J. C. Chubb, of the celebrated lock firm. If the winner is wise, he will use it to keep his flies and fly-book in, and so keep out the moth.

## ANGLERS AND THAMES RIGHTS.

IT will be seen from the report which we publish below that the House of Commons Committee, after long deliberation and examination of a great mass of evidence, have come to the conclusion that the public has "not got any right of free fishing from ancient custom, and that the fishing appeared to be entirely distributed among owners of manors who retained their proprietary rights." We have always said that the probable result of the inquiry would be to confirm the riparian owners in their claims, and that anglers would not benefit by the inquiry. Rowing men come off better if the recommendations of the Committee are agreed to by the House, for the right to row wherever you please wherever Thames water flows, whether for pleasure or business, is claimed for them.

ON Monday last the Committee of the House of Commons appointed "to inquire into the operation of the Acts for the preservation of the Thames, and the steps which are necessary to secure the enjoyment of the river as a place of recreation," presented their report to the House of Commons. The Committee had been taking evidence twice a week for about four months, and they have agreed to a report drafted by Mr. Story-Maskelyne, who has acted as chairman of the Committee. They assert that the paramount object of the river is its navigation, and they consider that the change from a great commercial traffic to a pleasure traffic does not interfere with that principal consideration. They maintain that the river is open from bank to bank wherever the Thames water runs. With regard to the towing-path, they deem it to be desirable to have a towing-path through all parts of the river that were much used, and that it should be made a public path, and not kept merely as a path for navigation. The Committee then propose that the Conservancy should have large powers to deal with all the questions which concern the rough and disorderly conduct which had made the Thames unpleasant lately, and that a certain number of police should be placed on duty on the river ; that the Conservancy should have the control of all house boats, steam launches, and all kinds of boats that are on the river ; in short, that they shall practically lay down the rules and laws that are to regulate the conduct of the public on the river. It is also suggested that for certain offences there ought to be summary jurisdiction. With regard to the fisheries, they had taken a great deal of evidence, and they had come to the conclusion that the public had not got any right of free fishing from ancient custom, that the fishing appeared to be entirely distributed among owners of manors, who had more or less granted them to other people, but had retained their proprietary rights.

## ELFORD, RIVER TAME.

AN inspector of the Trent Conservancy has been engaged during the last week, specially inquiring into the cause of dead fish floating down the Tame. It seems that the long drought killed a number of fish in the river Rea, and they floated into the Tame. When the Wolverhampton sewage is removed, the improvement will be very great, and the town council are now studying how best to remove it.

## AN AMATEUR ANGLER'S DAYS IN DOVE DALE—(*Continued.*)

SATURDAY, the first of my angling experiences, was the wettest I have known for many a day. I have already told you how I fared on that, to me, very memorable occasion. It rained steadily from 8 a.m. on Saturday till 11 a.m. on Sunday without intermission.

The Dale, you know, is a centre of attraction for all the country round, and Saturday always brings a number of visitors. They came in four-horse coaches, in vans, and waggonettes, and traps, all soaked in rain, and in rain some of the most adventurous started off for the river ; but most remained under the friendly shelter of the hotel. Happy youths and maidens, what cared they for wind or weather ! They departed as they came, in a steady downpour, happy and joyous as if in the brightest sunshine. Rain, after all, is not so depressing in these healthy hills as it is in the dank streets of London.

Yesterday afternoon, it being tolerably fine, I started off to survey, in sunshine, the scenes of my previous day's exploits in showers. I was accompanied only by my umbrella, and having as suddenly become a lover of Nature as I had become a disciple of Izaak Walton, I revelled in the beauties of the ever-changing scenery through which I rambled ; but now a sad reflection was forced upon me. I have been a business man for nearly fifty years, alas ! and during all that time Nature and I have been for the most part strangers to each other, and now that I meet her in her most enchanting beauty, I feel like a bashful lover, unable to find a single phrase wherewith to address her, or to express my admiration. I would advise all young people to study the language of Nature in their youth, and in old age they will be able to hold intelligent converse with her. Here am I, an old man, wandering through lovely scenes with a sort of childish delight ; but with a feeling of mournful regret that, withal, Nature and I are strangers. How have I neglected her in my youthful days ! And how she laughs at me now in my old age ! I long to be a botanist, an artist, a geologist, a fern collector, even a genuine piscator ! I want to seize Nature by some one of her many glorious features, and be able to say, "Here, at least, thou are mine." But, no ; she evades my grasp. I see around me green trees, and shrubs, and plants ; at my feet, a limpid, rippling stream ; far away above my head, bare rocks and wood-clad heights—but what are these to me ? I had a notion that, hidden away in rocky and almost inaccessible recesses, I should discover the rarest ferns and the choicest flowers—but how is it in reality ? Of ferns I could see none, and if I had seen them, how could I distinguish the rare from the common ? The prevailing plant on the water's margin was a large-leafed one—to my ignorant mind more like a cabbage than anything else, or, rather, like rhubarb as one sees it in market gardens, and in Covent Garden. It must surely be wild rhubarb.

Thus I wandered through the winding vale in childish admiration of the new pictures ever opening up before me. The most remarkable features of this wonderful valley seem to me to be the weird spires of grey rock, every here and there standing up abruptly, some of them over a hundred feet above the green foliage which lines the hills on either side. It does not require much imagination to fancy these gigantic rocky pillars as the ruins of some giant's fortress. Looking upward, I beheld a picture which reminded me of that terrible frontispiece to "The Whole Duty of Man," which has haunted me from my childhood—it looked so like the grim, wide open jaws of death ! The entrance to this awful cavern was about one hundred and fifty feet almost perpendicularly above me ; but like a trembling bird at the gaze of a serpent, I was fascinated. I felt bound to ascend that terrible height, and be swallowed up by that fearful, widely-gaping mouth. I scrambled up on my hands and knees, holding on now by tufts of grass, now by jutting rocks, until at length, breathless and exhausted, I tumbled headlong into that fearful monster's jaws ! After a lapse of time—I know not how long—I recovered my breath, and looking round, it did not seem to me so grim a place as my excited imagination had painted it. I observed here and there the ends of smoked cigars, fragments of tobacco pipes, and other mundane things, which sufficiently assured me that I was not "the first that ever burst" into that silent cave. In my case, comparatively speaking, it had been "facilis *as*census Averni," but how to get down again "hoc opus, hic labor, est !" That was really a trying time for me, for remember I was alone. I felt it was an easy matter to break my bones in scrambling down those slippery stones ; so I looked upwards and around, and at length I spied a side path which seemed to lead perpendicularly another hundred feet or so to the outside top or head of the giant's cave,* and as it presented jutting rocks, tufts of strong-looking grass, and here and there a tough young ash plant, I determined to try the ascent to the top, in the hope of finding my way down the other side of the mountain, rather than "retrograde" the way I had climbed so far ; and accordingly I set to work, but I found this tougher work than the first ascent. I had got nearly to the top when the terrible thought assailed me, "Suppose there is no outlet there !" To descend the way I had climbed on looking down I felt to be quite beyond my powers. In ascending I had prided myself on my Alpine youthful agility, but now my poor old limbs trembled violently beneath me ; it was clear that I could not sleep on that little ledge, I scorned the idea of shouting for assistance, and if I had I do not quite see how anybody could come to me ; so straining every nerve, I managed to reach a friendly young sapling at the very top of the precipice, and I landed clear above it on the mountain's brow, triumphant, but exhausted in wind and limb.

After a short interval of rest, I descended gradually to the margin of the gently-flowing Dove. In coming down I had heard some crashes in the woods on the opposite hills, and on reaching the bottom whom should I see on the other side but my old friend the keeper. "Well," said he, "I *was* surprised to see *you* up there !" There was just a little something in his tone not quite intelligible to me, but whether it meant sarcasm at my folly or admiration of my manly performance, I was uncertain. "How on earth did you get on top of that hill," he added ; and when I told him I had got there through the Giant's Cave, he only said, "I wouldn't a' done it for something !" After this he waded across the stream, and we became quite friendly-like and confidential. He remarked that the river was in capital order, just a little discoloured, and the trout were rising famously. "It's a curious thing," he said, "but I have often noticed, and other people have said the same, that fish do rise better on Sundays than on any other days. I suppose they get to know that people don't fish on Sundays."

A pretty bird flew up and skimmed along the water. It was the same kind of bird as the one which on Saturday caused me to lose my only fish. "Is that a kingfisher," said I. "No," he replied, "that's a *water ouzel*." I remarked that I had also seen a little bird, strange to me, about the size and colour of a lark, but with a white back, now skimming the water, and now pretending to pick up insects on the grass. "I don't know the proper name of that bird, but from your description I should think it must be what I call a 'dipper.' And I believe that both he and the water ouzel are about the worst fish poachers we have in these parts. People in other parts wouldn't believe that we had water ouzels here, and I remember some years ago a clergyman from Warwickshire sent a messenger specially to me offering to give me half-a-crown for a brace of water ouzels. I soon got him three, and he was so pleased that he gave me three-and-sixpence; but I have my ideas that that wasn't much to what he got by those birds. I have heard that, notwithstanding his being a clergyman, he had made a bet of ten pounds with another man who declared there were no water ouzels on the Dove, and of course he won it.[*] He promised to write to me again, but from that day to this I have never heard another word of him." "Shame," said I; "he ought to have sent you a pound at least." Thus we chatted along. I asked him if he could tell me how to get a good appetite, and he said that if I could not get a good appetite for dinner after such a climb as he had seen me perform, he could offer me no better prescription. For himself, he always did with one good meal a day; "but then," says he, "I like to get a fair share of beer. I generally take from five to six pints a day, and I find it does me good. I am on my feet about these hills and dales from daylight to dark, and I don't know as there is ever anything the matter with me." I should think not, indeed, for a more jolly, genial picture of good health I never came across in my life—a splendid example of what good air, good ale, and outdoor exercise can make of a man. How I envy him! For here am I, a poor valetudinarian (to say nothing of being a sexagenarian), who dare not touch a glass of ale; and now after this six miles' walk and scramble over that awful cave without any appetite whatever. They seem to get all sorts of people at this hotel. There are, I daresay, some like me, "as canna eat," and also some "as can eat"—like a company of ladies (mostly foreigners, judging by their names), under whose inscriptions in the visitor's book some wag has written :—

---

* I am told that in the guide books this rock is called "Reynard's Cave," but I make a point of never looking at guide books.

"They ate so much, and they drank so much,
And so little they cared to pay;
That it was well for this hotel
When this lot went away."

But I must be off. The trout are waiting for me with open mouths. The water is in better "fettle" than ever, so perhaps I shall tell you of my success in another letter."

## ON A YORKSHIRE CHALK STREAM.

By Francis M. Walbran.

*(Continued from page 2, Supplement, June 28th.)*

As a rule, you generally find that river watchers, and such kind of men, are pretty good judges of the weather, and in this respect C. proved himself no exception, for when I arose next morning I found there was every indication of the day being a blazing hot one. I was busily engaged in making up a fresh cast of flies in the coffee-room when the waiter appeared upon the scene :

"Please, sir," he remarked, "I am very sorry, but the cook has made a mistake."

"Mistake! What do you mean?" I exclaimed, wondering what on earth he could be driving at.

"Well, sir, I put down fish on the slate for your breakfast as you ordered, and she has cooked one of yours."

I dare say that most of my readers, who have been anxious to take a good dish home, and have met with adverse circumstances, can imagine my feelings. However, the fish was cooked, so I made the best of it, and did not allow my reflections to spoil my appetite.

A gentleman whom I met on the previous evening informed me that he had recently taken a good many fish with a small partridge hackle tied with crimson silk. I therefore called in at the local tackle dealer's and purchased a few as I went down to the river. I also picked out a few other likely patterns.

I found C. smoking his pipe in the garden pending my arrival.

"You will have to fish very carefully to-day, sir, to make up a dish," he sententiously remarked; "so, if you like, we will work up-stream where they have not been bothered so much this season as they have below."

"All right; you know best," I answered. So accordingly up-stream we went.

Just above C.'s cottage is a piece of water about a quarter of a mile in length. It is pretty uniform in depth, and contains some really splendid trout. I have conversed with a goodly number of keepers in my time, but I never remember meeting with one who took such an obvious interest in his stock of fish as C. does. He is absolutely proud of them, and treats them just like pets. The club may congratulate themselves upon having such a painstaking servant. Indeed, the fact that he has been in their employ for 28 years proves alone how they value his services.

There was not a breath of wind, and the whole of this length—alluded to above—being still water, there was no chance of rising any fish in it. We accordingly strolled on until we arrived at a mill, where the surplus water from the dam fell a distance of some feet into a kind of small lake, surrounded with hawthorn bushes and trees, under the shade of which several good trout were rising.

"If you can creep down behind them nettles, and get your flies well out under the boughs, you will happen catch one of yon," said C.

So I obeyed his instructions; and after the usual amount of caution necessary when crawling among nettles, succeeded in dropping my tait fly (crimson partridge) right into the centre of a circle caused by one of the rising fish.

"I have him," I shouted, as he came up with a wave, and the next moment rushed off into the boiling water below the fall. The struggle, however, was of short duration, the hook relaxing its hold. C.'s face showed evident chagrin; but the very next throw the same tactics were repeated, this time with more satisfactory results, for after a good fight a beautiful golden trout about 12oz. was scooped out with the net and consigned to the creel.

After this no more of the inhabitants of that pool were to be seduced into rising. We therefore proceeded onwards, making a cast here and there with no further success until we reached a thick plantation, where, under the leafy shelter of a large sycamore tree, several good fish were leisurely rising at every fly that came over them. It was, however, an exceedingly awkward cast, and only after numerous entanglements and forcible remarks did I contrive to get my flies on the water. One of the trout instantly took the yellow dun; but being in such a cramped position, I could not strike properly, and after a brief struggle he escaped—much to my disgust after all my trouble.

It was now eleven o'clock, and the fish began to rise pretty generally; so at C.'s suggestion we hastened on to a place where he was confident that I should get a brace or two. We soon arrived at this desirable hunting-ground, which I will describe before recounting the sport that I met with there.

It was a length of water rather narrower than that below, but more streamy, and terminating with a sluice, the water from which formed a nice eddying pool under it. On the left bank a thick fir plantation came down within the distance of a couple of yards from the water, the right bank being entirely open. My first cast was made into the rough water below the sluice, and resulted in the loss of a small fish; but within the next few throws I was fast in a "pounder," which C. brought to bank in the net. And now the fun began in earnest. Creeping along almost upon my hands and knees (for the bank was higher in this part), I threw across to the other side, where I could see that the trout were feeding, and almost every cast was rewarded either with a rise or a fish. Didn't I work while that rise lasted! Not one single moment did I waste; and when after the lapse of about three-quarters of an hour the circles began to appear less frequently, I had $2\frac{1}{2}$ brace of splendid trout in my creel. C. was now obliged to leave me, having some work below which needed his attention. I therefore sat down in the shade of a large tree to smoke a pipe, which I considered I had earned. Shortly after C.'s son passed by, and he kindly offered to carry my fish (which I had now made into $3\frac{1}{2}$ brace) down to the cottage. To this proposal I gladly assented, as the creel was beginning to feel heavy. After lunch and another pipe, I worked on up-stream, throwing over each fish that I saw rising; but the sun had now come out more strongly, and it was only in sheltered places that I could succeed at all. I therefore began to retrace my steps when I had gone about half a mile, nor did I make any halt until I came to the place where in the morning I had lost the fish that resided under the sycamore tree. Now, the fact of losing that fish after adopting such strategic tactics to get at him had "riled" me more than any other incident of the day, and I therefore determined, if possible, to make him accompany me home. Peeping cautiously through the bushes, I perceived that he had come back again exactly to the old spot, and was sucking down every fly that came over him with as much avidity as ever. I was perfectly well aware that he would have learnt caution from his previous experience, and that it would be useless to attempt reaching him in the same manner as before. I therefore crossed over to the opposite side of the stream and threw my flies about a yard above the overhanging branch, allowing the current to carry them down under it. I then lowered my rod-top, and awaited the result. I did not wait long in suspense: a gentle tug proclaimed to me the fact that my plan had succeeded, and my captive rushed out from beneath the boughs and made off down stream, taking out a few yards of line as he went. I soon stopped these tactics, however, by giving him the butt, for I had found out from previous experience that if you allowed these fish a yard of spare line, they almost invariably rushed into a bed of weeds, and threading the cast through, would escape on the other side. After another rush or two he plunged sullenly on the surface and then caved in, whereupon I gently drew him into the net, and triumphantly brought him to bank. I must say that after capturing this trout I felt more gratification than I did in the case of any of those taken previously, owing to the fact that he had triumphed over me in the morning's encounter.

I got another fish in the pool below the sluice, and then turned my steps towards C.'s cottage. On my way thither I met with my companion, who had picked up four brace of good fish, but was compelled to desist owing to a splitting headache. We had a cup of tea together, after which C. weighed my fish. Altogether, reckoning the $1\frac{1}{2}$ brace caught on the previous day, I had six brace of trout, the whole scaling exactly 11lb.

Wishing my companion (who was staying the week) success on the morrow and freedom from his headache, I wended my way to the station, and shortly after commenced my return journey. The details of that I will not recount; but may remark that when I read in the Fishing Gazette the other day our Editor's graphic description of *his* return home on the eve of Whit-Monday, with an almost identical creel of trout, I was very much struck by the similarity of our experiences, except that I did *not* meet with a rural policeman seeking promotion by the capture of supposed dynamitards. I reached home at one o'clock a.m., thoroughly tired-out and disgusted with the delays consequent upon Whitsuntide travelling. I was soon in bed, however, and a good sound sleep soon dispelled this feeling. I would not at all object to experience the same inconvenience to-morrow, so long as it resulted in such an enjoyable day's sport.

## CAMBRIDGE AND ELY ANGLING SOCIETY.

At the Ely Petty Sessions on Thursday, the 31st ult., before O. C. Pell, Esq., in the chair, H. T. Luddington, J. Martin, and C. M. Bidwell, Esq., an important case as to the rights of this Society was heard. James Bryant was charged with angling in the day time in the South Level Cut, near Littleport, in which water the Cambridge and Ely Angling Society have, as lessees of the South Level commissioners, the exclusive right of fishing.

Dr. Cooper (instructed by Mr. Rogers, of Ely) appeared for the prosecution. Mr. Atter, solicitor, of Peterborough, appeared for the defendant.

Dr. Cooper stated that this prosecution was instituted in order to vindicate the rights of the Cambridge and Ely Angling Society who claim the exclusive right of fishing in the South Level Cut. There was an idea prevalent that anyone, whether a member of the Society or not, could fish the water from a boat, or angle from the towing path. Such a claim was entirely erroneous, and it was of the highest importance to the Society that the illegality of such a course should be pronounced by the Bench. The learned counsel quoted the various decisions of the judges as to the rights of persons to angle in non-tidal rivers, and stated that he could conclusively prove that the South Level commissioners, who had made this Cut under the authority of an Act of Parliament, were the owners of the fishery which they had leased to the Society, and that the so-called claim of right by the inhabitants of Ely and the neighbourhood to fish the water was entirely without foundation. The Society, which consisted of 400 members, afforded every facility by a low subscription to persons to fish the waters, and in the interests of sport, and for the preservation of the fish, it was absolutely necessary that none but members should be permitted to fish.

Benton, the Society's keeper, gave evidence that on the 28th of June, about four in the morning, he found the defendant fishing in the South Level Cut in a boat with rods. He inquired if he was a member of the Society, and the defendant replied that he was not, and did not intend to be, and that he should fish as he had done for 20 years despite of the Society. He also threatened the keeper. Evidence was also given of the execution of the lease of the fishery, and of the right of the South Level commissioners to the fishery.

Mr. Atter, on behalf of the defendant, stated that he could not resist a conviction, as both the law and the facts were clearly against his client. The defendant, like many others, had an erroneous idea of his rights, and the only thing he could urge was that a somewhat misleading notice had been issued by the Society, to the effect that only angling by rod and line was permitted.

Dr. Cooper stated that the notice referred to only applied to members. There had been extensively circulated a further notice that only members of the Cambridge and Ely Angling Society were entitled to fish.

The Chairman (Mr. O. C. Pell) said that the case was perfectly clear, and the defendant must be convicted. As he understood no excessive penalty was asked for, the defendant would be ordered to pay a nominal fine of 1d., and the costs, £2 19s. 6d., on his undertaking not to offend again.

---

[*] There seems to be a specialty about the neck feathers of the real ouzel which mark its character; and these feathers are found on the Dove ouzel.

The defendant at first declined to give such an undertaking, but on the Chairman telling him that if he did not, he would be fined the full penalty of £5, he agreed to do so.

The Chairman stated that after this warning, any future offenders, if convicted, would be fined the full penalty. Every facility was offered by the Society for persons to become members, and their rights must be protected.

It may be useful to state that the keeper has received strict instructions to report all cases of persons fishing who are not members. The effect of this conviction has been to convince a large number of persons who imagined they had the right to fish from the towing path or a boat that they are wrong, and they consequently have joined the Society. At the present time the prospects for anglers in the Society's waters are very hopeful. The stock of fish was never larger, and some excellent sport has been obtained.

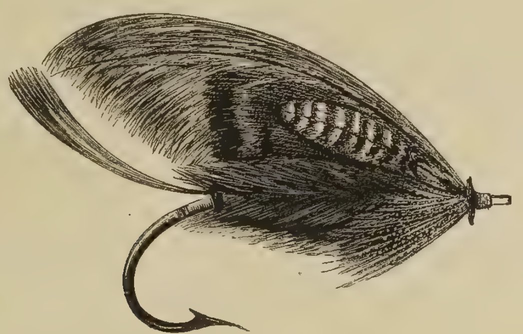
## ON THE DESCRIPTION OF SALMON FLIES.

### By Mr. Geo. M. Kelson.

### Major Traherne's Patterns *(Continued).*

### No. 9.—The "Chatterer."

Spreading tails, sometimes flat, sometimes in set-sail fashion, resembling closed butterflies' wings, are very effective and telling. I am very partial to them seated erect on any of the "Baker" element; but they would be out of character and ill-placed on any of these more refined patterns. Almost every wing feather in our collection can be utilised here in moderation; and if we want this sort of tail bow-shaped—turning up like the illustration—the strands from one side should be piled first and backed with those from the other; but after collecting the whole bundle, we must be careful in replacing any that are obstinate or reversed, before they are attached.



Mixed at will, they may be rolled between the thumb and forefinger, but not twisted, taking pains beforehand to pack them pretty much the same length. Unless it is first-class work, we may frequently observe that these fibres have been incorrectly fastened, resulting in a projection just at the very place where the small part of the taper should start from. But it is simple enough to avoid this obstruction.

You remember you have already levelled the under part with the floss which meets the gut, and that on the top from here there is nothing but the even and regular coils of tying silk closely woven. As a formal example, take Teal, Canadian duck, Gallina, Ibis, yellow Macaw, powdered blue, and Tippet, a minute portion of the three former, laying the latter only in different lengths, though also in single strands. Such combination would make a splendid show. In order to escape this clumsy lump, which is a dreadful eyesore, begin by lashing on the tail with a couple of turns of silk, holding the fibres between the thumb and forefinger for the upright variety; but if "shovel-tailed," merely press the thumb down throughout the work over them after they have been spread to suit the fancy. In cutting the waste away hold the scissors along, not across, the hook, and fetch it off pretty close to the iron, just touching the remainder with varnish before it is made secure with another turn or two of the silk. The herl butt should cover enough for you to have a fair road to proceed; but bear in mind that the scissors have encouraged the taper to decrease the wrong way, which momentary mischief you override by winding the small sprays or *point* of a rapid-tapered herl over the part apparently a little thick, and following on with its fuller ones to make up the very slight descent.

Particulars such as these, and many others to which I may occasionally allude, are more for amateurs who have "gone through the mill," who know something of the work, and who aim at nothing short of perfection.

Professionals can scarcely be expected to resort to such measures—they could ill afford the time, especially at their present prices. Hence our work is reputed to be firmer, truer, and more to be depended upon; but, of course, I am not alluding to the specimens of those who are masters of the art.

It is in these first steps, these early stages, that we require to be careful before we can possibly spring up enlightenment; and we must trace, we must pave these less interesting yet all important subways, by which alone we reach the goal.

If we really desire to gain habitual confidence—to become proficient, we should keep up our practice; there is no art in fly-dressing that is too difficult for industry to attain to. Industry makes its science easy; but that systematic knowledge founded on principles so infinite which to us has such a fascination, soon becomes so distasteful from the mere custom of inactivity that we are liable to sink from one state of quiescence into another till we may finally forget the most trivial matters which we have accomplished previously with the utmost ease.

However clever we may be, or however much we may know of flies, we can never decide what salmon take them for. Some schools say seaweed; others, for enemies or opponents on the spawning bed. Many authors tell us that this fish does not feed in fresh water; if we are to believe them, flies cannot be fancied for food. Have any of my readers ever seen salmon take caterpillars that have fallen from overhanging bushes? I have. Butterflies, struggling for their lives on the surface of the stream; wasps, as they dip like martins and swallows; dragon flies, as they flit along the sedgy side. I have also seen kelts chivying pinks and swallow them; and do they not readily take our worm, legering? or when in its steady and undisturbed descent down a flat suspended below our float yards and yards from the point of the rod? But the authors add that, of all the thousands of salmon opened annually, not one single atom of food is ever found in their stomachs.

Some years ago, pike fishing about Christmas time, I took my casting net to a favourite little rivulet (an upper tributary to a well-known salmon river) for a pitch over the numberless small yellow trout always to be seen there. In arranging the meshes over one shoulder I was gently tapped on the other by the water bailiff. "I see you have my master's dog, sir; do you mean having the salmon too?" he asked.

The "master," however, was a peaceful relative of mine, and "Shot," the pointer, with only a hale, hearty old housekeeper of perhaps seventy summers, whose profusion of respected wrinkles almost as regular as the jowl of a jack, had been my companions for some few days; the dog just now was made fast to a fence.

The "Artful Dodger"—such was the keeper's village title—was, however, soon satisfied, and called my attention to a salmon in a miniature pool of water, bright as gin, and only 18in. deep. The back fin of a trout quite ½lb. was at that moment ploughing its way up stream over the peeping pebbles at the outlet; it could thus scramble in, but the salmon—or rather the two salmon, for the female was also there—could neither get up nor down. *He* was devoting his attention to the persistent little trout which would not be beaten off, and which seemed bent upon disturbing her ladyship, who was busily engaged over a bright little dip in the gravelly bottom. At last we distinctly saw the trout caught and devoured. A friend who had just then put in an appearance determined to have this fish "set up"; the casting net was immediately popped over, and a 25lb. salmon was dragged out on to the bank in a moment. It proved to be dreadfully diseased, so we decided to dissect it, and found the cankerous sores little more than skin deep. But where was the trout? Nowhere. In the stomach? Not a sign of it; neither did we ever know!

. . . . The fly that I illustrate this week, with its beautiful blue body, is one of the most useful, one of the most expensive, and one of the most difficult to dress—indeed, a trophy which should specially attract our attention, and raise us into action in our wakeful study. The amateur who can make a fairly good "chatterer" anything approaching the illustration in shape may be regarded as a prodigy of skill and patience.

Such a device, the fruitful result of experience, the acme of perfection, may well suggest something beyond the mere picture of fancy—may mean more than an idea germinated and matured from the screened seed of knowledge—might almost strike us as nothing less than the ideal insect of superlative and Oriental beauty, or a clever copy of some sylph-like splendour looming from a magic lens—in either case vividly and most truthfully portrayed.

There is not a little generalship required in managing and marshalling some seven or eight dozen of these delicate and brilliant feathers—two at a time, one over the other—to form a true taper the whole length of the body; neither is it a task an angler would care to undertake before breakfast. But to give anything like an idea to the uninitiated of this charming invention and work of one who has every fancy feather at hand ready for his facile fingers, we want colour, or better still, the original fly. The "chatterer" can be made two ways—by padding the body and using the same sized feathers all along, or by increasing the length of them as you progress; your assortment, however, must be an extensive one, and if you select those of uniform dimensions the fibres will be more regular in substance, more even in action, and consequently more shapely under water. It is described:—

Tag: Silver twist and light orange floss (tippet colour).
Tail: Topping.
Butt: Black herl.
Body: Two turns of purple silk, making headway for the chatterer's feathers closely packed and covering the whole of the body. A hook this size taking perhaps fifty to sixty.
Throat: Gallina.
Wings: Four red crows, in pairs, red points of the former extended, and one jay feather on either side. Toppings over.
Cheeks: Blue chatterer.
Horns: Blue macaw.
Head: Black herl.

## IMPORTANT FISHERY PROSECUTION AT DORRINGTON.

At the Dorrington Petty Sessions, last Friday week, before Sir Frederick Smythe, Bart., and E. M. Hulton-Harrop, Esq., George Jones, Edward Jones, John Boiden, William Hughes, Richard Ford, and Humphrey Howells, all of Meole Brace, were summoned for unlawfully, between the expiration of the first hour after sunset, on such day, and the beginning of the last hour before sunrise on the following morning, taking freshwater fish, in the parish of Meole Brace, on Friday, the 27th of June. Mr. J. Hawley Edwards appeared to prosecute on behalf of the Severn Board of Conservators, and Mr. Chandler represented all the defendants.

Mr. Edwards said the defendants had been found fishing in the River Rea, contrary to the Salmon Fishery Laws, to the by-laws of the Severn Board of Conservators, and also to the new Act of Parliament—the Freshwater Fisheries Act of 1884. After detailing the circumstances of the case, he said it might be contended that the defendant Jones was on property where he, as tenant, had the exclusive right of fishing. He (Mr. Edwards) submitted very strongly that although he had the right of fishing, he was subject to the statutes and by-laws of the Severn Board of Conservators. It was unfair that he should use a small net to take out trout, and the other riparian owners on the other side of the stream should be deprived of fishing, which, perhaps, they might have carefully preserved, and only used a rod and line. Very strong representations had been made to the Board on the subject, but they did not wish the Bench to inflict any vindictive penalty.

The magistrates suggested that the case should be settled privately.

Mr. Edwards offered to do it on payment of costs, and not have a conviction registered, but after a long consultation the defendants declined to settle the matter.

The Chairman said they considered the case proved, and, although the defendants had acted in ignorance, they would each be fined 1s. and costs.

**Illegal Fishing.**—At the last Petty Sessions at Clasbury-Mortimer (Shropshire), Thomas Perkins and David Perkins, of Rock, and Daniel Barber and Joseph Hudson, of Kinlet, were charged by J. Humpherson, of Bewdly, water-bailiff of the Severn, with taking trout from a brook at Kinlet, otherwise than by a properly licensed instrument. As defendants had permission from the owners of the land through which the stream runs, and were not aware that it was in the Severn Fishery district, the Bench inflicted a fine of 1s. each, with 5s. 7d. each costs.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### "EYED HOOKS, THEIR EARLY HISTORY," &c.

Sir,—Your paper of the 26th has reached me here in the Highlands nearly a week late, and in it I see Mr. Hall's letter on the above subject. I am not going to reply to it now, being too much engaged in the cultivation of the acquaintance of the Loch Cluny trout, but on my return home I shall ask you permission to do so. Mr. Hall's letter is an utter perversion of the intention of my meaning in the letter of May 31st, and I beg your readers to reserve their judgment until I have an opportunity of stating my case in answer to his remarks.

I wrote hurriedly, and I intended to give him the "lion's share" of any credit there may be in the matter; but I can show that my statements are consistent with facts, though his reading has given a wrong impression of them.—I am, &c.,

George Bankart.

Glen Cluny, Rosshire, August 1.

### FISHING IN SUTHERLANDSHIRE.

Sir,—In your issue of to-day I am reported to have said at a meeting held at the Gresham Club on Tuesday last, when giving a short account of a fishing trip I had in Sutherlandshire, that "one rod caught 310lb. weight of trout in eight days."

This is a slight mistake. It should have been *four* rods in eight days. I may, however, say that only on two days did we fish for trout exclusively, and then we managed to take 70lb. weight each day between four rods. The other days were partly devoted to trolling for ferox, and only occasionally, when the wind was favourable, was any attempt made to fly-fish.—I am, &c., Wm. Thomas.

103, Talbot-road, Bayswater, August 2.

### FISHING AT MARTHAM.

Sir,—It is truly lamentable that in the Heigham Sounds case the poor anglers should have "gone to the wall;" but it may be some consolation to the piscatorial fraternities of the "big city," and other gentlemen ambitious to prove their dexterity with rod and line, to be informed that there are certain "holes" in the river Thirne, near Martham, where, with proper ground bait, &c., a goodly company of "finny beauties" can be attracted and coaxed "to bank." Witness the exploit of Mr. Geo. Nicholls, of Martham, on Wednesday, 30th ult. He fished a favourite "deep pitch" in the river, and in the evening I saw him "trudging his homeward way" with a sack of fish on his back. His catch, mostly bream, weighed 26lb., heaviest fish 2lb. I do not think, therefore, that Waltonians who visit Yarmouth can be far wrong if they give the Thirne a try.—I am, &c., Alf. Roskelly.

Martham, Aug. 1st.

### FISHING IN THE NEW RIVER.

Sir,—Can you give me any information (through the Gazette) as to the fishing in the New River near Cheshunt?

If you can, and will, I shall be much obliged.—I am, &c., E. E. S.

### FISHING NEAR BRISTOL.

Sir,—Can you or any of your numerous readers inform me of any fishing in the neighbourhood of Bristol, in the direction of Mangotsfield, Yate, or Coalpit Heath, as I shall probably be in that neighbourhood towards the end of the month?

Any hints as to the kinds of fish, &c., would be very acceptable.—I am, &c,

98, Hampton-road, Forest Gate, Essex, E., 7th August, 1884. Hy. Colley.

### FISHING NEAR YARMOUTH.

Sir,—I am now at Yarmouth for a few weeks, and, as usual, intend fishing the broads and rivers of Norfolk. To-day (my first day) I fished at Potter Heigham, in the river Thurne, my catch consisting of five bream, respectively 3¼lb., 2½lb., 2¼lb., 1½lb., and 1lb., besides many minor ones. I lost three hooks, and several very fine fish broke away. While writing for the benefit of your many readers, and probably some may visit Norfolk, I would say, that amongst all my fishing excursions for the last three years, I have never failed to get a "bag" at Potter Heigham—Ormesby, Fulton, Cantley, &c., &c., being very inferior in my estimation. There is a nice inn there (Potter Heigham), Waterman's Arms, kept by Mr. Laws, and visitors receive the greatest attention, cleanliness, and as good cooking as one would wish to find at most reasonable charges. I mention this, Mr. Editor, since so many friends of mine have been to other quarters, and have been charged exorbitant prices, and have had no sport worth speaking of, which damps one's holiday. On my return from Potter Heigham yesterday evening, I passed no less than eight fishermen from Ormesby, the biggest bag consisting of about 4lb. of fish. I may mention that the baits used were lob-worms. I hope in a few days to send you some really good catches, if you will accept such reports.—I am, &c.,

W. F. Ditcham, M.D.

### ANGLING ON THE YORKSHIRE RIVERS.

Sir,—In reply to your correspondent, Mr. Hutton, in last week's issue of the Gazette, I think that for trout fishing he will obtain more satisfactory results from a trip into Wharfedale than to the Yore, which is more a grayling stream. At Bolton Bridge, by staying at the Devonshire Arms, he will be allowed to fish upon a first-rate length of water abounding in trout, but not of great size. Higher up the valley comes the Burnsall Club water, a splendid piece of fishing. Inn, the Red Lion; terms, 5s. per day. Or he might go on to Kilnsey, which is perhaps the best ground of all. Inn, the Tennant's Arms; terms also 5s. per day. Should Mr. Hutton require any further information, I shall be most happy to oblige him by writing direct to me at my address as at foot.—I am, &c.,

Ivy Cottage, Pool, *viâ* Leeds. Francis M. Walbran.

---

Sir,—In reply to J. A. Hutton's inquiries for fishing the Wharfe, he can stay at the Tennant's Arms Hotel, Kilnsey-in-Craven, 14 miles from Skipton. Coach meets first train from Leeds and Bradford 7 a.m. The fishing is very good in the club waters for trout; charge 5s. per day. There is some free water as well. Bolton Abbey is another station. The Devonshire Arms Hotel has fishing for some miles of water free, but it is much fished. For Wensleydale, Haws's Black Bull Hotel, good length of fair fishing; day tickets, 1s. Aysgarth, Palmer Flatt Hotel. Club preserves 12 miles of water here, good fishing; day tickets, 2s. 6d. Masham, King's Head Hotel, gives permission for some good water. Tanfield, Bruce Arms Hotel: Mr. Kendall gives permission for about two miles of first-class water; salmon, sea trout, grayling, and trout. I think this is the best station on the river.

The fishing at Kilnsey is very good, but there is not the variety as in Wensleydale. Mr. H. will find, on the whole, according to my opinion, and I have fished both waters often enough, from Tanfield upwards the best; but of course before settling definitely, some of your correspondents may give Mr. H. more satisfactory information than—Yours, &c., W. Macaulay.

### BARBEL FISHING.

Sir,—As the topic of barbel fishing seems now to be affording some amusement, it may, perhaps, be of interest to note the capture by myself of a fine barbel of nearly 11lb. weight. The fish was taken among others from the bank on the Thames at Eynsham, while trying for chub, on Monday last, with a long rod (16ft.) and fine Nottingham tackle; these circumstances tending much to the sport of killing the fish, and to say truth, to my fears of losing him; however, after twenty minutes' play, he was in a condition to be landed, if that was possible, up a 6ft. high clay bank, and in a small net. This was also successfully done by Mr. Dean, of Oxford, who was kindly put across the river to my assistance by a boating party, and he very artistically brought the fish to grass, where he was held up to the astonished gaze of several boating parties, and was duly gloated over by —Yours, &c.,

R. W. Hobden.

P.S.—There are, I feel sure, many larger barbel than this one in these waters, and if properly fished for they could be taken: in this respect my opinions do not agree with some of our best barbel anglers; but if I could ventilate my notions on the subject without fear of transgressing against the laws of the Medes and Persians, I would do so.

23, Blomfield-road, W.

### "OTTER" FISHING ON LOUGH CONN, CO. MAYO.

Sir,—Seeing in last number of Fishing Gazette remarks made by Mr. F. Hearns—with whom I fished very many consecutive years, as also with his father, "Ould Pat,"—I am led to ask, What can have become of the proprietors on banks of River Moy and shores of the Lough Conn, that these otter fishers are not prosecuted? "Cross fishing" with a "license" is legal where it is not prevented by proprietors or associations; but "otter fishing" anywhere, with or without license, I have long understood, is "illegal" on any water in England, Ireland, or Scotland. Perhaps, sir, you will kindly inquire if I am right or wrong about the illegality of it, and let us know in next week's issue of Fishing Gazette. If illegal, I shall ask you to send the Fishing Gazette, at my expense, addressed to the Chief Officer, Revenue Office, Ballina, Co. Mayo, to sharpen up his wits. I intend going there shortly, but neither I nor any of the old and regular visitors to those happy fishing grounds will again try our luck if this nefarious poaching is permitted. I take it scarcely any salmon or trout angler that has gone there this or any other season is ignorant that this is one of the worst and most unsportsmanlike methods of poaching.—I am, &c.,

Laxoring.

[In our last year's "Holiday Summer Number" we gave a sketch of this poaching implement, and referred to it as the bane of Irish lake fishing, as fair anglers will not again go to a place where they find it is used. Many thanks for offer of trout and big pike fishing in Ireland; hope some day to avail ourselves of it.—Ed.]

### FISHING NETS.

Sir,—I have often thought something might be invented to supersede the fishing net, and of late have wished over and over again that this were so.

I have an ordinary net well steeped in linseed oil, and find when trawling down stream in a wide river, endless trouble whenever a trout is hooked, arising from the hooks embedding themselves in the net. (I refer to an artificial minnow.)

Again, trout come on the feed at the edge of dark, and continue rising more or less. What is more aggravating than wasting time every time a fish is hooked and netted, in order to liberate one, two, or three hooks?

I think something might be invented to obviate all this bother. When one draws his fish well up, head out of water, something is wanted like a pair of tongs, broad and oval, in order to clasp your fish under the gills, when a little pressure would safely land him, in spite of a little wriggling. It would have to be made of wood, with the exception of the head end, and could be carried behind, slung like a net.

If any of your inventive readers know of such an instrument, or use one, I shall be glad of any information. A net is very useful; but on a windy day, or under above circumstances, is frequently to me a great annoyance.—I am, &c.,

Fly Fisher.

### THAMES FISHERMEN.

Sir,—I was induced, from an article I read in the Fishing Gazette last year, to employ a fisherman of the name of George Lumsden, at Datchet, and I engaged him in writing for three special days this season, independent of any other days I might require him. Was with him the first day (July), and wrote to remind him of the second day, the 5th of August; but upon arriving at Datchet on the 5th found he had left a message with another fisherman that he was ill, and could not attend upon me. Upon reaching the Weir in a punt I found Lumsden out in his punt, attending upon another angler. I think a man who breaks an engagement, and tells a deliberate falsehood in that way, does not deserve the praise bestowed upon him in your columns.—I am, &c., Edward J. Powell,

64, Gauden-road, Clapham.

### THE THAMES.

Sir,—I am anxious to know why the people who are so anxious to clear the Thames of its sewage do not evince their anxiety by availing themselves of the advantages offered by, say, the Native Guano Company. Why not?

They can so purify their effluent that delicate fishes will live therein; so I think a vast improvement might easily be effected in the state of the great river. "Silver Thames" is so often referred to in essays and other writings, that it seems absurd that it should still run as black as ink in some parts, and brown in all. Why should not the accumulated filth of our 4,000,000 or 5,000,000 inhabitants of the great metropolis be utilised, as good manure, and spread on the land, instead of going out to sea?

People seem as if they wanted to quarrel with themselves. They want, it appears, to "cut off their noses," as the old proverb has it, "to spoil their faces." See what grand exhibits of fruits and vegetables the Native Guano Company have to show at the Health Exhibition. Why, then, throw away all that is capable of doing so much into the sea? It appears to me to be a perfect sin to go on in this really wicked way. Are we so wonderfully rich that we can easily afford to throw our wealth and "substance" into the salt water, and that for nothing? I trow not. England cannot afford to part with its wealth in these days of hard times, over-taxation, too expensive education, and so forth. No, we must utilise all we have, and strive all we know how, like the Chinese, to make the most of our possessions. Is not our sewage a national possession, just as much as anything? Why, then, should we throw away our goods for nothing? We send missionaries to convert the good people who do not, from habit, birth, or other natural causes, quite agree with us in our religious ideas; but I cannot help thinking that we had better leave them to their own devices, and take more care of our own health, as well as pockets, by attending to our sewage.

If you can make most excellent vegetables out of that which now flows down the gutter or sewer, is not that sounder political economy than any of the measures brought forward by any Ministry? I cannot help feeling that it is so, and, therefore heartily commend the subject to your consideration.—I am, &c.,

Chas. C. Capel.

Cray Fishery, Foot's Cray, Kent, July 20.

### LIVERPOOL ANGLERS AND CLOSE TIME.

Sir,—In reply to the letter of the secretary of the Liverpool Angling Association in your last issue, I beg to say that the members of the Liverpool Central Angling Association are not in the habit of fishing for small, old, degenerate roach in ponds rented by them, for the simple reason that they do not rent any ponds. I would advise him to be more careful in getting his information about this association, and get it from a more reliable source than he has done hitherto.

A smile stole over my countenance when I read that absurd passage about the gentleman and the milkmaid, because Mr. Woolfall is decidedly wrong in quoting that passage, as I have been asked dozens of times by members of the Liverpool Angling Association to join their club; but they always met with my refusal. I think the explanation, in which he tries to prove the Vyrnwy to be a private water, because the conservators have exempted it, is a very poor one; for what does it signify?—simply this, that there is a flaw in the law, and the Liverpool Angling Association takes a very mean advantage of it.

I quite agree with the first part of his letter about using a public journal for such a discussion; but he must remember that any discredit there may be attached to it must fall upon "Izaak's" head, as he first started it.

As regards "sly hits," mine have all been straightforward and to the point, it being in my power to prove them all, and am willing to do so if necessary, and so, do not consider them "sly ones." I certainly don't think either "Izaak" or Mr. Woolfall could do so by theirs. Trusting that I have not intruded too much upon your valuable space.—I am, &c.,

Quill Float.

### MAY-FLY FISHING IN WESTMEATH.

Sir,—I was one day musing over that most interesting of books, "A Year of Liberty," in which Dr. Peard relates his experiences of fishing in Ireland (a delightful book of which every angler should have a copy), and coming to that part wherein he describes his visit to the famous Westmeath lakes, and the fishing with a blow-line, I was taken with a strong desire to go and see what this May-fly fishing was like. At first I thought I would follow on the track of the worthy doctor, who made Mullingar his headquarters, fishing Loughs Belvedere, Ouel, and Derevaragh. It was 15 years or so since he sang the praises of these lakes, and though they are now as productive of sport as ever, I thought I would procure some recent information, and it is this, coupled with my own actual experience, which I am going to impart to your readers.

Towards the end of May, 1883, through the courtesy of friends in Dublin, and of one gentleman in particular, a solicitor (a great lover of the rod, and, I believe, a good all-round sportsman besides), I ascertained that Lough Sheelin, which lies a few miles north of these lakes (and really is in Cavan) was the best *point de départ*. For Sheelin accordingly I set out, the fly being reported well "up," and the moment most favourable. Starting by the night mail from Euston, you reach Dublin as usual about 7.0 in the morning, then take car to Broadstone terminus of the Irish Midland Railway, from which book by 9.0 train to Ballywillan, a distance of 70 miles. Ballywillan is reached at 12.0 or soon after, when a pleasant drive of half an hour or so brings us to the small village of Finea, and here we are at the end of our journey, and, I may say, landed at the water's edge. You will note that we leave London by the 8.25 night mail, and arrive at Finea in ample time next day for a good afternoon's fishing. The sport I had last year was so good that it induced me to go again this year, and with your permission I will prolong my description.

There is a small hotel at Finea, but two comely cottages, the one held by a Mrs. Whyte, the other by a Mrs. Coyle, seemed to be greatly patrynised by anglers. I stopped at Mrs. Whyte's last year, but if it were not for her being so good-natured as to let me squeeze into the smallest possible compass I would not have had that pleasure, as her best rooms are always engaged for months previously. As Mrs. Whyte was again quite full this year, I fixed at Mrs. Coyle's, and here received every attention, Mrs. Coyle herself being a model of activity and kindness. There were five or six gentlemen staying here, all anglers like myself, with whom I passed some very jovial evenings, and whom I hope to meet again. Now for the fishing.

In the first place, when arranging for your apartments, it would be well to secure your fisherman in good time. I must be excused if I do not publish the name of the excellent man to whom my friend consigned me, because in the short days of the May-fly season he could not divide himself into more than two portions, and that would only disappoint others; but there are plenty of good men about the lake having boats and understanding their business, and Mr. Whyte or Mrs. Coyle can always recommend one. For the information of friends who may not be acquainted with this peculiar style of fishing, I may state that the *modus operandi* is as follows:—

All being arranged, and the May-flies of course being well up, the men collect a supply in small boxes, which is easily obtained from the grass and the bushes surrounding the lake. The boats (managed by two men, for the lake is rough when the wind is up, and without wind you have little chance of fishing) are rowed into the proper quarter, and then allowed to drift leisurely before the wind.

The rod should measure 16 or 18 feet. To the line of the finest description is often attached a piece of strong, but very light, gossamer silk, supplemented with a length of the finest gut carrying a small hook (No. 5 Kirby, or smaller). Upon the hook the fisherman impales, in the most artistic manner, a couple (and sometimes three) of the natural May-flies. These float, wings up, in the most natural manner, and as a bait I doubt that anything could be more attractive. The wind which now drifts the boat carries out your blow-line, and the flies are held resting on the water as described.

In a little time a *break* is seen (sometimes a scarcely perceptible one), the "dap," or fatal bait, has vanished; you strike the trout as he turns, and almost surely find yourself engaged with a good fish. It is rare to get a small trout when fishing in this manner, if the weather be dull and rough, and there be much fly on the water. This lake, which is six miles long by three miles, abounds with fine fellows, up to even 10lb. and 12lb. Last year, to my knowledge, fish were killed up to 9lb.; but my biggest was 5½lb. exactly. On that occasion I sent four trout to London (part of a lot taken one afternoon) which weighed 20lb. (3½lb., 5½lb., 5½lb., 5½lb.) My average take last year was about 10 trout per day—all good fish from 2lb. to 5½lb. I got very few under 2lb. a-piece.

The Lough Sheelin trout are, as a rule, thick, well-fed fish; they cut deep pink like salmon, and are delicious eating. They give play like the salmon.

I had fair sport this season, but was too early for the big ones. I arrived on the 26th, and would have done better had I followed my friends' advice and waited till the 31st May. As it was, I got 53 trout in seven days, several going about 1½lb., a few from 2 to 3lb., and only two fish which scaled 4½lb. each. The small fish are usually the first to rise to the fly, and the big fellows were coming on as I left (3rd June). I am sure some good specimens were since landed.

So pleased have I been with my two visits to Lough Sheelin, I intend, if spared, paying it an annual visit when the May-fly is up. I hope next season to have you with me, and if even a party of 20 English friends can be made up there will be room for all and plenty of sport, too. I will "Cook" them, if they like, there and back, first-class and saloon, for 10 days, at £1 per head per day, and find everything needed (the *dripping* to be mine!), and promise the finest fishing they ever had. I know friends who spend more money than that going to Windsor in the vain attempt to catch that one Thames trout "we so often read of but so seldom see." Why not put some of the loose sovereigns by till 28th May, and go in for some really grand sport such as I have attempted to describe? I want to benefit Ireland and benefit the English angler as well, and I can tell him there is no place where he will meet with better welcome and better sport. If friends cannot leave their business in May, they will get the finest white trout and salmon fishing at Connemara in August, by going straight to the Glendalough Hotel; but as you have fished in Ireland yourself, you can tell them these things and a good deal more.

If special information concerning the great Westmeath lakes be desired, I would advise anglers to procure the "Tourist's and Angler's Guide" (price 1s.), issued by J. Ward, Esq., Manager of the Midland G. W. Railway of Ireland, Broadstone, Dublin. I have also heard that this gentleman, who is known to be most courteous to strangers, is always willing himself to give every information regarding the fisheries of Ireland. With many thanks for granting me so much space,—I am, &c.,

James Callaghan.

The Priory, Lawrie Park, Sydenham, June 24.

[It was with great reluctance we had to decline a most pressing invitation to join Mr. Callaghan last May. It would be very jolly to join his party next year, and we trust the fates may be propitious.—Ed.]

### WAXING GOSSAMER SILK—BLOCKS OF FLIES.

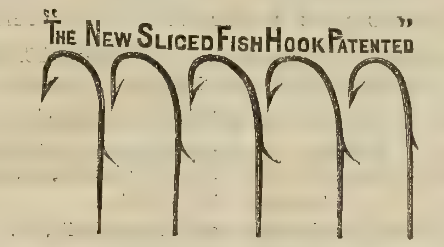
Sir,—Mr. Kelson, in the article of "Salmon Flies," recommends shoemaker's wax for use in fly-making. Does he not find this generally too soft, besides spoiling the colour of the silk? My plan of waxing is this: I cut the silk in lengths of from 14in. to 16in., break the wax into pieces about the size of B B shot; sit me down before the fire, take a piece of wax on first finger of right hand, warm it at the fire, place one end of the silk—beginning at the middle—on the wax, put the thumb on it, and draw the silk over the wax; warm this an instant again, then wax the other end of the silk. The best wax for the purpose I find is the one for which a recipe was given in the Gazette some twelve months ago. I always keep a quantity of different colours of silk waxed, as I find it impossible to make neat work with waxy fingers.

I am puzzled where to obtain electros of flies and fish for illustrating a price list. Can anyone tell me where I can get them? To have blocks cut would cost too much. I think, Mr. Editor, it would pay Messrs. Sampson Low, Marston and Co. to supply these. Under your supervision, no doubt correctly-shaped blocks could be produced.—I am, &c.,

S. Howarth.

## NOTICES OF FISHING TACKLE, &c

The Sliced Hook (Patent).—This is a little invention of Mr. R. B. Marston, which is so clearly shown in the accompanying illustration that much description is unnecessary. It has been very carefully carried out by Messrs. Milward and Sons, Fish Hook Makers, Redditch, and the principle applied to all kinds of hooks on which a natural bait of any kind is used—from the largest cod hooks down to those made for roach fishing. The object of the small projecting metal barb on the shank (in the larger sizes there are two) is to prevent any bait—such as a worm, mussel, gentle, wasp grub, &c., &c.—from slipping down on to the shank of the hook, as is the case so often in the ordinary smooth shank. This hook will be found specially useful in up-stream worm fishing, where the bait has to be cast frequently. The barb on the shank also aids materially in preventing a fish getting off the hook in its struggles. We have found them answer well for barbel fishing.



"The New Sliced Fish Hook Patented"

It will interest many of our readers to learn that Mr. Fairweather, the London manager to Messrs. P. & P. Campbell's dye works, has been successful with a few of the samples of dyed seal's fur for the standard colours for fly dressing. The gradations of the various tints are evenly distributed, and sufficiently distant and distinct from each other. One of the more valuable properties is that of every shade assuming the same appearance when immersed in water as it has when dry. Anglers are indeed indebted to Mr. Fairweather, for the careful consideration and pains he has taken, for having so far accomplished a task which has been burdened with hopelessness and disappointment. Perhaps there is not one among our national industries which adapts itself more directly to the requirements of the people, than the modern method of dyeing and cleaning adopted by this celebrated firm at Perth. We are aware that articles of house furniture, such as curtains, dresses, and all kinds of clothing, silk, and feathers are constantly being conveyed to these dyers, from members of the Royal Family down to the lowest class of the cleanly poor. Large quantities of unsaleable piece goods are also redyed by them to fashionable colours for the wholesale City houses. We venture to say that the large quantities of material sent to 39, New Oxford-street, the chief London office, to be despatched to Perth, is but a proof that the advantages offered by this firm are generally appreciated.

The Stores in Talbot-road, Bayswater, by Vale Bros., in the heart of angling clubs and all kinds of angling residents, deserve notice in this column. Fishermen are often "up a tree" about catering for lunch, and they willingly take anything provided by their servants. Curried chicken in tins especially and all other useful commodities are kept here, and sent to anglers or residents in any part of the kingdom. Vale Bros., having so large a connection, they are enabled to make a considerable reduction in their general price list, which may be obtained on application; and, their extensive premises admit of a large and varied stock of necessaries for anglers, &c. We specially notice Max Greger's Hungarian Carlowitz; which, owing to the extensive demand at this season of the year, they are offering at 3s. per wine flagon.

Fashions in sports as in pastimes, especially among the angling fraternity, are for ever changing. There is always a rare rush for anything newly designed which is really useful to fishermen. The fly fisher a few years ago could often be seen unrolling his housewife and sharpening his crumpled feathers on the banks of a brook, and otherwise making ready for a coarse and probably bad imitation of the natural insect which he had just carefully lifted from the surface of the steady running stream. True, we may have caught a glimpse now and again of Bernard's hackle book, which is highly spoken of because it is cleverly arranged. But what is the salmon fisherman to do with his large family of hooks in all sizes, his hundreds of tackles, his bustard, teal, toppings, summer duck, and numberless expensive provisions which he stands in need of—indeed, necessaries now-a-days, if he wishes to compete with his compeers and have the least chance of success? Brown mallard may now be kept free from moth and insect, and improve in shape rather than be damaged by imprisonment. We call attention with much pleasure to Mr. Rollason's new fly maker's tin cabinet. It is admirably adapted in all detail to preserve every requirement for dressing salmon, trout, and other flies. Being divided and subdivided, it has in its trays separate and suitable places for scissors and spring tweezers, for every hook, and for every feather. The space in the lid is utilised, and protects a partitioned papier-mâché box containing the various shades of seal's fur. They are inexpensive, and no amateur should be without one properly stocked, when he would have within arm's reach material for making any new or standard patterns.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
**191, STRAND, London, W.C.,**

MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE, SALMON AND TROUT FLIES, SUITABLE FOR ALL PARTS OF THE WORLD.

**Mahseer Tackle in Great Variety.**
**Makers of Split Cane Rods.**
**Improved Folding Trout Landing Nets**
(Very Light).

28, WINCHCOMB STREET, CHELTENHAM,

PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE.

**James Ogden's Newly-Invented Premier Spinner,**

Regd. Nov. 13th, 1883. This Bait is constructed upon an entirely new and improved principle. Salmon, 6s. 6d.; Trout, 5s.; smaller do., 3s. 6d.

SILVER OR GILT.

Also coloured, similar to the Devon Baits, &c.

JAMES OGDEN'S
**MULTUM IN PARVO FLY RODS,**
PRICE 21s.,

The enormous and increasing demand for which is a sufficient guarantee for the high estimation in which they are held by the leading anglers of the day.

All Standard Flies ordered, or dressed correct to pattern, will be despatched by return of post.

N.B.—NO CONNECTION WITH ANY OTHER PERSONS ASSUMING THE SAME NAME

**A NEW PERFECT FLY AND SPINNING LINE.**

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES; FREEDOM FROM IRRITATING ENTANGLEMENTS; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says:—"I find the Acme more valuable than all others."

Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction, will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. Samples, Post Free, to all Applicants.

## RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | | |
|---|---|---|---|
| Add | 30 | minutes for | Chelsea. |
| | 40 | „ | Putney. |
| | 45 | „ | Hammersmith. |
| | 50 | „ | Barnes. |
| | 55 | „ | Kew. |
| | 75 | „ | Richmond. |
| | 80 | „ | Twickenham. |
| | 85 | „ | Teddington. |

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | | Morning. | Afternoon. |
|---|---|---|---|---|
| Saturday, | August | 9 | 3.17 | 3.35 |
| Sunday, | „ | 10 | 3.54 | 4.12 |
| Monday, | „ | 11 | 4.31 | 4.51 |
| Tuesday, | „ | 12 | 5,10 | 5.29 |
| Wednesday, | „ | 13 | 5.49 | 6.13 |
| Thursday, | „ | 14 | 6.39 | 7.7 |
| Friday, | „ | 15 | 7.35 | 8.8 |

Note.—Izaak Walton born August 9, 1593.

### THE LOWER THAMES.

General Remarks.

The river, and especially in the tideway, is again suffering for want of rain, but the country is, on the other hand, requiring a continuance of fine weather for the harvest. On Monday last, being Bank Holiday, the anglers on the banks were very numerous; indeed, it was found impossible to count them, so completely was the shore lined with them, and, being so many, there was not much chance of catching fish. The punt anglers could not do much through the vast amount of pleasure traffic. The recent convictions—three for laying fixed or dead lines, and two for unsizeable fish—should prove a caution to anglers generally, and affords evidence the keepers are on the alert to put a stop to illegal offences. The attempts that have been made to lay fixed lines by the bank anglers in the daytime will have to be severely checked after the present convictions; and if it is true, as has been reported, it has been carried on at night, the offence will be the more serious. The following are the principal items of sport:—

**Richmond.**—C. Brown, during a period of six days, has taken 60lb. weight of roach and dace. Henry Wheeler, in a couple of days, 40lb. Henry Mansell records a satisfactory result of six days' fishing, 120lb. of roach and dace, two carp, twelve barbel, and one brace of perch. Job Brain, during the week, makes a total of 80lb. of roach and dace and twenty barbel. Henry Howard, in six days, 120lb. of roach and dace and six barbel. The bank anglers during the week have done fairly well.

**Twickenham.**—H. Spiers, in seven days, fifty-one dozen of roach and dace and thirteen barbel. J. Spong, in five days, forty-two-dozen of roach and dace. Samuel Cole, in seven days, fifty-six dozen of roach and dace and seven barbel. Edward Finch, during the week, seventy dozen of roach and dace and ten barbel. C. Hennessey, in five days, thirty dozen. James Coxen, with Mr. Bicknell, in two days, eighteen dozen of roach and dace and two barbel; and, in two other days, sixteen dozen of roach and dace and three barbel. Richard Coxen, in one day, eight dozen of roach and dace. Joseph Dobbin, in four days, twenty-four dozen of roach and dace and two barbel. Joseph Dunn, in half a day, three dozen and a half of roach and dace. George Coxen, in four days, thirty-two dozen of roach and dace and two barbel. W. Spong, in three days, with Mr. Walker, twenty-one dozen of roach and dace, and another day 7½lb. Pert Hammerton, in five days, forty dozen of roach and dace and three barbel. One of the bank anglers got a nice bream and a fine barbel of 5¾lb. The roach are reported to be working up, and some fine ones have been taken.

**Teddington.**—J. Stevens, in one day, three dozen of roach and dace. B. Stevens, during the week, eighteen barbel. Joseph Baldwin, in three days, eighteen dozen of roach and dace, seven chub, and two barbel. C. Baldwin, in one day, five dozen of roach and dace. Mr. Wetherall, fishing off the Weir on Tuesday morning, caught two jack, weighing respectively 11lb. and 4lb. The water is now very bright, and wants rain badly.

**Kingston.**—John Johnson, sen., writes, "I have been getting a fair share of fish this week, my best day has been seven bream, one barbel, and five dozen of roach and dace; all good fish. In three other half days, from four to six dozen, and a stray bream or barbel. My son John has been getting some dace, his best take being six dozen and three barbel. There has been a quantity of fish taken by the bank fishers at the Sewers, consisting principally of roach, bream, and barbel. I saw a barbel and a jack up to 6lb. each. A few jack have been taken by the private boats in trailing, and a couple of nice chub. The water is very bright, and fine tackle is the thing for those who can use it."

**Hampton Court.**—William Milbourne, in two days, twenty dozen of gudgeon and twelve brace of perch. Thomas Milbourne, in two days, seven perch, a jack of 2lb., seven dozen of gudgeon, four dozen of roach and dace, and one barbel; and in two other days twenty-two dozen of roach and dace. John Smith, in four days, twenty-five barbel, three brace of perch, eight chub, and two dozen of roach and dace. Thomas Wheeler twenty-eight barbel, four dozen of roach and dace, and four dozen of gudgeon. The records of takes at the Island Hotel include twenty dozen of roach and dace, six fine chub, and a jack of 3lb.

**Sunbury.**—Edward Clarke, jun., with Mr. Cooper, in three days, sixty-seven barbel, twenty-three bream, four perch, four chub, a jack of 3lb., twenty dozen of roach and dace, and twenty dozen of gudgeon, altogether weighing 230lb. H. Clark, in three days, twenty dozen of roach and dace, ten dozen of gudgeon, two bream, one chub, and a roach of 1lb.

**Walton.**—D. Walford, one day, eight dozen of roach; another day, six dozen; and another day, nine dozen and nine bream. George Stone, jun., one day, three dozen of gudgeons and six bream; another day, five bream of 3lb. each; another day, four dozen of roach; and another day, eight dozen. The visitors at the Swan Hotel have killed some good fish. Mr. Williams, at the tumbling bay, with a large grouse fly, a nice trout of over 5lb. Mr. Kirk, with minnows, three splendid perch, over 2lb. each; and another gentleman, four barbel and five bream from the bank.

**Halliford.**—J. Strudwick, one day, nine bream and eleven dace; another day, ten bream and five perch; another day, eight dozen of roach: and another day, ten dozen of gudgeons.

**Weybridge.**—H. Cam, one day, twenty dozen of gudgeon and two dozen of roach; and another day, five large chub and one brace of perch.

**Shepperton.**—F. Purdue, in one day, ten dozen of gudgeons, a brace of perch weighing 1½lb., and a jack of 2½lb.; and W. Rogerson, one barbel, a brace of perch, two eels, and three dozen of gudgeons.

**Staines.**—G. Osman, one day, two barbel, one chub, one perch, and two dozen of roach and dace; and another day six dozen. John Keene, one day, a barbel of 3½lb., and another day, 10lb. of roach and dace. The angler hooked a very large barbel, and after playing it for half an hour, lost it. John Keene, jun., in four hours, got some fine roach.

## UPPER THAMES.

The river is as clear as unadulterated Old Tom, and, let anglers fish as cleverly as possible, the various denizens of the river decline to leave their umbrageous homes amid the various sorts of weeds which now abound in all the chosen haunts of the finny tribes. Barbel are very shy, and will only nibble at the most tempting of lobs at daybreak and sunset. Perch are biting somewhat up to the mark, and gudgeon may be had for the asking. Roach seem to be feeding in the most shy manner, and chub will only look at a fly of the most approved "masher" pattern. At Maidenhead, three trout have been had, and a few miscellaneous baskets of inferior types of fish. At Marlow, many men have been out on the war path, but I only know of one trout being "instructed" to fall a victim to a man of law. At Hurley, on the 3rd inst., Messrs. Kidd (of the South Hornsey Angling Club), Parry, Keats, and Tongue, by fishing from early morn to dewy eve, obtained some 12lb. of roach and perch; and again on Monday did creditably, considering the blazing sun and the clear water. At Medmenham, a barbel of 2½lb. has been had by a banker, besides a pretty sprinkling of perch and roach; all had with my favourite tail of lob, legering. Thursday evening; weather simply scorching. River low and bright—gudgeon being the only midday certainties.—MARLOW BUZZ.

### Datchet.

Water lower than ever, dace and gudgeon biting; perch, in the evening; had a good turn with the barbel on the 3rd with lobworm; have not been able to get any worms since, although the present weather forbids any hope of catching them. Have seen them lying mid-water to-day by hundreds, apparently in a sinking condition. J. Hoare took a very handsome bream on the 3rd, 7lb.; a trout caught in the flat on the 3rd, with lobworm, 5lb.—G. LUMSDEN.

### Dockett Point.

Water low and bright; still, with fine tackle, fish to be had. Mr. D. Brunton, on Tuesday, 5 barbel, 1 perch, 1 bream; the same day, J. Haslett, jun., fishing with Mr. P. C. Hatfield, 6 bream, 3 barbel, roach and dace; legering, one day last week, 6 dozen of gudgeon, 3 perch put back.

### Thames (Goring).

Water in good order for perch and gudgeons; roach not on much; jack are in the weeds still. Best day: twelve dozen of gudgeon, two jack, and two dozen of very good perch.—JOHN RUSH.

### Walton-on-Thames.

The fishing here has, with few exceptions, been bad, some of the punts doing little or nothing; G. Hone, jun., and D. Walford are, however, the exceptions. G. Hone, jun., from Rosewell's boathouse, has had several good days' fishing—one day three dozen gudgeon and five or six dozen roach, and another day five large bream of 3lb. each, besides a good basket of roach and dace of good size. D. Walford has been very successful, and is a very attentive fisherman; he made some very good takes of large roach, bream, and barbel. Being late for post I cannot give you the details. A gentleman staying at the Swan Hotel was very lucky in killing a large trout in Tumbling Bay of 5½lb. with a large-grown hackle fly with orange pig's wool to-day, and he (Mr. Milburn) must be complimented on his capture. This fish has been hooked several times previously and made his escape. A spectator, who went up to look on, said he never saw a salmon make such frantic efforts to get away, but the old North-country salmon fisher was too much for the hitherto invincible trout after twenty minutes' desperate encounter in rapid and rather shallow water—a more difficult place to kill a fish does not exist in the Thames. Mr. Kirk is another of the Swan Hotel patrons who has shown his angling skill, killing three splendid perch upwards of 2lb. each. The fish are getting too numerous and well-fed.—GOLDFINCH.

---

### Ancholme District.

There is now some capital sport to be had among the coarse fish in the waters of the Ancholme navigation. At Brigg, and lower down the river, the takes of late have been good. Among those who have done well at the place named was S. Stokes, of Sheffield, who got upwards of 15lb. of fine roach. At Appleby another angler landed 28lb. 3oz. of roach, perch, and bream from the same river. Since the Sunday fishing at this place has been stopped a better class of anglers have patronised the water.—X.

Many excursionists visited the Ancholme on Monday last, and obtained varying results. Some did badly, others well; but the best sport is now to be had early in the morning or late in the evening. The trout streams are so low and choked with weeds that but little is doing on them. Rain is much needed to cleanse the bed and to put the fish on the feed.—THOMAS FORD.

### Ballynahinch.

These are the takes for week ending August 5th:—Col. Biden, 59 trout; Mr. Power, 44 trout and 1 salmon, 8lb.; Mr. Smith, 42 trout; Mr. Taylor, 12 trout; Mr. Middleton, 18 trout and 1 salmon, 12lb.; Mr. Hone, 24 trout; Mr. McNeil, 61 trout; a party of three, the Right Hon. the Earl of Malmesbury, Col. Harris, and Mr. Gould, 63 trout and 1 salmon, 6lb.; Messrs. Debham and Dalton (in two days), 48 trout. Total for the week, 331 trout and 3 salmon. Some days very bright and trout not taking well.—WALTER BLACKADDER.

### Bure.

Some extraordinarily good luck has been experienced on the pretty stream at Horning Ferry, Host Thompson. I am informed that on Monday two anglers caught nearly a comb sack full of bream, &c., whilst many others had good, and in some cases, first-rate, success. At Wroxham, I am told, numerous good catches were made, but I cannot report any in particular, as what I have heard is not authenticated, and rumour is proverbially a "lying jade." At Host Rose's, Acle Bridge, excellent sport, as far as numbers are concerned, have been the usual luck, whilst in one or two instances some very fine roach and perch have been captured. Any of these stations are within easy reach of either Yarmouth, Lowestoft, or Cromer, but in the case of Horning Ferry it is necessary to write to Host Thompson to meet you at Wroxham Station. Prospects:—From Coltishall down to Acle the river is alive with fish, which only await the follower of "Old Isaac" to be taken out of the wet.—ROBERT MOLL.

### Dove.

The weather has continued very bright and hot all the week, and the river has become very low and clear. Anglers have been numerous, but all have been more or less nonplussed. The best results have been obtained at night, when rodsters have done moderately with the coachman, the dun cut, and the caterpillar. Now and again an odd fish has been captured in the face of the glaring sun with the gold-bodied dun. The reflection of the fierce sunlight thrown out by this little tinsel affair, doubtless attracts Master Speckle when otherwise not inclined to feed. The bottom fishers have done better than those on the surface, though not much, as the water certainly requires a shade of colour. The best bait has been the wasp grub.—THE SPLODGER.

### The Dove (Ilam).

The river is very low and bright, but the fish rise fairly well, especially in the evening. Several good grayling have been taken, with the minnow chiefly—spun very slowly and pulled against the stream—it must be small. Mr. R. B. Marston has had some fair sport with the fly; five brace of trout on Saturday with olive and honey duns; on Tuesday two and a half brace of trout and a grayling, 1lb. 3oz., with same flies; on Wednesday with "Hofland's fancy" he had a nice dish of six brace of trout and one grayling. There has been a good rise of fly at sunset—a mottled-winged brown.—CAPERER.

### Exe (Exeter).

Bank holidays took most of our piscators to the delightful seaside resorts of this charming county; but some mustered at Turf and caught some perch, the most successful anglers being Mr. Albert Chamberlain and a gentleman from the College, who captured a fine perch of 2lb. Weather fearfully hot, water low, and prospects not bright till the weather cools and some rain falls.—J. A. KELLY.

### The Exe (Tiverton).

The river is again very low; nothing doing only at dusk. In the evening trout sport very well; flies taking best, blue upright and red ant.—WM. MUDFORD.

### Fens (Boston.)

The Fen Drains have not had the usual number of excursionists this week to feed the fish and make them sick with groundbait; still, there has been plenty of sport, and on most of the drains the craft have done well. Up the Hobhole at Leake and at Frieston, there have been anglers who have done well among the roach with here and there an occasional tench, and a few good bream. On the Cowbridge Drain there have been anglers who have done well, and particularly on the Aqueduct water. From the Kelsey Drain, also, anglers have made up good baskets; one of note that I have heard of was that of Henry Cawthorne, who had a splendid level lot of roach, few under ½lb., and the best running to 1½lb. each. From other places nice fish have been brought, and also the local anglers have done fairly in the river, and at more distant spots than those mentioned. The water in the drains is now in first-class condition and colour, but the return of dry weather will have a tendency to reduce the total weights brought to land.—Y. B.

### Ilfracombe.

Sea Fishing.—Several boating parties out daily, but their catches of fish have not been so good as the previous week. I think it has been in a large measure owing to the clearness of the water, the bottom showing very plain at three and four fathoms, so but small strings of bream, whiting, and pollack were caught off the Torrs; and on Wednesday some dabs and whiting were caught off Rillage. Those fishing with rod and hand-lines from the pier head and jetty have had very little sport. Several lobsters have been caught. The weather at present very fine.—E. COMER.

### Kempton Park Lake and River.

The fishing here is in first-rate condition. Several members of the Beresford Society were here on the 3rd inst., and had some fine sport. Mr. Sames took some nice bream and a very handsome perch; Mr. Blackman three brace and a half of fine bream, and other members roach and bream. On the following evening, I killed a brace and a half of bream in 30 minutes kicking the beam at 4½lb. from the same spot where Mr. Sames had been fishing the previous day, perhaps the most fishy spot in the lake. As I walked along the bank of the river in the afternoon, I saw some very fine bream, tench, and pike basking in the sunshine, which fairly made my fingers tingle. I tried them; but they seemed to say they preferred to stay till another day.—G. ATTWELL.

### Lea (Tottenham).

Notwithstanding the water continues low and bright, some capital bags of fish have been got during the week. On Monday, Mr. Bennett, jun., whipping with artificial fly, killed five dozen of roach and dace. On Wednesday, Mr. Beresford, bottom fishing, took 16lb. of roach, and on Thursday Mr. Bennett, sen., whipping, filled his creel with roach, dace, and chub. Anyone who is at all sceptical about the quantity and quality of the fish in this reach of the river should run down now. "Old Sol" is in the ascendant and the fish are on the surface. Big bream and roach are showing themselves literally in hundreds.—HACKLES RED.

### Leicester.

Fine weather has prevailed now for some days. Owing to the Bank Holiday a very large concourse of anglers have been fishing. On Monday there were over 200 at the Leicester society's preserves, and in addition to these over 400 were booked by the Midland and Great Northern Railway Company to the various other waters in this locality. Some idea may, therefore, be gathered of the large number of people who indulge in the sport hereabouts. Of course, it could not be expected that the takes would be in proportion to the number of anglers out, although in many cases some really good baskets were obtained. Among the most successful were Messrs. Bird, H. Barrows, Creeland, and Thomas, who each showed fine lots, varying from 10lb. to 15lb., taken from the home waters, most of which were taken with creeded wheat and malt. Of the out-of-town anglers, Messrs. Bonner, Jarvis, Burgess, Wells, and Carpenter brought home some heavy lots of fish on Monday and Tuesday, whilst other good takes came under my notice during the week. Thursday was exceedingly hot. On this day, Mr. Hardy, the secretary to the local angling society, with a friend, caught a fine lot of roach from some distant waters weighing over 20lb. The waters are now in first-rate condition, and prospects of fishing remain exceedingly good.—ALERT.

### Littleport.

The following is a list of a few of the best takes since last week's report:—August 1st, Dr. Cooper, President of Cambridge and Ely Angling Society, with Mr.

J. E. L. Whitehead, Cambridge, 11 bream, 28lb. in all; largest, 4½lb. August 2nd, Mr. F. Duchesnes, fishing with Messrs. J. and J. Cutlack, Ely, 12lb. good roach. August 4th, Messrs. S. Ratcliffe and H. Holt, three stone very fine roach; Mr. W. Purchas, sec. C. and E. A. S., 50 roach going 14lb., in four and a half hours; Mr. M. Ellison, London, 11lb. good roach; Mr. H. Lee, Cambridge, 8½lb. Several other anglers out, and all had fair sport, Mr. H. H. Heading, Ely, taking honours. August 6th, Mr. Trafford, Peterborough, 7½lb. good roach; Messrs. F. G. Tuck, New, Barnes, Ely, and R. Long, Shippera, 10½lb. August 1st, Mr. W. Rowton, Cambridge, and Mr. F. Drew, Cambridge, each had a very nice basket of roach, which it appears I have neglected to jot down. Keeper Brenton gives me the following:—July 30th, Mr. R. S. Hall, Ely, 107 roach; three largest, 1½lb., 1¼lb., and 1lb. respectively, and all others very good roach. August 1st, Mr. Turner, lay clerk, Ely, a nice catch of roach. August 2nd, Mr. T. Allpress, Ely, a brace of pike, going 9½lb. the brace; Messrs. J. Cooper and C. Brown, Ely, a nice pike each.

### Lodden.

The weather is so very hot and bright, the river low and very clear, that sport is not obtainable. We started, as I informed you in my last report, at six o'clock on Thursday morning for trout. It was quite a thick fog when we started. We were soon at work on the tumbling bay water, but no signs of a rise. The mist began to disperse, and the sun came out with scalding heat. Chub and dace at every cast, but no trout; and then the flies, confound them!—they literally drove us off the water. Between nine and ten o'clock they were intolerable. The result of the four hours' sport was twelve chub, as many roach and dace, but only one trout of ½lb. weight.—F. Gosden.

### Lugg and Arrow (Leominster).

There is little to complain of in the state of these, except that they are rather lower than suits some of the anglers who periodically visit these streams. Fishermen have made some very fair baskets this week, and both these streams have been well patronised both in top and bottom fishing. We have not heard of much being done out Bodenham way, but a gentleman near Ford's Bridge caught some very nice trout on Monday with the large black ant. Up the Kingsland waters several nice catches were had on Bank Holiday with the wasp grub; one gentleman, who had been up the Shobden district, near Aymestry, caught on Monday eleven trout, six perch, and four grayling with the grub—the trout averaged about 1lb. weight each. A gentleman, who has been using the grasshopper several evenings this week, has had some very good luck each evening. The Arrow has afforded some good fishing. A gentleman, on Saturday, went down the Ivington waters after four o'clock, and tried the red spinner for half an hour, but not a fish would bite. Being well provided with wasp grub, he went higher up the stream, when the fish began to take the bait splendidly; in a short time his basket contained twelve trout (good ones), four grayling, and two small eels. Up Stanton way, on Monday, a gentleman caught several fine fish with the grub, principally trout. At Eardisland, on Tuesday, a gentleman fly fishing caught a trout which weighed over 2lb. On Monday, I understand, a party visited Monkland, and had some very good sport until all their bait (wasp grub) was exhausted. They then tried the worm, but not a single bite did they get amongst them. Some nice fish landed from the Pinsley.—Gwynne.

### Moy and Loch Conn (Ballina).

Very poor sport to be had on river and loch at present. Although the river rose to a fair angling height more than once in the last fortnight, the fish will not rise to fly freely.—Frank Hearns.

### Nene (Northampton).

Fishing in this river has been tame since last report, but during the past few days large numbers have been trying the canals in this district, and some nice bags have been taken. On Monday last, C. Westley killed one dozen tench and half dozen roach; C. Eyte has managed to bag 40lb. of eels and some nice roach and perch; A. Adams has been taking about six dozen gudgeon and minnow; G. Hind and Master Slip killed three brace of pike. Our two crack anglers, E. Bullock and Bill Singlehurst, have been trying the roach in the Borough free water, but no luck.—T. F.

### Ouse (Huntingdon).

Anglers have been very busy among the bream and roach. This last week several good takes have been had owing to the splendid bright weather, which has brought the fish to the bait. On the 1st inst. I took 23¼lb. roach, 15½lb. bream. On the 3rd inst. 29¾lb. bream, 7½lb. roach. On the morning of the 6th inst. 49lb. of bream, 10lb. roach. On the 7th 54¾lb. bream. Roach were very quiet, so during the last week I have had some splendid takes. On the 4th and 5th inst. good takes were made by some gentlemen. From what I have heard two of the gentlemen took between 3 and 4 stone. It is a fact that the river is well stocked with fish, but not visited much by London anglers, nor any others from distant places.—H. Rout.

### Severn (Shrewsbury).

The weather now appears to have settled down, and the banks of this beautiful river are certainly looking at their best. With the water in good condition, good baskets of fish have been by no means uncommon during the holidays. On Monday last, being probably the most popular Bank Holiday throughout the year, the river was studded every few yards with anglers of all descriptions; there were bottom fishers and fly fishers, as well as here and there a troller; there were old and skilful Waltonians, as well as many who were receiving their first lesson in the art. One gentleman who came from Manchester, and visited this water for the first time, said that he was tempted to this neighbourhood by having read several accounts of the district, and the good fishing there is to be obtained in the neighbourhood, and he was highly pleased with the results of the sport. On Monday he caught a good basket of fish, which consisted chiefly of trout and grayling. In fact, so pleased was he with the water that he said he should certainly advise the members of his club to take a turn in this locality. Mr. Sayce had a good afternoon's fishing on Friday, taking one nice trout and about 6lb. of dace and chub. Mr. Lewis, fishing on Saturday, below Shrewsbury, 1 trout, 5 fine grayling, and 16 dace, &c. Three anglers, on Wednesday, fishing near Montford Bridge, had some grand sport—one took 40 good roach, another 30 odd, and the third 25. Dry fly is the the most killing at present on the still water; on the fords, the addition of a maggot is very enticing. —Severn Salmon.

### Teme (Ludlow).

During the whole of the week this river has continued in a somewhat low state, the tributaries all being in a similar condition. Angling has been indulged in in all the streams, and fishermen have been, on the whole, very fortunate. Of course the wasp grub is all the rage at present, and top fishing has almost been deserted for bottom, and few fishermen using the grub have returned at night without something to boast of. The wasp grub appears to be a more successful bait this year in the tributaries than it is in the Teme; at least, so say the anglers who have tried both streams. On Tuesday large numbers of anglers paid the rivers a visit, it being Bank-holiday here (instead of Monday, which is market day, as I before stated). These fishermen had the average luck of amateurs. Mr. T. Hodges, the well-known fly maker, caught seven splendid trout the other night up the Park-waters, with the wasp grub. A gentleman, on Monday evening, near to Ashford, landed with the grub seven trout, three grayling, and three perch. A gentleman, on Tuesday, caught several nice fish with the grasshopper, in the Ludford waters. There has been some good trout caught in Lord Windsor's waters during the week. The Clun keeps low, and little has been done in this stream. In the upper part some few fish have been caught with the wasp grub and the grasshopper. In the Corve good catches have been had towards night with the grub. On Tuesday eleven trout were caugut by a gentleman, near the race-course, and, on Wednesday, seven more. The waters of the Ledwych are low, and not many fish have been landed from this stream of late. Up the Onibury waters some good sport has been had. A gentleman named Matthewson, caught, one evening near Bromfield, with the wasp grub, four brace of trout, three dace, and one chub. One trout was over 2lb. weight.—S. Ludlow.

### Teme (Tenbury).

The waters continue in a pretty fair state for anglers, and visitors to the waters are rather more numerous, preferring the cool sides of the river banks to the dusty streets of the busy town. Two visitors on last Saturday landed some very nice fish with the maggot up the Burford district; they secured twenty-nine trout between them, seventeen of the fish weighed a pound or more each, they also caught several more fish of different sorts. A gentleman landed some very good fish on Monday, above where the Corn Brook joins the Teme. Some nice fish were caught near Rochford on Tuesday with the wasp grub, and some dozen trout in the Eastham waters with the red-spinner. There are large quantities of fish about here in all the streams affording excellent sport for the angler. On Monday, a gentleman showed me, towards dusk, a fine basket of fish which he informed me he caught that afternoon, at Little Hereford, with the wasp grub. Up the Rea to Neen Sallars some excellent fish have been landed. While fishing in these waters, on Monday, I could distinctly hear the sound of the bugle in the camp of the 1st Shropshire Rifle Volunteers, who were camping in the beautiful grounds of Mawley Park, the seat of Lady Blount. I hear of some very nice trout being landed on Monday by a well-known M.D. up as far as Stoddesden and Dudlick with the wasp grub. Near the Clevebury North district local anglers have been successful this week. In the Kyre a few trout, I am told, were caught on Saturday, near Kyre Park, and some few on Tuesday, in the Burntlands quarter. Most of the fishing in these quarters has been in the evening.—Worcester.

### Torridge (Torrington).

River getting very low. Some good fish have been taken late evenings with the fly. Also a quantity of large dace with paste. Float fishing and mullet fishing were good last week, and we were expecting good sport; but some fellows came up the river with their small mesh nets by night and scared the fish away. These net fishermen will never be pleased until they have driven away all the fish. I wish one of the conservators would bring the case up at one of their meetings. That would be the best way to deal with it.—Practical Angler.

### Trent (Alrewas).

River very low and fine, and fish very hard to get at, although a few good bags have been secured with the maggot. Some fine chub have been taken during the past week, and those who want to be successful must fish a long way off, also early and late. A large quantity of weed still remains in the water, and a good flush would materially help to cleanse the swims. In last week's report, for "Pan and Pig" read "Paul Pry."

### Trent (Lower).

Anglers on the lower waters of the Trent have done well again this week. A goodly number came down on Bank Holiday, and at several spots had good fun. Flounders continue to give diversion, and also eels. At Littleborough, near to Cottam, a Mr. Stevenson showed a basket of over 22lb., made up of flounders, roach, and eels. At Durham some very nice roach were had, and among others H. Landells had a basket of them scaling 11lb. Most of his fish were ¾lb. each. Bream, I fancy, have been quiet; still, they, as well as barbel, are yet to be had. The water is in fine condition, and those fond of chub-fishing should soon seek their opportunities. —Ware.

### Trent (Newark).

The water is very low and clear and not at all in bad condition for angling, if it was not for the vast accumulation of weeds on the bottom. Being Bank Holiday week fishermen have turned out in goodly numbers, but somehow or other sport has not been of a good general character. 'Tis true some few experienced men met with fairish sport, but in the majority of cases "very indifferent" may be written opposite their names and catches. The reason of this, in my opinion, is not very far to seek, because we, most of us, know that after a very long, dry summer, when week after week the river runs very low and clear, and no heavy floods sweep down the valley of the Trent to clear away the deposits, the vegetable and animal life at the bottom of the river increases and multiplies to such an extent that the fish are clean gorged up with it. This being their natural food, and plenty of it within easy reach, we cannot wonder at not enticing large shoals of fish into the various swims, no matter how judiciously we ground bait. But still, as I said at the outset, the week has been far from being a blank. A very few barbel have been grassed, the lump of scratchings seeming to be the best bait in this instance. Bream have also bit at worms and died; roach and dace have been secured with gentles and paste, while a few eels and flounders have been brought home from the lower waters. I must not forget a bag of half a dozen nice chub, being taken with wasp grubs, and a dozen of the same fish taken from under the boughs with the fly. I have heard of an odd pike or two being had spinning, but not very big, as far as I can learn. Water very low and fine; weather very fine and dry; prospects do not seem to me to be very brilliant until we get an alteration in the water. In last week's Gazette notice of the Anglers' Tournament I see my address is given as Nottingham; it should be Newark-on-Trent. Please correct.—The Trent Otter.

### Wharfe (Yorkshire).

The river is at present very low and clear, and even the evening fishing is productive of little sport. On Monday (Bank Holiday), there was a nice breeze upon the water during the whole of the day. I fished upon the Ottley Club length, and did well considering the state of the water. I had 15 good fish when I gave up at 4.30 p.m. They were in the height of condition, and gave excellent sport. On the same day, the seventh annual fishing match, promoted by Mrs. Greenwood, Marquis of Granby Inn, Leeds, took place at Skipton-bridge, near Thirsk. The amount of £25 was given in money prizes, and 250 anglers competed. The first prize was won by Mr. Wm. Brumfitt, of Otley, with 2lb. 9oz. weight of fish, while the weight of 1lb. 6½oz. obtained the eighth prize, so that it will be seen that the catches ran remarkably close. The best flies to employ at the present time are stone bloa, orange partridge, August brown (or dun), and knotted midge, or tail to tail, as Mr. Aldam styles it. The fly that I rose most fish with on Monday was one hackled from a landrail and orange silk body; it was dressed by Mr Brumfitt, of Otley, who, by the bye, makes a most excellent fly, true to colour and size, which, I may add, is everything on a river like the Wharfe. The weather at the time of writing (Wednesday) is simply glorious. We have had no summer like the present for the past six years.—Francis M. Walbran.

### The Wensum (Norwich).

Extraordinary Catch of Roach with a Fly.

At Fakenham last Monday a member of the Wensum Preservation Society (Mr. Yelf), an old London fly fisherman, was fortunate enough to catch, with "the soldier palmer," nearly 3st. of very fine roach, the largest, which he showed at our club-house (Norwich Angling Club) weighed 1¾lb.; the average of the catch was about 12oz. I received a letter from him this morning giving me all particulars, and I am sorry that the largest fish of all, about 2lb., he carelessly put into the grass too near the river, and it escaped back to its native element. He informs me that the roach were feeding about 20 yards from his bank, and that as he hooked them he led them a good distance away, so as not to disturb the others. Another member of the same society had some very fair sport on Saturday at the same place, catching some good large dace, and also a few very fine roach; these were taken by Mr. Howitt, of the Norwich Angling Club.—Robert Moll.

### Witham.

The anglers on the Witham have not been so numerous during the present week as last, owing to the fact of no specials having come down, and possibly owing to the counter attractions of Bank Holiday. There was a goodly number, however, at most of the stations, and these, on the whole, did pretty well, it is thought. At some points there were only a few anglers, yet good baskets were to be seen returning. There were not many features about the takes seen that would prove interesting; nevertheless, I may mention one—that of an angler named Stringer, who had a nice bream of 3lb. in a basket of 17lb. odd of roach and perch. Some of the visiting anglers only came as far as Lincoln. On the Fossdyke fair sport was had for the water. At Saxilby, G. Leeman got 3lb. 2oz. of roach on Monday.—The Yellow Belly.

### Witham (Dogdyke).

We still continue to be favoured with many anglers from Bradford, Halifax’ Manchester, Sheffield, and other large towns, most of whom have been very fortunate indeed, having made very good baskets of roach, perch, eels, tench, and a large quantity of very good bream, weighing from 2lb. to 3½lb. each. Mr. Ashton, of Manchester, caught 10lb. of fine bream and 5lb. of roach; Messrs. Mitchell and J. and G. Hill, of the same place, scaled 36lb. of bream and 12lb. of roach. The river Bain, which flows into the Witham at Dogdyke, behind the flour mills, has yielded some very good sport, for two gentlemen from Halifax have caught some very good chub, from 1lb. and upwards, with the ordinary large meat flies, commonly called in Lincolnshire, "bluebottles."—Packet Hotel.

### Wye and Derwent.

All our Derbyshire rivers are exceedingly low and clear for this time of the year; in fact, it is over 30 years since it was as low as it is at the present time; in fact, I heard of a great deal of poached, netted fish being hawked up and down this district—the fish supposed to have been taken off of various parts of the Darley Dale Club waters lately. This I do not wonder at, as the honourable secretary, Lieut.-Colonel Rawlings, of Matlock Tower, is not at all liked, either by the members of the club he belongs to, or the landowners or gentlemen fishers in this district; in fact, men speak of the Colonel as a complete nuisance. If the Darley Dale Club does not get another secretary at once, they will lose a lot of the land they now hold, and give it to the Matlock Bath new fishing club, just started. Sport during the last week has been very bad with the artificial flies in the middle of the day; morning and evening are the best times, and baskets from 4 to 7 brace per evening are being made. The killing flies are black gnat, Eabor's light dun, sand fly, and light evening duns. The Bottom fishers only fish late at night, and their takes are very small. Eels are now running well; several fish up to 3lb. each are being taken on night-lines between Darley and Matlock-bridge.—G. J. Eabor.

### The Yare (Norwich).

At every station on this river, anglers have been having a good time. From Surlingham, just below Norwich, I hear that some excellent sport has been experienced during the past week, whilst at "Flowers" Station at Brundall, and also at Host Brown's, Coldham Hall. Visitors have had some good fun amongst the roach and bream at Buckenham Ferry (Host Garrett's), the catches of roach have been both numerous and fine. I am pleased to say that small fish are not as frequent this summer as they have been in seasons past. At Cantley and Reedham good bream and roach fishing are to be had, as well as good accommodation. This last remark applies to Brundall and Buckenham Ferry especially. I have had the pleasure of meeting several London anglers lately, and have received the greatest kindness and many useful hints from them. Amongst some I have been fortunate enough to meet are Mr. Wheatstone, president of the Stanley Angling Society (a very jolly angler); Mr. Cliff, of the Friendly Anglers' Society, who visited the Norwich Angling Club at their club-house last Tuesday evening, and in response to his health gave some very useful and practical information to the members of this old Society. I also have at Yarmouth two London gentlemen who are on "Piscatorial ventures" bent, and who applied to me to advise them. I am happy to say I met them at Yarmouth on Saturday, and feel sure I have made two friends. We want more of this social, kindly intercourse among anglers throughout the kingdom, and then we should be confirmed in our good opinion of our brethren of the rod.

The Norwich Angling Club holds its annual match at Buckenham Ferry next Tuesday, and I trust they may have as good sport as the Champion Club had—nearly a stone a man is fair sport on a match day. The weather is everything that could be desired, and I strongly advise those who think of paying a visit to Norfolk to do so as early as possible, before a change sets in. They cannot do better than try the Yare or the Bure, not forgetting the Thurne, Ant, &c., nor Oulton Broad for Lowestoft sojourners, and Fritton Decoy should come in for a fair share of patronage (visitors not forgetting that they cannot obtain anything stronger than Bohea at this favourite spot). Prospects never better.—Robert Moll.

## THE DEE AND DON SALMON FISHINGS (ABERDEENSHIRE.)

The grilse season, now practically over, it is safe to say has this year proved the worst on record so far as the Dee is concerned. Than the continued drought in June and July, with its attendant low waters, no greater disappointment could have been experienced by anglers. Nor are matters yet improving. The rise in the river which took place about a fortnight ago, came all too late to benefit the frequenters of the salmon pools. The season for the run of grilse was past, and they and the salmon and sea trout had in a measure, and for a time at least, moved off the coast. Along the coast, especially between Nigg and Stonehaven, the shots of salmon and grilse of late have been very small. For about a week previous to the first of last week some fairly good shots of salmon and grilse—the salmon, mostly good and heavy—were got at the Nether Don and the Harbour fishings. Apart altogether from the low state of the rivers, the bright, fine weather, and the quiet glassy nature of the season, combine to keep the fish from running. The low state of the water this year has made manifest one important point, and that is, that the upper proprietors must either allow their rents to decline or else have more nets removed from the river, as the leases of the various netting stations expire. When the grilse sought up this summer, the nets captured all and sundry, except a few that straggled up on Sundays. Such is the state of matters on the Dee from 11th to 26th August (whenever the river is small), and will remain so till some important netting stations disappear before the financial resources of the Upper Proprietors' Protection and Improvement Association.

To return to the fishing, we may mention that though the season, so far as gone, has been poor, there is now a generally good appearance of fine heavy old salmon along the coast, and if wind and weather prove suitable a good make up may yet be had before the season ends. The shots at all the stations in this locality during the past fortnight varied from 10 to 50 salmon and 12 to 60 grilse. The higher shots were got about the harbour. At the Nether Don Fishings the shots varied from 30 to 100 salmon, 40 to 120 grilse, with some good sea trout. In the Dee the nets are doing poorly, and for a month or six weeks now have been in the same condition. The last fortnight in July only produced 12 salmon 261 grilse, and 319 sea trout—a poor return indeed, scarcely a fish being got at present at any of the Don river stations.—W. M.

Angling Contest at Crowle Wharf.—Mr. Sanderson's Annual Sweepstakes for the best gross weight took place at Crowle Wharf, on the Keadby Canal, on Monday. It was a great success, and a somewhat severe contest was the result. J. Hirst, with 2lb. 10oz., took the first prize; R. Brown, with 2lb. 5oz., the second; and E. Cowley, with 2lb. 2oz., the third. The money prizes, nine in number, ranged from £13 to £1; and there were a large number of others, the gifts of friends. About 380 competitors entered, and the day was very enjoyable.

## THE DEE (ABERDEENSHIRE)—GRILSE FLIES.

Third Article.

Before proceeding with description, it may be just as well to state that we intend completing in the present article our list of grilse and salmon flies suitable for day-time fishing during the summer months. These, be it understood, will be strictly within the range of those we deem the best. Keeping in view the advantage our readers will derive from a separate description of our evening lures and sea trout patterns, we will devote after attention to these. The evening lures will be represented by four or five of the best killing patterns after 8 o'clock, or sooner or later according to the length of the day, in June, July, and August. The flies we have done best with since we commenced taking observations will be included in our sea trout list.

It may look a piece of supererogation to mention, as most Dee anglers will know already, that a considerable number of the better known standard patterns, if dressed about the size we have indicated, will be found very suitable during the summer time to angle with in the Dee. Given a clear canopy above, and the angler will find that the Silver Doctor, as a grilse lure, well deserves its high reputation. When the sun "comes out in all his majesty," the Childers, of all the lures we know, is the best for grilse when the water is dyed a peaty brown. The Jock Scott is a pretty sure killer. In June last year, when angling on Kineskie, the writer hooked with a small specimen, No. 8 double iron, and safely landed the largest grilse (8¼lb.) got on the Dee during the regular grilse season of 1883. Of the other standard patterns, we may state that on several of the reaches a Butcher at certain times does very well, and a Popham at command is not undesirable.

After these prefatory observations, we may now describe

### No. 9.—The Dusty Miller.

Than this fly, perhaps, no better specimen can be found wherewith to angle in the Dee on a clear day, especially if the water has a slightly brownish tinge. As a grilse lure, it is very deadly. It is equally suitable for the Teugh and Dye. Description :—

Tag : Silver twist and yellow floss.
Tail : Small topping.
Butt : Black herl.
Body : Embossed silver tinsel.
Ribbed : Silver flatform.
Wings : Mixed-white tipped turkey, pheasant's tail, pintail bustard summer duck, blue, red, and yellow swan, topping over all.
Hackle : Guinea fowl, only at shoulder in small specimens.
Cheeks : Jungle fowl, small.
Head : Black.

Limericks, sizes 5, 6, 7, 8, double irons. In the smaller sizes, the silver flatworm and turkey to be omitted.

### No. 10.—The Clunie

Has this year been used with much success in the upper reaches of the Dee, and in the stream from which its name is derived? Specially as a salmon pattern, it has attained great popularity from Ballater upwards. To appearance, it seems a likely grilse pattern. Description as under :—

Tag : Silver twist.
Tail : A small topping.
Butt : One turn black herl.
Body : Black silk floss.
Ribbed : Silver tinsel, 5 turns.
Wings : Double strips, distinctly marked teal.
Hackle : Guinea fowl, only at shoulder.
Head : Black.

Limericks, 6 and 7, double irons.

### No. 11.—The Logie

Is virtually a plain "Gordon," as in the body it is almost identically the same. This fly stands unrivalled in the Aboyne and Ballater districts during the latter half of April and the month of May, if the water is anywise small. As no fly can approach the "Gordon" for general use from Banchory to Ballater, so this small representation of it occupies, during the period we have stated, a like unique position. Limericks, sizes 6, 7, and 8, used for salmon and grilse. The Logie is described thus :—

Tag : Silver thread.
Tail : Small topping.
Body : Yellow silk floss one third, claret silk floss to head for the rest. The yellow to be of the same shade as yellow swan.
Ribbed : Embossed silver tinsel, 4 turns.
Hackle : Blue, only round shoulder.
Wings : Yellow swan under ; mallard over in strips.
Head : Black.

With the Wasp and Dark Bumble, we complete our list, as the best Dee patterns for summer use will then have been described.

### No. 12.—The Wasp.

Tag : Silver tinsel.
Tail : Small topping.
Body : Yellow mohair, well picked out.
Ribbed : Black twist, 5 turns.
Hackle : Cock-y-bondu.
Wings : Double strips of mallard.
Head : Black.

Sizes, 6, 7, and 8, suitable for salmon, grilse, or sea trout.

### No. 13.—The Dark Bumble.

Tag : Silver thread.
Tail : Small topping.
Body : Yellow and claret mohair, well picked out ; the claret to preponderate slightly and be nearest to head.
Ribbed : Silver flatworm, 5 turns.
Wings : Double strips of very dark mallard.
Hackle : Black, only at shoulder, longish likewise and spare.
Head : Black.

This hook we prefer single—Limericks, 4, 5, and 6, suitable for grilse and salmon.

Nos. 9, 11, and 12 are old Dee patterns ; 10 was shown to us by Mr. Garden, Aberdeen ; and 13 is the production of Mr. Frank Farquharson, head keeper, Blackhall Castle, than whom few can tie a neater fly. W. M.

# CLUB REPORTS.

### ALEXANDRA SOCIETY OF ANGLERS.

Our members had a very good show of fish on the 3rd inst. Mr. E. Hunter, ten very handsome perch; Mr. John Wilson, 16lb. 13oz. bream; Mr. E. Wicks, roach; Mr. C. Wicks, roach; Mr. Wells, roach and perch. The members will dine at the Five Horse Shoes, at Hoddesdon, on the 10th inst., being our annual dinner. Several of our members did not arrive in time to weigh in.—F. WAGNER, sec.

### AMICABLE BROTHERS ANGLING SOCIETY.

On August 3rd, Mr. Moir had 5lb. 1oz. of bream and 1lb. of roach from Dagenham; and Mr. Harding 1lb. 1½oz. of roach, dace, and perch from the Lea. We start from the club house on Saturday, August 9th, at 12 o'clock sharp, for Dagenham.—J. WORLEDGE, sec.

### ANCHOR AND HOPE ANGLING SOCIETY.

Several members of the above society have been out during the holidays; the following members weighing in:—Messrs. D. Davis, J. Bowling, T. Bowling, bream and roach from the Arun. Mr. A. Shakel, roach from the Thames. Messrs. C. Watkins and A. Davis, bream from Wimbledon Lake. On the 10th inst. we fish for a prize given by Mr. Dipple for the heaviest weight of roach, go where you please.—D. DAVIS, sec.

### BATTERSEA FRIENDLY ANGLING CLUB.

The members of this club fished on the 3rd inst. for three prizes presented by Mr. Grant, in any waters, and was won by Mr. G. Mumford with bream and roach, from Amberley; Mr. H. Martin second, with perch and roach from Woking; Mr. R. Tarling third, with roach from Amberley; Messrs. Ford, Crook, Sampson, Newton, and Pepal also weighing in fish. One of our members, Mr. G. Butterworth, fishing at Woking, had the misfortune to fall in ten feet of water, and being unable to swim was in great danger of being drowned but for the prompt action of Mr. F. Newton, a club member, and Mr. James Smith, who threw him his rod and drew him to the bank, and so landed him. I have to thank Mr. Smith on behalf of our members for the kind assistance he rendered. Our next contest for three prizes, presented by the host, Mr. Edwards, will take place at Egham, August 24th.—GEO. MUMFORD, president.

### BIRMINGHAM AND DISTRICT AMALGAMATED ANGLING ASSOCIATION.

The members were out in force on Bank Holiday, but many of the clubs have not sent their reports as yet. I and other members fished the Mease on Monday, but the water was very low and the fish very shy. Mr. Butter had a fair basket, and this was the only catch of any good—he had three pike, two eels, one over 3lb., and a few perch and dace; Mr. T. Duddleston had perch and dace; Mr. Callagan, dace and gudgeon; myself, roach, dace, perch, and gudgeon. In returning home I came across Mr. T. Coles, our president, and Mr. T. Hands, of the Leopold, and they had got the best catch of roach I have seen this season—they had quite 30lb., and nothing under half a pound. Mr. Clem Wainright, of the West-end Club, 25lb. 14oz. roach and bream in private water. The contest of Hearts of Oak took place on Monday, and was won by Mr. H. Attwood. I will send you the full particulars of this contest next week. The Old Green Man Piscatorials fish their annual contest on August 18th, at Westwood Park, and any member of any club who belongs to the Amalgamation can go with them and have the day's fishing. I will send you the time of starting next week.—JAMES T. ALLEN.

### BORDESLEY WALTONIANS.

The members of the above club held their opening match of the season on Aug. 4th, at Binton Bridges, when, although the catches were not so good as could be wished, owing to want of appetite on the part of the fish, a most enjoyable day was spent by them, the result of the contest being as follows:—Mr. H. Kendall, 1st; Mr. Bagot, 2nd; Mr. Pares, 3rd; Mr. Seymore and Mr. Tildesley tying for 4th place; Mr. J. Kendall coming next, but no prize was taken, owing to an experimental rule passed by the club as follows:—In order that a larger number of the members may participate in the prizes offered in fishing matches, no member shall take more than one prize, except specials, in one season, the order of merit to be determined by the gross weight at end of season. No fish under 3oz. to weigh. A record of each match to be kept by the secretary, and endorsed by the chairman or vice-chairman for the time being.—E. TILDESLEY, sec.

### BROMPTON ANGLING SOCIETY.

Mr. Ducker, on the 30th, a very handsome show of bream; on the 3rd Mr. E. Saunders coming to the front with some good samples of bream; Messrs. Dutton and Burbidge showing some good bream and roach.—W. DUTTON, sec.

### CITY OF LONDON ANGLING SOCIETY.

The following had fish on the 3rd:—Mr. Castell, roach, dace, and perch, from the Roding, 3lb. 2oz.; Mr. Chambers, roach, dace, and bream, from Amberley; Mr. Nitz, roach from Dagenham; and Mr. Bowyer, perch from Kingston.—CAS.

### CLAPHAM JUNCTION ANGLING SOCIETY.

On Monday, July 29th, Messrs. E. Wilson and our host, C. Speed, got among the barbel and roach (18lb.) at Staines; Mr. Westbrook, 16lb. bream, from Ormesby Broad; and, during the week, fair shows from Messrs. Starsmere, Banfield, Thomas, Moore, and Maslin. Mr. R. Wellman, had 17lb. 3oz. of bream from Wimbledon Lake. Mr. Moore came in first, at our first match at Walton, other prizes not taken. Mr. Wilson and friend (Mr. H. Smith) again got amongst the barbel and roach, at Staines, on Saturday last, taking about 20lb. of good fish. Bank Holiday, Mr. E. Wilson a very pretty take of tench, 22lb.; Messrs. Westbrook, Favell, Boisseau, Wakeford, and Starsmere also had fish. We are open to enrol a few more gentlemen, resident in neighbourhood preferred.—W. MASLIN, sec.

### EUSTONIAN ANGLING SOCIETY.

The following gentlemen had a good show of bream on Monday last, 4th inst.:—Mr. Comley, 15½lb.; Mr. Jones, 10lb.; Mr. Richards, 10lb.; Mr. Maynard had one bream on his tray scaling nearly 4lb. Taking the members all round, they did well.—R. NEALE, sec.

### GREAT YARMOUTH EASTERN COUNTIES ANGLING SOCIETY.

A well-attended meeting in connection with this society was held on Tuesday evening, the 5th inst., at the Duke's Head Hotel, Quay. It was resolved that in the future the meetings be held on Tuesday evenings at nine o'clock p.m., at the Duke's Head Hotel, Mr. Seaman, the proprietor of this convenient establishment having kindly granted for the society's use a handsome and commodious room. It has also been arranged that anglers coming from a distance who may wish to attend the society's meetings will be accommodated in every way by Mr. Seaman at reasonable rates, and that, should anglers call at his house for information regarding the fishing grounds, or any other subject pertaining to angling in this district, he will do his best to enlighten them. It was also resolved that cards of membership and books of rules be immediately published, and that the members be supplied with them forthwith. The president (Dr. Mitchell) was requested to call upon the managers of the different railway companies here with a view to making some arrangement by means of which members, when travelling to or from the fishing grounds, would be allowed to do so at a reduced rate. The question of having the first competition having been discussed, it was determined that a special meeting be called for Friday evening, the 8th inst., at 9 p.m., to make arrangements concerning it. Already, two handsome prizes have been offered by the president and vice-president, T. Freeman, Esq., to be competed for. We are pleased to note that close upon fifty members have up to the present time been enrolled. Considering that the society has been established but a few weeks, it is most gratifying to the promoters, their most sanguine expectations never leading them to such a satisfactory result. Several members have been angling during the week, and the following catches have been registered by the acting secretary, Mr. Seaman:—Messrs. Lee and Bonfellow, Ormesby Broad, 23lb.; Mr. Bunn, Filby Broad, 21lb.; Mr. Freeman, Ormesby, 21lb.; Mr. Lowne, Ormesby, 15lb. Weather magnificent, and water in good condition.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening at the Mason's Hall Tavern, Mason's-avenue, Basinghall-street; Mr. Crumplen in the chair. The minutes were read and confirmed. Notice of a special delegate meeting on Friday next was read from the central association. A letter was also read from the Fisheries Preservation Association, inclosing a copy of specimen by-laws drawn up by Mr. Willis-Bund for the guidance of angling societies and fishery boards. The chairman reported on behalf of the committee that they had decided, for various reasons, to recommend the society not to make an offer for the Alresford Pond. After some discussion the recommendation was unanimously agreed to. Messrs. Crumplen, Bentley, Godwin, and Chambers each reported the steps they were taking to procure a suitable piece of water for the use of the members. In all probability at the next meeting one or other of these gentlemen will be in a position to make a definite proposal to the society on the subject. The meeting closed with the usual vote of thanks to the chairman.—H.

### GLOBE ANGLING SOCIETY.

On the 3rd inst., the following members weighed in roach, bream, and dace:—Messrs. D. Thomas, 6lb. 3oz., one bream scaling 3lb. 6oz.; C. Ellis, 1lb. 8½oz.; C. Franklin, 3lb. 5oz.; H. Jeffries, 3lb. 12oz.; G. Brown, 1lb. 7½oz.; W. Brown, 15oz.; T. Howell, 1lb. 13oz.; J. J. Holmes, 1lb. 1oz.; J. Ballard, 2lb. 8oz.; and H. Lane, 4lb. 3½oz. On the 4th inst., from Amberley, Messrs. S. Howell, 8lb.; J. J. Holmes, 6lb. 10oz.; H. Jeffries, 9lb. 5oz.—J. J. HOLMES, sec.

[The report of the annual dinner of this society is unavoidably crowded out.—ED.]

### GUILDFORD ANGLING SOCIETY.

On the bright morning of Thursday, the 7th inst., between five and eight o'clock (three hours), two expert anglers, Mr. C. H. Buckland (hon. sec. of the Society) and Mr. J. Clark (steward of the County Club) caught from the river Wey, an enormous quantity of jack, giving a total of 51lb. 10¾oz. The respective weights of Mr. Buckland's fish are as follow:—1, 10lb. 13oz.; 2, 7lb. 8½oz.; 3, 7lb. 7oz.; 4, 3lb. 1oz.; 5, 2lb. 3½oz.—total, 31lb. 1oz. Mr. Clarke's: 1, 8lb. 4oz.; 2, 5lb. 12¼oz.; 3, 4lb. 1oz.; 4, 2lb. 8½oz—20lb. 9¾oz.; total of both catches, 51lb. 10¾oz. It should be mentioned that the whole of the fish were taken with fine gut tackle and No. 8 perch hooks. The largest jack (10lb. 13oz.) occupied three-quarters of an hour before it could be landed; the sport was magnificent. Mr. Buckland the provious day caught eleven perch weighing 7lb. 9oz. and a jack of 3lb. 12½oz. The total quantity of fish weighed in by the members of this flourishing society at this date far exceeds the total at the corresponding period of last year.

### HIGHBURY ANGLING SOCIETY.

The display of jack, perch, roach, bream, dace, and gudgeon in our trays on the 4th inst. greatly exceeded the most sanguine expectations, the gross total being very close upon 1cwt. Mr. Frank Temple, barbel and dace, 16lb. 10½oz., heaviest single barbel scaling nearly 5lb.; Mr. White, bream, roach, and dace, 16½lb.; Mr. Higley, bream, 15lb.; Mr. Devonshire, a fine pike of 14½lb.; Mr. Shipley, bream and roach, nearly 8lb.; Mr. Anthony, bream and roach, 6½lb.; Mr. C. Lewis, barbel and perch, 5lb.; Mr. S. Howell, jun., roach, dace, perch, and gudgeon, 5lb.; and Mr. Edwards, roach and perch, 3½lb. Several other members were out and added to the show, viz., Mr. Edward Wheatley, Mr. George Price, Mr. Ricketts, Mr. Kenneth Middleton, Mr. C. Otway, and yours faithfully,—J. E. WHEATLEY. sec.

### HOXTON BROTHERS ANGLING SOCIETY.

Our members have been getting some good shows of fish the last three weeks. On July 20th, J. Osborne had 30lb. 13½oz. of fine roach. On August 3rd, A. Pollard had 39lb. 10oz. of English carp. Messrs. Gillett, Merrick, Dean, and G. Hunt had roach and bream; W. High and G. Swinerton, roach; and R. Ghurney, jack.—R. GHURNEY, sec.

### INDEPENDENT BROTHERS ANGLING SOCIETY.

On the return of our members that were out on the 3rd and 4th inst. our trays presented a grand appearance, nearly every kind of fish being placed upon them. Mr. Roberts had pike, perch, and roach; Mr. T. Leader had a pretty barbel, besides roach, dace, and perch; Mr. H. Moore had bream, roach, gudgeon, and perch, one perch turning the scale at 1¼lb., and a nice lot of slippery eels; Mr. R. Clark, roach, dace, and a large show of good gudgeon; and Mr. G. Coomes dace and chub. There were also others out. We beg to remind all brother anglers and friends that our return visit will take place on Tuesday, August 26th, at the Club-house, Bird in Hand, Long Acre, W.C. (Host, Mr. Waldock), when we shall be most happy to have the company of all those who can make it convenient to attend.—H. MOORE, hon. sec.

### IZAAK WALTON ANGLING SOCIETY.

The shows have been very good during the past week. Mr. A. Bass had some nice roach and perch on the 3rd inst.; Mr. H. Butt had roach on the same day; Mr. N. Martin has weighed two lots of handsome roach during the week. On Wednesday, the 6th inst., Messrs. G. Rolt and G. P. Rolt had some beautiful bream and roach; Mr. W. Wilkinson, bream; Mr. H. Butt, bream; Mr. T. Goodwin, bream; Mr. G. W. Wood, roach. Three special prizes are to be fished for on the 17th inst. at Dagenham Lake; those who intend to compete will greatly oblige by being present at the meeting on Wednesday evening next.—H. B.

### LEICESTER ROVING ANGLERS.

The annual competition of members of this club for money prizes, for roach and perch, took place on Bank Holiday, when some good fish were weighed in. The successful competitors were: 1st, W. Berry, 1lb. 6¼oz.; 2nd, W. Holmes, 1lb. 2¾oz.; 3rd, W. Pratt, 12½oz. For perch—1st, W. Holmes, 1lb.; 2nd, H. Limbert, 8½oz.; 3rd, J. Godfrey, 8¼oz.

### LIVERPOOL ANGLING ASSOCIATION.

We mustered over thirty strong at Llanymynech on Bank Holiday, to fish in the Vyrniew for a variety of prizes. We assembled, as usual, at Mr. Baugh's, Cross Keys Hotel, there from whence a start was made at 11.30 a.m. The water was very low and clear, and soon after the commencement the sun broke through the clouds which had previously obscured him, and shone with a brilliancy and warmth that was well-nigh overpowering, and certainly most fatiguing, and put an end to the already poor prospects of good baskets being made with the fly. However, the great majority of those angling stood to their colours, and were more or less rewarded for their perseverance under difficulties. On reassembling at 7 p.m.—weighing in time—the scales gave the following results:—Best trout, Mr. Bloomfield and Mr. Harrison; best grayling, Mr. Boulding (too late); next best, Mr. W. Francis (too late); third best, Mr. Ellinger (winner); heaviest basket, Mr. Cardwell; second ditto, Mr. Bloomfield; third, Mr. Don. Best roach (special prize), Mr. Cardwell. Mr. H. Burrows had some especially good chub, but was not competing. Trout and grayling taken in this competition rank for Messrs. Ellinger and Boulding's Silver Challenge Cup. It is most regrettable that Messrs. Boulding and Francis were too late to weigh in, as they both had some very fair grayling, but the line as to the time of weighing in must be adhered to, or there would be endless bother and confusion. After partaking of one of Host Baugh's famous dinners, the party returned home, tired, but in the main contented mortals.—Rd. Woolfall, hon. sec.

### NORTH-WESTERN ANGLING SOCIETY.

There was a good number of members out on the 3rd, and the trays in the evening showed a fair return. Mr. Underwood had a very nice take of bream and a very pretty carp of 5lb.; Mr. Stead, jack and bream, Messrs. Marshall, Pearce, and Hillier, bream; Mr. E. Cross, a brace of tench. Mr. Stead was amongst the bream again in the week.—W. Hillier, sec.

### PHŒNIX ANGLING SOCIETY.

On Bank Holiday, four prizes were angled for by the members of our society, the result being that 132lb. 12oz. of bream, roach, and perch were weighed in, Mr. C. Slater being 1st, Mr. Garner 2nd, Mr. Townsend 3rd, Mr. Keen 4th, Messrs. Packer, Grist, Burnett, Baillie, Bartrip, Elbourn, Milton, Bentley, Reed, and the Brothers Ashley all coming in with bags, making it hot for some of the leaders.—W. Elbourn, sec.

### THE PRINCESS OF WALES ANGLING SOCIETY.

The members of the above had a very fine show of fish on Bank Holiday. The following members weighed in:—Mr. C. Ney, 13½lb. roach and bream; Mr. A. Porter, a handsome jack and roach; Mr. Cooper, 3½lb. roach; Mr. W. Ney, 30lb. bream; Mr. Maynard, 20lb. roach; Mr. Layzell, 11lb. bream. Members are requested to attend next Thursday, as business of importance is to be brought forward.—G. Attwell.

### RODNEY PISCATORIALS.

On the 3rd inst. Messrs. Smith and Grant visited Amberley. They managed to get some nice bream and perch. Messrs. Pyne, Dodd, and Friedel had some sport at Taplow; but the complaint is "Brightness of water." On the 4th inst. the Medway was well represented with some nice roach and bream, all in splendid condition. Several members visited Wimbledon, but met with little sport. Some friends punt fishing at Richmond, for a few hours in the afternoon, managed to get a nice lot of roach and dace. At the meeting, held on the 6th inst., it was decided that the August competition take place at Taplow, on the 17th; conditions same as previous competition. Mr. H. W. Flowers, of Hillery-road, Walworth, was proposed as a member this evening.—Pixey.

### SMETHWICK ANGLING CLUB.

Several of our members were out on Saturday, but had poor sport, the river being very low and bright; but on Monday we had some very fair baskets of roach, perch, and dace, plenty of the dace running up to 10oz.—Thos. Bannister, hon. sec.

### STANLEY ANGLING SOCIETY.

The following are the weights of fish registered by our members during the past month:—Mr. W. Ellis: carp, 1lb. 10oz.; perch, 1lb. 1oz., 10oz.; dace, 5lb. 5oz.; roach, 10lb. 1oz. Mr. W. Humby: roach, 10lb. 7oz., also seven weighing 6lb. 4oz.; perch, 7oz. Mr. Lupton: dace and gudgeon. Mr. Pistrucci: four roach, 4lb. 3oz., and eleven roach, 6lb. 1oz. Mr. Roset: roach, 1lb. 4oz.; four ditto, 2lb. 2oz.; one ditto, 15½oz.; ten perch, 4lb. 2oz.; one chub, 2lb. 5oz.; one pike, 2lb. 6oz. Mr. Scull: eighteen roach, 10lb. 15oz.; forty-nine ditto, 17lb. 4oz.; ditto 6lb. 4oz., and 4lb. 13oz. Mr. Wrightson: two perch, 1lb. 7oz.; 23 ditto, 13lb. 6oz.; five ditto, 4lb. 14oz.; one ditto, 1lb. 3½oz.; eleven ditto, 4lb. 6½oz.; one ditto, 14oz.; heaviest perch, 1lb. 12½oz.; one roach, 1lb. 7oz.; twenty-three roach, 15lb. 3oz., and 4lb. 7¾oz., and nine ditto, 8lb. 11oz. Amongst these roach were two splendid specimens, each fish weighing 2lb. 2oz.; two bream, 4lb. 15½oz.; two ditto, 5lb. 13oz.; one ditto, 3lb. 4½oz. Many other of our members were out during the recent holidays, but owing to distance and want of success, were unable to contribute towards the general show.—G. E. W.

### WALTONIANS.

On August 3rd Mr. Jukes had 2lb. 4¾oz of. jack, and 13lb. 5oz. of bream, &c. On August 4th, Mr. Phillips had a trout, 4lb. 13oz., and barbel, 19lb. 12oz.; Mr. Morris, roach, &c., 8lb. 3oz., and one dace, 11oz.; Mr. Burton, roach &c., 18lb. 15½oz.—A. J. Marriott.

### WEST GREEN ANGLING SOCIETY.

Mr. Guyver's prizes are to be fished for on 10th inst. Go where you please—roach only to weigh.—J. Guyver, sec.

### WELLINGTON ANGLING SOCIETY.

The following members have weighed in on the 4th, 5th, and 6th inst.;—Messrs. Phillips, Wright, Jenner, Hills, Newbury, and Locket, roach and dace; Messrs. Hill and Wright, bream. Messrs. Wright, Locket, and Harris, fishing in the Medway, had a good take of roach, but in consequence of the warm weather could not weigh in; the same may be said of Messrs. White, Crocker, and Alexander, at Shepperton. Mr. Andrews sent up a basket from Brundall, containing two perch, 2lb. 2oz.; one rudd, 1lb. ¼oz.; and roach, 26lb. 11oz.—total, 29lb. 13¼oz.—W. W. Alexander, sec.

## STATE OF THE RIVER LEA BELOW TOTTENHAM.

The following letter recently appeared in the *Times*:—

"Sir,—I beg to ask you to allow me to call attention to the terrible state of the river Lea below the outfall of the sewage at Tottenham. I am sure the state of affairs is becoming seriously dangerous. On Sunday evening I walked from Lea-bridge for a mile along the left bank towards Tottenham, and then crossed and went back to Lea-bridge down the other side. I never had such an unpleasant walk in my life; it was like walking by an open sewer—in fact, the river is now nothing but an open sewer from Tottenham to the Thames. And yet this horrible, fetid stream passes through a thickly-populated, poor district, and is frequented by thousands who go for recreation in boats and on the banks. These people are almost without exception of the lower classes, and are doubtless in too many cases used to bad drainage; but the one thing I heard talked about both by young and old was the horrible smell. At Lea Bridge, close to the open filtering-beds of the East London Waterworks, is an immense rubbish deposit, apparently from dustbins, and coming on to this after having such a dose on the river almost sickened me, and I was glad to get some brandy at the publichouse by Lea Bridge. I said to the man who served me, 'Something ought to be done to stop the stench from the river.' He replied, 'Indeed, you are right, sir; it is awful." I asked if it was often so bad as then, and he said, 'Oh, to-day is nothing to what it often is; a fortnight ago we could hardly stop in the house.'

"If the authorities of the Health Exhibition wish to deal practically with the sewage question and experiment on a large scale, there is every opportuuity at the Tottenham sewage works, which are utterly powerless at present to deal with the increasing stream. The Lower Lea Valley could not be improved upon as a field for cholera and other diseases less feared but more fatal.

"I am, Sir, your obedient servant,

"July 30. "R. B. Marston."

## THE "BREAKING OF THE MERES."

A correspondent writes:—"The curious phenomenon known as the 'breaking of the water, is familiar to all residents in localities where there are large sheets of fresh water as at Ellesmere, Shropshire. The water in such cases gradually becomes quite thick and turbid from the extreme abundance in it of a minute green freshwater algæ. This turbidity only continues for a brief period, after which the water gradually clears again as before. A small piece of water, known locally as the Ox Leysher, and lying parallel to the river Dee, near Radley, is just now in this peculiar condition. The whole of its water is thick, and of a dull pea or almost blue-green colour. On holding a bottleful of it up to the light this colour is seen to be due to the presence of very tiny but enormously abundant bundles of filamenteous green algæ. This is generally diffused through the main body of the water, but in the adjoining ditches which connect the Ox Leysher and the Serpentine it is as thick as though dark green thick grease had been stirred into the water. These ditches are evidently the great nurseries of the algæ, and from them it spreads into the water of the Ox Leysher; but why it should become so abundant in that piece of water and not also in the Serpentine is not easy to say. A microscopic examination of the algæ shows that it is a species, but of which I am not certain, of Oscillatoria, the filaments of which are producing the peculiar enlarged reproductive cells called heterocysts. These filaments lie side by side, and so become aggregated into small bundles, the individual plants slowly gliding backwards and forwards over each other. The average size of the filaments is about 1-40th of an inch long by 1-250th wide. Yet, in spite of this extreme minuteness, the whole depth of great sheets of water, as at Ellesmere, Oulton, or that now referred to, are rendered as thick as soup by its abundance. Apparently, this is the vegetating and fruiting season of the plant, and in a few weeks it will sink again to the bottom of the water, where all, except its reproductive cells, will decay and disappear. The reproductive cells will then remain dormant until next year, when they by their activity will again cause the 'breaking' of the water."

Thames Fishery Convictions.—Robert Randell was brought before the Brentford Bench on Saturday last on the charge of taking out of the river Thames at Twickenham a large quantity of unsizeable roach and dace by means of a large landing net made of muslin. Mr. W. H. Brougham prosecuted on behalf of the Thames Angling Preservation Society, and referred to the action of the society in successfully protecting the spawn of roach in that neighbourhood during the close season as one of the means of increasing the stock of fish. The evidence of head river-keeper, Alfred Thompson, went to prove he found in the possession of the defendant upwards of 200 small fry, which were principally roach, and that he saw him using the net. His assistant, Edward Wright, gave similar testimony. The defence which the defendant set up was that the keepers were mistaken, and put a boy in the witness-box to swear that he committed the offence, and that Randell had nothing to do with it. The magistrates considered the boy had been trained to make the statement he did, and the defendant was fined in the sum of twenty shillings, including costs.—J. R. Brooks was summoned before the Kingston Borough Bench on Wednesday last for laying a fixed line in the river Thames, at the back of the premises in the occupation of Mr. Harding, dyer, Kingston. Mr. W. H. Brougham prosecuted on behalf of the Thames Angling Preservation Society, and the case was proved by head river-keeper, Alfred Thompson. Mr. Harding addressed the Bench, and said that the boy had laid the hooks at his request to catch some eels, and was entirely ignorant of its being wrong, but that he would take care it should not occur again. The Bench submitted in that case it should be dealt leniently with, and Mr. Brougham concurring with that view, the defendant was fined five shillings, including costs.

Salmon in Newtown, Montgomery.—Fishermen and others residing on the upper part of the Severn, above Newtown, Montgomeryshire, have been complaining, and not without cause, of the scarcity of sport in that part of the river owing to the low condition of the Severn, and the depth of the weirs below Newtown, to which place the sport has been confined. We are glad to be in a position to state that the Salmon Fishery Association are now employed in erecting a new fish pass to the weir at the Craigfryn Factory. Should the erection of this pass prove successful, a greater number of salmon may be expected in the upper waters of the Severn than has yet been seen, notwithstanding the vast improvement which has taken place during the year.

Charge of Fishing Without a License.—Prosecution by Severn Fishery Board.—At the last Petty Sessions at Llanfair-Caereinon, before R. D. Pyse and H. Hilton, Esqrs., Richard Morgan, Llanllugan, was charged by Mr. A. George, superintendent, on behalf of the Severn Fishery Board, with unlawfully taking fish without a license. Mr. T. A. Lort, Vrongoch Hall, deposed that he was near the Rhiew River at 3 p.m. on Wednesday, June 18th. Saw defendant in a brook fishing with his hands, taking by groping: was only a few yards from him. Defendant had his sleeves turned up, and was carrying about twenty small trout threaded on a string. The defence was an *alibi*. Mr. Edward Jones, Nantwylit, said defendant was his servant. On Wednesday, June 18th, he was ready to swear that the defendant was at home working in the turnip field. He was quite positive as to the fact. Witness was uncle of the defendant. They worked together from two till six o'clock. He knew it was the 18th of June because the Voel Association was held next day. The case was adjourned for a month.

Black Bass Fishing Extraordinary.—The black bass fishing at Gogebic Lake, Wis., is indeed remarkable. A party of three anglers, viz., Messrs. Henry T. Drake, J. W. Ormsby, and Wm. H. Thurston, of Milwaukee, visited the lake recently, and in three hours caught one hundred and fifty black bass, using common "spoon hooks." The fish were of good size, ranging from 2lb. to 4½lb. each. Gogebic Lake is about eighteen miles in length, by three to four miles in width, and the surrounding streams are well stocked with brook trout.

Illegal Possession of Salmon Fry.—Before Sheriff Robertson, at Forfar, on the 24th ult., George Lowson, a factory worker, Forfar, was charged at the instance of the District Fishery Board of the South Esk, Forfarshire, with having contravened the Salmon Fisheries (Scotland) Act, 1868, by being in possession of eleven smolt or salmon fry at the River South Esk on the 7th July ult. It was stated in Lowson's behalf that he had caught one or two trout and also a number of smolts, between which and trout he did not know the difference, and had kept them in ignorance. The Sheriff remarked that Lowson had no right to go fishing for these things, and imposed a fine of 5s., with £1 15s. 5d. expenses, the alternative being a week's imprisonment. He also warned Lowson against a repetition of the offence.—P. McG.

We notice that the summer number of *The Topical Times*, to be published on August 12th, will contain a clever, tinted cartoon by "Pilotell," entitled "Footlights and Foam," in which will appear portraits of most of the leading actresses of the day. The contributors to the number will comprise many writers of ability and note. The paper will be in a wrapper, will contain twelve pages, and the price will be 4d.

## AWARD OF HEAVY DAMAGES FOR INJURY TO THE RIVER ERNE EEL AND SALMON FISHERY.

(From our Correspondent.)

At the Donegal Assizes, Baron Dowse and a special jury have been engaged hearing a traverse of the award of the Government arbitrator, Mr. E. Murphy, in relation to the injury done to the River Erne Salmon and Eel Fishery by the drainage and navigation works executed on the lake, and up to the falls at Belleek by the Drainage Board. For the traversers it was alleged that the greatest injury was done to the eel fishery, and also to the salmon fishery, by the removal of the falls at Belleek and the substitution of sluice gates which, when opened, suddenly raised the river by five and a half feet in twenty minutes. On the other hand, it was contended that the works, when completed, would be a benefit rather than a disadvantage to the fishery, and the arbitrator had not been aware of the facts when he made such a large award. In 1882 the take of salmon had been unprecedented, and in 1883 the eel fishery had been more productive than ever—and this, while the works were in progress. The drainage board had bought out a weir owned by Lord Ely on the river, and the result was to send all the eels formerly caught there, and the value of which was estimated at £300 a year, down to the weirs of the traversers. The jury awarded the Erne Fishery Company £14,248 in respect of the injury done to their eel and salmon fishery in the River Erne, from Belleek to Ballyshannon. This exceeds the Government arbitrator's award by about £3,000.

## AN AMATEUR ANGLER'S DAYS IN DOVE DALE.—(No. 3.)—JULY 29.

I THINK I told you in my last that the open-mouthed trout were waiting for me. They were ! It had been a fine, bright morning ; but when I got down to the water, the water came down on me, as usual, in torrents.

I started about three o'clock, well covered as to my back with my new mackintosh ; but my poor feet and legs were badly off, and were soon in a sloppy, floppy state ; but what cared I ? I began down at the bridge, and worked up stream, casting three flies. I had a notion, derived, I believe, from such an experienced mentor as yourself, that it was the proper thing to do. Fish, you know, generally lie with their heads up stream ; so if you throw a good way up and let your flies float gently down, they naturally fall into the open-mouthed trout. Well, I tried that plan all yesterday afternoon ; this time I did not hurry along. I followed the great master's advice. Unlike Peveril of the Peak, I took heed to old Izaak Walton's recommendation to "fish the streams inch by inch" ; but, nevertheless, I gave preference to the spots "where the stream broke sparkling over a stone, or where, gliding away from a rippling current to a still eddy, it streamed under the projecting bank, or dashed from the pool of some low cascade." Ah ! those "low cascades"—there are scores of them in the three miles winding of the Dove ; how fondly I fished those "rippling currents." I was not in the least discouraged by getting no nibble—not the least indication on the part of the fish that they were conscious of the tempting flies I put before them. I had met a venerable old man with an immense fish basket, landing net, and all the other needful impedimenta. He might have been Izaak himself, so deftly did he handle his tools. He asked me how I fared, and I told him that I had caught nothing, but I meant to persevere. He, too, had not been blessed with a nibble. Further on I encountered that young fellow and his charming bride. They had fished all the morning and were now returning triumphant, having had four rises and two bites ! But this successful young angler rather despises trout fishing. "Salmon fishing is the sport I like," said he. "A thirty pounder at the end of your line, you know, that's the sort of thing for me !" I felt encouraged, determined, in spite of pelting rain, to persevere, and so I plodded on. I should tell you that my genial friend the keeper had put me up to a dodge. You will remember that just above the point where the stepping-stones are, and opposite to where the old woman keeps her donkeys, the left side of the river is fenced off by a strong iron gate, with notice-board warning intruders to go away ; but I had the right (useless without the key) to pass this barrier at any time. "The gate is not really locked," said he ; "it sticks in a peculiar way, and it can only be opened by a secret trick," which he imparted to me. Unluckily it happened that I had not quite learnt the trick. I thought he had told me to lift the gate lightly off its hinges and so pass through, deftly dropping it on again. So I marched up to the gate and tried the little dodge ; but, alas ! the gate is made of iron, and must weigh, at least, half a ton ! I lifted and strained with all my might, but not a bit would it move. I had imagined from the way the brawny keeper spoke of it that I had only to touch it with my little finger and up it would go ! But brawny and muscular as he is, I defy him and another man to boot to lift that gate off its hinges ; and yet he could not have intended to deceive me. I must have mislearnt my lesson. Chagrined and disappointed, I had to return to the stepping-stones and recross the stream. I was disappointed, because that left side is level and easy travelling, whilst the right is rugged, rocky, and unequal ; besides, on the left, the wind would have helped me to lay my flies just where I wanted them to go, whilst on the right it only baffled me. In my perplexity the donkey-boy came to my assistance. "If you want to go to the other side I can open the gate," said he. "Certainly I do," I replied. My donkey-boy, without key or other appliance, had only to cry "*open sesame*," and open it flew. I rewarded him so handsomely that he voluntarily exclaimed, "I shall be gone before you return, but I will leave it open for you," for which I thanked him, and went on my way.

Above all others, the Dove certainly is "the brook" which everlastingly sings—

> "Men may come and men may go,
> But I flow on for ever."

Men do come here now as they did in Izaak's time, and as he himself came ; and, alas ! men do go, as he has gone. I, too, must leave soon ; but before I go let me pause for a moment to remind those of your readers who know not this lovely spot, that the Dove is not like other rivers. It runs in a perfect zig-zag —straight from each zag to each zig—then suddenly turning an abrupt corner straight on to another zag, and so on, each stretch running for two or three hundred yards, each side lined with rocky or wood-clad hills coming sheer down to the water's edge, leaving only a narrow space varying from one to ten yards for Piscator's operations. In each of these stretches are two or three cascades, which extend quite across the stream like natural mill dams, forming pretty waterfalls of 3ft. or 4ft. deep. It is at the foot of these little cataracts that the hopes of the experienced angler lie ; here, if anywhere, will you catch your wary trout. It was here, in one of these musical swirls, that I, the youngest disciple, hooked and landed my *first trout*. Ah ! the excitement of that happy moment, when to my utter astonishment I felt a heavy tug at my rod ! "Pooh ! another weed," I cried. But it moves—it dashes down the stream—it dashes up again to the cascade—it shows now and again in the frothing water a lovely pink and yellow belly. It is *not* a weed, it is a splendid trout ! Shade of Izaak ! what shall I do ? How am I to keep hold of him ? He dashes away here and there, now under the rock, now away off, and for a second or two he lies under some thick flowering weeds, then off again ! What ought I to do ? All my theoretical lessons have gone out of my head except this solitary one, "Keep the point of your rod up." I kept it up. I gradually wound up, but let out again as my fish displayed a disposition to come in or go away. I had, on a previous occasion, found a landing net a quite unnecessary encumbrance, so now that I sorely needed it I had not brought it with me. By degrees my trout seemed to become exhausted by the unequal struggle, and for a moment lay up on a tuft of grass nearly out of the water, apparently to take breath. I thought it best not to give him time to regain his strength, so I gently lifted him straight up from his grassy bed and threw him on to another not quite so congenial to him ; but I had him safe. I had got him only by the skin of his teeth, for he fell on *terra firma* freed from the hook, and I was puzzled to know which of my doughty flies had performed the deadly deed. Thus encouraged—I may say, perhaps, unduly elated—inch by inch I flogged that pretty pool, but with no more success, so on I went to another cascade, and there, to my perfect bewilderment, I hooked and landed another trout, under circumstances so exactly like the first that it would be waste of words to redescribe them. Need I say how proud I was ? I saw a party of ladies coming along on the opposite side in mackintoshes and under umbrellas (for rain does not keep ladies indoors in these parts), so with pardonable vanity I laid my brace of trout on a conspicuous bank where they could easily see them, and no doubt remark, "See, there is a true Waltonian ; he knows how to do it !" Well, now I perceive a wet and dripping angler coming down the other side. "What sport, my friend ?" cried I. "I have toiled all day," he replied, "and have caught nothing. Not a rise, not a bite ! How fares it with you ?" "Oh," said I, "poorly, very poorly, only these two half-pounders. Nice little fish, are they not ?" Then he asked the name of the fly I was using, and I at once told him, for I am not selfish in such matters, that my little "honey dun bumble" had done these deeds, and I advised him to go over to Foster's, of Ashbourne, who would furnish him to his heart's content. And now I started homewards ; but—could one believe it ?—that rascally donkey-boy had *not* left the iron gate open ! What in the name of Izaak am I to do ? I cannot get over it, it is lined with spikes. I cannot get round it, there is a high stone wall, and the water is 6ft. deep on one side, and the rock rises abruptly for a hundred feet on the other. I cannot get through it, for how am I, a weak old man, to lift a gate of half a ton ? Why did I not pay more attention to the keeper's instruction ? Why did I not watch that donkey-boy's "*open sesame*" ? I must puzzle out the secret for myself ; and I did, after endless exertion, find it out. It is very simple when you know how. But I don't intend to betray my friendly keeper's secret—not I.

How I astonished my friends and my neighbours, and especially how I aroused the admiration—not to say, the envy—of that young fellow and his beautiful bride, when I dangled my beauties before their eyes, I need not relate. Two hours after my trout had been disporting themselves in the Dove were they placed before me at dinner, cooked in a way they only know how at "The Izaak."

I have tasted trout from all parts many a time, but never before have I tasted anything to equal the delicate, delicious flavour of these of my own catching. I must say that the strangers in the hotel respected my prowess far more than did my own familiar friends ; even the wife of my bosom slyly inquired if I had caught them with a "silver hook." I rejected the imputation with scorn.

## IMPORTANT IRISH FISHERY INQUIRY.

(FROM OUR DUBLIN CORRESPONDENT.)

MR. T. F. BRADY and Mr. W. Johnston, Inspectors of Irish Fisheries, held a meeting at Swords Court-house, near this city, on the 6th inst., when several magistrates, landowners, and conservators attended. The notice convening the meeting was to the effect that the Inspectors of Irish Fisheries had been called on to inquire into the expediency and necessity of defining the mouth and estuary, and also the boundary between the tidal and fresh water portions of the Broad, Meadows Water, and Ward or Swords River, in the counties of Dublin and Meath.

Mr. T. Fitzgerald, civil engineer, in support of the application, deposed that in his opinion the mouth of the river should be defined by a line drawn across the Ordnance Map from the course of the spot between Prospect Point on the north, to the shore under Seatown Castle on the south side of the river, and that the boundary between the tidal and fresh water should be defined by the line drawn across the map below the spot marked as the Big Marsh.

Mr. John Neill, the water-bailiff, also gave evidence in support of the application, and as to the injury done by nets for want of a proper definition of the mouth of the river. Gaffs, he said, were used illegally, and anglers did not require gaffs.

The Inspectors made an order defining the mouth of the river, and the boundary between the tidal and fresh water, on the lines laid down by Mr. Fitzgerald ; and Mr. Brady explained that the effect of the decision practically would be to preclude the present netsmen from using nets inside the mouth of the river, or within half a mile outside the mouth of the river. The Inspectors also made a by-law prohibiting "gaffs in possession" on the banks of the river.

ILLEGAL FISHING IN THE TEME AT LUDLOW.—At the Ludlow Petty Sessions, on Monday, James Rowlands was charged by John Jackson, gamekeeper to J. L. Parkinson, Esq., Ludford House, with illegally fishing in the river Teme on the 24th July, in the parish of Ludford, where Mr. Parkinson had a private right of fishing. John Jackson stated that on the 24th July, about six o'clock in the evening, he saw James Rowlands fishing in a stream below Steventon. Witness went to the defendant, and asked him if he had a ticket for permission to fish there. He said he had not, but he had seen Mr. Parkinson that morning, and he had said he might go there as he was going with another gentleman who had got leave. There being a gentleman fishing just below, witness asked him if he was with him. The gentleman said he knew nothing about him. He asked defendant his name, and he gave the name of "John Dobbs," but he afterwards saw his license with the name of James Rowlands on it. Defendant had not seen Mr. Parkinson that morning. Fined 6d. and 8s. 10d. costs.

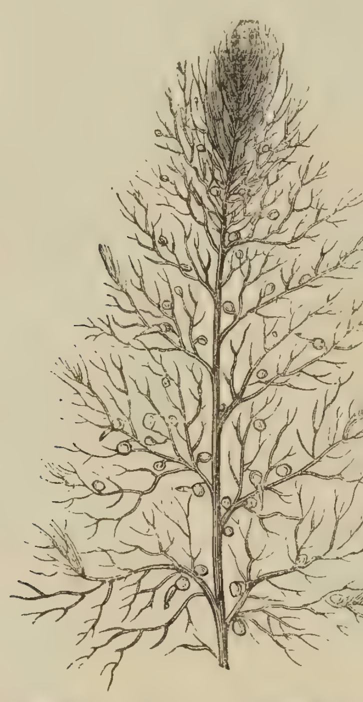
# THE FISH-EATING PLANT.

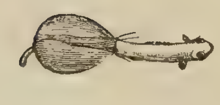
(Illustrated.)

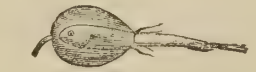
The Utricularia Vulgaris (Fig. 1) is distributed over the British Isles, growing freely in stagnant water.

It is local in its habits ; but wherever it is found it is very destructive to animal life, catching and killing immense quantities of aquatic larvæ, worms, crustaceans, and other invertebrates.

Mr. Darwin, in his "Insectivorous" plants, mentions that in plants received from the New Forest in July, most of the bladders contained prey, and in a second lot obtained in August, from unusually pure water, the greater proportion of the traps were empty. On an examination of the contents of some of the bladders, the first all contained prey of some kind, and eight of them included entomostrocan crustaceans, three larvæ of insects (one being still alive), and six remains of insects so decomposed that it was impossible to distinguish their species. Five more vesicles were picked out, and there were found in them four, five, and eight crustaceans, and in the fifth a single elongated larva.







In five other bladders selected because they contained remains, but not appearing very fresh, there were one, two, four, and five crustaceans.

How the plant manages to attract so many creatures of various sorts is rather difficult to determine, especially as its action is a passive one, and even when placed in water at a temperature varying from 80° to 130° Fahr., and then brushed with a fine camel's hair pencil to imitate the crawling of minute crustaceans, the valve could not be induced to open.

The general supposition is, and I take it to be extremely probable, that the insects which get entrapped are attracted by the hairs outside the mouth of the valve ; but this would not account for the entrance of animal feeding crustaceans, unless, as I would suggest, they are lured to their doom by the other animals already in the trap.

In the case of fish, I imagine it is simply due to the restless, prying habits of the tiny creatures, which go poking their noses into every nook and corner they come across, and attracted by the spot of light made by the colourless membrane of the valve, they touch one of the branched processes, and the more they struggle the further in they go.

This is, I think, conclusively proved by the fish also being caught by the tail, and in more than one instance by both the head and the tail, the latter being caused by the struggles of the fish to release his tail, bringing his head in contact with the processes of another vesicle. By reference to the woodcut, Fig. 2 shows a fish taken into the trap by the head, and Fig. 3 one caught by the tail.

I was hoping before this to be enabled to give a paper on its powers of destruction in a state of nature, by placing several plants in the midst of some hatching roach spawn, the last and only ova with which I am cognisant just at present. Unfortunately, in my case, the old proverb *l'homme propose mais le bon dieu dispose* is only too true, a sharp attack of illness having intervened, so I am perforce compelled to defer my experiments until a more convenient season.

In conclusion, I sincerely hope this discovery will be of great use to the pisciculturalist, for I think it shows the innumerable perils surrounding the denizens of our rivers and lakes on every side, and it clearly demonstrates that the life of a young fish from the moment he emerges from the egg and begins life on his own hook, till the time he finishes it on that of an angler, must be a perpetual battle for existence.

G. E. Simms.

37, Broad-street, Oxford.

---

**Dee and Don Fishery Boards.**—The proprietors and lessees of the fishings have elected as their representatives at these Boards for the ensuing year the following gentlemen—viz. :—For the lower district of the river Don, A. T. P. Hogarth, Esq., Duncan Forbes, Esq., of Balgownie, and G. Davidson, Esq., of Messrs. G. and W. Davidson. For the upper district, Lord Forbes, Castle Forbes ; R. F. O. Farquharson, Esq., of Haughton ; and Henry Gordon, Esq., of Manar. These six gentlemen, with the proprietor, holding the largest rental (Aberdeen Shipmaster's Association), constitute the Board. For the lower district of the Dee, Treasurer Walker, Aberdeen ; A. P. Hogarth, Esq., ; and Geo. Davidson, Esq. For the upper district, Most Noble the Marquis of Huntly, Aboyne Castle ; Sir Robert Burnett, Bart., of Leys, Crathes Castle ; and Col. Farquharson, of Invercauld.

# ON THE DESCRIPTION OF SALMON FLIES.

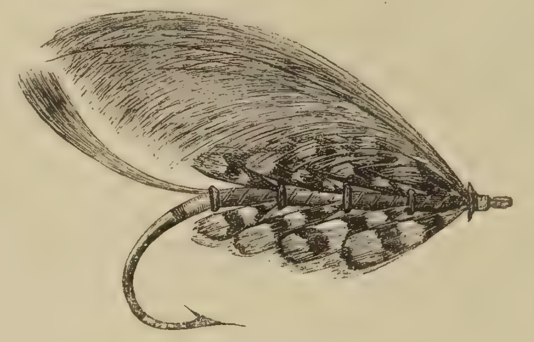
By Mr. Geo. M. Kelson.

## Major Traherne's Patterns *(Continued).*

### No. 10.—The "Jungle Don."

Whether it be in fly dressing or other pursuit in life, blighted hope, if not failure, is well within the bounds of probability, unless we can conveniently secure a fairly good start. Amateurs who have followed me so far should, I hope, be able to manage the tag and tail successfully. Perhaps it is as well to say that in adjusting toppings at the tail, though I scarcely thought it necessary to refer to them here, the tying silk should extend up to (not over) the fibres, and after two turns, the quill end of the feather, which should have been inclining rather towards you, is lifted up and placed straight along the top of the hook before proceeding. If this feather is not put in a diagonal position at first, the silk in unskilled hands is almost sure to drag it over—beyond the hook ; consequently, the dent in the shaft of the feather is made out of place, and spoils all chance of its posing well when offered its proper seat afterwards, leaving no remedy but to shorten it, or keep it for a smaller fly. Prior to my getting these feathers under control, I used to make the dent beforehand with a spatula, and found it answered well.

As we require double the amount of scraggy or spare herls for butts, select those dyed a good black, and with short, close filaments ; for the fewer coils we have of them the better, as a salmon's tooth often effects so much mischief here. Always try the strength of them. The dye, if hot, weakens them considerably ; but if cold, and the feather fresh from the bird, they will keep for years stored away from light and air. The hairy fragments should always face the tag. Wool butts are becoming popular only because they last much longer. They should have a symmetrical oval outline, which is not difficult to get if you dishevel and unravel your wool well, make a "pea" of it, and roll it a little between the palms of your hands, as a plumber would his putty ; then lay it down and give it a skin-deep pull right and left to form a double taper, say an inch long. Apply one end behind the tying silk, under and against the hook, and press it there with the first finger of the left hand. Guide it alongside the silk, if it requires guiding (but it generally hangs down sufficiently straight), and by taking that end between the thumb and forefinger of the right hand with the silk, you can twist both together, and they will unite if you hold the left finger as directed. In repeating the twisting motion, which you have to do when the thumb which started at the first finger-joint reaches the end of that finger, take care, before you leave go, to drag them both down the whole of the tying silk to maintain the twist throughout, otherwise your work will retreat, fly back, and then you will have to begin again. And here I may mention there are other qualifications expected of butts besides long life ; so even if herls have a "touch-and-go" reputation—if they are minute in importance—they are more attractive and enticing while they last.



It is astonishing how fishermen delight in building their recollections upon some basis of reality, and although there may be little else to urge beyond the function of imagination, why we fancy this and that in preference to the other, it is no less true there are other facts to all appearance equally insignificant—verities, though only gathered in twilight by degrees which should not simply be unveiled to hover around us, but should assuredly concern and, undoubtedly, direct us. Undoubtedly—perhaps too strong an expression this—for how often, how very often, between the desire and its fulfilment lies only the briefest space of time, and the desire remains for ever unfulfilled ! The sad and sudden death of the king of anglers, Major French, surrounded—poor fellow—by little else but his feathers and fishing gear, in which he manifested such pardonable pride, is so remindful how the joys and sorrows of this world may be strikingly mingled. I trust any, or so brief an allusion is not entirely out of place ; but, indeed, salmon fishermen have lost a true, noble-hearted man, who was always most happy when he could in any way contribute to the happiness of others. I hope I may be excused for this digression.

. . . . . . . . . .

In returning to our subject, perhaps I need not say much now of the tinsel tribe. The first turn of the tying silk beyond the butt should be over the substratum of oval tinsel which is tied in here for ribs. I have previously suggested how and why it is to be "peeled ;" but at this point it requires a little different management.

An extravagant, still, a good plan, for manœuvring a taper for the body—one which I used to adopt, because in my early days I found it difficult to gradually and regularly increase the amount of outside material—is to divest sufficient tinsel to allow enough of its internal silk for the purpose. It may be waxed with cobblers' wax for a seal's fur body, then one turn only of the tying silk is enough by the butt. Spread out or widen the first coil or two considerably, and from there with ordinary management you have an area every atom as firm to work upon—a foundation that answers admirably.

In my opinion, there is no wax so good as this for salmon flies—nothing, in fact, approaches it ; bodies are stronger and more durable over its clinging grasp, and it alike strengthens all parts of the fly. Dressers who are very familiar with its use know exactly when to drop or shift it to avoid waxing their fingers ; and those less *au fait* would do well to put a small quantity in a piece of kid or thin leather the size and shape of a five-shilling piece, which should be kept doubled, as exposure is detrimental. When waxing thread, it is unnecessary to open this wad all the way, but merely down to where the wax has spread ; the pressure is with the forefinger above the gossamer silk, on the four strands which you hold horizontally after having put them twice over the "fly-maker's peg." When the wax is soft it works best. As to "spoiling the colour of the silk," if the correspondent last week meant the colour of his floss when worked over the waxed tying silk—and we may fairly assume he intended to convey that idea, because it is immaterial what colour the tying silk turns, as it is hidden from the tag to the head—he should either be more sparing with wax, or more generous with his floss silk. If there is a scarcity of the latter, it will be sure to turn a bad colour *in*, if it does not *out* of the water.

I need not resort to the sophistry of foreign phrases—a fashion, frivolous and fast fading away—for the object of apparently fortifying any observations in favour of the "Don." However perfect this fly appears (and the harmony as usual reveals superior skill, and must be commendably acknowledged), though it derives its origin from so authentic a source as "to make assurance doubly sure," we can but draw an inference only of its certitude. With such startling prominence in the composition, it bids fair to run many of its precious predecessors uncommonly hard.

All fishermen know that "Jungle" is most conspicuous, and when once salmon become accustomed to it, there is always a special demand for the feathers, which may well be attributed to their captivating qualities and exercising influence.

There is a very general opinion current that this useful bird is rendered more valuable when the spots are black and brown. In presence of this mistaken spirit of toleration, may I ask (and I do so with a deal of confidence), Is there an experienced fisherman living who makes his own flies that will not condemn such utter fallacy? We use it because it is easily and clearly seen in the water: the greater the contrast the greater the attraction, and is there not a wide difference between black and brown and black and white? Want of faith is an unenjoyable hindrance to success. If anyone is, therefore, in doubt about Jungle fowl, let him be persevering with the larger feathers in rough, deep pools, reserving the more diminutive for steadier flowing streams. To enjoy is to live in the instant we grasp, and how can we be hopeful if we are deficient in faith? There may not be much in anticipation, but it invariably lends encouragement, even though it frequently forgets to fulfil what it promises. The forecasts of fishermen are, however, often frustrated—proved void—though the water and weather be never so favourable: uncommonly suggestive that "that which is least expected will be sure to transpire" is about our only safe and sound matutinal prediction.

In preface to the description of our illustration, I may mention that we cannot absolutely depend upon the "rights" and "lefts" of these feathers, which with others (golden toppings omitted) is important. Upon more than one occasion I have come across necks when, from the unusual—I may almost say deformed—shape of the shaft, utterly precluded the idea of fixing those on that side of the fly for which they are presumably intended. I am given to understand that this anomaly arises from the constant habit some of the birds have of always roosting with the head under the same wing; but we can fortunately fit all their feathers to advantage somewhere, and whether large or small, so long as they are velvety black and a pure white, they are most useful and invaluable to salmon anglers.

Tag: Silver twist, and silk the same colour as toppings.
Tail: Topping.
Butt: Black herl.
Body: In four sections, butted, and with two jungle feathers back to back, top and bottom, as shown. No. 1 division: Green silk, same shade as the green feather of the macaw. 2: Tippet-coloured silk. 3: Dark blue silk, same tone as an enamelled thrush. 4: Black silk.
Ribbed: Oval tinsel.
Wings: Toppings.
Horns: Blue macaw.
Head: Black herl.

## A DAY'S TROUTING.

By the "Medway Dace."

SIXTY miles an hour, and then not travelling fast enough; but you must know I was leaving for a time the smoke, bustle, and din of the metropolis of the North ("canny" Newcastle, as they are pleased to call it up there) for a nice quiet week's trout fishing in water that was seldom whipped to death. So there was every excuse for my being eager to reach my journey's end. Certainly I was leaving good fishing behind, but I was going where former experience had taught me that the trout were there (and "smarmers," too). The only thing to be done was to catch 'em.

"York: ten minutes here," was shouted by a porter who could easily have given the fat boy in "Pickwick" five stone, and then weighed against him successfully. Out I jumped to get a stretch. At the same moment a tall, thin lady emerged from a carriage in front of me, and immediately busied herself by shouting "Porter!" in a voice and manner that led me to think I would rather remain single than be "spliced" to such a one. Finding her call entirely ignored, she walked briskly up to the fat official above mentioned and prodded him in the back with a substantial umbrella, asking at the same time:

"Did you not hear me call you, porter?"

"Certainly I did, marm!" retorted that individual. "And I should just like to know how *you* would like to be called 'porter' if you was 'stout'!"

Arrived at King's Cross, I indulged myself in four miles of danger at eightpence, got on another line of rail, and was soon at my destination.

The two first days I only had average luck—2½ brace, 4lb.; and 3 brace, 2lb. The third day I had a grand catch—14 brace, 18lb. It was this catch that led to the day's fishing—the subject of this paper.

My friend R——l goes in for coarse fishing, and a very good hand at it he is, too; but he is not used to handling a fly-rod. Nevertheless, we had arranged to have a day together during my stay, and when I got home with my big catch he had just arrived, and you may be sure his eyes sparkled at the sight, and his hand itched to get at them himself.

We had a jolly evening together chatting over old times, and turned in early, and next morning started early as blithe as a lark, and as fresh as a daisy. R——l being eager to begin, I assisted him in fitting up his tackle, and he was soon flogging the water in a style that bid fair to drive all the trout far away. Leaving him a good stretch of water, I walked ahead, and was soon busy at it myself. I put on a blue dun and started at a deep curling eddy. At my second cast I rose, and was immediately after deep into a good fish, which I succeeded in landing safely. Five minutes or so after, I noticed a whacker just ahead of me rising beautifully. Twice I threw over him. On each occasion he eluded my snare; but the third cast that trout was doomed. He rose, I sent the cold steel home, and soon after had the pleasure of creeling him. He was a well-conditioned fish of about 1¼lb., and proved to be the largest I took that day.

I was just loading my pipe, preparatory to moving onward, when the loud and excited cries and frantic movements of my esteemed, but somewhat headstrong friend, R——l, attracted my attention. He appeared to have hooked a fish, and I immediately hastened to render such little assistance as I was able to do. Before I reached him, however, my services were dispensed with, for he shouted:

"I've got him! I've got him! No!—I'm d——d if I have. He's gone!"

I endeavoured to console my friend with the reflection that he was by no means the only angler who had lost his first trout, and was turning to resume my fishing, when he requested me to give him a few more flies, remarking:

"I've *used* the six you gave me: two are in the back of my coat, two are in that bush over there, another is in a root just below, and the last has just departed in that fish!"

Truly, he had proved himself at least a "powerful fisher." I knew a parson once who was considered a "powerful preacher." If knocking the "innards" out of a bible every sermon constitutes such a man, *he* was a double-pressure, copper bound, "powerful preacher."

I cut the flies from R——l's coat, and gave him some others "to go on with," observing:

"You'd be a little fortune to the fly-dressers, old man, if you'd only be a 'leetle' more energetic!"

"Yes," he returned; "I guess the price of blue duns will go up after this little festival has ended."

I then left him and went ahead some distance, returning after an hour and a half's fishing, during which time I had added three nice trout to my catch. I found R——l sitting on the bank under a tree, busily discussing a large Melton Mowbray pie. He was having what he calls "just a little snack." He invited me, with his mouth full of "mystery," to join him, by saying, "Have some." Some people don't know how to go a-fishing, do they, Mr. Editor? You and I do, though, and so does my friend R——l.

I found he had "used" the rest of the flies in odd bushes, &c., had caught one nice trout (quite by accident, I told him), and being somewhat tired in the right arm, had started the boy back for some liquid.

I hope my readers will pardon a little digression at this point, while I make the inquiry, "How is it our wives have such a strong objection to our fishing excursions?" Truly, they show it in different ways; but all manage to show it somehow. Luckily, I have a "cooking" wife, and, therefore, I have only to keep her cooking well praised to be supplied with pies, cold meat, &c., &c., *ad lib.* It is otherwise with my friend R——l. He has a "house-cleaning" wife, poor devil, and has to put up with No. 3 Melton Mowbrays and stale sausage-rolls. How our poor angling friends whose wives fairly "set their face against it altogether" get on, I can only surmise. Mr. Editor, can't we have a "round robin"? Or, how would a compromise answer—say we go in for women's suffrage, and our wives go in for angling? (Even then we should have the worst of it, I am thinking, for I vividly remember taking the present doubler of my joys and halver of my sorrows roach fishing on an occasion *before marriage*. After a bit she considered things were rather too slow, and commenced shying pines into the water. It was soon "wind up" with me, you may safely bet. I had to bear it *then*, but *now* ———. Heaven forgive me for having taken one of the superior sex fishing once. It spoiled a good day's fishing. I'll never do it again!)

To resume. After our "snack" we lighted up our pipes, and leaning back, contemplated the beauties surrounding us on every side. The greater proportion of my readers will agree with me, I believe, when I say that no one appreciates the mighty works of Nature more than the angler. He is constantly in close companionship with all that is grand and good, and being so, cannot but be impressed with the importance of his surroundings, and the insignificance of himself. This teaches him the great lesson of life, and is, I believe, the reason of all anglers being good men and brothers. The humble man is wise, the conceited man is ignorant, and an ignorant man is no fit companion for a good angler. And then, again, angling teaches us forbearance, patience, and how to appreciate good tobacco. Therefore, I say to the unenlightened, "Become anglers!"

But, stop! I am running away from my subject again; so to turn to fishing. After a while, during which it turned fearfully hot—the sky being almost without a cloud—I, having caught no fish, determined to have a rest and wait for a "rise." Once more I resort to the angler's boon companion—his pipe—and lying under a tree manage to fall into a delicious slumber, soothed by the rippling of the stream, the whirring of the countless dragon and other flies, the twittering of the birds (mostly sparrows!), and the sighing of the gentle breeze among the trees.

I awoke with a start and found that two or three good trout were feeding just ahead of where I lay. I was soon at them, and in a quarter of an hour had grassed four trout that would average ½lb. The water above me being not much good, I retraced my steps, having a cast here and there as I went along. I succeeded in picking up another brace, and then ran against R——l, who had been hard at it, and had taken three very decent fish. What will not perseverance do? Together we walked down stream, and as I missed the boy, I asked what had become of him.

"Oh!" said my friend, "I told him to wait for us at the bridge. I propose we make a line for that bridge."

I agreed, and we walked rapidly in that direction. We soon reached the spot, and there found an awful example of the effects of beer upon any but good anglers. The boy, it appeared, by the emptiness of the bottle, and the few incoherent remarks we ultimately managed to get from him, had imbibed the whole of the liquor, and was lying on the grass, spread out like the letter X, plaintively explaining to Mother Earth that he "felt orful bad."

This sight, combined with the loss of the beer, exasperated R——l. He seized the boy, and was soon busy immersing his head and shoulders in the stream. This treatment soon brought his victim round, and he made frantic efforts to escape the clutches of my friend. Eventually he broke away and started running towards the village as though ten thousand fiends were at his back, followed by the energetic remarks of my friend.

"Well, what are we to do now?" inquired R——l. "The fish have given over rising. I propose we pack up."

This I assented to, and we walked quietly back to the village.

We were soon sitting comfortably at home, and when the trout made their appearance, nicely cooked, and swimming in butter, we made a good meal. Afterwards, my landlady's daughter (who had been very obliging during my stay) regaled us with a little very good music. R——l has an excellent voice, and he kindly obliged with a few stirring songs. Sitting back in an old-fashioned but comfortable arm-chair, smoking a long churchwarden, I thought my lines were for the time laid in a very good swim, and that this was a proper and Waltonian way of finishing my day's trouting.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is re[illegible]d, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(ADVT.)

## JOTTINGS—PROSPECTIVE AND RETROSPECTIVE—REGARDING THE DEE AND DON SEASON, 1884.

Many anglers are already anxiously asking, "How is the 'back-end' fishing to turn out?" To such a query we reply that any answer at present is more or less risky. If we were asked to gauge the prospects six weeks hence by the present state of the weather and water, we should say, "Poor, poor, indeed!"

Though bound to admit that matters at present wear a somewhat cheerless look, we are hopeful that a brighter aspect may soon become apparent. That there is room for improvement, those prospecting will join us in admitting. Our remarks are applicable to both Dee and Don.

The net fishing ceases on 26th curt., and should wind and tide be propitious, there will likely be a few "drappit" fish for a week or two, prior to the commencement of the general run. On the lower and middle sections but little sport can be calculated on till the 20th of September in an ordinary year. The upper sections are practically valueless in the autumn: the fish got are soft, dark, and thought of little account. Between Aboyne and Kingcausie there are a number of good beats; but all outside these limits may be classed as inferior—seaward, at least, as uncertain.

Reports coming in tell of the abundance of very heavy old fish along the coast from Stonehaven to Ythan mouth. A few of good weight—30 to 40lb.—are occasionally got in the stake nets. The too clear and quiet nature of the sea, however, prevents, and the scarcity of the fresh-water outflow from the rivers into the sea does nothing to encourage, their coming closely in shore. On the contrary, though along the coast, they are keeping pretty well off. When the wind is favourable, they approach more inshore, and good hauls are then got. All those we have seen in the fishmongers' windows were finely shaped and firm: would have been good fish in the river, we should say, for a couple of months to come.

The nets at all the river stations on the Dee have been worked very industriously the whole season through. That the most of it has been made by the fisherman, there cannot be room to doubt; but whether legally or illegally in some instances we will not venture to say, pending a decision in the Aberdeen Law Courts. A reward (we believe by a gentleman angler) was some time ago offered for information concerning illegal netting in June and July. The Improvements Association, too, are ever watchful. For the first month or two, small salmon were got quite plentifully, and in the grilse season some fair shots were obtained; but otherwise, in consequence of the low, limpid, and warm state of the water, the fishing, so far as gone, has been poor—far, far behind that of last year. In the earlier months, anglers were well rewarded for their perseverance; but since then, nothing of any account has been got. With a scarcity of water, and a scarcity of fresh-run fish, what could have been expected? The Don, if anything, was possibly worse: on it as yet, not over 30 fish have been got by angling. The cruives and dykes doubtless interfere with the spring and summer sport. The riparian amenities of this river have no need to be curtailed. Notwithstanding its disadvantages, the Don, if a good steady flowing water during the latter half of September and the month of October, affords excellent sport, particularly on its lower reaches. As a trout stream, it is unequalled in the North.

"If they won't take the fly, they'll get nothing else from me," was the remark last spring of as good and gentlemanly an angler as has fished the Dee for many a year. We repeat the words: they are worth repeating. They form an exact index of our own sentiment, and of many more besides. Last spring, prawn, natural minnow, eel-tail, "devils," and a whole paraphernalia of such-like abominations were extensively used, to the utter disgust of all lovers of genuine sport. Protestations by "our old friends" were made against these imputations: wranglings ensued, and other points cropped up and were disputed. Several of these, if we mistake not, are yet unsettled. On this point, we have just to add that on two beats of equal merit, but fished differently (the one with the natural minnow, the other with the fly), the sport on the latter, after the first week or two, far exceeded that on the former, and was of much longer duration. At the end of the spring season, the weight of the fly fisher almost doubled that of the minnow fisher.

"Better small fish than none" has passed into a proverb—a proverb whose literal fulfilment it would not surprise us to hear of during the coming autumn. Our reason for this surmise is that the numerous shoals of grilse and small salmon which hovered about the coast in June and July, but did not take to the rivers, owing to the low waters, are almost certain to again appear and force upward ere the autumn fishing has progressed. Fish of the orders alluded to coming up thus late take more readily than "potted" fish, and, besides, are superior in every way. All things considered, we are of opinion that in a moderately strong, regular-flowing volume of water, the autumn takes of *mixed* fish will be quite up to an average. Even in as fine a water as the most fastidious could wish, there, as yet, has been nothing to indicate, or lead us to expect, more than ordinary returns. A small water would dash our hopes completely.

An Angler.

(*To be continued.*)

## HOW I SPENT MY HOLIDAY.

Of all the public holidays of the year, there is none like the August one for the angler, and knowing this, I had made up my mind to enjoy myself in the best possible way, considering I was debarred the pleasure of going with three of my pals to a very good trout stream, through being, unfortunately, blessed with a small family ranging from 12 years to 12 months old, and being in duty bound obliged to give them the benefit of one holiday out of the four. I had arranged some time before with the landlord at our fishing quarters for the use of his horse and trap to take them all (wife and children) to a quiet spot on the banks of the Severn, where I could have pursued my favourite sport, and the rest have enjoyed themselves upen the green sward in the shade of some large elm trees; but this was not to be, for some monster posters announced that a fête on a large scale was to take place on Bank Holiday, and then, one by one, they gradually backed out of going with me for this lovely country ride—a day in the pure air—and made me promise to take them to the fête, which, of course, I could not refuse; but there was still the old hankering in my mind to be off to the silent stream, and all day on Sunday kept thinking how I could manage the two—viz., take them to the fête and have an hour or two fishing. Ultimately, my better half decided that if I would be home by six o'clock, and meet her at the field as soon after as possible; I had better go fishing, as she could see I should be like a fish out of water if kept at home. Just the very thing to suit me. So I went and found a pal to go with me early in the morning, so as to have as long a time as possible, and at 7.50 off we started by train to our rendezvous; but on arriving at the stream, we found, to our disgust, that the mill-hands were holiday keeping like ourselves, and, consequently, the water was in a state of coma, which was no good sign for the angler; but as luck would have it, we had two chances, the brook (which at present was no use), and a canal close by which we had to take advantage of. I posted myself by one of the locks, with the determination not to move till my time was up. I began fishing with wasp grub, and soon had six or seven fair-sized gudgeon on the grass behind me, but not feeling inclined to be satisfied with my sport, I resorted to gentles as bait, and then found myself amongst the roach, but very small; thus I went on till 1.30, when my appetite told me it was dinner-time, and opening my basket (one of Warner's, of Birmingham, that acts as a seat) I produced a napkin, bread, and cheese, half-a-dozen good-sized onions, with salt, and a flask of old Scotch to swill it down, and seating myself on the grass, with my back resting against a stay post, I enjoyed myself to the best advantage. My line was still in the water, and when in the midst of my lunch my float gradually disappeared from sight. "Hallo!" thinks I, "whatever is that?" so catching hold of my rod, with a gentle twist of the wrist (for I was fishing with a single horsehair bottom, obtained from Hanlon's) I found there was something more bulky than what I had been landing before, so with careful manipulation, brought my captive to the top of the water, and to my surprise it was a bream, in my estimation about 3lb. How am I to get this fish? the thought struck me. I had no landing net, and I was afraid of the hook (a No. 12 crystal) or the hair giving way, and not a soul to be seen near. I did not worry myself, because I knew, with a little patience, the fish would be mine, so I gently walked it up the canal and landed it at one of the overflow passages by keeping my line taut with my left hand, lying down on my stomach full length and grasping the fish with my right hand close under the gills. I disengaged the hook, and flung the fish on the grass, and I guessed it then at 1½lb. Having rebaited my hook and put in, I sat down and finished my meal in peace. About 2.30 the master of the local Union come down, accompanied by one of the inmates carrying a stool and water can. On coming up to me, he stood gazing on the fish lying on the grass. "That's a fine chub you got there," says he. "Did you catch that out of this pound?" "I did," said I. "But you never saw a chub like that, I am sure." "Well," he said, "I am no angler; but I have seen some big fish like that knocking about here, and I put them down to be chub." "That's a bream," I said; "and if you say they are here, then by all means bait a hole with some boiled rice or grains, if you can get them, and then leave your bed just before daylight in the morning and come down and angle with gentles, your bait two or three inches on the bottom, and I'll be bound to say you will have some of them." "Thanks," he said; "blowed if I don't try it." This pompous individual, who was attended by one of Nature's unfortunates, kept me company for an hour or so till my pal came up, then feeling almost dried up by the broiling sun, we decided to be off home, which we did, two hours before the time expected. Well, I went to the fête, met missus and bairns, treated them to rides on the roundabouts, &c., saw the fireworks, and took them safe home. Then I wended my way to our fishing quarters, and was just in time to see my three pals (that was to have been) arrive home. One of them (our president this year) had 10 brace of trout, averaging ½lb. each, and 10lb. of dace, all fine fish; another had 7lb. of dace and a few trout and roach; and the other 4lb of eels, with some dace and roach. After having a parting glass together, we left for our homes very tired, but thankful to think we had the privilege of a Bank Holiday in August. I wish we had another in September.

W. L.

## TROUTING IN ABERDEEN, BANFF, AND KINCARDINE SHIRES.

Sport is fast declining, and the season, at any rate, is near its end. On a number of the strictly preserved streams, sportsmen now arrived at their lodges for the season may yet enjoy fair sport—their chances, at all events, are much superior to those practising on open, well-thrashed streams. Taking advantage, the other day, of the much-prized standing permission of a courteous and generous proprietor of Dee fishings, we tried a nice piece of streamy water, and within half-an-hour succeeded with the black spider (smallest size) in basketing some six or seven plump, well-conditioned trout. The brighter the sun, the more freely they rose. At present nothing but the finest tackle need be used. We waded in and fished up stream. On the Don the takes are not so good by a long way as they were a fortnight or three weeks ago. On the reaches attached to the hotels at Alford some sport is still agoing. Valetudinarians and holiday-makers are always having fair takes farther up the Don; but after the 12th it would be well that they should recognise that the lessees who pay for the sport should be allowed, as a matter of courtesy, if not of right, to have it all to themselves. Kintore is still resorted to by a few fishermen, and the natural minnow is even yet doing some havoc among the big trout. The tidal waters of the Dee and Don are just now well stocked with sea trout and "finnock." Parties returning usually report good takes. One or two of the experts have been fortunate in securing several pretty large sea trout. At Ythan mouth the catches this year are not quite up to that of an average season. We have not heard of much being done by Col. Fordyce or Col. Ferguson, and their guests of late among the Loch Leven trout in the Bruckley Castle and Pitfour House private lakes. When fishing on the former, occasionally we, as a rule, had grand sport about this season. Sea trout are taking to the Philorth, the Ythan, the Bervie, the Ugie, and the Cruden Water—in fact, they and finnock are nearing the frsh water the whole north-east coast round. A spate, if it should come, would induce them to ascend in shoals, and sport in the Ebrie, &c., the above named streams would then be first-rate in a good flow of water.

The Deveron and Bogie are still yielding trout anglers fair returns for their pains. The trout got in these streams this year have been goodly-sized on the whole. The silting up of the former river by sand, where it debouches into the sea, is little improved, and the consequence is that salmon anglers are feeling a good deal of uneasiness in view of the autumn fishing.

W. M.

## DEATH OF THE DUKE OF WELLINGTON.

By the sudden death of the Duke of Wellington at Brighton, on Wednesday last, the art of Pisciculture has lost one who took very great and practical interest in it. We trust that the fish-breeding establishment of the late Duke, which has been so ably managed by Mr. Frank Gosden, will be carried on. The Duke was a vice-president of the National Fish Culture Association of Great Britain and Ireland.

Four Trout at One Cast.—Mr. George W. Dillingham, of G. W. Carleton and Co., Publishers, New York, while trout fishing at "the outlet," Moosehead Lake, Maine, had the remarkable luck to strike four trout at one cast, whose united weight was 10lb., and he was so fortunate as to succeed in landing them all. There were with him at the time as witnesses of the wonderful feat, Messrs. R. L. Keatch, of Providence, R. I.; P. O. Vickery, of Augusta, Me., and G. R. Geer, Jr. of New York.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### THAMES FISHERMEN.

Sir,—Referring to the complaint made by Mr. Edward J. Powell in the correspondence columns of last Saturday's issue of the Gazette, I agree with him, it is quite right that such conduct should be exposed. I am at present labouring under an inconvenience owing to the dilatory conduct of George Hone, at Walton.

About a month ago I wrote to him, inclosing stamped directed envelope, requesting a note of what his charges would be for attendance on self and friend for a few days. Not having received reply, I, on the 7th instant, again wrote requesting an answer; but up to this time have received none. It is very annoying to be treated like this. My friend leaves town on Sunday, and I was to have joined him later on, and we trusted that by giving an ample margin of time our arrangements might be completed before his departure; but now probably not only shall I be deprived of my friend's company, but be unable to procure the services of another fisherman at such short notice. I addressed the letters thus:—George Hone, Fisherman, Walton-on-Thames, which, I presume, is sufficient—at any rate, they have not been returned.

If you will give this letter insertion in your next issue I shall be obliged, and glad to hear from any of the fishermen at Walton, including George Hone (to whom, in deference to my friend's prejudice in his favour, preference will be given, even unto the eleventh hour), if he will condescend to reply to me at once.—I am, &c.,

John J. Harris.

51, Great Marlborough-street, London, W., Aug. 13.

---

Sir,—Will you kindly allow me to give an explanation of my conduct in answer to Mr. Powell's letter. I had a swim baited with worms where my patron fished on the 3rd; the hot weather killed so many of the worms I was keeping, and when I went on the 4th to buy some I failed, so I could neither feed them again nor get a worm to bait a hook with. I asked Hoare to meet him, as he had two or three swims baited; meanwhile I went dace fishing with another gentleman, as I could not have conscientiously taken the other barbel fishing, as I had not bait to give them. The above is the sole and only reason for my not going, as I am not very partial to sending my patrons to another, and if there had been time I should have sent word by post.—I am, &c.,

G. Lumsden.

P.S.—I hope I have not yet got the customary title of fishermen for telling lies. I think everyone that writes to me knows better than that; but I thought my excuse would not want the least explaining.

### FISHING AT DEAL.

Sir,—As many lovers of the gentle art are now taking, or about to take, their annual holidays, I thought it might be of use to some of them to know that the pollack are running well here now, and will be likely to do so up to the end of September. They may be taken in the morning and evening from the pier head by fishing near the surface with artificial bait, and during the whole day on the bottom with cockle, &c. There are also many other kinds of fish to be taken bottom fishing. Many good bags have been made here lately; amongst others, a visitor little used to angling took five nice fish weighing just over 7lb., between 8 and 10 in the evening. I have taken over 20 fish since the middle of July, fishing occasionally of an evening, largest 3lb. There is also some very fair freshwater fishing within easy distance for jack, perch, tench, roach, &c.—I am, &c.,

Squatter.

### FISHING TRIPS.

Sir,—Will you allow me, through the medium of your paper, to make known my desire to join one or more gentlemen on a fishing and boating trip to the Norfolk Broads for a fortnight in September? Perhaps also some of your readers could give me some information as to the best localities, hotels, &c., in Norfolk.

Is there any pike fishing to be had there, as well as bottom fishing? Should like expenses not to exceed 10s. to 12s. per day, including boating, &c., if possible.

I should have no objection to vary this trip by a visit to the Angler's Paradise in Sutherlandshire, described in the meeting of the London Gresham Angling Society in your issue of the 2nd inst.—I am, &c.,

Samuel Horton.

16, Woburn-hill, Stoneycroft, Liverpool.

### LANDING NETS.

Sir,—I agree with "Fly Fisher" that a landing net is a nuisance. My plan is to use a small trout gaff, very sharp, with which any fish over 6oz. may, with practice, be easily struck; but, of course, sometimes one or two are lost that might be taken with a net, as the fish must be steadied before attempting to strike. When using a net, I find nothing answers better for preventing the hooks sticking in the meshes than good green paint. Of course, at night your eyes must be very good to land a trout with either a gaff or a pair of tongs.—I am, &c.,

Watchett.

---

Sir,—In answer to "Fly Fisher's" letter, *re* "Hooks Catching in the Net," if he writes to the Manchester Cotton Twine Spinning Company, 51, Corporation-street, he will get a waterproof net, at a reasonable price, in which hooks catch very seldom. —I am, &c.,

A. Benn.

August 12.

### CRAYFISHING.

Sir,—Boys born and bred in London among the middle and working classes (though all work!) have necessarily far less opportunities for learning how to angle, and even to catch crayfish, than your country town youngsters, who goes down to the "cut" or mill-tail, or other stream where the fishing is free, partly from inclination, but chiefly from emulating what the other boys do, with rod and line and the crayfish net. Boys teach boys without any of the jealousies and reserves of after life, and mutually congratulate each other when a bright dace, a half-pound roach, or other fish is safely landed. Now, I have often thought what a blessing it had been to piscatorial posterity that a certain young "haberdasher" had not suffered his mind to be dwarfed and dulled by serving bodkins and buttons, pins and needles, tapes and trimmings, if not also garters, stay-cords, and, perhaps, even braces—though the "Argosy" had not then arrived in town. Neither did the temptation of the "City" prevail even the immortal "Izaak" in keeping him in after years from the daisy-dotted meadows and the pastures where the dappled and the duns, and the strawberry-coloured cows were awaiting the coming of the pretty dairymaids "a-going a-milking, sir," hard by the banks of the pellucid rivers and streams away in beautiful rural England. While giving due credit to Mr. Oscar Wilde for the pictures and the partial displacement of the old "willow pattern," with its little Oriental romance, on our domestic crockery, for the rushes and the "black heads" and the long-legged birds, some of which are trying to swallow impossible fish, it must not, however, be thought that there were not many thousands of unobtrusive admirers of our water-meadow and marine plants and the stately forms of growth, with the familiar birds and the voles in our river-valleys long before the sunflower was degraded in the current literature by persons who probably could not have told a heron from a handsaw.

Your country-town resident, happily now restricted as to time for catching and the length of crayfish to be retained, knows the favourite free fishings, and when moonlight serves, a lot of boys will have occupied a good stretch of the local canal or stream. Dread of exposure in "the papers" and a fine will doubtless keep most crayfishers pretty close to the legal length of fish to be kept, though an occasional official turn out of a "bag" might be advisable. It is not, however, in main rivers that the best crayfishing is to be got; rather in quiet streams, and even in some obscure and narrow waterways, well overgrown in places with marine plants, and the water connected with the main stream ever so iudirectly. In private streams the crayfish should not be fished for on more than two or three nights in the same length of water; for crayfish, like coveys of partridges, even when more or less depleted by the sportsman, stick pretty close by the spot where they were hatched, and over-fishing, like over-shooting, is detrimental to the stock. Happily, immature and early-bred crayfish can no longer be legally taken for garnishing dishes of cold lamb, chicken, and such like; and therefore many more better-sized fish can now be fished for by owners of private fisheries and by the people where the water is open to them.—I am, &c.,

Rusticus.

### *RE* FISHING AT AMBERLEY.

Sir,—Perhaps the following items may interest some of your readers. There are plenty of good fish this season in the Arun. For instance—C. Elliott, fine carp caught on Bank Holiday; a number of good bream, one a 4lb., caught yesterday by Mr. Fletcher, was a real beauty; there have also been taken a fair quantity of fine roach —I measured one caught by a female angler yesterday morning, 17in. extreme length, or 14⅜in. eye to fork, weight 2lb. ¼oz. I believe Mrs. Malcom intends sending it to Cooper's for preservation; I hope she will do so, for it was a handsome fish. On Bank Holiday several good catches, mostly bream, were had by men who fished all night, one London angler getting 40lb.—he took his swim at 7 o'clock on Saturday evening and never left it till he packed up on Monday to return home (this angler does not belong to any club). A Mr. Lee, another angler who stays out all night, had a good show of fish on the 10th August, about 18lb. bream and roach, worm fishing. I have been staying at Houghton some days, but the weather was too hot to fish after breakfast time.—I am, &c.,

Rambler.

### LIVERPOOL ANGLERS.

Sir,—If the Central do not rent any pond fishing the members have misled the public. It is, however, a matter of so little interest that it is childish to make a point of it. Firmness is a valuable quality, and I congratulate "Quill Float" in having sufficient of it to enable him to refuse the "dozens" of invitations to join us he says he has received. But his loss is our gain, and we are truly thankful for the narrow escape we have had of enrolling him. Fishing in the Vyrniew is taking a mean advantage of what "Q. F." calls a "flaw" in the Freshwater Fisheries Act. Must it not, therefore, be immeasurably more mean to take advantage of the said "flaw" by fishing in ponds for small roach and perch?

"Isaak" is not to blame, although he struck home; but it all arose through "Piscator" reporting that the Central was the *only* Liverpool Association which had observed the *spirit* of the Act with regard to close time—which was not correct, and was unneighbourly. As to proving or disproving sly hits, &c., why "Quill Float" only needs to refer to his inner consciousness and to the letters published in the Fishing Gazette by himself and *confrères* to find condemnation. Any *real greivance* I shall be glad to hear of direct, and I promise my best attention. *Au revoir.*—I am, &c.,

R. Woolfall,
Hon. Sec. the Liverpool Angling Association.

### WHOLESALE DESTRUCTION OF FISH IN THE RIVER LARK.

Sir,—Information of the most reliable character has within the last few days reached me of the wholesale and disgraceful destruction of fish by netting and poisoning in the beautiful little river Lark, between Isleham West Row and Barton Mills.

Two men present at the netting assure me that over 30 stone weight of splendid roach, dace, chub, and perch were taken at a staunch near Mildenhall. Another big lot were dragged out at Wamil Staunch, and, worse than all, a quantity of poison mixed with bread has been thrown in near Barton Mills, and numbers of large fish destroyed. This is a most distressing account for all lovers of the rod, but it is perfectly true; and after all the trouble several gentlemen at Mildenhall and other places have taken to preserve the fish for angling, it is a great pity that steps cannot be taken to stop these nefarious practices. I would ask any of the inhabitants, and especially the innkeepers, at either of the villages Barton Mills, Mildenhall, West Row, or Isleham, whether it would not be better for them to prevent the netting, and to preserve the fish for anglers, hundreds of whom would go yearly to each of the above-named places if they knew the stream was not netted, and, of course, they would all spend money. The value of the fish when caught is nothing, but the delightful ramble along the river bank and the beautiful surroundings of nature make a Paradise to the good and true angler. What I would suggest is, that every publican and inhabitant should use his best endeavours to preserve the fish; and, if possible, to form a society, which might be amalgamated with the Cambridge and Ely Angling Society, the committee of which would, I am sure, render all assistance in their power to further such a scheme.—I am, &c.,

William Howlett,
One of the Hon. Secs. and Treasurers for the Cambridge and Ely Angling Society.

Newmarket.

### THE EXTRAORDINARY CATCH OF ROACH WITH A FLY.

Sir,—Your heading—"The Wensum (Norwich)"—to the paragraph relating to the above is likely to mislead. The fish were taken in the waters of the River Wensum Preservation Society, at Fakenham, about thirty miles by rail north-west of Norwich.—I am, &c.,

West Norfolk.

London, W.

P.S.—I have also known the soldier palmer as a very killing fly among the roach there, and last year I saw some good fish caught with a big one, tied by a Norfolk county schoolboy.

## THE DEVERON NET FISHINGS AND AUTUMN PROSPECTS.

Since April this game little river, in the way of salmon, has produced extremely little. The water here—as did the Dee and Don—assumed unusually low dimensions in the early summer. The entrance to the sea got choked up; the outflow of the river, hitherto inclining pretty much to the Banff shore, got transferred to the Macduff side, with the result that there are now two beaches, the outer one formed by the sea, and the inner one by the river running through the sand and pebbles and being lashed by the sea at high tide. The river now being too complicated, and, moreover, spreading out and running too thinly over shifting sand, the fish disincline to seek upward in any number. The river nets, since the time indicated above, have fished a virtual blank. Even in the bay and along the coast the salmon and grilse season has been poor, and much loss to the lessees must result. Even supposing a spate were now to come on in the 10 or 12 days yet to run before the fishings expire, the tenants could not possibly be anything like recouped. The Macduffers have cheap fresh salmon whenever they want at a low figure the season throughout in consequence of having stipulated with Lord Fife, when the town's fishings were handed over to him, that they were to be supplied at all times at the price current in London. Summer visitors to Macduff were wont to remark about the cheapness of salmon and grilse in that small town. What is now wanted in view of the autumn fishing is a very heavy spate to clean out the river. The salmon that take the Deveron in the autumn are large for the most part, and the flies used for their capture generally sombre in hue. That sport may be better than we have reason to apprehend is our heartiest wish. Heavy fish are appearing on the coast in shoals.

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,

MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE, SALMON AND TROUT FLIES, SUITABLE FOR ALL PARTS OF THE WORLD.

A NEW PERFECT FLY AND SPINNING LINE.

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES; FREEDOM FROM IRRITATING ENTANGLEMENTS; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says:—"I find the Acme more valuable than all others."

Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. Samples, Post Free, to all Applicants.

# RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | |
|---|---|---|
| Add | 30 minutes for | Chelsea. |
| | 40 ,, | Putney. |
| | 45 ,, | Hammersmith. |
| | 50 ,, | Barnes. |
| | 55 ,, | Kew. |
| | 75 ,, | Richmond. |
| | 80 ,, | Twickenham. |
| | 85 ,, | Teddington. |

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | Morning. | Afternoon. |
|---|---|---|---|
| Saturday, | August 16 | 8.44 | 9.26 |
| Sunday, | ,, 17 | 10.10 | 10.50 |
| Monday, | ,, 18 | 11.29 | 12.0 |
| Tuesday, | ,, 19 | 12.4 | 12.35 |
| Wednesday, | ,, 20 | 1.3 | 1.29 |

Note.—New moon August 20; high tide August 22 and 23.

## THE LOWER THAMES.

### General Remarks.

The misdeeds of anglers are always published, and it is but common justice to those who do right to give them a word of praise. It appears the other day there were a large number of anglers fishing near the bridge at Richmond, when the head river keeper, Thompson, conceived the idea of watching and listening to their movements by concealing himself from their view. It must have been a pleasurable time to him when he found that each of the anglers, after catching a fish, either brought out a rule to see if they were the proper size or measured them from the bottom of the rod, and, when found deficient, immediately return them to the water, and his pleasure must have been wonderfully increased when he heard one of them exclaim, "How thankful we ought to be to the Thames Angling Preservation Society for what it does for us." It is not true the head river keeper afterwards went round with his hat to benefit the funds of the society, but he went home so delighted he at once wrote to the worthy President and reported what he had seen and heard. This is, indeed, the sunny side of an angling picture. Although the water in the tideway is very low and bright, it does not keep the anglers away, and the sport they get satisfies them.

**Richmond.**—Christopher Brown, in five days, has taken 60lb. weight of roach and dace, and twenty-six barbel. Harry Wheeler, during the week, 110lb. of roach and dace, and three barbel. F. Brown, in three days, 36lb. and three barbel. Henry Howard, in four days, 60lb. Job Brain, during the week, 34lb. of roach. Henry Mansell, one day with Mr. Bennett, 30lb. of roach and dace; another day with Mr. King, 20lb.; and in four other days, 60lb., making a total of 410lb. weight of roach and dace and thirty-two barbel. One of the bank anglers, on their favourite day, got four barbel, and the others had some good takes of roach and dace.

**Twickenham.**—Pert Hammerton, in one day, 35lb. of roach and dace, five barbel and one perch; and in four other days 58lb. John Coxen, jun., in one day, 12lb. of dace. James Coxen, in three days, thirty-eight dozen of dace and three barbel. George Coxen, in the same time, twenty-one and a half dozen of roach and dace. William Spong, in one day, eight dozen. John Spong, in two days, seventeen dozen. Joseph Debbin, the same quantity, and one perch. H. Spiers, in three days, sixteen dozen, and six barbel. Samuel Cole, in seven days, seventy dozen of roach and dace, eleven barbel, and three perch. Edward Finch, in four days, thirty-six dozen, and four barbel.

**Teddington.**—Joseph Baldwin, in four days, twenty dozen of roach and dace. Charles Baldwin, in the same time, twenty dozen, and a barbel of 5½lb. Alexander Kemp, seven small barbel, which he put back again. How greatly has the glory of Teddington fishing diminished from the time when it was a common thing to get twenty dozen of fish in the day. This was when the impurity of the river drove the fish to the head of the tide.

**Kingston.**—John Johnson, sen., writes: "I have done some fair fishing this week with roach, dace, and some good bream, the latter up to 5½lb.; barbel only three, and nothing over 3lb. Yesterday, three jack, the best 4½lb. I should say twenty-five dozen of roach and dace in the week, all good fish. Some private boats have been getting a few jack in trailing, the best 7lb., and a few good perch. The bank fishers have been getting some good roach and a few barbel, and a fair show of eels." John Johnson, jun., in three days, twelve barbel, fifteen dozen of roach and dace, and one brace of jack. B. Pope, in two days, eleven bream, the best 6½lb. If anglers, when they have done fishing for barbel, could see the fish put back again instead of going away and asking the fisherman to do it, they would do a good thing. There has been instances where another angler has come, and the fish having been left in the well of the punt, he has claimed them as his take, and it may he weighted them in at his club-house and got a prize ! This is not what it ought to be.

**Long Ditton and Thames Ditton.**—H. Buttery, in one day, four barbel, the best 4lb., a chub of 2½lb., and two eels ; and E. Tagg, seven perch and about five dozen of dace. The bank anglers have done good business amongst the roach, dace, and perch.

**Hampton Court.**—Thomas Davis, in three days, seven barbel and eleven dozen of roach and dace. C. Davis, in one day, four dozen of roach and dace and nine barbel. Thomas Watford, in two days, four barbel and three dozen of roach and dace. Thomas Wheeler, in three days, ten dozen of gudgeons, nine barbel, twelve dozen of roach and dace, and a fine chub. C. Stone, in a day and a half, four dozen of roach and dace and a fine barbel. The bank anglers, at Tagg's Island Fishery, during the week landed about twenty dozen of roach and dace. A gentleman, at Hampton, has taken in legering a nice trout of 4lb. 6oz.

**Sunbury.**—Edward Clarke, jun., in four days, twelve barbel, twenty bream (the best 4½lb.), four perch, and forty dozen of gudgeon. H. Clarke, in three days, six barbel, twelve dozen of roach and dace, fifteen dozen of gudgeon, six brace of perch, and eight bream (the largest 4lb). Edward Clarke, sen., in one day, six dozen of roach and dace.

**Walton.**—S. Rosewell, in one day, four dozen of roach, another day seven dozen, and another day six dozen. R. Watford, one day five dozen, and the same evening four dozen. John Hone, one day five dozen, another day five dozen, another day six dozen of roach and dace, and another day four dozen of roach and four bream.

**Halliford.**—E. D. Rosewell, in one day, five dozen of roach and dace, two bream, and three dozen of gudgeon.

**Shepperton.**—H. Purdue, in one day, six brace of perch, three dozen of gudgeon, and two bream. F. Purdue, three dozen of roach and dace and two dozen of gudgeon. W. Rogerson, in four days, twelve dozen of roach and dace, seven barbel, and one bream. W. House, in one day, four dozen of roach and dace, ten dozen of gudgeon, a bream of 3lb., and four brace of perch.

**Eynsham.**—We had a number of anglers down here for the Bank Holiday, and I hear of general good sport. Mr. Hobden was the most fortunate, as with a lot of other good fish he succeeded in landing a splendid barbel weighing 10½lb. It was 2ft. 9in. long, caught with a lobworm float, fishing near Pinkhill Weir. I believe there are plenty more such fish about here, as there were plenty seen sunning themselves in the early summer. Roach and perch are biting well, the former at boiled wheat and gentles, the latter at minnows and lobworms. Water all round here in good order.—W. B. Howe.

## UPPER THAMES.

The Thames angling seems to have gone out. Barbel will not bite ; roach fishing just now is more honoured in the breach than the observance, for the fish are simply *non est* (that is, they are in the weeds), and are not likely just now to be enticed therefrom. Chub may be had late and early with a fly, black or white palmer or Marlow buzz, the latter for choice, being the best allurements, to my fancy, as may well be imagined. Gudgeon are biting freely, sixteen or seventeen dozen to two and three rods being reported to me from Marlow, Cookham, Cliveden, and Bray. Jack are now well in the weeds ; but anglers would do well by trying the weir pools with live bait, especially if the pools result in eddies. Temple Hurley, Marsh, and Boveney are fair waters of this class to fish in. In the first-mentioned pool last week eight jack were taken therefrom, the best going 9lb., all had with live bait, in the quiet bail from the weir—that is, in the eddy caused by the overflow. At Medmenham, Bob Young has been busy with patrons ; and at Harley, Tom Street has been instructing piscators in the art of dabbing at perch with a landing net, under the difficult surroundings of a moving punt, weeds, and laughter. Tom, however, is all there ! Thursday Evening, Seven o'Clock.—Weather everything to be desired—river, in colour not everything to be desired ; but I think careful fishing, with some expense with regard to bait, and early and morning work, would produce fair baskets, and I am quite sure appetites and good health.—Marlow Buzz.

### Dockett Point.

Three days fishing, nine barbel, three bream, five perch, six dozen of gudgeon, four chub, roach and dace.—J. Haslett.

### Thames (Goring).

Water very low and clear, nothing much doing. Gudgeon biting very well, perch coming on better. My best day, fourteen dozen of gudgeons, one dozen of perch, and two jack.—John Rush.

### Thames (Oxford).

Last week I was fishing the upper reaches of the Thames between Lechlade and Inglesham. On Friday, one of the hottest days I ever remember, I tried the shallow reach above Inglesham Weir pool, and in spite of the heat, I bagged twelve nice roach. The bait I used was King's natural paste, and although I have no wish to give the inventor a gratuitous advertisement, I must honestly confess its attractive powers were far beyond my fondest expectations. Mr. Jaggard, of Lechlade, also succeeded in taking a very nice sample. A friend of mine, writing from the lower river, where he has been staying for a week, says—" On Friday we went out, and as a matter of course, took everything with us but the teacups ; but we rose superior to such a trifle, and drank it out of the maggot-box." On Saturday, I spun the Colne ; but unfortunately, from some fault of the triangles or my own, I only succeeded in pricking a brace and a half of trout. On the 10th the thunderstorm marred the sport in a great measure ; but on Monday, Mr. Moor, after an exciting struggle, brought a nice eel weighing 2lb. to bank, and although the day was frightfully warm, I managed to bag 6lb. of roach and a chub going 2½lb. The latter was a game little fish, and tried my drawn gut and fine Nottingham silk to its utmost. From Cricklade to Inglesham, the confluence of the Colne and the Thames, the river is in a terribly dirty state, owing to the dredging operations which are being carried out ; but from the Colne right away past Oxford, the water is low, bright, and in the pink of condition for roach, chub, and barbel. All along the river very large bags of chub and roach have been made, more especially in the vicinity of Hart's Weir and Radcote-bridge. Coming home, I met a gentleman who had been staying at Hart's, and during the time he had been there he had taken a brace of large jack and a quantity of perch and roach ; he also informed me that a stranger from London had caught several chub going from 3lb. to 5lb. I am glad to say trout are on the increase in the city waters. On the 7th, I had one just over a pound, but not large enough to take ; and on the succeeding evening I was fast in another, which went off with my float and part of my line. Judge my surprise when, in less than half an hour, I caught the float and tackle, but lost the fish. —Cherwell Otter.

### Ancholme District.

One thousand anglers visited the Ancholme on Bank Holiday, and nearly all had fair sport. A bream of 5lb. 2oz. was taken last week, and both this fish and roach continue well on the feed. We have had some thunderstorms, but they have not affected the colour of the waters. Trout fishing is at a standstill. Visitors at Croxby Lake have had good sport in the evenings amongst the eels and perch, whilst an occasional trout, now and then, comes to bank. Some gentlemen have recently caught several perch with the fly.—Thomas Ford, Caistor, 13th August.

Good sport has again been had upon the Ancholme, chiefly among the roach. The water is in good order, and in the morning and evening there are admirable opportunities of doing well. Among the takes I have note of two—24lb. chiefly roach, from Mr. Jenkinson, and 26lb. roach and perch from T. Stokes. Some of the local anglers are boasting of getting three, four and even six stones of fish in the course of two or three days, but I fear they are phenomenal. Some good bream are got hold of occasionally. Rain is now wanted, though the weather is splendid for th harvester.—X.

### Ballynahinch.

Since my last report the weather has been very much against angling ; still, some of the rods have done very fairly, as will be seen by the following takes :—Colonel Biden, in six days, 68 sea trout ; Mr. Bewer, in six days, 66 trout ; Mr. Smith, 70 trout ; Mr. M'Niel, 44 trout ; Messrs. Debenham and Dalton, 116 trout ; Mr. Hone, in four days, and Major Wilmott, in six days, killed 88 trout ; Major Malone, in four days, 30 trout ; a party of three (the Right Hon. the Earl of Malmesbury, Colonel Harris, and Mr. Gould) fished a few days and took 16 trout. The last three days we have not had so much sunshine.—Walter Blackadder.

### Bure.

During the holidays this river has been covered with anglers at all points. I am credibly informed that on the Bank Holiday as many as eleven matches were held on the Bure, either at Wrexham or Horning Ferry. The reports from Host Thompson, Horning Ferry, are as good as I have ever known them ; large bream, up to 4lb., are being taken every day ; six stone to the boat is no uncommon catch. Acle (Host Rose) has also been well patronised by the fraternity, and several matches have been held here with capital results ; the members returning to Norwich pleased with their sport, and also with Host Rose's good catering. Wrexham, of course, has come in for the lion's share of visitors, as it is so handy to get at, and, I am told, that both up to Coltishall and down to Salhouse, some fine fish have been caught, though hereabouts seem to abound with youngsters, and if you wish to avoid them cease to use gentles ; try boiled white wheat and white and coloured paste or pearl barley. At Ranworth downwards, and up the Thurne, good sport is being had. I can fully endorse what your correspondent writes regarding Host Lawes, at the Waterman's Arms, Potter Heigham ; this is a first-rate spot to stay at, though their accommodation as to number is unfortnnately limited. Above Heigham Bridge, near Kendal Dyke, are good reaches for bream, &c., and should be tried by those paying a visit. Prospects, both on the Bure and Thurne, are first-rate.—Robert Moll.

### Chichester.

Owing to absence from home last week, my usual report must be embodied in the present. At Chichester, during the past fortnight, some fair sport has been had, Mr. Young having some good takes of bream, especially during the later hours of the day. At Selham, Mr. Lane, late of the Chichester Angling Society, took a couple of fine pike ; while Mr. Young brought home an excellent basket of roach. Mr. Willison writes :—" This week fish are well on feed, especially in the evening. Local anglers have been doing well." At Chichester, fish are to be found nearer Hunston. In the basin, there are tales of a 15lb. pike, but up to the present no one has had the fortune to hook the prize.—George F. Salter.

### The Dove (Ilam).

The thundery weather of last Saturday did not result in any rain to speak of, and the rivers are still extremely low ; in fact, the bed of the Dove from Hartington to Load Mill is almost dry, With Hofland's fancy, Mr. R. B. Marston, who has been staying at the Izaak Walton, has continued to have good sport—on the 7th, 3 brace ; 8th, 3½ brace, and 1 grayling 1¼lb. ; on Saturday, the 9th, in about 2½ hours of thunder and lightning, 9½ brace, weighing just 10lb. ; on the 11th, 8½ brace ; on the 12th, 9 brace. Altogether, in eleven days he has had 55 brace of trout (several over 1lb.) and 1½ brace of grayling. The latter are not rising well yet. Mr. M. says the rivers are well stocked with fish, but more water is wanted, and only very fine upstream fishing is of any use.—Caperer.

### Eden (Carlisle).

There are plenty of whitings now, and very nice fish they are, many of them running three-quarters of a pound, or thereabouts. The river is so low, and the weather has been so brilliant, that the best sport is to be had at night. I have not heard of any very good takes in the Eden, but the Esk, below Longtown, has yielded some fine baskets. The fact is that the Esk is such a " beck," compared to the Eden, that the fish get more concentrated in certain places, and after dark it is sometimes " hammer and tongs " with them. You may catch half a creel full in an hour, when they are in the humour ; for they take fits and starts like all the salmon breed. As our well-known professional Dick Routledge says, " Fish and women are the queerest things going—you never know where you have them."—Silver Grey.

### Eynsham.

The river here is in good order, and fish are biting well. The rivers Evenlode and Windrush are also in capital condition. Mr. Geer and self had a nice take of perch and roach, in the Evenlode, a few days since with lob-worm. Mr. Hobden has again had some good sport in the Thames. On the 14th he, with several other nice fish, took one barbel, each 5 and 6lb., float-fishing. There seems every prospect of a lot of barbel being taken here this season, several smaller ones having been caught by local anglers.—W. B. Howe.

### The Fen Drains (Boston.)

Large numbers of anglers came down to Boston and other adjacent points this week for their sport. All the more popular swims were well patronised, and in some cases the patronage was of that holiday kind which is called pleasure, but which naturally much disgusts the regular fishermen. This applies to drains near to the town especially ; but further away, those who went farthest fared best. The Hobhole was well patronised, and among those who found the fish in a satisfactory manner, I may mention a take from Mr. Cawthorn, of Sheffield, of 31½lb. roach and bream. Three of Mr. Cawthorne's best scaled 7lb. At Old Leake, the angling was prime also. An angler, named Garner, got 32lb. ; and there were others of the same kind.—T. B.

### Ilfracombe.

Sea fishing good sport this week. Saturday, a large quantity of fish caught. Monday, J. Bedmore and party fishing off Popple Cove, caught 106 fish in two and a half hours, consisting of pollack, codlin, and whiting. F. Redmore, fishing off Popple Cove, caught 40lb. of bream, whiting, and eels ; J. Busher and party, to the eastward of the harbour, caught five cod and a quantity of whiting pout. Tuesday, R. Louch and party caught some fine bream and a lot of whiting ; D. Lovering, a large cod ; a gentleman fishing from the jetty, a large bass and some pollack. The trawlers brought from the bay some fine soles, turbot, and plaice. Wednesday, good fishing. F. Redmore's party fishing off Popple Cove Point caught between 40lb. and 50lb. of bream and whiting ; others had equally fine catches. E. German, fishing from the rocks, caught a fine tamlin cod. Lovers of fishing are now enjoying good sport, the fishing being good ; the weather fine, with just a nice breeze blowing.—E. Comer.

### Leicester.

The weather during the week has been of the most changeable character, and altogether unfavourable to anglers. One or two violent thunderstorms have visited this part of the country, and the heat has been occasionally intense. Notwithstanding the drawbacks to angling operations, a large number continued to pay attention to the waters hereabouts, but sport, as may be imagined, has been of a variable kind ; however, there has been individual cases where large takes have been had. The principal of the fishing in the Leicester Society's waters has been for roach, and although not well on the feed, they have afforded some moderate sport ; a few baskets containing from 8lb. to 12lb. of fish, among which specimens over 1lb. each were shown. Those having the best baskets were Messrs. Barrows, Hobbs, Owen, and Bird. To exemplify how fickle the fish are at the present time, I may mention that a gentleman hooked a chub weighing 3½lb. and a roach 1¼lb. in two swims, both with white paste. Some large chub have lately made themselves visible in the waters, and although almost every bait has been tried, scarcely any have been landed. Pike fishing has been at a standstill in the Leicester waters, the weather being unsuitable for this kind of angling. Visitors to distant waters have fared fairly well. On Tuesday W. S. Smith, and Mr. Austin took 120lb. of perch from Thornton Reservoir, and on Wednesday Messrs. Bonner, S. Smith, and Pole caught a very fine lot of roach, weighing about 40lb. I also heard of a chub 6lb. 3oz., and 14lb. of roach, the largest weighing 1lb. 12oz., being caught by Mr. J. W. Marwood, who fished with King's natural bait in the Aylestone preserves, near Leicester. Other anglers who had large lots of perch, roach, and bream, were Messrs. Benskin and Burgess. At Barrow-on-Soar but poor reward has fallen to the lot of rodsters who have tried their luck in the River Soar, but this may in some degree be accounted for owing to the large amount of duckmeat on the waters. A good, heavy flush is badly needed in this neighbourhood. At the Wreake there has been several nice lots taken. I am sorry to say one of the occupiers of land was using some trammels very freely on Bank Holiday, landing a large quantity of bream and other fish in a most unsportsmanlike manner. After the storm on Thursday morning, the weather became a little milder, and it being the weekly half holiday, a good many were out fishing.—ALERT.

## Lea (Tottenham).

The water continues low and bright ; but, in spite of this, capital sport can be had with the whipping rod. Mr. Bennett, sen., was down on Monday and Wednesday, and on each occasion succeeded in filling his creel. The black gnat, "Wickham's fancy," and the "Red Ant," dressed on No. 17 sneck bent hooks, are the most killing flies just now. On the 10th inst., a couple of anglers, fishing under the bridge close to the house, took about 10lb. of perch, and, on Tuesday, Mr. Beresford, bottom-fishing with paste, got about a like weight of roach ; Mr. Day got a nice bream of 3½lb. On Wednesday a capital tray of roach and dace was exhibited in the bar, taken by Mr. Wheeler.—HACKLES RED.

## Lugg and Arrow (Leominster).

Both these streams are now in good fishing order, and the anglers have visited both streams freely this week, but complain of the water being so low ; but some of them have had some very good sport, and have taken some very good baskets of trout with the wasp grub and fly. On Friday evening a gentleman tried the Lugg with the wasp grub, and landed a splendid dish of fine fish, some scaling 1lb. each. A good basket of trout and grayling was taken from the Arrow with the fly, and some very nice ones with the wasp grub. The Arrow was tried near Stanton, on Saturday, by a gentleman who landed a very good basket of trout, weighing 7lb. the lot, with the fly ; with the wasp grub a gentleman took eight very fine trout and grayling, all weighing over 10oz. each. In the Lugg, at Aymestry, a gentleman with the wasp grub took a splendid lot of fine trout. The streams were tried the same evening with the fly, and a gentleman took a good dish of grayling and trout, scaling 4lb. the dish. Some good sport has been had in the water near Ford's Bridge. A gentleman with the fly took, on Monday morning, a dozen very good trout, and a few nice grayling, all in prime condition. Fishing with the grub in the evening, a gentleman landed six very fine trout, some weighing 1lb. each. A very nice lot of trout was taken in the Arrow with the fly. Fishing near Eardisland with the wasp grub, a gentleman took a very good lot of fine fish. On Tuesday the fish were rising freely in the Arrow at the fly, one gentleman landed some very good-sized trout and grayling at Ivington. Some few very nice trout and grayling have been landed in the Bodenham waters this week. A very nice dish of trout was landed in the Bodenham this week. A very nice dish of trout was landed in the Monkland water on Tuesday evening with the wasp grub. The Pinsley is in good fishing order, but low ; the fish bite well in the evening at the fly and wasp grub, and some very good sized fish have been landed this week.—GWYNNE.

## Ouse (Huntingdon).

The bream and roach are still on the feed ; several takes have been made this last week. On the 8th, I took 23lb. bream and 10lb. of roach ; the 10th, 10lb. roach and 5½lb. of roach ; the 12th, 18½lb. bream and 7lb. of roach ; the 13th, 15¾lb. bream and 4½lb. of roach ; the 14th, 21lb. bream, and 3¼lb. of roach. Two gentlemen took, on the 10th inst., about 54lb. bream. Some other takes have been had, but I have not heard the weight. The water is in good condition, and the weather very favourable, which shows every prospect for fishing. The roach are still on the wheat bait, which is a very good one, and nothing is better at present.—H. ROUT.

## Pickering.

Continued hot and dry weather has prevailed in this district for the past three weeks, rendering angling a work of continued patience, with little or no reward. On Pickering Beck the fishermen who were wont to catch nice dishes of trout and grayling after the stoppage of the mill from 6 to 10 p.m., have this year had hard work to catch a fish apiece. We have been visited with very heavy thunderstorms for some days, whilst little or no rain has fallen in the immediate vicinity. It has been very heavy not far off ; in fact, a perfect deluge fell on Levisham Common on Tuesday morning, causing a flood in Newtondale Beck, and a wholesale destruction along the Levisham Beck Vally, the whole bed of that fine little trout stream being torn up, warped, and completely changed ; thousands of trout were picked up dead in the fields adjoining. The mill almost a ruin, the whole of the miller's poultry and pigs swept away, and a dead trout afterwards found amongst the mud deposited on the dairy shelf, will give some idea of the flood in this pretty little valley. There used to be a very nice rise of May fly on this stream ; the larvæ will now be undoubtedly swept away. Such has been the case on one or two other Yorkshire streams of the writer's acquaintance. If we remember correctly, the May fly disappeared on both of them the season succeeding the memorable flood of August 7th, 1857. On the other waters around but little has been done. On August 4 one rod did manage a decent basket—nine grayling, best fish 1lb. 15oz., and four trout ; all but one taken with fly, mostly with alder fly.—NORTH-EAST.

## Severn (Shrewsbury).

This river has been well fished for some time, and, although the water has been lower than it has been known for some years, some very good catches of rough fish have been had. One gentleman fishing near the Welsh Bridge caught 16 good dace, &c., with a dry fly, which has certainly become a very favourite way of fishing. Mr. Sayce who, I believe, is a member of the Angling Society, last week had a fair day's sport with the maggot, among the roach at Montford Bridge. Mr. Ellis, who is looked upon as one of the most successful anglers in this district, had a good day's sport at the Isle, on Monday.

## Severn (Kidderminster).

Not much news even now. Severn very low and fine, but full of nasty, flannel weeds, which makes it nearly impossible to fish either top or bottom. Best catches lately are : John Goode, 11lb. ; James Yeomans, 4lb. ; Frank Millington, 8lb., with a trout of 1lb. 9oz. from the Stour ; myself, 8lb., with bread paste for bait, from the Stour. While fishing for roach, on Monday last, with very fine horsehair and bread paste for bait, I had the luck to hook an eel of a pound weight. Of course, I never thought of landing it ; finally, it sawed the hair through and got away. I put another hair on ; the pellet of paste hardly reached the bottom when another eel took it, and I think a larger eel than the first—of course the same mishap befell me. Those *contretemps* spoiled the roach fishing in that spot, so I had to move on. I did no more good, for the mill ceased to work. The water ran down fine ; the bottom of the river was as visible as the grass I stood on. Four roach only fell to my lot, though they were good ones. The weather was almost insufferable from 12 noon until three, when I was glad to get back home. Though this weather does not suit angling, there is one class of the community it is especially convenient to, the farmers could not have a better time. The crops look especially good, and it is to be hoped it will be equally as well gathered.—E. EARP, hon. sec.

## Severn and Teme (Worcester).

The last two or three weeks the weather has been anything but favourable to the angler ; nevertheless, many good baskets of fish have been taken, those most successful have avoided the midday. As I said before, morn and night are the times to take fish. Let your bait be worm, grub, or fly (natural or artificial). The waters are low and fine, and the novice, as a rule, gets disappointed ; but I beg of him to persevere, for without patience and perseverance none will make anglers. These waters are well stocked with fish, and of description natives of these streams. Some trout have been landed over 2lb., many chub between 2lb. and 3lb., roach from 4oz. to 20oz. each, and perch from 4oz. to 16oz. I saw a few pike that were taken with the worm, but they ran small. The following brothers of the angle have been amongst the most fortunate :—Mr. Kale 3½ brace of trout, the best fish weighing 2½lb. ; Mr. Burges, a good basket of roach, the finest over 1lb., and all the others above ½lb. each ; and Mr. Russell a few good perch. There were many who took dozens of roach, dace, and chub within a few miles of the faithful city.—J. A. GRIFFEN.

## Sewardstone.

During the twelve years I have resided at Sewardstone I have not seen such fine takes of roach as have been taken during the past week, for any novice can catch them. Mr. Butler, of Sewardstone, on Monday evening, in two hours caught 7¾lb. of roach. On Tuesday evening some fine fish were taken by different gentlemen.—DASH.

## Shrewsbury.

Myself and two friends succeeded this (Thursday) morning in capturing, with the artificial fly, 27 roach in fine condition, averaging about ½lb. each. Such a take of roach with the fly has not been known in this neighbourhood. The river is now full of fish, and we are in hopes of having one of the best seasons known for many years past.—SANDFLY.

## South Level Cut (Littleport).

The floating weeds this week have been something cruel—cruel because if it had not been for them the roach were biting splendidly. The following, however, is the best I can do :—August 7th, Mr. W. H. Holt, London, 14lb. splendid roach ; Mr. W. Purchas, sec. C. and E. A. S., 6½lb. very good roach in two hours. August 8th, Mr. H. Holt, 7lb. very nice roach. August 10th, Mr. A. E. Toms, London, 10lb. very nice roach. August 11th, Mr. E. Fetch, Cambridge, 7lb. roach in three hours ; Messrs. E. and W. Fetch, Cambridge, 15½lb. roach during afternoon ; Messrs. S. J. and F. M. Miller, Cambridge, 6lb. good roach ; Mr. A. E. Toms, London, started well with 3lb. roach in half-hour, but was hindered of a good bag through floating weeds. August 12th, Messrs. J. Allen, Littleport, and E. Fetch, Cambridge, 6½lb. roach in early morning. Keeper Benton gives me the following :—Mr. R. S. Hall, Ely, Wednesday evening, sixty good roach ; Mr. J. Bickley, Ely, a very good catch of roach.

## Taw (N. Devon).

The fishing is wretched ; no water, and the net men having increased in numbers and their mesh made smaller, few, if any, I believe, now are taken. The river is too low to allow fish to run up. I have been out with the hounds up the Taw and Torridge, and was surprised at the lowness of the rivers. I do not think it possible many fish can live much longer, and next year they must be very scarce. A gentlemen told me in July and August he used to catch 100 peal ; this year only three, and those one day when the water rose two or three inches. Yesterday two grampuses were taken by the net men, and they say, although they shared £2 per man last week, these brutes have eaten hundreds of peal and salmon. At the estuary some good bass fishing has been got, and there the porpoises are very fine and plentiful, and indulge in the sport of chasing the bass when hooked, and about to be taken into the boats. If it were not for the harvest, and a desire that the farmer may be blessed with a little good luck, I should advise a day of prayer for rain. There can be no fishing without a very serious fall of rain.—RUSTY GAME.

## Teme (Ludlow).

The excessively hot weather has prevented many fishermen visiting the waters until towards evening. Some anglers have paid early visits to the tributaries, and have returned well rewarded for their early exertions. I am informed that the Teme, from near to Ludford Bridge down to the Steventon waters, has been carefully netted and all the "rough" fish taken out of the river. The "rough" fish here alluded to would gladden the heart of many an angler, had he the opportunity of catching them legitimately, and consist of perch, roach, dace, chub, &c. The trout and grayling are returned very carefully to the stream. There has been discovered down the Teme, in the Ashford quarter near the "Aqueduct," a splendid bitch otter with a fine lot of young ones ; they have been seen several times near the above spot. A gentleman, on Monday evening, landed from Burway meadow with the wasp grub, eight grand trout and five good perch—the trout turned the scale at 9½lb. Some thirty trout and ten grayling were caught near to Leintwardine, on Saturday evening, by two gentlemen with the grasshopper and wasp grub. The trout average nearly 1lb. each taken all round. A fisherman visited the Corve, at Felton, on Monday night with the grub, and after a couple of hours' fishing secured one grayling, six trout; and two small eels. The Onibury waters have produced some nice trout ; a gentleman fishing in these waters, on Tuesday, caught a chub which turned the scale at 2¾lb. A few fish taken from the Ledwyche water with the fly, but the fish were small. The Clun is pretty quiet, but a few good trout have been caught towards night with the wasp grub. One gentleman, one evening, caught thirteen fish with the grub. The weather remains hot—thermometer 103deg. in the sun at 1 p.m. on Monday. —S. LUDLOW.

## Teme (Tenbury).

This stream still remains in good angling order, but very low and clear. The fish are sporting well, and good catches have been had with the fly and wasp grub. Most of the best angling has been had first thing in the morning, and towards dusk in the evening. Near Little Hereford, on Saturday, some visitors, with the wasp grub, landed some very good trout, averaging ¾lb. each. The same evening, in the water a little below Tenbury, a gentleman with the fly landed a splendid dish of trout and some very nice grayling. The water near Berrington Court was tried on Monday morning with the fly, and, as the fish were sporting well, they managed to land some very good samples of fine trout and grayling. Near Corn Brook in the evening good sport was had with the wasp grub, and some nice fish were taken. Good sport was had in the water at Burford on Tuesday, one gentleman, with the fly, took a basket of 6lb. of good fish. Fishing near Eastham with the wasp grub has been very successful ; one gentleman showed me a splendid basket of trout he had taken there. Above the Teme Bridge some very good sport has been had in the evening with the fly, and some nice fish have been landed. There has been some good sport had at Rochford with the fly in the morning, and several lots of fine fish have been taken. The Kyre, Rea, and Ledwyche are all in good fishing order, but low. In the Rea, near Cleobury Mortimer, some splendid trout have been taken with the wasp grub and fly. Up Stoddesden way a gentleman from Ludlow has been doing good execution with the fly, and has landed some very fine fish with the wasp grub. In the Kyre the fish have been biting well at wasp grub. In the water near the Park some very good fish have been landed, Some very good trout were taken by a gentleman with the fly, on Monday evening, in the Bruntlands water. In the Ledwyche some very good fish have been taken with the wasp grub.—WORCESTER."

### Trent (Nottingham).

There is still a dearth of news in this district. The river continues as low and clear as ever, and the vast accumulations of "flannel" weed on the bottom do not enhance the enjoyment of the angler. Barbel fishing has been pursued with varied success at Shardlow and Sawley, and a few fish have daily been caught at Wilford. Colwick Weir has been heavily baited of late, but the takes have not exceeded half a dozen fish per diem. At Kelham the subscribers have been busy amongst the chub, and on Saturday last Mr. W. Hartshorne, of this town, landed at Kelham a splendid lot of fish with the wasp grub. Since my last Mr. G. Sills, an occasional contributor to the FISHING GAZETTE, has been found dead in the river above Killington, at a spot where, only a few weeks previously, he had killed a remarkably fine salmon.—THE MAN AT THE CLUBS.

### Trent (Alrewas).

The very severe storm on Saturday, August 9th, caused a good rise in the river, and some of the long accumulated rubbish has been removed. This ought to improve the condition of the water and cause the fish to feed freely. During the past week some good bags have been had, principally roach and dace. Perch have taken the bait more freely this season than for some time past, and some very good samples have been landed, the minnow proving more tempting than anything else.

### Trent (Lower).

Many anglers were to be found on the lower reaches of the Trent, and on the whole, taking into account the dryness of the weather, the river is much below par. But, low as it is, is in fine angling condition. The various points have been well patronised. At Torksey there were many anglers, and among those who did good business at that place, I may mention W. Newbold with 10lb. of roach, and W. Chambers, 15lb. 3oz., a miscellaneous lot, but he had, in addition, a roach scaling 1lb. 8½oz. At Cottam also, a gentleman made up a bag of 2st. of roach, perch, dace, &c., from the Trent. At other points good business was done. There was a sad accident on the Trent the other day, which it might be interesting to mention in reference to Lower Trent angling. Several persons went down the river from Gainsboro' for a bit of pleasure, when they were met by the "tidal wave" or "bore" and swamped. Those who do not know it and are unaware of the time to expect it, get nervous when they see it, and coming as it does like a great wave, it swamps them easily. Anglers should be careful if they take a boat to avoid such a catastrophe.—TRACE.

### Wharfe (Yorkshire).

There has been a slight influx of fresh water since my last report, but nothing to speak of; from eight o'clock to nine in the evening has been the best time, and even then up-stream-fishing was strictly imperative; knotted midge, pale blue bloa, august brown, and stone midge have been the best flies to employ. To-night (Wednesday), in an hour's fishing, I killed two dace and one trout, about ½lb. each, and hooked a lot of fish besides. One of the latter was a grand trout; I heard him rising and threw over him until he took my fly. It was very nearly dark, and I could not see either the fish or my line; he rushed about frantically for about three minutes, when to my disgust broke away. I witnessed a very curious incident on Tuesday evening: a friend and myself were eel-fishing, when we saw a fine water-rat running under the bank. I chased it, when he struck out across the river; he got exactly half way when a large pike came at him with a tremendous splash, and Mr. Rat immediately disappeared, I presume to rise no more. I never knew that there were any pike in this part of the river, but have no doubt upon that point now. Weather very close and sultry. I think we shall have thunder before long.—FRANCIS M. WALBRAN.

### Witham.

The Witham, owing to the excessively dry weather, is now running very low, but it is none the less good for the angler, except that he has difficulties in many swims. The fish bite pretty freely, and notwithstanding the fact that they or the water have no rest, the banks of the river are lined from end to end almost with ardent anglers, and travelling down the adjacent railway the scene is quite a novel one nearly every day. One would imagine a vast fishing match always on. Some rare sport has been had among the bream. This fish has been very plentiful at Kirkstead and other points, and some good baskets have been made. An angler named Bell caught over 35lb., nearly all bream, at this point, and at Tattershall A. Crofts was credited with 26lb., nearly all bream. At the same place Mr. Darwent got a basket of 28lb., mostly bream, and at Southery a visitor named Mimmach totalled 37lb. 7oz. of the same kind.—YELLOW BELLY.

### Witham (Dogdyke).

We still continue to receive a fair amount of patronage from our angling friends from the large towns of Lancashire and Yorkshire, also several from Nottingham. There have been some very good takes of bream and tench, and very fair baskets made of roach, perch, eels, &c. Mr. Wright, of Sheffield, caught four bream, scaling 8½lbs. A Manchester gentleman caught some nice bream from 2lb. to 4lb. each. I would advise anglers coming here to provide themselves with good strong lines if they intend fishing for bream and tench. Last Friday I saw four anglers have their lines broken with what they thought were tench, and they all had the disappointment and mortification to lose both lines and fish.—PACKET HOTEL, DOGDYKE.

### Wye and Derwent.

Last Saturday afternoon there was a very heavy thunderstorm passed over Derbyshire, the lightning doing a great deal of damage. The Derwent rose about 2ft. on Sunday night, and both on Monday and Tuesday it had a black, peaty-coloured water on it from the heavy rain which fell up in the woodlands. The bottom fishers did very well on Monday afternoon, also on Tuesday, and baskets up to fully twelve brace per angler were made. The Brothers Bucksley's, of Matlock-bridge, had a good catch of trout and 1 eel on Monday on the Derwent between Nowsley and Darley, all taken with wasp grubs for baits, and some good baskets of coarse fish—viz., chub, barbel, roach, and dace—have been killed on the Derwent between Crawford and Ambergate, by the aid of maggots and wasp grubs for baits. Eels have been running well lately. I hear of a good many being taken on night lines. Sport with artificial flies has not been very good on the Wye lately, only the last thing at night, then there have been a few brace landed. On the Derwent, sport has been much better, and some good catches have been had; in fact, I know of baskets up to 10 brace per angler being made on different parts of the Derwent. The small honey dun bumble, little red, black, and duns have all killed fish at the present time. It is very little use fly fishing in the middle of the day, especially while the sun is so bright and the weather is so fearfully hot. Early morning and late evening are the best times. I hear of a large otter being seen at Matlock-bridge by Mr. Joseph Clay, under the bridge, playing itself in the river Derwent. Very few anglers out just at present; most of the sportsmen have gone to the Moors, grouse shooting.—GEO. JAS. EATON.

### The Yare (Norwich).

If anything, the good report I sent you last week has been improved upon during the past week. At every station sport has been excellent, the number of anglers has been very great, and nearly all have returned satisfied. Of course here and there you are always sure to meet with some who do not succeed, but a few inquiries will usually elucidate the why and wherefore. In some cases actually they have never plumbed since commencing fishing, and then they grumble at not having sport. All visitors to these waters should bear in mind that it is absolutely necessary, in order to insure sport, to plumb every half hour, or at shorter intervals, as the waters rise and fall rapidly. At Host Garrett's, Buckenham Ferry, Professor Day is showing some London visitors how to snick the roach. I met our friend Mr. Skull, and also the Mr. Winters, who are so regular in their visits to this favourite spot, and who, I am informed, have all had first-rate sport. From Flowers's Station at Brundall, I hear that Mr. Ramsay (of London), with a friend, caught a bag of over 3st. of fine roach. This makes the third good catch this gentleman has had this week. The Norwich Angling Club had their annual match at Buckenham on Tuesday last, and twenty-four members weighed in nearly 16st. of roach (none under 6in. being allowed); the top catch was 18lb. 9oz. Prospects are as good as they can be.—ROBERT MOLL.

## CLUB REPORTS.

### ALEXANDRA ANGLING SOCIETY.

The members of the above society dined at the Five Horse Shoes, Hoddesdon, Herts, and several friends, including Mr. R. Ghurney, also Mr. James Lane, Bailiff, of the Lea, and a most excellent dinner was served by the worthy host, Mr. Coombs, and the members one and all expressed their satisfaction of the dinner they enjoyed so much. Mr. West was chairman, Mr. Coxhead vice. "The Health of Mr. Ghurney" was proposed, who replied in a very suitable speech respecting angling societies and their doings. Several other toasts, including the healths of Mr. Pain and the secretary, who also responded. After dinner the members enjoyed the country walks, returning home by an early train after spending a very happy day. Mr. Wilson weighed in 11lb. 10½oz. bream, 1lb. 11oz. roach; Mr. Wells had a very good show of perch and roach.—F. WAGNER, sec.

### AMICABLE BROTHERS ANGLING SOCIETY.

The result of the pegged-down match was as follows:—Mr. Harding, 1st, 7lb. 13oz.; Mr. Carrington, 2nd, 5lb. 9½oz.; Mr. Moir, 3rd, 4lb. 14½oz.; Mr. Chevalier, 4th, 4lb. 1½oz.; Mr. Lake, 5th, 3lb. 8oz.; Mr. Medcalf, 6th, 2lb. 12½oz.; Mr. Wicks, 7th, 2lb. 11½oz.; Mr. Robinson, jun. 8th, 2lb. 0½oz. Messrs. Pealey, Taylor, Worledge, Squires, Farebrother, Arnold, and Austin also weighed in fish. Members are requested to attend the club on August 27th (general meeting night), to arrange a roaming match.—J. WORLEDGE, sec.

### BOSTONIAN ANGLING SOCIETY.

Our trays were well filled on July 27th by Mr. Brothers, with roach and dace from Amberley; Mr. Goodge, bream, from Amberley; Mr. Taylor, 6lb. of nice roach from the Thames; Mr. Jennings, roach and dace; and Mr. Elton, roach. On August 4th, Mr. Elton had a good show of roach and bream, from the Medway; Mr. Goodge and Mr. Brothers, bream from Amberley; Mr. Jennings, roach and dace from the river Avon; Mr. Jamieson, jack, from the Thames; and Mr. Chapman, roach.—J. J.

### BIRMINGHAM AND DISTRICT AMALGAMATED ANGLING ASSOCIATION.

The Old Green Man Piscatorials fish their annual contest on Monday next, August 18th, at Westwood. The train leaves New-street Station at 6.40 a.m. I had the pleasure of seeing a fine chub which was caught at Penkridge, by Mr. Thos. Williams, of the Brothers Well Met; it measures 23½in. in length, 15½in. round the girth, and weighs 4lb. 12oz. It is being preserved by Mr. Haywood, of Key-hill, Birmingham, and when it is cased up it will be on show for a few days at the Hen and Chickens, Spencer-street, Birmingham. Any angler who likes to see a fine fish will do well to pay the Hen and Chickens a visit and see it. Mr. Thos. Duddleston, in private water on Monday, caught over 40lb. of perch.—JAMES T. ALLEN, hon. sec.

### BROTHERS WELL-MET ANGLING SOCIETY.

The annual contest of the above club took place at Osborne's Reservoir, Earlswood on July 14th. There were twenty contestants, and they were successful in landing 560 members of the finny tribe during the two hours of the contest. Messrs. Hewir, 56; Sydenham, 41; and Barlow, 33 were the chief individual takers, and with the exception of three members all obtained prizes. A member of our club, Mr. Williams, angling in the river Penk, near Penkridge, landed a fine chub, 4lb. 12oz., after two hours' play on a tight line. He also succeeded in taking six jack, avereging 3lb. each; two perch, ¾lb. each; and one roach, 14oz.—A. CLEMENT, sec.

### BURDETT ANGLING SOCIETY.

The following members have weighed fish in the above club during the past fortnight:—On the 1st inst., T. Hammond, roach; D. Flint, roach. On the 3rd, Mr. Hopkins, perch; J. Hastings, roach; J. Kerry, rudd and carp; B. Smith, roach; W. Eaton, roach and dace; F. Shervill, jun., carp. On the 10th, J. Hadkiss, bream and roach; D. Flint, roach; B. Smith, dace and roach; J. Herring, rudd; H. De Cort, roach; F. Shervill, jun., rudd; and W. Eaton, roach.—T. G. WALKER.

### CALLANDER ANGLING CLUB.

On Monday last, 11th August, this club had a special competition on Loch Vennacher, with the object of killing as many pike as possible before the stocking of the loch with two-year-old trout. Few pike were caught, either on account of their being fewer in the loch than is supposed, or from their not taking well.—P. McG.

### CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 10th:—Mr. Nitz, 3lb. 6oz. of bream from the Welsh Harp; Mr. Chambers, roach, dace, and bream from Amberley; and Mr. Castell, roach from the Canal at Brentford.—CAS.

### COBDEN ANGLING SOCIETY.

Several of our members were out on the 3rd and 4th inst., and some good takes of fish were weighed in. Mr. Dunn had some nice bream from Wimbledon, and Mr. Webley also had some very fine bream from the Welsh Harp. Mr. Stead had a nice bag of roach, several of them scaling over 1lb. each. On the 10th inst., the only fish worthy of mention that was weighed in were three bream taken by Mr. Webley, weighing nearly 8lb., and several small jack and perch taken by Mr. Hammans.—C. REEVES, sec.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly meeting was held on Monday last, Mr. Colls in the chair. The minutes of the meeting on the 28th July were signed. No meeting was held on account of Bank Holiday on the 4th inst. Mr. Chillingworth had a fine show of roach from the Yare, eleven fish scaling 14lb. Mr. H. Short, jack (small) and roach; Mr. Tidbury, perch and some fine gudgeon from the company's water at Sewardstone; Mr. Beck, chub from the same waters with the fly. Several smaller takes were reported. Mr. Chillingworth presented the society with a very handsome polished mahogany notice board for the club-room, and was thanked by the members for his useful gift. Three new members were elected, and a vote of thanks to the chairman closed the proceedings. Members visiting the society's waters at Tottenham and Sewardstone report "plenty of splendid fish of all kinds can be seen early in the mornings in these waters.—HENRY HOWSE, hon. sec.

### THE CROWN AND BUCKLAND UNITED PISCATORIAL CLUB.

The members of the above society were out in full force, but only a few had fish—the Messrs. Willcockson, rudd 5lb.; H. Long, roach and dace, 1lb. 14¼oz.; J. Penn, dace 1lb. 8oz.; S. Cavanagh, roach 1lb. 7oz.; and F. Johnson, roach. The members are competing for a prize given by Mr. Pratt for the gross weight of all fish taken in August. On Wednesday, Mr. Norris had bream 2lb. 14½oz. A match will take place at Dagenham Lake on August 31st, for five prizes ; given by Messrs. Burwash, a tea-service for the first ; Mr. Penn, a fishing-rod, winch, and line for the second ; Mr. Johnson, a prize for the third ; Mr. Noble, a pair of boots for fourth ; and Mr. W. Long, a prize for the fifth. A conveyance will start from the club-house at 12 p.m. on the day previous. All members wishing to compete must give in their names on or before August 27th to be eligible. N.B.—The new rules are printed, and in hand, and those members who have not got one, will oblige by attending next Wednesday to receive them.—W. H. Burwash, Jun., Secretary.

### GOOD INTENT ANGLING SOCIETY.

Messrs. George Hughes and H. Devon brought to the club-house on the 5th inst. over a hundred-weight of good bream. Mr. E. Holmes showed 30lb. of roach and bream on the 10th inst. Mr. Guntrip had a fine show of rudd. Mr. Maybury, roach and bream. Our dinner takes place on Monday, the 25th inst., at the Rye House Hotel. Mr. W. B. Wood has given a handsome plated cup to be run for, and also Mr. H. Courcha has done likewise, 120 yards handicap foot race, and many other prizes have been given for that occasion. The sports will be under the management of Mr. W. B. Wood and H. Courcha. I hope to see a large gathering of members on the day.—R. Murphy.

### GRESHAM ANGLING SOCIETY.

The usual weekly meeting of the above society was held on Tuesday evening at the Masons' Hall Tavern, Masons' Avenue, Basinghall-street, Mr. Lake in the chair. The minutes of the last meeting were read and confirmed. A letter was read from Mr. Chambers with reference to a piece of water about which he has kindly been making inquiries on behalf of the society. Mr. Crumplen and Mr. Field also reported the result of their endeavours to procure a piece of water. They will each make a further report to the next meeting. Mr. Charles King was unanimously elected a member of the society, and Mr. Crumplen made a very nice present to the library, for which a vote of thanks was accorded to him. Some very agreeable musical selections followed, and the evening was brought to a close by a hearty vote of thanks to the chairman.—H.

### HIGHBURY ANGLING SOCIETY.

Several members competed for three special prizes on the 10th inst., Mr. Samuel Howell, jun., taking first honours with jack, dace, and gudgeon ; Mr. Edwards, second, with roach and dace ; and, third, the secretary, with bream.—J. E. Wheatley, sec.

### HOXTON BROTHERS ANGLING SOCIETY.

Several members were out on the 10th inst., and good trays of fish were shown, consisting of jack, roach, dace, bream, perch, carp, and Tench. On the 17th the members will fish for their last prizes of the season in the river Lea, between St. Margaret's Bridge and Rye House Bridge, towing-path only. The annual dinner will take place at the Rye House on August 31, at 2 o'clock.—R. Ghurney, Secretary.

### INDEPENDENT BROTHERS ANGLING SOCIETY.

Our trays were not quite so well filled on the 10th as we have had them this last few weeks, although very fair for the number of members that were out. Mr. C. Roberts had perch and dace ; Mr. T. Leader, roach and dace ; and Mr. R. Clark, roach. We beg to remind brother anglers and friends that our return visit takes place on Tuesday, August 26th, at the club-house, Bird in Hand, Long Acre, W.C. (Host, Mr. Waldock), when we shall be most happy of the company of those who can possibly attend, and not anything on our part shall be wanting to make everybody comfortable.—H. Moore, sec.

### IZAAK WALTON ANGLING SOCIETY.

Messrs. G. and G. P. Rolt have again been successful amongst the bream and roach, each of them having trays of beauties. Mr. G. Wood had a good show of rudd and roach. I again beg to remind the members that the three special prizes given by Messrs. T. Harris, W. Wilkinson, and B. Crook, are to be fished for at Dagenham Lake on the 17th inst.—H. B.

### LIVERPOOL CENTRAL ANGLING ASSOCIATION.

The second match of the season of the above club was fished in the canal at Ellesmere Port on the 4th inst., when a most enjoyable day was spent. 1st prize, kindly presented by Messrs. J. Lloyd and Son, of Whitechapel, was won by Mr. Rimmer with a very nice show of roach. 2nd prize, given by Mr. Rimmer, was won by Mr. King, with another nice show of roach. 3rd prize, given by Mr. W. V. Narracott, was won by Mr. Smith. 4th prize was won by Mr. R. A. Narracott. Mr. Rimmer weighed in a 10oz. roach for a special prize given by Mr. Smith for the heaviest roach caught in any of the club contests during the season. Owing to illness in the family of our hon. sec., this report was omitted last week.—M. King.

### LIVERPOOL ANGLING ASSOCIATION.

At our weekly meeting on the 7th inst. a competition was arranged to be fished in Lake Windermere on Monday, the 25th inst. A visit to the far-famed English Lake District for a day's outing will be most enjoyable, as those not caring to fish can ramble amongst the beautiful surroundings, boat on the lakes, visit places of interest scattered all about, and pass the time in a hundred pleasant ways. The train leaves Lime-street at 7.15, and arrives at Windermere at 10.15 a.m., returning from Windermere at 8.45, and arriving in Liverpool at 12.0 midnight. Fare for the double journey, 3s. 6d. each, one booking separately. Members will receive circular with full particulars in due course.—Rd. Woolfall, hon. sec.

### NORFOLK ANGLING SOCIETY.

Mr. Foulger showed in the handsomest tray we have had this season, viz., tench, rudd, jack, and perch—the gross weight 42lb.—T. Buckingham, sec.

### NORTH-WESTERN ANGLING SOCIETY.

Several members have been out and had pretty fair sport. E. Cross, tench ; Messrs. Marshall, Grindley, Pearce, and Underwood, bream. Mr. Marshall had three good takes, the gross weight 100lb. The annual outing takes place on the 31st inst. The drive will be to Boxmore.—W. Hillier, sec.

### NORWICH ANGLING SOCIETY.

The annual match of the above club was held at Buckenham Ferry on Tuesday, 12th inst. The members assembled at Mr. C. J. Greene's (hon. sec. of the Yare Preservation Society), at 7 a.m. sharp, and were conveyed to their destination by the Norwich Omnibus Company. The journey was accompanied by vivid flashes of lightning and distant peals of thunder ; but fortunately the party seemed to succeed the storm all along the route, for upon arriving at Brundall (although some half hour before they had been going through some inch or more of dust), the horses had in some parts to wade through the water in the middle of the road, whilst wide streams were seeking their level on either side. On arrival at Host Garratt's, the unpacking commenced at once, and oh ! what a display is the luggage and accoutrements of 30 jolly anglers. Rods, creels, baskets, ground bait, waterproofs, bait and worm cans, and live-nets covered the green, and every members' heart beat high with expectation of coming in in the evening the proud winner of the much-envied challenge cup. After the drawing for boats and the competitors had provided themselves with a supply of moisture for internal application, the boats were started ; at 10 or shortly after the match commenced. Dull, cloudy, tempestuous weather was the order of the day ; but, notwithstanding, sport was fairly good. At 6 p.m., the members struck and returned for the weighing in. I might mention that about three miles of water was allowed by the committee, and members could fish anywhere within these limits. The following was the result of the weighing (all fish under six inches in length being excluded) :—1st prize, silver challenge cup (presented by S. Gurney Buxton, Esq., and J. J. Colman, Esq., M.P.), Mr. Littleboy, 18lb. 9oz. ; 2nd, R. Moll (hon. sec.), 17lb. 12oz. ; 3rd, C. Clowes, 15lb. 13oz. ; 4th, G. Daniels, 14lb. 12oz. ; 5th, S. F. Howitt, 13lb. 12oz. ; 6th, C. Daniells, 13lb. 4oz. ; 7th, B. B. Morgan, 13lb. 2oz. ; 8th, G. G. Whincop, 11lb. 4oz. ; 9th, W. Chettleburgh, 11lb. ; 10th, M. J. Bailey, 9lb. 12oz. ; 11th, L. Estrange, jun., 8lb. 13oz. ; 12th, Mr. G. Diggins (president), 7lb. 10oz. ; 13th, W. Burrage, 7lb. 2oz. After the prize winners came the following catches :—7lb., 7lb., 6lb. 12oz., 6lb. 4oz., 6lb., 4lb. 8oz., 4lb. 7oz., 4lb. 1oz., 3lb. 12oz., 3lb. 4oz., and 2lb. 12oz. Six members failed to weigh in, although they nearly all had some fish. Taking the catch altogether, and remembering the fish under 6in. did not count, 16st. may be said to be a good haul, and the members are to be congratulated on their skill. A word of special thanks is due to Hostess Garrett for the excellent spread she provided, and for the kind attention shown to all.—R. Moll.

### ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

Since my last report very few fish have come to scale, the following members having weighed in : Mr. Obbard, roach and chub, 5lb. 3oz. ; Mr. Roberts, bream and dace, 7lb. 6oz. ; Mr. Laundy, roach, 2lb. 12oz. ; Mr. Richardson, roach, 1lb. Result of competition during July : Mr. Laundy's prize, Daily Gift, Mr. Obbard ; Mr. Whitehead's prize for Pulborough only, Mr. Roberts ; Mr. Lucy's prize for greatest weight of fish, Mr. Craffard ; Mr. Burwash's prize for largest roach, Mr. Kent. The above society will take a complimentary visit, of which due notice will be given.—J. Obbard , sec.

### PECKHAM BROTHERS ANGLING SOCIETY.

The match fished at Pulborough, on the 3rd inst. resulted as follows : Mr. Brancher, 1st ; Mr. Page, 2nd ; and Mr. Gatty, 3rd. Members will please notice that for the future all fish from any waters will be weighed at Thames sizes only ; a bill with these sizes can be had from the secretary. A match will be fished on the 17th inst., at Kingston ; members to meet at Vauxhall at 7.20. On the occasion of the S.L.U.D. visit, the chair will be taken by Mr. George Durant, the vice-chair by " The Duke." A start will be made at 8 o'clock sharp.—Gadfly.

### PERTH ANGLING CLUB.

This club held their third annual competition on Thursday, 31st ult., on the Killin Water on Loch Tay, which had been kindly granted for the occasion by Lord Breadalbane. The following are the prize winners :—1st, Mr. D. Hunter ; 2nd, Mr. Wm. Wilson ; 3rd, Mr. James Fenton ; 4th, Sergeant Turnbull ; 5th, Sergeant Major Knight. Heaviest trout, Mr. W. Hewitt. Eighteen competitors fished.—P. McG.

### PERTHSHIRE ANGLING CLUB.

This club held their third and last competition for the season on Loch Leven, on Wednesday, 13th inst. The weather was genial, with a moderate south-west wind, and the lake was in fine trim for anglers after the thunderstorm. The club had five boats out with 12 competitors, who succeeded in landing 38 trout, weighing 34lb. 9½oz., the prizes being gained as follows :—1st, Mr. Cruickshank, eight trout, 7lb. ; 2nd, Mr. Paple, six trout, 6lb. 8oz. ; 3rd, Mr. King, five trout, 4lb. 5oz. ; 4th, Mr. James Kaye, five trout, 4lb. 4oz. The heaviest trout weighed 1lb. 15¼oz., and was killed by Mr. Farquharson.—P. McG.

### THE PISCATORIAL SOCIETY.

The usual weekly meeting of this society took place on Monday last, at Ashley's Hotel, Covent Garden. Although the heat of the weather was very great, there was a good attendance of members, amongst them being Messrs. Gillatt, Pattisson, Sachs, Brown, Russell, Booker, Rev. J. Sumner, R. S. Fennings, Gray, Bennett, Dr. Brunton, T. Huggett, E. Walker, Foreman, Sparrow, J. Lander, hon. sec., and Mr. E. Jackson, visitor. Dr. Brunton was unanimously voted to the chair. The minutes of the previous meeting were read and confirmed. Mr. Fennings produced for the inspection of members some reels, as advertised in the Fishing Gazette by Mr. R. Heaton. They were well examined, and their qualities discussed by the chairman, Messrs. Fennings, Pattisson, Rev. J. Summer, &c., one particular feature of the same being that you could adjust the check movement to any degree of strength. This led to a discussion as to striking from the winch, and Mr. Sumner was of opinion that striking from the winch was a myth. The hon. sec. read a letter from Mr. Lark, promising some explanation of the way in which the funds collected for the Heigham Sounds case had been expended. Such explanation is earnestly desired by this society, its members having subscribed so liberally to the fund. Mr. Harden has been fishing at Heigham Sounds, and advised our members not to go there at the present, the bulk of the fish to be taken there being about 3in. long. He advises Fritton. Mr. H. B. Brown has had some fine sport with the fly chub fishing at Abingdon, taking several over 3lb., and a gross weight of over 40lb. in two days. Dr. Brunton has been fishing near Dockett Point for barbel with success, and taking a trip into Hampshire for grayling, also with success. The following members have weighed fish during the week :—Mr. Meyer, barbel from Shepperton ; Lemann, chub from Maidenhead ; Foreman, chub and roach ; Booker, bream from the Thames, largest 3lb. 12oz. Mr. Sachs stated he had received a letter from Mr. Marston, and upon the spur of the moment had composed the following lines :—

" Marston and wife, ' his dearest love,'
Are angling trout from river Dove,
Enjoying life's charms, from business free.
Envious their lot—yet joy wish we."

Mr. Gray (hon. librarian) presented two rare angling books to the library, and a vote of thanks was cordially given for his kind presentation. Mr. Lander and Dr. Coates have been to the Norfolk Broads ; sport bad. They witnessed an angling competition with a number of rodsters, and hardly any fish were taken the whole day long. Messrs. Foreman and E. Walker arrived late this evening with a fine show of roach, rudd, and dace ; particulars will be announced next week. " Prosperity of the Piscatorial Society " was duly honoured. Mr. Huggett proposed " The Health of the Chairman," who graciously replied, and the meeting terminated.—T. H.

### ROYAL GEORGE ANGLING SOCIETY.

We had rather a good show of fish on our trays on the 10th inst. Mr. Wood brought some fine chub and roach from the Thames, and Messrs. Churt, Sinclair, Longhind, and Hughes also had fish from the same river. Mr. Palmer visited his favourite stream at Amberly, but was not so fortunate as usual. Our annual free excursion takes place on the 17th, when we expect a good muster, as there is a cup to be fished for. Two more members were added to our number last Tuesday night, and another is to be elected next Tuesday.—W. H. Rider.

### STOKE NEWINGTON ANGLING SOCIETY.

Secretaries and others are particularly requested to note that this club has now removed to the Royal Standard, Fleming-street, Kingsland-road, proprietor, Mr. Godfrey, where all communications should be addressed. Meeting nights : every Tuesday. The fourth annual dinner took place at the Pied Bull Inn, St. Margarets, Herts, on the 10th inst., Host Lyndsell's catering being thoroughly appreciated by all present on that occasion. Mr. Thos. Millington will give a prize value 10s. for the heaviest bream taken during the remainder of the month.—T. Gretton.

### UNITED BROTHERS, DEPTFORD.

Our members were out during the holidays and met with very good sport. Messrs. Payne, Penton, and Currans, small takes from Pulborough. On the 4th, Mr. Watts weighed in 16lb. of bream from the Medway. On the 5th, Mr. W. Tyler weighed in 14lb. 10oz. of roach and bream from the Medway; M. Deangate, 8lb. 12¾oz. of roach and bream from the Medway; Mr. H. Tyler, 6lb. 5¾oz. of roach from the Medway. On the 10th but few of our members were out. The following members weighed in:—G. Belton, roach from Pulborough; J. Currans, bream from Dagenham; J. Divers, bream and perch from Dagenham; J. Payne, 8lb. 0¾oz. of bream from Dagenham.—H. T.

### WALWORTH PISCATORIALS.

The members of the above society had a special prize outing on Bank Holiday for three prizes, the result being: Mr. C. Hibble, first, with barbel and dace, 11lb. 6oz.; Mr. W. Grimmett, second, perch and dace, 8lb. 13oz.; Mr. C. A. Beckett, third, dace, 6lb. 15oz., all from Richmond. Several other members were out, but arrived too late. On Thursday, the 7th inst., Messrs. La Feuillade, Edwards, Gilbert, and Boalch visited Richmond, and succeeded in taking about 25lb. of barbel and dace. After some remarks from Mr. S. J. Weatherhead and others with respect to the protection of the Thames, it was unanimously decided to send a donation of one guinea to the Thames Angling Preservation Society.—J. Boalch, sec.

### WELLINGTON ANGLING SOCIETY.

At the meeting on Wednesday it was arranged that our excursion and dinner on the 15th September, and which includes a three hours' fishing competition for three valuable prizes, should be to Sunbury. Each member can introduce a friend, but the list will positively close on Wednesday, 27th August. Messrs. A. Alexander, Hopkins, and Andrews were appointed a committee to make arrangements. On the 8th inst. Mr. Wright weighed in 5lb. 15¼oz. of bream; and Mr. W. W. Alexander, one bream, 1lb. 12oz. On the 10th, Mr. Jenner, roach, 2lb. 3oz.; and Mr. Andrews, roach, 15lb. 5½oz. On the 11th, Mr. Newbury, roach, 1lb. 4oz.; and Mr. Hills, bream, 2lb. 8½oz.—W. W. Alexander, sec.

## JABBING ALLIGATORS.

Although I had gone on many an alligator hunt, of which the object was the killing of these hideous saurians, either for their teeth and hides, or for the purpose of ridding some locality of a pest, I had never assisted in the capturing of one alive, nor had I, until very recently, any idea of how such captures were effected. Full-grown alligators of from 8 to 12ft. in length are common enough in "zoos" and menageries, and in Florida nearly every curiosity shop is provided with a tank in which good-sized specimens are kept and exhibited as advertisements. In regard to these the majority of visitors who have given the subject any consideration whatever have vaguely imagined that they were captured when very young, and allowed to attain their present size in captivity. Such some impression that had lingered in my own mind was thoroughly dispelled one bright January morning as I walked along Bay-street in Jacksonville. Before the doors of one of the many curiosity shops something that excited the lively curiosity of a great crowd of people was being unloaded from a cart. The something proved to be an immense alligator, the largest, as I was afterwards told, ever captured alive, measuring 13ft. 4in. from the end of his ugly snout to the tip of his tail, and weighing a trifle over 800lb.

He was so bound with ropes as to be perfectly helpless, and a gang of stout negroes lifted him from the cart, and carried him to the tank fitted for his reception at the rear of the shop, as they would a great log of wood. In this case the reptile had most evidently not been caught young and brought up by hand, for he bore many marks of a recent violent struggle, and a wiry little old man in torn and muddy clothes, who directed his transfer from cart to tank, was pointed out to me as the captor, and also as the most successful alligator-hunter in Florida. In personal appearance this man was so insignificant that it seemed impossible that any of the stories told of him could be true. He was nearly seventy years of age, so small and spare that his weight could not have been over 120lb., and he had the sallow, colourless complexion peculiar to the "poor whites," or "crackers," of Florida. Although he had the reputation of being very taciturn upon all matters relating to his business, and the exploits which he regarded in a most matter-of-fact light, upon this occasion he was so elated over the success of this, his most notable capture, that for once his tongue was loosed, and after the trophy of his skill was safely lodged in its tank, and the crowd had dispersed, I succeeded in drawing from him the following facts:

"Wa'al, mister, long's youm ain't in the business, nor likely to go into it on your own account, I don't mind telling yer how big 'gators is caught. Some fellers makes traps; like ez not you've seen 'em in some of the creeks puttin' in from the St. John's. They drives a ring of stout stakes in the water, clus to the bank, with an opening to one side. On the side nearest the bank they bends down a sapling with a noose to the end of it, an' jest inside the noose, in the water, they fixes a bait that 'll spring the sapling when it's teched. That yanks the 'gator's head up in the yair, an' afore he can git clar they has him bound fast with ropes. That ain't my way, though. Hit's too much work a-fixing of the trap; you has ter wait too long a-watching fer the 'gators to come along an' stick ther snouts into it, an' then they'm too all-fired lively with ther tails, when ther heads is cotched, to suit me. Sometimes I fixes a noose on to the end of a spring sapling acrost a runway when it comes handy, an' I've cotched a right smart of 'em that ar way, too; but I ginerally goes fer 'em in ther holes, an' digs 'em out.

"You know 'gators allus has holes clus in under the bank. They begins in the water; but a leetle back they kinder raises, so's when he's in, he's half outen the water an' half in. Soon's cool weather comes on, 'long in December, theym gits into ther holes an' lies thar quiet like, 'cept on bright warm days, when they come out an' suns. A curus thing is that they allus goes in backwards, an' lies with their noses p'intin' towards the opening. Wa'al, 'long in the fall I watches the 'gators putty clus, an' spots ther runways an' places whar they'm mos' likely to make holes; so by time cool weather sots in I has a dozen or twenty marked. Then when I wants a 'gator I goes fur him an' digs him out.

"How do I manage hit? Why, hit's easy 'nuff when you knows how. I usen to take Mandy, my boy, along; but he's got big 'nuff now to go huntin' fer hissef, so I goes alone mos' ginerally. I cotched that thar feller all alone. Not a soul seed him twel I had him tied up an' ready fer market. When I had Mandy along he usen to punch a fence rail into ther hole, an' into ther 'gator's mouth. 'Gator'd grab it, an' hang on like death, and never let up on his holt long's yer kep' movin' ther rail a leetle. While he was kep' busy an' amoosed like that ar way, I'd dig down into him, an' fust thing he'd know I'd hev a rope round his head an' fore-paws. Then I'd dig along back twel I'd get to his hind-paws an' git 'em tied up. But look out fer his tail. When he gits that ar loose, thar's gwine ter be fun, an' mud's gwine ter fly, you bet!

"Yes, sir, this yere feller give me a tussle. Mandy warn't along, and I tackled him all alone. When I first jabbed the rail down his throat he begun to yank his head this side an' that, twel I 'lowed I was the tail-end of a threshin' machine. But I hung on, an' kep' a-proddin' of him, kase I 'lowed he mought taken it into his head to come outen. When he begun fer to back, I begun fer to dig, an' 'twarn't more than three hours afore I had him dug outen thar, and tied up snug as yer please.

"Yas, 'gators is mighty peart with ther tails; but they can't do nothin' much with ther jaws. Them's their weak p'int. Why, sir, I kin cotch that thar 'gator by the end of his jaws with my han's, when hit's mouth's shet, an' hold hit shet, spite of all he kin do; but keep outen the way of his tail, for yer mought jes as well hev a cannon-ball strike yer.

"Does cotching 'gators pay? Wa'al, ef a man 'tends to business, he kin make livin' wages at hit. I got twenty-five dollars fer this yere feller, and prices range 'cording to size—so much a foot, ginerally—'bout a dollar to a dollar and a half a foot, fer anything 5ft. long and over.

"Little ones? Them I cotches by the hundred in scoop-nets, or digs 'em outen 'long with their mammy. They fotches 'bout a quarter apiece when trade's good. Mos' folkses hain't no idee how to care fer 'em when they get's 'em, an' bime-by they dies outen sheer starvation. You'm got to feed 'em like they was young kittens, and feed 'em in the water. They won't eat nothin' 'less they kin put their heads under water. Feed 'em on bits of raw meat, and put hit right clus to ther noses, so's they kin smell hit. They can't find nothin' fer theirselfs ef you throw hit into the water.

"Skins and teeth? No; ther hain't much doing in them now. Since you Yankee fellers has got to making celluloid teeth and imitation 'gator leather, prices is 'way down; 'bout 35 or 40 cents is all the hunter gits fer prime hides, nothin' taken less than 7ft. long, nuther."

Before I left the old hunter, he had agreed to send me word when he discovered another exceptionally large alligator, and promised to show me how to "jab" a fence-rail down its throat in a manner that would induce him to "hang on an' keep him amoosed."

After keeping the big alligator in a tank for a week or so, and thereby attracting many customers to his shop, the curiosity man sold him to a travelling showman for 75 dollars, and Mr. 'Gator is now being exhibited to admiring crowds in the smaller towns of the Southern States.

The curiosity man wishes me to say that he will furnish good healthy alligators, sound in wind and limb, boxed for shipment to any part of the world and of any size under 10ft. long, for two dollars per lineal foot.

Kirk Munroe.

## NOTICES OF BOOKS, &c.

### THE ANGLER'S NOTE-BOOK—NEW SERIES.

We are glad to see that a new series of this delightful angling gossip is being published by Messrs Satchell and Co., 19, Tavistock-street, Strand. Three editions are issued—viz., a special edition of fifty copies on hand-made paper, illustrated; a subscribers' edition on stout paper; and a free edition on thin paper. In his introduction, Mr. Westwood proclaims his intention to make anglers gentlemen: he does not think that there is left among us a scholarly angler, or one capable of appreciating anything in fishing, but fishing. He says, in effect, that we are all mere fishers; our eyes never see any beauty in the earth or sky; we never note the song of the robin or the thrush; the blue of the corn-flower is lost on us; even the sweet "forget-me-not," nestling under the shadow of the waving flags, or the scent of the wild roses, whose petals fall as we shake the bough in unhooking our fly from it—these are not for us—at least Mr. Westwood does not think we can appreciate them yet; we require educating. Luckily there is a chance left us, as will be seen from the following extract. After describing how he has searched everywhere for the "gentleman angler" he asks: "*Have we sunk so low, that not a remnant of such is left? Methinks our paper blushes at having to record the question! Anglers of England! your name is legion—will you not take courage, raise yourselves to a higher level, and become 'gentlemen anglers?' You have all read Izaak Walton—have you not discovered how much of good and great there is in him, apart from such questions as bottom fishing and ground bait?*" Seeing that Izaak Walton has long ceased to be read for anything but his unique style and honest, manly, lovable characteristics—we consider Mr. Westwood's question impertinent, to say the least of it. We venture to assert that the best angling literature, old or new, was never so much appreciated as at the present time, and that never since the time of Walton has the true angling spirit been so strong among us as now. But what are we to do to be saved? How shall we become "gentlemen anglers"? Listen to Mr. Westwood: "The Angler's Note Book has this object specially in view. Anglers of England, will you not lay aside old habits and old prejudices, and co-operate with us in our task?"

We do not know, but we should imagine that Mr. Westwood is not an angler; but in spite of this unhappy "introduction" we trust he will get plenty of subscribers. He should remember that if we cannot all praise God and nature in prose or verse like Izaak Walton or T. Westwood, we may yet be able to appreciate these things as much as he claims to do.

*The Moselle: from the Battlefield to the Rhine*, is a charmingly-written and illustrated penny guide, by Mr. Percy Lindley. The score of artistic illustrations make the guide worth a shilling.

*The Tourists' Travel Talk* (edited also by Mr. Lindley) contains an every-day vocabulary in English, French, and German, with money and distance tables, practical hints, routes, &c., all for the small sum of one penny! The get-up of all Mr. Lindley's books is most attractive.

*Bowlker's Art of Angling.*—From the very interesting and charmingly-situated old town of Ludlow, in Shropshire—a town situated at the confluence of several glorious trout and grayling streams — we have received for review a copy of a work well known to all who know anything of angling literature. We should have thought that quaint little work on "The Art of Angling," by Bowlker, of Ludlow, was quite out of print; but Mr. Woolley, bookseller, Ludlow, informs us that he bought the remainder of the revised edition of 1854, and has a few copies left, for which, from his advertisement we see, he only asks the small sum of 2s. 6d.; and as this edition contains some long extracts from Colonel Hawker's very practical and valuable instructions in spinning the natural minnow and in fly fishing, we can recommend our readers to add it to their library. Indeed, in spite of the antiquated matter of much of the work, the whole of it is interesting. Indian grass is recommended in place of gut or hair, as in many other old works. Can any of our readers tell us where this Indian grass can be obtained? There may be some left in the storeroom of some old angler or tackle-maker.

**The Border Rivers.**—The sport got on these rivers during the past ten days has been as much as could reasonably be expected. The rivers have been very small for some time, but the pluvial descents of the present week have given a fuller volume of water to the streams, and angling will be somewhat better than it has been of late. For a week past the baskets of trout killed have ranged from 2½lb. to 3½lb., and the only large baskets that have been got were killed on the Kale a week ago, and scaled 10lb. or thereby. Of course, baskets of the minimum weight have frequently been got; but on the whole, trout fishing is in a very poor condition at present. Salmon angling with the rod is at a standstill, although the net fishings are very fairly productive, the hauls got being fair, and compare favourably with those got last period.

## PROSECUTION UNDER THE FISHERIES ACT AT KEYNSHAM.

At the Keynsham Petty Sessions Court, before Messrs. J. C. Ireland (in the chair), W. P. Baker, and H. Lyne, Walter Harris, George Neal, and John Janes, a man and two lads, the former foreman of the Emery Works, Keynsham, and the others employed at the same manufactory, were charged under the information of G. O'Connor Parnell, solicitor, residing at Keynsham, with having on the 12th July, at the Emery Works, Weir-head, used a certain explosive substance for the purpose of catching and destroying fish, contrary to the terms of the Fisheries (Dynamite) Act, 1877, and the Freshwater Fisheries Act, 1878. The information under which proceedings were taken was the sworn statement of Thomas Ford, of Keynsham, who stated that on the 12th of July last he saw a substance thrown by some man from the Emery Works, Weir-head, into the water, and soon afterwards the water rose in a volume quite 5ft. He then saw two boys named John Janes and George Neal get into the water below the weir and take out a quantity of fish, which consisted of trout and all sorts of fish. One trout was, he should say, about 2½lb., and numbers of fish varied from 1ft. in length to an inch. Walter Harris, the foreman of the works, was present, standing on the weir head, and Janes and Neal handed up to him a tub with the fish in it. The boys also threw to Harris some more fish, aud the latter caught them as they were thrown up to him. He believed the man who brought the dynamite from Bristol was present. The charge having been read over, the defendants pleaded guilty. Mr. Carter (Messrs. Clifton and Carter) said he had been instructed to prosecute in the case. The information had been prepared by Mr. Parnell, who had taken up the matter in the interests of the public. The proceedings were instituted under section 2 of the Fisheries (Dynamite) Act of 1877, which provides that "any person who uses dynamite or other explosive substance to catch or destroy fish in a public fishery shall be liable, on summary conviction, either to a fine not exceeding £20, or, in the discretion of the court, to be imprisoned, with or without hard labour, for a term not exceeding two months"; and under the Freshwater Fisheries Act, 1878, section 12, which read as follows:—"The Fisheries (Dynamite) Act, 1877, which prohibits the use of dynamite or other explosive substance for the catching or destruction of fish in a public fishery, shall apply to the use of any such substance for the catching or destruction of fish in any water, whether public or private, within the limits of this Act." Mr. Parnell had no personal feeling whatever against the defendants; he merely acted in the interests of the public, and the angling fraternity especially.

In reply to the bench, who asked what he had to say, the defendant Harris admitted throwing a dynamite cartridge into the water, and sending the lads in to get the fish out. He acted innocently. He put in the charge because he thought he would like a few fish, and in doing so he was not aware he was breaking the law. He thought he had a perfect right to use dynamite in his master's water. The bench, after a brief consultation, fined Harris 40s. and costs, and dismissed the lads on payment of costs.

SECTION OF THE GOLD MEDAL

FISHING RODS,
With and without Steel Centres. Guaranteed the lightest, most powerful, and durable manufactured. The only cane rods made that will stand wet weather and hard work. Gained the highest award in the world at the Great I.F. Exhibition, 1883.

Awarded Twenty Prize Medals, and Special Prizes since 1881.

See Hardy's Catalogue and "Angler's Guide" for 1884 post free three stamps.

HARDY BROTHERS,
LONDON AND NORTH BRITISH WORKS,
ALNWICK, NORTHUMBERLAND.
NO AGENTS.

Are now exhibiting at the Forestry Exhibition, Edinburgh.

Summer Tours in Scotland.

Glasgow and the Highlands.

(Royal Route via Crinan and Caledonian Canals.)
TOURISTS' SPECIAL CABIN TICKETS issued, entitling the holder to sail during the time specified, in any or all of the fleet of (19) steamers, and to any part of the Highlands at which they may call. One week, £3; two weeks, £5; or six separate days, £3 10s.

THE ROYAL MAIL SWIFT PASSENGER STEAMER
"COLUMBA" OR "IONA",
Sails Daily from May till October, from Glasgow at 7 a.m., and from Greenock about 9 a.m., in connection with Express trains from London and the South, Edinburgh and Glasgow, &c., for Kyles of Bute, Tarbert, and Ardrishaig, conveying passengers for Oban, Glencoe, Inverness, Loch Awe, Staffa and Iona, Mull, Skye, Gairloch, Stornaway, &c., &c.

Official Guide, 3d.; Illustrated, 6d. and 1s., at W. H. SMITH and SON, Railway Bookstalls; Bill, with Map and Tourist Fares, free, at Messrs. CHATTO and WINDUS, Publishers, 214, Piccadilly, London; or by post from the owner, DAVID MACBRAYNE, 119, Hope Street, Glasgow.

FISHING RODS AND TACKLE.
BULMER'S "FISHING GAZETTE" GOSSAMER GUT LINES,
Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—FISHING GAZETTE Notice, September 18, 1883.

See also notices in the FISHING GAZETTE for Dec. 17, 1881; June 28th, 1882; July 1, 1882; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d. each; FISHING GAZETTE Gossamer Gut, Tapered 8d., each; Salmon, 3 yards, 8d. to 1s. 9d., twisted do., 1s. 6d. each; Hair, 3 yards, 3d. and 4d.; Nottingham silk twist, 10 yards, 3d.; stout, 4d. Best 8-plait silk line, 25 yards, 1s., 1s. 3d., and 1s. 6d.; prepared ditto, 20 yards, 1s.; stout, 1d. per yard; good gut, 12in., 1s. per hank, about 100 strips; 14in. 1s. 6d.; Gossamer Gut, 12in., 3s. 6d.; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz.; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kenda hooks, 1s. 100.

FLIES.—Best Trout, 11d. doz., on Gossamer Gut, 1s. 2d. doz.; chub flies, 1½d. each, 1s. 2d. doz.; Pennels, 1s. doz., on Gossamer Gut, 1s. 2d.; May Flies, cork bodies, 2d. each, 1s. 8d. doz. Devons, Totnes, or Minnows, from 6d. each; Twisted gut and gimp traces, used with or without lead, 4 swivels, 10d. each.

RODS.—Good 3-joint rod, 1s., rung, 1s. 3d., rung, winch fittings, 1s. 9d. and 2s.; Bamboo roach and bream rods, pack in 3, 2 tops, 15ft., 6s.; 18ft., 8s. 6d.; 20ft., 10s. 6d. Hollow butt fly rods, 4 joints, 12 feet, two tops, 9s. 6d., 10s. 6d., 11s. 6d., and 15s. 6d The "Marston" Trout Rod, 17s. 6d. and 21s.

WINCHES.—Brass, 2¼in., 1s. 9d.; bronze check 2½in., 3s. 6d.; 3in., 5s. Bronze best make Salmon or Trout Reels, 2½in., 5s. 6d.; 3in., 7s. 6d.; 3½in., 9s. 6d.; 4in., 12s. 6d. Four-line winder box centre, 8d. and 10d.; rosewood, 1s. 2d. Full-sized leather fly books, from 1s. 3d. Tackle books from 6d. to 5s. each. FISHING GAZETTE Twisted Gossamer gut top casts, 1½ yards, 1s., stout, 1s. 2d. each. See notice in FISHING GAZETTE, May 10, 1884.

## THE FORTHCOMING EXHIBITION AT SOUTH KENSINGTON.

WE have received the prospectus of the International Inventions Exhibition, to be held in the grounds and buildings now occupied by the "Healtheries"—(we presume the new affair will be called the "Inventories," or some other easy slang). There is to be space for apparatus used in field sports under Group XXXI. All who own inventions connected with fishing, and wish to exhibit them, must make application for space before Sept. 15 to the Secretary of the Inventions Exhibition, South Kensington.

## GREAT DESTRUCTION OF FISH IN THE RIVER WEY.

MUCH excitement has been aroused at Guildford by the fouling of the river Wey, and the poisoning of the whole of the fish for miles along its course. The mischief is supposed to have been caused by the refuse from some manufactories on the banks of the river having been allowed to enter the stream. The river for days past has been of the colour of black ink, with a white froth floating on the surface. The fish have perished literally by the ton, and, having become putrid in the water, the stench emitted has been sickening. The Guildford town council has discussed the matter, but appears to be doubtful how far it can exercise its powers to stop the pollution of the stream. In the meantime, the inhabitants are arousing themselves, and a petition to the Local Government Board is in course of signature, asking that authority to step in and remedy the existing disgraceful and dangerous state of things.

When we first heard of this dastardly affair, we said it was a very fortunate thing that there was a vigorous angling society at Guildford, and we felt sure they would not let the matter rest. It therefore gives us great pleasure to publish the following letter and circular which we have received from Mr. H. P. Holton Sturges, Chairman of the Society :—

County Club, Guildford,
August 20.

SIR,—I beg to inform you that I have issued a circular (of which the inclosed is a copy) to the principal inhabitants of this town and neighbourhood, and up to this date I have much pleasure in stating there is an influential and liberal response to the proposed Guarantee Fund.

If you will give this letter, with the circular, insertion in your valuable paper, it might meet the eye of some who would be willing to aid the movement, and who could communicate with me.

Feeling that our efforts will have your sympathy, I beg to ask this great favour.—I am, Sir, your obedient servant,

H. HOLTON STURGES, Chairman of the Guildford Angling Society.

### DESTRUCTION OF FISH IN THE RIVER WEY.

SIR,—The recent enormous destruction of fish in the river Wey, occasioned by poisonous substances being caused or allowed to flow therein, has rendered it necessary that some action should be taken, if the enjoyment of the river is to be in any way preserved.

With this object, it is proposed that a Committee, with a Guarantee Fund, shall be immediately formed :

1. To collect information and evidence as to the cause of the destruction of the fish.
2. To adopt measures to prevent the recurrence of the offence, and, if necessary,
3. To take legal proceedings against the offenders.

As Chairman of the Committee of "The Guildford Angling Society," I have been asked to act as Honorary Secretary to the Committee, and I therefore venture to inquire if you are willing to join the proposed Committee, and, if so, to name the amount you would give to the Guarantee Fund to meet expenses.

I will of course undertake that no expenses shall be incurred, either in legal proceedings, or otherwise, until the Committee have met and sanctioned the course to be pursued.

Your early reply will oblige.—I have the honour to be, Sir, your obedient servant,

H. HOLTON STURGES.

25, High-street, Guildford, 14th August, 1884.

## AN AMATEUR ANGLER'S DAYS IN DOVEDALE.—No. IV.

LAST night I had another turn at the river, but nothing came of it more remarkable than the usual good wetting. I started, it is true, with sanguine expectations, inspired partly by my grand success of the day before, and partly by the advice of an aristocratic friend whom I met on the way. On reaching the water where the wooden bridge crosses it, I saw a man leisurely reclining on the rails, and seemingly in blissful contemplation of the lovely scenery around him. He quietly approached, and with that marked courtesy and civility which at once create good fellowship in all true disciples, he accosted me. My first glance assured me that he was a man of substance. He was clad in a handsome suit of Scottish tweed, his cheek was bronzed, and he looked the embodiment of good health and substantiality. "What sport?" said he. "As yet I have not wet my line," I replied. "May I, as an old sportsman, have a look at your flies? I am well acquainted with all the waters for many miles around here, and if you want a day's real sport I will gladly give you four miles of the very best water hereabouts." "Thank you, very much indeed," said I—and to myself I said, "I was right in my first impression : this is truly a man of broad acres and generous impulses." He examined my flies with the look of a master. "Pooh," said he, "those flies are perfectly useless for this water, the gut is too coarse, and such flies as these are never seen here. You may fish till doomsday with such things and catch nothing." I expressed my surprise with much humility that this should be so, seeing that they had been supplied by the most celebrated maker in this neighbourhood. "Ah," said he, drawing out a large pocket-book, "look at these, my friend. That's the fly for grayling in the early morning, this for trout in the evening, and this for all-day fishing for either trout or grayling. Nothing can resist it." He began to pack them up again, and *I*—how I coveted those wonderful flies. "As I have remarked," said he, "if you want a real good day I'll give you my card. You can write to me and I'll fix it for you." "Would you care to try a cast of my flies?" he continued. I thanked him heartily, and said, "I should." "There's my card; and as I hope you will be a good customer another day, I will only charge you eighteenpence for this cast, and two shillings for a dozen of my choicest flies warranted to kill." I looked at my friend's card, and then I discovered that my great landed proprietor "having made the gentle art his intense study for years," supplies the best of flies dressed from Nature by himself at two shillings a dozen, &c. I was rather sold, but still had confidence in these nature-copied flies, and I worked away with my new cast. I got two rises, and one 4oz. trout, which I returned to his native element, and then I returned home with my usual wet feet ; and so my third day's angling was over. This morning I decided to give the trout a rest, devoting it instead to a quiet contemplative walk. I strolled over to the pretty village of Ilam, and sauntering by the margin of the river Manifold, I again encountered my little friend the water ouzel ; this time he was not at all shy, he hopped along from stone to stone, now dipping his head into the water, now disappearing for a second altogether, then emerging he would make me a few pretty curtsies, displaying his white bib and tucker just like a national school girl. What an industrious little chap he is—he works as hard and perseveringly as a starling! I calculate that if every time he pecks the moss-covered rocks in the river, or dips his head in the water, he kills an insect or a fish, he must have swallowed no less than 1,800 articles of food, insect or fish, in the half hour he gave me the pleasure of his company. He not only went up the water with me from the point where the river touches the road up to the bridge—but he followed me back again to the same point, giving me every now and then his jerky little curtsey, which said plainly enough "I'm pleased to see you, stranger, in these parts. Good-bye!" and away he sailed, just skimming the water in his rapid flight. No sooner had I parted with my pretty little companion than I heard a strange humming in the air that sounded like distant music. Looking up I found myself beneath a wide-spreading sycamore, and looking down I was surprised to see the ground covered with dead and dying bumblebees. I wonder if any of your apiarian readers can explain to me the cause of this strange slaughter. Had they over-laden themselves with honey, or been surfeited or poisoned by it? Or, had some envious wasps or bees robbed them of their spoils, and then done them to death? "Sic vos non vobis mellificatis, apes"—not for yourselves do ye gather honey, O ye foolish bumble bees! Or—when ye consume it yourselves it seems you become intoxicated, tumble helplessly on the flinty road, break your backs or necks, and so perish! You see, I have lived so long in the great city that all such little things as these which are beneath the notice of country people are novel and curious to me.

July 31.—Now is the winter of my discontent made glorious summer; Jupiter Pluvius has given place to sunshine, and in the evening I ventured forth once more, rod in hand, to allure if possible some stray denizen of "The Dove." My record hitherto, as you know, has been, with one memorable exception, a record of utter failure. Again I am sorry to say it is not the story of success. I got one rise, that was all. For a young and ardent disciple, my evening, I assure you, was not one to inspire enthusiasm. Canst thou feel very amiable, oh, gentlest of readers, after being caught seven times in seven successive throws in bush or bramble, tree or root?—and what if thy eighth throw lands thy "bumble" in the midst of a mass of young and stalwart nettles? That fate and worse befel me in my evening's ramble. I have been told (indeed, it is an old axiom) to "grasp your nettle" if you would not be stung by it. As there seemed to be no other way of unhooking my unlucky hook, I did grasp my nettle with a vengeance, and never again will I believe in that old axiom ; my belief now and evermore will be that the harder you grasp it the more vilely will it sting. My tingling, smarting fingers for many hours after the event sufficiently attest the truth of this assertion. But another and far more trying adventure befell me on this singular excursion. "Why," I have been led to ask myself, "should things happen to me, a citizen of famous London town, in my rare country rambles, such as never in the lifetime of one in a hundred of country people happen to them?" Did you, my friend, or did anyone of your many readers, ever, in his backward throw, hook his fly firmly into a tough twig on a wasp's nest? By what strange fatality, then, is it that I of all piscators in the world should have come upon one in this strange way? I may be very green and innocent in things rural and piscatorial, but I do hope that not one of your readers has thought me such a fool as to walk up to that twig to release my hook. No ; I did what any other sane person would do : I threw down my rod and ignominously bolted, like a madman, across the meadow pursued by a dozen of these little-winged beasts. One by one they dropped off, five, four, three, two ; the last pursued me to the bitter end. I threw off my hat, hoping he would think that was *me;* not a bit of it. Fortunately, it is more than six weeks since my head underwent the operations of a barber ; consequently, my back hair is unusually long. I felt a fizzle-whizzle on the hollow which represents my bump of firmness, with all my might I struck that bump and smashed the little wretch before he had time to unsheath his horrid dagger. But my difficulties are not yet over. How am I to regain my rod, my flies, and my net? I slowly returned to the neighbourhood of the nest, dodging cautiously behind the bushes till I approached the handle of the rod. I then noiselessly unwound a quantity of line, and then quietly withdrew the rod till I had got it full fifty feet away from that horrid twig; then I gave a sharp tug, fully determined to sacrifice anything and everything. I tugged and pulled, and the wasps became angry again; neither twig nor fly, neither gut nor line would give way. I pulled again, a long pull and a strong pull, and then came away a part of the twig with my bumble sticking in it.

I ought to haue mentioned before, that on Wednesday evening, *Piscator major* arrived; (he has been so named to distinguish him from the humble *minor* who writes these lines). On Thursday he made his first attack on "The Dove," and captured 2½ brace of fine trout. On Friday the major and I started, filled with grand expectations, to fish the highly-preserved waters of "The Manifold." We had been told that that river swarms with grayling and trout. Probably it does, but this happened to be a Friday, a fast day with fishes, it is their day for being eaten, not to eat; at all events, they abstained from flies and doubtless betook themselves to worms. The major tried all the arts of which he is an easy master, he waded up and he waded down, but not a rise could he get—neither could I. It was rather tantalising, for we could see fish in abundance, but, as I have said, they were on *the fast.* We returned in the evening somewhat crestfallen.

Let me here mention a very curious incident which happened to a brother angler, *Piscator major* by name. On his first expedition he lost his "collar" in the branches of an ash overhanging a deep hole, his second fly was hooked, and the leader was thus left hanging a few inches above the water. That dangling bait attracted the attention of a wandering bat, and on revisiting the spot next morning, like Little Bo-Peep "there we espied our *bat* all tied and hung in a tree to dry." We found him dead, suspended 'twixt wind and water to that little hook. How that foolish little bat must have struggled and splashed and dashed before he finally succumbed! The gut is of the finest gossamer, and one would have thought he could easily have snapped it or the twig; but perhaps his death will be better explained by the pliancy of the bough just on the top of the water. He probably met the unusual fate of being drowned as well as hanged.

(*To be continued.*)

## IMPORTANT MEETING OF THE ANGLERS' ASSOCIATION.

A MEETING of this association was held on Monday last at the Foresters' Hall. The chair was taken punctually at nine by the President, Mr. Philip Green.

There were delegates present from fifty-two societies when the roll was called; but as this was not done until a later hour than usual, the representatives of many societies had left.

A very pleasing feature of the evening's business was the enrolment of four new societies, three of which may be looked upon as country societies which have been formed with an earnest desire to co-operate in the substantial work of this association.

The "Uxbridge Rovers," which have twenty-three members, was the first to be enrolled, and the second a society numbering twenty-four members from the adjacent village of Cowley Peachey. This society is named the "Cowley Peachey Fishing Club." Next came the "Hounsfield Otters," a society which has been formed at Edmonton, and is likely to prove a great success. The "Original Anglers' Pride Angling Society," about whose right to take this title when there is another Anglers' Pride Angling Society already in existence, whose delegates have entered an objection, was also enrolled, subject to a meeting before the working committee of this association to settle the matter of which society is the original one. From statements made during the evening by the Secretary and President, in answer to questions, it may now be understood that the progress of this association is even greater than could have been anticipated, as more tickets have already been sold than was sold by the two associations last year, and ten new societies have been enrolled.

A report was now given by Messrs. Beckett, Manning, Murphy, Green, Page, Jennings, and others who represent this association on the "Fisheries Society," which was considered so unsatisfactory in the interests of that large body represented by the "Anglers' Association," that the following resolutions were put and carried unanimously. It was also unanimously decided that the President should send the following letter to the Chairman of the "Fisheries Society," and that a report of the proceedings be prepared and sent to the Editor of the FISHING GAZETTE, asking him to kindly favour them with its insertion in this week's issue.

Proposed by Mr. Beckett, seconded by Mr. Manning—

"That, in the opinion of this meeting, it is desirable, in the hope that the work of the 'Fisheries Society' may not be interrupted as is now threatened, to meet the representatives of the Central Association on the old basis of twelve each from the three associations; that is to say, that the West Central and the United London Anglers' Association, having joined together for the fuller and more economical attainment of their objects, shall continue to elect from the members of their united body twenty-four representatives, and the Central Association twelve. Or, we are willing that the representatives to the 'Fisheries Society' should be elected from the two associations in proportion to the number of tickets paid for by them to the funds of the 'Fisheries Society,' one being elected for each completed hundred, the computation to be made upon either this or last year's payments, as the representatives of the Central Association may choose."

Proposed by Mr. Murphy, seconded by Mr. Jennings—

"That, as some of our representatives have from various causes become ineligible to serve us on the 'Fisheries Society,' we do immediately proceed to elect twenty-four gentlemen to serve us on the committee of that society from this date."

Proposed by Mr. Page, seconded by Mr. Green—

"Resolved—That it having been reported to this meeting that while the United London Anglers' Central Committee paid into the funds of the 'Fisheries Society' on account of last year's tickets, the sum of £59 8s., and the West Central Association the sum of £81 18s.; the Central Association have only paid £10, and that a balance is admitted to be still due from them of about £13. It is so far satisfactory to learn that a promise was made at the last meeting of the 'Fisheries Society' that this sum should be immediately paid, as unless it has been previously paid or be paid during the evening of Monday next, it will be impossible to continue parties with an association which only contributes 7½ per cent. of the income, and admittedly owes a larger sum than that it has paid."

Proposed by Mr. Tibbatts, seconded by Mr. Stanley—

"That, in the event of our representatives to the 'Fisheries Society' being of opinion that the spirit of the foregoing resolutions had not been accepted by the representatives of the Central Association, they are empowered at their discretion to declare that, so far as our association is concerned, the 'Fisheries Society' is dissolved, and that from that date we no longer hold ourselves responsible for any debt or debts which may be contracted in its name. On the other hand, we desire it to be understood that in the event of our representatives declaring the 'Fisheries Society' dissolved, we are quite willing that three of our representatives should meet three of theirs for the purpose of a mutual winding up of the society."

"Foresters' Hall, August 18th, 1884.

"To the Chairman of the United London Anglers' Fisheries Society's next meeting.

"DEAR SIR,—It having been reported to the Anglers' Association at a specially-convened meeting of all the angling societies affiliated to it, that our representatives have been unable to agree with the representatives of the Central Association on the important subject of what numbers should be received on the committee of your society from each of the two associations, we have deemed it desirable to maturely consider and definitely decide as follows:—

"That we are willing, with the hope that the work of the 'Fisheries Society' may not be interrupted as is now threatened, to meet the representatives of the Central Association on the old basis of twelve each from the three associations—that is to say, that the West Central and the West London Angler's Association having united shall continue to elect twenty-four representatives from the members of the new association—'The Angler's Association'—and the Central Association twelve from theirs. Or, we are willing that the representatives to your society should be elected from the two associations in proportion to the number of tickets paid for by them to the funds of the 'Fisheries Society,' one being elected for each completed hundred tickets. The computation to be made upon either last year's payments or this, as the representatives of the Central Association may decide.

"It having been further reported to us that some of our representatives are, from various causes, no longer eligible to serve us on your committee, we have, to avoid the possibility of a misunderstanding on this point, determined to elect, and have elected, the following 24 gentlemen to serve us from this date; and, in the event of its being determined that the representation shall be in proportion to the number of tickets paid for either this year or last, we will immediately, or as soon as possible, proceed to elect such further gentlemen as we may be entitled to.

Mr. Geen
„ Beckett
„ Page
„ Thorling
„ Field
„ Dutton
Mr. Allan
„ Cashell
„ Parker
„ Murphy
„ Tibbatts
„ Dymond
Mr. Chambers
„ Wagner
„ Gray
„ Bunn
„ Starr
„ Manning
Mr. Jennings
„ Green
„ Marriott
„ Kidd
„ Aldridge
„ Gaffney

"It was also reported to our meeting that while the West Central Association paid into the funds of your society, on account of last year's tickets, the sum of £81 18s., and the United London Anglers the sum of £59 8s., the Central Association have only paid £10, but that a balance is admitted to be due from them of £13.

"We are pleased to learn that a promise has been made that this sum shall be paid in at once, as we are unanimously of opinion that unless such money has been previously paid, or is paid during the evening of the next meeting, it will be impossible for us to continue partners with them in the work of the 'Fisheries Society.'

"It was further resolved, that in the event of our representatives being of opinion that the spirit of the foregoing resolutions had not been accepted by the representatives of the Central Association, they are empowered, at their discretion, to declare that, so far as our association is concerned, the Fisheries Society is dissolved, and that we no longer hold ourselves responsible for any debt or debts which it may contract; but that, on the other hand, we would be willing to elect three gentlemen to meet three from the Central to arrange matters with a view to winding up the Fisheries Society.

"We presume it may be taken as a matter of course, that if winding up is decided upon, that the Central Association will not expect more than seven per cent. of the waters already rented, and seven per cent of the funds in hand, as that proportion represents the amount subscribed by them.

"I am, Dear Sir,
"Yours faithfully,
"PHILIP GEEN."

A hearty vote of thanks to the chair brought the meeting to a close.

## PROPOSED ERECTION OF SALMON PASSES IN PERTHSHIRE.

COLONEL MARSHALL MACDONALD, Commissioner of Fisheries in Virginia and Assistant to the United States Fish Commission, is at present inspecting the rivers in the Tay district, and is to submit plans for the erection of salmon ways or passes at such points as may be determined upon by the Tay District Fishery Board.

Colonel Macdonald had a conference with the members of the Board in their offices in George-street on Saturday, respecting the obstructions to salmon at the Falls of Tummel and on the river Ericht, at Blairgowrie. The Colonel, who is at present visiting Europe for the purpose of investigating the methods of fish culture and of the fisheries as practised in the different districts, inspected the Tay District at the invitation of the Tay District Fishery Board. As Assistant to the United States Fish Commission, Colonel Macdonald is charged with the administration of some of the most important functions of that body.

## ABERDEEN.—FISHING WITH FIXED NETS.—INTERESTING DECISION.

A LITTLE time ago, some interested parties were instrumental in bringing before the Sheriff a number of the netters on the Dee, with a view to having them tried under a criminal libel for the manner in which they had been using their nets. The case was taken to avizandum, but on Monday last a judgment was pronounced. The learned Sheriff gave a written deliverance. It was true, he said, that fishing by means of fixed engines was against the common law, but the adoption of an illegal method by persons otherwise entitled to take salmon amounted to nothing more than a trespass, and could not therefore be tried under a criminal libel. The question of law, as to whether fishing for salmon with a fixed net and boat in contravention of the laws regulating salmon fishing, can be dealt with under a criminal libel, is thereby decided. Mr. Oswald Prosser, solicitor, asked his lordship to grant expenses, as the respondents had been put to considerable trouble in bringing witnesses forward. The Sheriff granted £1 11s. 6d.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen Orders punctually attended to.—(ADVT.)

## ON THE DESCRIPTION OF SALMON FLIES.

By Mr. Geo. M. Kelson.

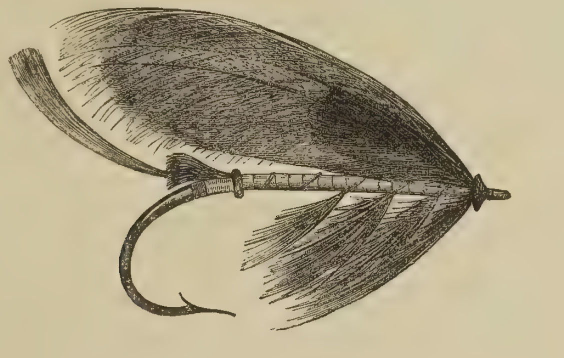
### Major Traherne's Patterns *(Continued)*.

### No. 11.—The "May Queen."

Stevens' silicon tablet is a capital cure for tarnished tinsel ; it not only revives, but preserves it from lacking lustre. It is sold at 103, Talbot-road, W., in a little papier mâché box which contains a brush for renovating timeworn "Lions," "My Queens," &c., &c., and the piece of wash leather upon which the dry tablet should be rubbed serves for brightening and coating twists and tinsels ever so new. After removing a quarter of an inch of the silver at each end of the piece, apply the tweezers to the silk, pull it through the wash leather, which is held pretty firmly between the thumb and forefinger, up to, *not beyond*, the metal at the opposite end, reverse it, and repeat the dose.

Ribs have a tendency to become loose on seals'-fur bodied flies, and if they are not made very firm at the head end, the fur, or some of it, will escape, and by degrees disappear. The tying-silk there, after the two first coils, ought to be placed between the third and fourth fingers of the left hand, and not strained ; then give the tinsel a hard tug, taking hold of it with the pliers and pull the silk tight at the same time.

For all practical purposes flat tinselled bodies can be run up by beginning at the throat, working to the butt and back again ; but to make them particularly nice—regular and even as a piece of piping—a deal of preparatory arrangement is required. Some rig up a foundation with merely the tying silk waxed ; but I consider the best plan is to utilise the floss in the inside of the tinsel as I suggested ; and after the taper is formed of it, frayed out with the point of a needle and varnished, it should be made perfectly true and smooth before it is quite dry. Then you can make the ribs with the other end which has not been deprived of the silver coating, and as one turn of the tying-thread is all that is necessary close to the butt you prevent, instead of having to cure a lump there, which is so often made by the ordinary way of tying in the ribs. When this, or any similar system is supplemented, there need be but one layer of tinsel along the body, starting it at the butt. Before you fasten it there, cut it from one of its sides to a point, and now, with the bevelled edge downwards, tie just that point in on the far side of the hook, leaving the least atom of it bare to turn back for clinching, under, and alongside. This should not occupy more room than half the width of the butt, which you can judge of by the illustration ; the floss upon which you tie it will give way and bury that which would bulge, had you not left just that space (no more) unvarnished. Be careful not to put too much pressure on to the tying-silk, or you will imbed the tinsel too deep, which will leave a cavity and put you in another hobble.



When the varnish over the taper is quite hard, the tinsel, which should have been held laterally, is wound along at a right angle, not askew ; and the first turn of it disposes of the bevel. By winding it in this way, straight over the hook and pressing the coils close to each other with your nail as you proceed, the joints ought to be imperceptible.

I say "held laterally ;" the tinsel should be supported so while it is being tied on the far side of the hook ; but it is important that the exact position of the rest of it should be mentioned in order to secure "a fair start." The hook should be so held that the shank is horizontal ; the thumb and forefinger in squeezing it should be well bent, *while the tinsel is resting straight along over the knuckles.*

If you hold the hook with the finger and thumb extended, you cannot advantageously make use of the middle finger, which gives much facility—not only that, you lose considerable power, as you cannot wind the tying-silk on the portion sheltered by the extremity of the fingers.

The hackle may be managed different ways ; it is not only fixed tighter when pulled against the ribs, which also protect it from the teeth of the fish, but you can keep the shaft touching them the whole way when on that, the tag side. Nine dressers in every ten put it on the other ; surely it is wrong to do so. A salmon pulls *from* you ; therefore, if he tears the body of the fly, the gash is made from the head towards the tail ; his teeth should, I suggest, wage war with the protecting tinsel first, which—unlike the feather—is capable of much resistance. Again, in coiling the hackle over the body, it is often cut asunder by the sharp tinsel at the starting point ; that can be dodged by pressing the stiletto (the fine end) against the sharp edge, when you come to that turn in the tinsel, and the little curve you make in it by this means provides a safe outlet for the hackle. But my way, the ribbing can pass over the hackle just where it protrudes, and so when the latter is lifted to wind along the body, it butts immediately against the oval which prevents it from coming in contact with the sharp edge of the body tinsel, and consequently, during the process you can pull it much harder with less danger. Accidents are pretty sure to happen ; and it is tantalising to be compelled to take off and replace both tinsels, but if the hackle is injured or cut, there is no other remedy.

That familiar phrase "To be continued in our next," may be quoted here, as I desire to refer to a slight error in my letter of last week, from a *façon de parler* before touching upon the other topics.

The feathers in the body of the "Don," as, perhaps, everyone knew, are from the neck of the jungle cock of India. "Jungle *fowl*," as I wrote, must not be confounded with it ; the head and crest of this Australian bird is of a cinnamon brown, the neck is gray, and of little or no value to us. It is scarcely possible for us to mistake one neck feather for the other ; the idea is too eccentric—one that may become practicable in the millennium, but certainly not before. The definition I gave, although inaccurate, would probably not lead any fly-dresser astray ; but, perhaps, it should not remain uncorrected.

The "May Queen" is another of these splendid specimens which serves to remind us what can be done by sheer perseverance. What a thing is patience ! It sits and weaves so long in the gloom futilely till it fashions its own scientific reliable laws so strong as to sever the bonds of immemorial usage, and it traps at last.

There is nothing in this sport in aftertimes, however radiant with pleasure or success those latter times may be, so perfectly happy as the buoyant and fearless ignorance of the young fisherman just first thrust himself from the shell of dependence, venturing alone into a salmon pool. He intuitively surveys with dazzled and delighted eyes the illimitable domain that lies in the mere Possible! He naturally expects any obstruction or impediment will give way before him, and for once he is triumphant. He never forgets this first stroke of luck—this first victory. As though accustomed to conquest, those memorable words, "Veni, Vidi, Vici," are engraven in his youthful and unworn mind where the fetter of tradition requires no loosening, nor the web of superstition no breaking.

What a wonderful and supreme magician is Youth—but once only to be enjoyed, as it never returns.

Pretty much the same deep sense and emotions affect the young fly tier in his uncertain and trepid attempts with his own early inventions—inventions which from close watchful attention may grow and claim their origin through some practical yet indescribable observation, and which therefore gradually inspire him with instinctive confidence and hope.

Fly-dressers need not necessarily become fishermen, but all fishermen would benefit by becoming fly-dressers ; they would have a much better chance of bringing to good account the knowledge they are for ever cramming in from the facts brought to their notice in the constant whirl and incessant amusement of their life. The more their experience the more they find it difficult for any one impression to last long ; in fact, they are almost sure to invent something in the way of flies more striking—more killing, until the living shape of their fancy has been summoned, as it were, into existence.

Many years ago I remember the popular Scotch pattern which owned the time-honoured name of "The Maypole," constructed—or rather said to be so—after the colouring of the "Column of May," which once stood upon the site of the Church of St. Mary-le-Strand, and a fly from its posthumous fame probably receded into the shade much too soon ; it would be interesting to know if a reliable sample is still in existence.

Our illustration this week serves again to suggest that great artists narrow not themselves to one meagre phase of art ; and with splendid plenitude it gives us a notion of their able powers.

The fly may be described as follows :—
Tag : Silver twist and silk, same shade as the point of the red crow.
Tail : Topping, two red crow feathers (sideways).
Butt : Black herl.
Body : Blue silk, to end of first turn of ribs, same shade as the macaw hackle, the rest silver tinsel.
Ribbed ; Fine oval tinsel.
Hackle : Powdered blue macaw (as illustrated).
Throat : Yellow macaw.
Wings : Two yellow macaw feathers.
Cheeks : Enamelled thrush, two toppings over.
Horns : Blue macaw.
Head : Black herl.

## OBITUARY NOTICES.

We regret to announce the death of Mr. F. A. Hawthorne, many years a member of the Izaak Walton Angling Society, who died on Tuesday last, the 19th inst., after a long and painful illness, which he bore with much fortitude. He was well known and much respected by a large circle of the angling fraternity for straightforward and upright character. The funeral will take place on Saturday afternoon next, the 23rd inst., at 2.30 p.m., at Abney Park cemetery. (Friends will kindly accept this intimation.)

It was with great regret that we read the short reference to the death of Mr. Sills, of Nottingham, in our Nottingham river report last week. We have often corresponded with Mr. Sills, who took much interest in the Gazette. Will our correspondent say how he came to get drowned ?

A Royal Donation.—Her Most Gracious Majesty the Queen has, through Sir Henry Ponsonby, given her patronage, and a contribution of fifty pounds toward the building funds of the Working Lads' Institute, The Mount, Whitechapel, London, E. The object of the institute is to promote the welfare of the working lads of the metropolis, by establishing a suitable place where youths may profitably spend the evening hours, and so be saved from the temptations and snares of the streets, public-houses, music-halls, and theatres, which abound in the East-end of our great city. In connection with the institute there is a reading-room, library, evening classes, &c., combined with innocent recreation and religious teaching. More than 1,100 lads have been benefited, many of whom are now actively engaged in religious, philanthropic, and temperance work, both at home and abroad. After three years of successful work, the committee found that larger premises were an absolute and pressing necessity ; but though diligent search was made, no suitable site could be found. Eventually, in 1882, a large plot of freehold land was secured, and designs were forthwith prepared. Soon after a notice was served by the District Railway Company, that the land was wanted for the extension of their line. A second site of freehold land has now been secured, and the purchase money paid. The total cost, including the freehold, buildings, fittings, &c., will be £10,500, of which £5,000 has been raised. The memorial stones of the new buildings, comprising reading, refreshment, and class rooms, lecture hall, technical school, swimming bath, domitories, gymnasium, &c., will be laid on October 15th, by the Right Honorable the Lord Mayor. The new institute will accommodate about a thousand lads, and the committee hope to promote, by every possible means, their physical, mental, moral, and spiritual welfare. Those who know the temptations of the working lads in our great city, will gladly help in such an effort. None more need sympathy than the lads who are arriving daily from our towns and villages ; and the committee earnestly beg their friends in the Provinces, as well as in London, to help them in this great work. Contributions may be sent to the treasurer, F. A. Bevan, Esq., 54, Lombard-street, E.C., or to Henry Hill, jun. Esq., hon. secretary, 38, Bow-lane, E.C.

Refuge Harbours and Ports of Shelter.—A meeting of noblemen, members of Parliament, harbour authorities, shipowners, and others, will shortly be held at the Westminster Palace Hotel, over which Lord Waveney has kindly consented to preside, to consider the details of a bill and to make a concerted effort to give effect to recommendations of the Royal Commission and recent select Parliamentary Committee on Harbours, that what is most desirable should be done to save the lives of our seafaring population. Also the best method of settling the question of sites for these harbours. Already we have arrived at the extremely dangerous stage that four-fifths of the men in our mercantile marine are of foreign nationalities, which, unless amended, may perhaps some day cause a famine in this country, destroy its commerce, and possibly even the independence of this Kingdom. Any further particulars relative to the meeting alluded to will be gladly forwarded in reply to letters addressed to the Hon. Secretary, National Refuge Harbours Society, 17, Parliament-street, London.

## ANSWERS TO CORRESPONDENTS.

**C. Wodehouse.**—It is a physical impossibility to be fishing in Dove Dale and yet see everything sent into the Gazette and insert it the same week. We are aware that several errors crept into the paper, but they explained themselves, and were of no great consequence; to print "tackle" for "hackle" is a very excusable printer's error. You should see some of the MS. which the printer has to translate into beautifully clear type for you. Every Friday one of the printer's devils comes down to our little office with some "copy" which even the "reader" can't read—"Please, sir, can you say what *this* means?" the "this" referring to writing which looks like a hawthorn hedge in a fit. We puzzle it out if we can, or else knock it out and insert some remark about the weather.—Ed.

**J. F. W.**—(1) Write to C. C. Baker, Esq., Bridgewater Estate Office, Salop. Ellesmere "breaks" generally in August, or earlier, according to the weather, and does not clear again until end of September or beginning of October; but little fishing is done during the "break." (2) We always attach our flies to the gut line by making a double knot, and then a single one over that (if the gut is very fine) in the gut of the drop fly, about 3in. from the fly; then we make the usual sliding water knot in the gut line; but before pulling it tight insert the gut of the dropper, and then pull all tight. If you do not understand, we will give an illustration. (3) You can fish the Dove, in Dovedale, free, by staying at the Izaak Walton Hotel. Write to Mr. Wm. Prince, Izaak Walton Hotel, Ilam, Ashbourne, for his charges, which are very moderate.

**A Constant Reader** (Lombard-street).—Bream often bite well in early part of September, or later, if weather is suitable. You should ground-bait thirty-six hours previously, with boiled potatoes and bread mashed together into balls, and fish with paste the size of a pea or bean. Or else ground-bait with worms, and fish with well-scoured red worm; use fine tackle, and keep quiet. We have had several bream from 3lb. to 5lb. this season with bread paste.

**P. Robin** (Regent's-park).—You can get carp, roach, and eel fishing in Wimbledon Lake. We think the fishing is by season ticket. At Boxmoor you can get fish in the canal—roach, perch, pike, &c.

## CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### THE "WICKHAM FANCY" AS A SEA TROUT AND LOCH TROUT FLY.

Sir,—On June 21 I mentioned the unusual preference I had experienced in Scotland amongst sea trout and loch trout for a particular fly, but, not being quite certain of my data, I hesitated to give particulars until I could have another opportunity of confirming my previous experience. Having just returned from a Highland fishing visit (not of the best, in consequence of low lochs and streams, and close, calm weather), during which my previous impression has been fully confirmed; and, as the best of the sea trout fishing in the North is just coming on, with your permission I beg to offer your Northern readers a little information which I hope may help them to fill their baskets.

The small trout fly mentioned is well known as a standard fly to all Southern chalk stream fishers as the "Wickham's Fancy," but, as I have never met with it amongst anglers in the North, or heard of its being used for sea trout or loch fishing as a *large* fly, perhaps I had better describe the small fly and my proposed modification of it for sea trout and loch fishing:—Small fly: Body, plain gold tinsel; wings, starling wing (or, for a variety, "corn-crake" wing); hackle, redcocks wound all down the body.

My attention was first drawn to the use of the larger fly in September, 1883, when fishing a good sea trout river in Mull. In consequence of fine weather and a low and clear state of water, the fish were congregated in a pool a short distance above the sea mouth of the river, and were shy and hard to raise. I had tried them with the usual flies without any success; but looking through my fly book for something more attractive, I found one good-sized "Wickham," put it on, and fished the pool over and over again, resting it for half an hour each time, and obtained a nice basket of sea trout with this one fly.

Moving afterwards to another river in Ross-shire, I dressed more flies of the same kind, and using one on the cast with other well-known patterns, I was surprised to find the marked preference given to the "Wickham," and I filled my creel with it alone, when they would not touch the others. This experience was further confirmed when moving to a good loch, where the brown trout run from ½lb. to 2lb., and where again the "Wickham" took fully four or five fish to one with any other fly throughout the period of my stay.

I have just returned from fishing partly the same waters as in 1883, and others not before tested with this fly, and desiring to ascertain exactly how the fly was appreciated by the trout, I kept a strict account of every fish hooked, and I find that the general average in favour of the "Wickham" is beyond my previous estimate, and that it accounted for about eight fish to one as compared with any of the well-known flies generally used, as "March Brown," "Red and Teal," "Green and Teal," "Hecham Pecham," "Black Spider," "Zulu," "Light Dun," or "Buff Spider" and others, and I think I may now offer the opinion that it is one of the best flies which can be put on the cast, and I strongly advise your readers who go in for that sort of fishing to give it a trial.

I had hoped to have made an improvement in the fly, before I went out, by substitution of a hackle with *more lustre*, and more in harmony with the gold body, but in the limited time at my disposal I have not yet succeeded in dyeing one to my liking, and have therefore kept mainly to the standard red-cock's hackle. Mr. G. Holland, of Cook-street, Failsworth, Manchester (who has been very successful in dressing flies for floating and dry fly-fishing to Mr. Hall's patterns), has materially assisted me in aiming at a good dyed hackle, and I hope we shall yet succeed in dyeing a perfect one, as the redcock's feather is too dull in lustre. I have sent him a pattern of the sea trout fly, and those of your readers who think the information worth having will, no doubt, be able to obtain flies from him shortly.

I find only one objection to the fly further than that it is rather a troublesome one to dress. The hackle being run spirally all down the body with the tender point at the bend is rather apt to get cut by the teeth of the trout unless care is used in extracting the hook; and, if so cut, the fly is spoiled by the unrolling of the feather until it is refastened, which can readily be done by any one accustomed to fly dressing. The modified patterns for sea trout and loch fishing should be as follows:—

"Loch Leven" size on No. 3 (eyed hooks), or No. 4 if the breeze is very strong. Ordinary "Loch" size on No. 4 or No. 5. "Sea Trout" size on No. 4 or No. 5 "*Long Shanked*" (made by Hutchinson and Son specially for "Green Drake," and called by them "Long Mays"); No. 4 for light water; No. 5 for heavy streams.

Tail.—A small golden pheasant "Topping," proportioned to the size of the fly.

Body.—Flat gold tinsel-wing; for Loch Leven size, starling or corn-crake wing-feather. For larger loch flies (Nos. 4 or 5), cock pheasant or woodcock wing-feather, according as a lighter or darker wing is desired; for sea trout, cock pheasant wing-feather.

Hackle.—The most brilliant redcock's hackle obtainable; two turns under wings at shoulder, the rest carried spirally down the body to the tail. The hackle must be *long* and *narrow* in shape, so as not to make the fly too "bushy," and to have length enough for the spiral without running too closely to the point for fastening off, as, being tender, it is apt to get cut if too fine.

In *large* flies the hackle fibres are better partly dressed off with scissors, for a short piece near the tail of the fly, so as to show the gold body more distinctly.

The rich lustre of the body material is important. Good gold tinsel will do; but that I prefer to use is made from a thin strip of *pure gold*, soldered upon a thicker strip of copper, and the two rolled out until thin enough. This makes a very tough and malleable strip to work with, may readily be cut with scissors to any width, and makes a body much richer in colour than any "tinsel," and the pure gold surface does not tarnish by keeping in the fly-book as "tinsel" is apt to do. I am indebted to a friend accustomed to metallurgical work for my supply; but it might probably be got from other workers in precious metals or makers of gold embroidery, and it is worth the trouble of getiing, if possible, as these flies will last a very long time (on eyed hooks) if well taken care of.

I beg to inclose you a pattern of the fly, sea-trout size, and I should think that it might be found equally attractive to grilse or salmon, if dressed of proper sizes.

If any angling readers give the fly a trial, I shall be pleased to hear that their fortune has been as good as mine in using it.

There is just one special point in putting on the hackle, which I had better mention. There is a tendency (caused by the constant casting) for the hackle to slip down the smooth gold surface of the body, and settle in a lump at the tail, thus spoiling the look of the fly. To prevent this, after fastening the hackle in at the shoulder, it is better to run the silk (well waxed) down the gold body, spirally, and as tightly as possible, and *let the hackle follow it closely*; the silk acts as a support to the hackle, and prevents slipping.—I am, &c., George Bankart.

P.S.—Can any one tell me where to obtain seal's fur dyed of a *perfectly fast* scarlet or blood-red colour? I have bought dyed seal's fur at one of the best London tackle makers, and the colour does not stand for a single day's fishing, but turns a dirty brown, which quite ruins a red-bodied fly like the "Hecham Pecham" or "red and teal," whilst the fly itself is quite sound and good. I inclose you a small piece of the unused fur, and a fly used only for a few hours, to show the extraordinary fading of the dye. It is only labour thrown away to dress a lot of flies with such "dubbing."

Leicester, Aug. 17.

[Anglers ought to be much obliged to Mr. Bankart for thus placing his discovery of such a killing sea and loch trout fly at their disposal. We have sent the sample fly to our esteemed correspondent, "Silver Doctor," who is now salmon and sea-trout fishing in Scotland. We hope he will give it a good trial, and report result. Perhaps Mr. Kelson can tell us how to get a perfectly fast scarlet. We have often noticed the peculiar way wool and mohair dyed with this colour change. In fact, one of the greatest difficulties in these days of dyed feathers is to get a fly which will stand sunlight and water for even a day. An Irish correspondent kindly sends us some recipes, which which will be found most valuable.—Ed.]

### STRIKE FROM THE WINCH.

Sir,—Seeing in the report of the meeting of the Piscatorial Society in your last issue that a member considered striking from the winch a myth, I would be greatly obliged if you will allow me to say a few words.

My reason for inventing this ("Strike from the Winch") reel was to save trouble to myself and unnecessary annoyance to anglers, as I have repeatedly had reels returned to me solely to alter the action to suit different gentlemen, some liking a light check, while others prefer a strong one to prevent rebounding. Tastes are so varied with regard to the motion of a reel, that I found it necessary to adopt some method by which the motion could be regulated in a moment, by the fisherman himself, and without taking the reel to pieces.

As a practical fisherman and reel-maker I would not have incurred the expense of patenting in England and America, had I not felt assured that the action must (sooner or later) be applied to all salmon and trout reels.

I wonder it has never suggested itself to me before, while working on the lathe (the back centre of which is made to adjust the head when worn loose) that the same action would be applicable to the spindle of a reel. This is the action I have now protected, and is applied either to alarm or silent checks. I have adapted many regulations for the motion of reels to run hard or soft as desirable, but none have been so simple, durable, and the cost so small as the present one.

At the suggestion of the Editor the name "Strike from the Winch," was given it, and quite appropriately too, as a winch when properly adjusted, to suit the strength of the gut, is far safer to strike from than from the hand. The centre screw is made either as a thumbscrew or plain, as desired; but I find the small sunk screw out of the way is best, as when the winch is once adjusted to one's taste it can be locked in position and nothing can move it.—I am, &c.

Birmingham. Reuben Heaton.

[The member of the Piscatorial Society who described striking from the winch as "a myth" is perfectly entitled to hold his own opinion. At the same time we feel sure he has never given the system a fair trial. In fly-fishing for salmon, trout, and grayling in most cases—not in all—it is an infinitely better plan than striking with the line held fast. Mr. Geo. M. Kelson designed a winch for salmon anglers expressly to permit of striking from the winch; and Messrs. Farlow are selling great numbers of it. In response to our suggestion that some maker should give us a good silent graduated check winch for trout and grayling-fishing, Mr. Reuben Heaton designed the admirable winch which he describes above. You can make it as stiff as you please, or to run freely—in fact, by the aid of the two screws, you can graduate the "pull" to a nicety. In a recent fishing excursion we hit over a hundred trout off one of these winches, and many were over 1lb. weight in a very rocky stream, and on the very finest drawn gut. The stream being often overhung with trees, the flies frequently caught in them in the back cast; but as the line was not held it gave when the forward cast was attempted, and a little ran off the reel. If it had been held tight the line or rod must have been smashed now and then when an extra long cast was to be made. It is the same in striking a fish; you must strike hard when up stream fishing, because your line often bags with the stream, but by striking from the winch you cannot easily strike too hard, because the winch is graduated so as to revolve at a certain pull, just as the pull on the trigger of a rifle is graduated. We have no interest in Mr. Heaton's winch, and it is a matter of perfect indifference to us what mode of fishing other anglers prefer; but we consider it our duty to say what plan we find answer best, and the number of anglers who have thanked us for suggesting this plan proves that it is no "myth." For the soft-mouthed grayling it is specially valuable.—Ed.

### HINTS ON DYEING HACKLES FOR FLIES.

Sir,—As my offer of sending a few hints on dyeing hackles has proved acceptable, I will relate my experiences on the subject, in the hopes that I may in some way benefit my angling brethren, and render them more free from the despotic sway of the vendors of fly-making materials.

First, then, before you can dye a good colour you must have a good feather. Why a difference exists in the feathers of one cock from that of another I know not; but it does exist, and put one bunch of feathers through identically the same process as another bunch, and it does not follow that you get the same shade in each bunch. Now, what I call a good feather—or hackle, I perhaps should say—is one whose "barbs" are as free as possible from "barbules"; that, in other words, is a hackle, the fibres or strands of which have as little fluff or down along them as possible, and whose "barbs," strands, or fibres are stiff and strong. There are two sets of hackles on a cock—one at the neck, the other above the tail, generally called the saddle. The ones at the neck are infinitely inferior to those at the saddle, but for one saddle hackle seen in salmon flies I believe five hundred neck ones are to be seen. Indeed, one of your most celebrated London tackle makers told me that "their dressers would not use the saddle hackle," which puzzled me for some time, and then it struck me that they did not just quite altogether understand how to put them on. I say that the neck hackle is inferior to the saddle one, because in the neck hackle there is a greater quantity of fluff, and no brilliancy can be imparted into it; the brilliancy comes from the feather itself and not from the dye. Sparkling may perhaps convey the meaning better than brilliancy. In the saddle hackle there is hardly any fluff, and the whole hackle when wound on a fly sparkles. It is difficult to get good hackles, and I think the best come from a pile game cock, the older the better, but not under two years old, and for nearly all colours pure white or yellowish-white is the best hackle to dye from.

Now, then, we have got the hackles. Strip the all fluff part off, and tie them up into bunches of six or eight hackles in the bunch. By putting too many together the dye does not get at them all equally. Then go through the process I described for dyeing feathers a golden colour, of steeping them in about a pint of water in which a drachm of carbonate of potash has been put, and then well washing them in the same. The first and great principle in dyeing is to thoroughly clean the material to be dyed, and remove all grease from it; and though hackles can be cleaned by a long washing in soap and scalding water, pouring the scalding water on them, and as soon as cool enough, rubbing them between the hands and soap, and making a good lather. The use of the potash saves all this bother, and does less injury to the feathers. A good plan is to put the feathers into steep the night before you are going to dye them, and then a little washing of them thoroughly cleanses them. Then, as before stated, having well rinsed them in clean cold water, put them into the alum mordant, and simmer them therein for ten or fifteen minutes. There are other materials used as mordants, but if time sufficient is given when the hackles are in the alum mordant, and a gentle simmer kept up, I have never found the dyes wash out more with alum mordant than any other, and generally they do not wash out at all. A slow clear fire to stew the materials being dyed over is what is generally recommended; but what I find much more convenient is a spirit-lamp. One of those used for boiling a kettle, with two flames, one below the other, seems made for the purpose, blowing out the underneath flame when the dye bath has been brought to a boiling point, and letting the hackles just stew or simmer with the one flame at work.

I think for some of the dyes there can be no better utensil in which to boil them than a small china-lined saucepan holding three-quarters of a pint, and for others a small tin cup does quite well, so long as it is watertight; and one of these does also for the mordant. In the receipt I gave for dyeing feathers a golden colour, I said that by that process *all* shades of the golden olive could be obtained, but I should have said *nearly* all, for some like the golden olive to have a rather dull shade in it, and that is obtained by dipping the feathers into a hot solution of copperas and water, after being dyed a dark yellow or golden colour. Another shade, which is so good in coloured water, is got from a decoction of Brazil wood and water. After the feathers are dyed a good deep golden olive, just give them a dip into the hot Brazil wood decoction, and it gives them a rather red tinge; but at the same time, when the fibres become separated by being wound on the hook as a hackle, the redness is not too apparent, and it certainly gives a colour much appreciated by Salmo salar in coloured water, and so far as my experience goes, equally despised in very clear water.

I found out this shade some years ago entirely by chance. I had been stewing some hackles which would *not* come right, and I flung them into a decoction of Brazil wood which was stewing for another colour, without ever dreaming that any good could from it; and also by chance I removed them before they were long in it, and thus I obtained what had proved a very killing colour. I think I have now said enough for the golden olive colour, and to any who think it worth giving a trial to I must tell them that they can only obtain the shades they want by frequent trials and not to be discouraged by failures at first attempts. Yet one word more: when a good stew of turmeric is on it will be found very convenient to put bits of feathers useful for mixing in wings, into the decoction. Bits of all sorts come in useful; bustard, tail of golden pheasant, guinea hen, white swan, or goose, or turkey-cock's tail, golden pheasant tippets and toppings. These last are often greatly improved by a little deepening of their colour, especially if collected from young birds, and remember that each bit of feather must be treated as to washing and mordant same as the hackles. A very good colour, for trout especially, is to be got from different shades of natural red hackles, put through the turmeric dye, and natural black hackles so treated become what is called in some parts of Ireland a "sooty olive," and a beloved colour it is by trout, at some seasons.

I believe that the different shades of this so-called golden olive can best be obtained from turmeric, or if not from it alone, in combination with some of the ingredients mentioned. I am well aware that other materials have been used, but I rather think they were worked with because the amateur dyers did not know of turmeric as a dye, or of the method of steeping in the solution of carbonate of potash; nor can I find that any of the patent dyes will give the required shades of golden olive. But I do believe that every other shade of all the best colours for flies can be obtained from the patent dyes. Notably, Crawshaw's crystal dyes. For instance, take Crawshaw's "cardinal," and see what a grand colour can be obtained from it, and how many different shades, and then go through the old process used, and often used in vain, of trying to obtain similar colour and shades—compare the two and I am sure the verdict will at once be in favour of the crystal dye. The old process I refer to was to stew the hackles in a decoction of madder for the lighter shades, and for darker or clarets, in a decoction of madder and Brazil wood, in about equal quantities, and sometimes the colour and shade required was obtained and sometimes it was not. But with a little attention to the time the hackles are left in Crawshaw's dyes an almost certain result follows.

Should any of your readers wish for any further hints on this subject, I shall be always happy to afford them any information in my power.—I am, &c.,

EASTERN.

## FISHING AT FOLKESTONE.

SIR,—I should be obliged if you, or any reader of the FISHING GAZETTE, could kindly give me any information about the fishing salt or fresh water, at or near Folkestone. I have looked up the "Angler's Diary," but the nearest fishing mentioned seems to be at Dover and Hythe. I should be glad to know whether there are any small streams or ponds nearer Folkestone.—I am, &c., J.

8, David-street, Baker-street, W., August 15.

## COARSE FISHING WANTED IN N. WALES.

SIR,—I am thinking of spending two or three weeks at Llandudno, and will esteem it a favour if you will kindly let me know as to the *bottom* fishing in the neighbourhood. I like perch and pike fishing best. If no bottom fishing is to be had near or at Llandudno, kindly tell me if I can find pike or perch fishing (good) near Barmouth, Betws-y-coed, or in any of the lakes between Llandudno and Holyhead. Any information on the subject will oblige.—I am, &c., T. E. NALTY.

[We fear our correspondent will not get much fishing near Llandudno, and think, considering what he wants, he could not do better than visit Bala lake (Merioneth), which is said to contain great numbers of pike, perch, roach, gwyniad, &c.—ED.]

## SORREL COLOUR.

SIR,—I would feel obliged if you will kindly describe the exact colour of the *sorrel* lines mentioned by you in the FISHING GAZETTE of 2nd inst.—I am, &c.,

Richmond. J. S.

[Sorrel is a yellowish-red or brown colour. The majority of brown or dark-coloured horses have black manes and tails, and a sorrel-coloured tail of fine, long hair is very difficult to get.—ED.]

## A VERY FINE ROACH.

SIR,—I send you up a roach of, I believe, unusual weight; it was caught yesterday by my boy, while spinning for jack, at Mottisfont, and took a *4in. artificial dace.* I don't know that I ever heard of one being taken spinning. Major Carlisle was present when the fish was caught, and weighed it immediately after it came out of the water; it was then exactly 2lb. 4oz.; he said it was worth stuffing. Perhaps you may know of someone who would like it.—I am, &c., W. G. TURLE.

Stockbridge.

[We are much obliged to Major Turle, the fish is such a splendid specimen we have sent it to be set up as a specimen fish, captured in an extraordinary manner. —ED.]

## THE GREAT YARMOUTH PISCATORIAL SOCIETY.

SIR,—It is truly unfortunate to the gentlemen who meet every week at this society's club house not to be able yet to show the public, and especially the London supporters and societies in the recent law case (of Heigham Sounds), the reason why the case (to quote the words of your journal) so suddenly collapsed, and then not to show in what way the subscriptions had been expended.

The reason will, no doubt, soon be given by those whose duty (and public duty) it is to give them. All that can be said at the present time is, we have only just received Messrs. Harmer and Ruddock's bill (the solicitors in the case), and that our late president and treasurer resigned on July 1st, and asked that another treasurer be appointed to receive all moneys, &c., the property of the society, and that the accounts be audited by a competent auditor, from the commencement of the society.

The society at once appointed a competent auditor by electing Mr. Lovewell Blake, which request was confirmed at a finance meeting and general meeting of the society. The secretary's books were at once delivered to Mr. Lovewell Blake, but up to the present time the late treasurer, Dr. Mitchell, has not done so, and until all documents, moneys, &c., are delivered up to the gentleman appointed, no audit can be made or accounts paid that are now due. C. K. LAMB, Chairman.

JAMES LARK, Secretary.

## THE ROACH FISHING CHALLENGE.

SIR,—I am directed to inform Mr. A. Fish, in answer to his challenge to fish anyone for roach for £10 a-side, that a member of the Hoxton Brothers Angling Society will be selected to fish a match with him for £10, or as much larger amount as he may feel disposed to name. Arrangements can be made by his attendance at the Cherry Tree, Kingsland-road, on Thursday evening, August 28th, between 9 and 10 o'clock. R. GHURNEY, secretary.

## FISHING IN THE WITHAM AT DOGDYKE.

SIR,—On Monday, 18th inst., Mr. Wing, of Bay Horse Inn, Pittsmoor, Sheffield, had his annual club match fished here, when thirty-nine entered, and all caught fish with the exception of two.

Fishing commenced at one o'clock and lasted until four o'clock. As soon as time was called the weighing in commenced, when it was found that Mr. H. Draper took the first prize with 24½oz.; second, Mr. C. Taylor, 16¾oz.; third, Mr. G. Ward, 16½oz.; fourth, Mr. A. Taylor, 16¼oz.; fifth, Mr. T. Wing, 16oz. We consider the weights rather small for here, which, doubtless, was owing in some measure to the unfavourable time they fished, and the sun being very powerful and gleamy all the time.

One gentleman caught one tench 2lb. in weight, and one jack, 1½lb., and we have also heard of several good perch and roach being taken, from 10oz. to 15oz. each.—I am, &c., PACKET HOTEL, DOGDYKE.

## THE LAST CAST.

I.

The evening was serene and cool,
The landscape lovely as a dream;
I stood beside a trouty pool
In Bovey's blithesome swirling stream.
The dreaded end had come at last,
When I should make my *final cast!*

II.

The windings of that winsome brook
I'd followed through the summer day;
Each tempting turn—each fairy nook—
*Now* many weary leagues away,
Are photographed upon my brain:
I *wish*, and wander there again!

III.

The dreary moor towards the west,
Steep fields upon the other side.
Down stream the vision I love best—
The Lustleigh Cleave in all its barren pride!
And in the foreground wood and wold,
Starred with rich pink, and blue, and gold!

IV.

The grizzled Palmer's light descent
Upon the brooklet's dimpled brim,
Beneath the bushes deftly sent,
Where lurk the shadows deep and dim:
The sudden splash—the bending rod—
The crimson stain upon the sod!

V.

The wealth of bloom beneath my feet,
The rapture of wild woodland song;
The streamlet's tinkle, low and sweet,
As daintily it slid along!
The trusty creel's increasing weight—
The sun going down in regal state.

VI.

And there, beside the pool, at last,
The breath of evening in the gale,
I sadly make my *last* light cast
In that romantic Devon dale!
A fruitless one! With moistened eye
I bid the Bovey brook good-bye!

Eastbourne, Aug., 1884. F. B. DOVETON.

As Mr. H. Barker, of Long Horsley, Northumberland, was fishing with worm in a tributary of the river Font, on Saturday last, he caught a water hen, which had swallowed the hook greedily. He had just caught a trout in the same pool. The bird had evidently been sitting under the bank, and had made a rush at the worm as it was thrown into the water the second time.

SALMON & TROUT-FISHING.

**CHAS. FARLOW & Co.,**

**191, STRAND, London, W.C.,**

MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE,
SALMON AND TROUT FLIES, SUITABLE FOR
ALL PARTS OF THE WORLD.

**Mahseer Tackle in Great Variety.**

**Makers of Split Cane Rods.**

**Improved Folding Trout Landing Nets**
(Very Light).

**New Patent Lever Salmon Winch**
(Can be regulated to any stiffness at will).

**Brown's Phantom Minnows.**

CATALOGUES GRATIS. PRIZE MEDALS. IMPORTERS OF SILKWORM GUT.

**A NEW PERFECT FLY AND SPINNING LINE.**

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES; FREEDOM FROM IRRITATING ENTANGLEMENTS; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says:—"I find the Acme more valuable than all others."

Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. Samples, Post Free, to all Applicants.

## EXCHANGE.

### Things Wanted—to BUY, to SELL, or to EXCHANGE.

:o:

N.B.—We take no responsibility whatever in connection with advertisements inserted in this or other parts of this paper; but beg our readers to expose any case of imposition. The prices for inserting advertisements in this "EXCHANGE" Column are 6d. per line for one, or 4d. per line for more than one insertion.—Address, Manager, Fishing Gazette, 12 and 13, Fetter Lane, London, and send stamps with the order, or the advertisement cannot be inserted.

WANTED.—Particulars and Prices of Second-hand Books on Angling and Fish Culture. Must be in good condition.—Address Editor, Fishing Gazette, 12 and 13, Fetter-lane, London, E.C.

### THE PIKE.

By lakelet margin, where sluggish flow
The lazy currents and tall reeds grow,
Where green in the placid waters breast
The broad-leav'd water lilies rest,
There lies in ambush, greedy and grim,
The pike, the tyrant of all that swim.
He seizes the roach, the trout, the bream,
The helpless tenants of the stream,
As the tiger lurks in darksome wood
To spring on the timid deer—his food,
But the angler comes with skilful throw,
To cast his minnow to the foe,
And soon the cruel marauder lies
On the grass, fierce-struggling as he dies.

Greenport, L. I. June 30th, 1884. Isaac McLellan.

## RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

Add
30 minutes for Chelsea.
40 " Putney.
45 " Hammersmith.
50 " Barnes.
55 " Kew.
75 " Richmond.
80 " Twickenham.
85 " Teddington.

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | | Morning. | Afternoon. |
|---|---|---|---|---|
| Saturday, | August | 23 | 3.16 | 3.36 |
| Sunday, | " | 24 | 3.53 | 4.13 |
| Monday, | " | 25 | 4.32 | 4.48 |
| Tuesday, | " | 26 | 5.5 | 5.22 |
| Wednesday, | " | 27 | 5.39 | 5.59 |
| Thursday, | " | 28 | 6.18 | 6.40 |
| Friday, | " | 29 | 7.3 | 7.30 |

Note.—High tide August 23.

### THE LOWER THAMES.

General Remarks.

Many of the Thames anglers are now on their holidays, and are doing some good business on the broads and rivers of Norfolk and Suffolk, which are now so easily approached by the facilities offered by the Great Eastern Railway Company. A member of the committee of the T.A.P.S. thus writes from Lowestoft:—"My brother-in-law and I caught in two days 120lb. weight of roach and a few bream ; between thirty and forty of the roach scaled over 1lb. each, the largest 1¾lb., and the bream from 2lb. to 3½lb. each. During the time we have been here we have caught as many fish as we could possibly wish." And now for old Father Thames. There is still the same cry of the low and bright state of the water, but it does not at all deter the anglers from frequenting it and getting some good average sport. The practice of using fixed lines both by night and by day is a growing evil on the Thames, and the T.A.P.S. has wisely put into circulation a small handbill cautioning the anglers against using them, and pointing out the penalties they are liable to in doing so. After the numerous convictions that have been made, it will be desirable to enforce the penalties.

**Richmond.**—Christopher Brown, during the week, has taken sixteen barbel and 54lb. of dace. F. Brown, in three days, 38lb. of roach and dace, and three barbel. Henry Wheeler, in two days, 22lb. and one barbel. H. Mansell has been out five days, one day with Mr. Newens, when he got 30lb. of roach and dace, and in the other days nine barbel and 40lb. of roach and dace. This shows the variation in sport, that all days are not good days. Henry Howard, in one day, with Mr. Whitmore, twenty-two dozen of roach and dace, and five barbel ; another day, with Mr. Bambridge, twelve dozen ; and in four other days, sixty dozen and four barbel. Mr. Marchant, in a boat by himself, five barbel and nine dozen of roach and dace. Job Brain, during the week, 120lb. weight of roach and dace, and sixteen barbel.

**Twickenham.**—William Spong, in five days, forty dozen of dace and one barbel. John Spong, one day with Mr. Keys, 26lb. of roach and dace ; another day, with Mr. Godfrey and Mr. White, eight dozen ; another day, with Mr. Smith, ten dozen ; and in two other days, fourteen dozen and one barbel. Joseph Dobbin, during the week, fifty-nine dozen and a half dozen barbel. Samuel Cole, in six days, fifty-four dozen and seven barbel. James Coxen, in three days, twenty-five dozen and three barbel. George Coxen, in one day, with Mr. Allen Davis, four dozen of dace and a barbel weighing 8lb. and measuring 29in., which has been sent for preservation ; and in three other days seventeen dozen and three barbel. Pert Hammerton, in four days, sixty-two dozen of roach and dace and seven barbel. Edward Finch, during the week, nine barbel and 80lb. of roach and dace. Henry Spiers has done well this week, his best day being 18lb. of roach, the fish averaging 1lb. each. A barbel was picked up on Monday evening last weighing 10½lb. and measuring 33in., in good condition and alive, on the flats. Mr. Walker, the piscatorial proprietor of the Two Sawyers, has presented it to a gentleman for preservation.

**Teddington.**—Joseph Baldwin, in one day, with Mr. Smith, twelve dozen of dace, and in four other days twenty-four dozen. Charles Baldwin, in three days, thirteen dozen and a couple of barbel ; and B. Stevens, in four days, twelve dozen of dace, twelve barbel, and four chub. The above returns, including Twickenham and Richmond, will show how fully the fishermen have been employed.

**Kingston.**—John Johnson, sen., in four days, thirty dozen of roach and dace, three barbel, three bream, two chub, and five perch. John Johnson, jun., in the same time, twenty-two dozen of roach and dace, nine barbel, three chub, and a jack of 6lb. F. Eastland, in a similar time, forty-three dozen of roach and dace. Luke Francis, in one day, three dozen. The bank fishers here and at Surbiton have been catching a splendid lot of bream, barbel, perch, and chub.

**Hampton Court.**—Thomas Wheeler, in four days, sixteen barbel (the largest 3lb.) and twelve dozen of roach and dace. Thomas Milbourne, in the same time, five barbel, twelve dozen of roach and dace and two brace of perch. W. Milbourne, in two days, seven barbel (the largest 4lb.) and twelve dozen of roach and dace ; and Charles Davis, in one day, six barbel (the largest 3½lb.), and three dozen of roach and dace. "Tagg's Island Fishery" has been well patronised, and good baskets of roach and dace have been made.

**Hampton.**—J. Langshaw, in one day, six dozen of gudgeon, three dozen of roach, and three brace of perch.

**Sunbury.**—Edward Clarke, jun., in one day three dozen of roach and dace, and a couple of bream. H. Clarke, jun., four dozen and seven bream ; and Edward Clarke, sen., in three days, eighteen brace of chub, the largest fish 3lb., and one dozen of dace.

**Walton.**—George Hone, during the week, four barbel, twelve bream, and fourteen dozen of roach and dace. John Hone, twenty-four bream and sixteen dozen of roach and dace. R. Watford has been making some good shows of roach and bream.

**Halliford.**—F. Smedwick, during the week, eighteen dozen of roach and dace and a quantity of good gudgeon. W. S. Rosewell, in three days, a jack of 3lb., four bream, and thirteen dozen of fine roach and dace.

**Shepperton.**—Mr. Purdue, in one day, four dozen of roach and dace and eight dozen of gudgeon ; and another day, three dozen of roach, five perch, and eighteen dozen of gudgeon. F. Purdue, in three days, seven dozen of roach and dace, three perch over 2lb., and seventeen dozen of gudgeon. David Hackett, in two days, eight dozen of roach and dace, and ten dozen of gudgeon. F. Poulter, in five days, thirty dozen of gudgeon and ten dozen of roach and dace.

**Weybridge.**—H. Cun, one day, seven dozen of roach and dace ; another day, with Mr. Forster, eleven dozen ; and another day, with Mr. Burrows, eight barbel and four chub.

**Chertsey.**—The following report from J. Poulter arrived too late for publication :—"One day, 25lb. of barbel ; another day, with Mr. Lea, 62½lb of barbel and two eels ; another day, seven bream, four chub, and four dozen of gudgeon ; another day, with Mr. L. Buckland, 20lb. of barbel and bream and one chub ; another day, one bream, one chub, and two fine dace ; and another day, 25lb. of bream, one chub, one perch, two dace, and one eel—all on the 'leger.' "—During this week, J. Poulter has taken, in one day, two bream, three brace of perch, and some fine dace ; another day, one brace of perch and three dozen of gudgeon ; and another day, with Mr. G. H. Thurston, seven bream, the largest 4½lb., one brace of perch, and one chub.

**Staines.**—John Keene, sen., in one day, five barbel, the largest 7lb. John Keene, jun., fifteen dozen of roach and dace. G. Osman, three jack and eight dozen of roach and dace ; and Mr. Mason and Mr. Pouch, with Charles Hone, twenty-eight barbel, the largest 7lb., and two chub.

## UPPER THAMES.

The same old tale : the river is very bright and low in all directions, with a nasty scum and decomposing weeds and *débris* in all likely fishing nooks and corners. The weir pools are the most desirable places just now, not only for angling, but to obtain a breath of non-odorous air, which in the channel of the river is almost impossible, for the olfactories there only get undesirable whiffs of decaying weeds, with a dash of mudbanks and stale vegetables. I visited Marlow, Temple, Cookham, Cliveden, Maidenhead, and Bray on Friday last, and in the whole 12 miles' journey I did not see a single punt or bank angler out, and this in the height of the river season, when I am sure in years gone by I should have seen a dozen punts in every reach between lock and lock, with regiments of anglers on the banks. How is this, sir? Certainly, the weather is very scorching and the river very unfishable ; but surely one or two might venture out, so as to give one the opportunity of saying something, even if it was only to report their temerity. At Maidenhead, a few barbel and perch have been had from the scours, and at Temple three barbel have succumbed, but a trout of 12lb. "declined with thanks" to follow suit. At Medmenham the gudgeons have been fairly on ; but well-known swims are not so easy to fish, because weeds seem so on the increase where weeds never were before. Thursday evening.—Weather very fine and hot ; not the slightest indication of much-needed rain. Fishing will be poor until we have some "heavy wet."—Marlow Buzz, August 21.

### Thames (Datchet).

The water still keeps low, and no signs of a change. Been catching ten to twelve dozen dace and gudgeon a day, and a good few chub ; largest, 3½lb.. J. Hoare has had a few takes of dace and roach on the 11th. A bank angler had five good chub ; and yesterday I saw one going home with a jack close on 7lb. Myself and patrons have been obliged to feast our eyes, and that's all, on a brace of jack from 10lb. to 14lb. each. They won't look at the bait. C. Clarke, to-day, in the Fleet, three dozen roach, all good fish. Before I conclude, I must tell my readers of a curious phenomenon respecting the barbel. I think it is at variance with any previous notion. They actually lie between the weeds, and allow themselves to be picked up. Always thought that was the result of frost.—G. Lumsden.

[Received too late for last week.—Ed.]

Water still low. Been out every day ; nothing but dace and gudgeon biting, and well too. My partners have taken over 50 dozen dace during the week, and 14 or 15 dozen gudgeon, 3 barbel, and some chub. On the 17th, H. Hoare, 6 dozen dace, and to-day four dozen. No other punt has been out in the neighbourhood.

### Dockett Point.

Fishing with Mr. J. L. Meyers last week, several bream, roach, da[illegible], and perch. Monday, J. Haslett, jun., with Mr. J. L. Meyers, two jack, four barbel, one chub. Myself, with Dr. Brunton, two barbel, two perch. Next day, with Mr. J. L. Meyers, two perch and two chub.—James Haslett.

### Thames (Goring).

Water very low and clear. Nothing doing much, gudgeons biting very well. Have been taking a few good perch ; best day ten dozen of gudgeons and one dozen of perch, and two good chub.—John Rush.

### Thames (Oxford).

Very little has been done during the past week, and I am afraid unless we soon have a favourable change, accompanied by a fresh, there will be a legend in circulation to the effect that the Thames once ran in former years through the deep rift intersecting the country to the north and south-east of the City ; but it has not been seen there, since it rapidly disappeared in the hot summer of 1884. Every day the river assumes slenderer proportions, and has already become reduced to within a third of the space it usually covers, and without a few showers there will be a serious mortality amongst the fish, which will assist to intensify the fœtid stench from the rotting weeds which arises with the fall of the river fog. In the Upper Cherwell, as far as the sluice gates at the end of the New Walk, there is a full head of water ; but from that point to the confluence of the three lower arms with the Isis, in Christchurch meadow, it is possible to walk across from bank to bank, for the greater part of its course, a feat which has not been accomplished within the memory of several of the oldest inhabitants. A friend of mine, writing from Lechlade, says that they are taking from 8lb. to 10lb. of roach on an average, to each rod per day ; but the sweltering heat of the weather and the attentions they receive from the wasps almost counteracts the pleasure of fishing. On Thursday, Messrs. Brace, Sessions, and Hall had 56lb. of roach, tench, and chub from Sir Harry Vernon's private water ; but owing to Mr. Bruce's absence from home, I am unfortunately unable to give further particulars. I am told by a conservancy man, that on Wednesday, Mr. Wing from the Bridge hole at Terrey Hinksey, had a large roach weighing 2lb. 8oz.. and that a larger one was taken the previous day at Skinner's Weir by Mr. Jones ; but from previous experience I am inclined to think that they were chub instead of roach. Yesterday, Dr. Stainer's sons, landed four chub, going 2½lb., 1¾lb., 1½lb., 1½lb., and ¾lb. from Alderman Randall's private pond at Grandpoint. The angling society hold their second competition of the present season at Wolvercott to-day.—Cherwell Otter.

### Thames (Shepperton).

One day's fishing 20th August : 9 dozen of gudgeon, 4 dozen of very fine dace, 3 perch 1½lb. Water very low and clear.—J. Purdue.

---

### Ancholme District.

Thursday last was a red-letter day in my fishing experience. I had arranged to take my family, making, with two juvenile Cockney visitors, fifteen souls, for a day's outing to Croxby Lake. Of course, so large a party required the largest waggonette in the town. Drawn by a couple of bays, we started about 11 o'clock, and resolved to make a detour, and visit *en passant* a nice little pond of about half an acre, in which during February of last year, I had placed a mixed lot of about three thousand fry of common trout. Loch Levens, and Americans. Sundry reports had reached me from time to time that the pond was alive with fish, and as they are now eighteen months, I felt anxious to see how they were getting on. In due course we arrived at this pretty little place, which, for obvious reasons, must at present be nameless. I rigged up a collar of three flies, and the first throw was fast in a nice Fontinalis. Having landed this, I threw again, hooked and landed two at once. I then lost two collars in succession by the fish getting into the weeds, so I adjusted a somewhat stouter one, and with one fly only, after which I had no further mishaps. All this time my sons and daughters were catching fish merrily, and at the end of one hour and a half we had 39 fish, which on weighing when we got home, reached the total of 13lb.—i.e., just three to the pound. Most of them were Americans, and had nicely grown, the largest being just a foot long. The Fario and Loch Leven fish were much smaller, and we only kept a few of these by way of sample. The Fontinalis showed most excellent sport, but on cooking we found them inferior to common trout, particularly the males. The females were much more toothsome. The fish took any fly well, but we stuck mainly to a medium-sized march brown. Having finished at the little pond we drove on to Croxby, and after lunch on the verdant sward at the foot of the lake, and beneath the shady trees, we commenced to operate upon the perch. As our sport was so good in the morning, we were rather careless of results in the afternoon, but we managed to secure an additional 22 fish, which weighed a total of 9lb., making a grand total for the day of 22lb. of eatable fish. Six families shared in the fry which followed. At the time of writing this no Ancholme notes have come to hand.—Thomas Ford, Caistor, 19th August.

The Ancholme has again been visited by anglers, and some fair sport was had by the experienced ones. Among the takes by visitors, 20lb. of roach, dace, and perch, by E. Rhodes, and 17lb. of roach, perch, and bream by S. Stokes, near Brigg. At Appleby I heard of a good lot of roach and dace taken by an angler named Lingard. The water, though low, is not in bad condition.—X.

### The Bure (Norfolk).

I visited Wroxham last night, and am pleased to say the reports, both at Whittaker's and Simpson's, were excellent. On Saturday last, 9½ stone of bream were caught by two anglers, and Whittaker informs me this is not the only instance, but that several equal catches have been had lately. The anglers I met still continue to complain of the vast number of small fish hereabouts, and vote them a nuisance. From Horning Ferry news of good catches of bream flat has reached me. In a match held there the other day, several of the leading boats had over three stone each, while in individual cases, very much heavier catches have been had. Host Rose (Acle Bridge) has been very busy with anglers, and only moderate success has attended their efforts, as the bream seem to have gone clean off feed. At every station on this river they are as busy as possible, and on the whole sport may be said to be good ; prospects never better.—Robert Moll.

### Dove.

The river maintains its clearness, and the water is running extremely low. We have had some trifling rain during this week, but it has not materially altered the height or colour of the water. Before there is any improvement in sport it will certainly be necessary that a rise shall come on. More grayling have been killed this week than trout, and I suspect this is because the latter are beginning to have ideas of maternity—that is to say, going into spawn. On the contrary, grayling are just now getting into the ripest and gamest order, and a ten or twelve ounce fish when hooked, shows great liveliness in the water. The same lures as last week have been killing this. Twilight angling has proved more successful than fishing in the middle of the day, for the sun has been pouring down with quite as much power as during the previous week, and angling has consequently not been that unalloyed pleasure which could be desired. The bottom fishers have done best with the wasp grub, but the same influences affect angling on the bottom as on the surface, and we must have a thorough good soaking downfall before matters improve to any extent.—The Splodger.

### Eynsham.

The river here is still low and of good colour. Barbel are well on the feed. Mr. Pitts, on the 17th inst., took two, each 4lb. and 6lb., with several other nice fish. Mr. Emery has also been very successful, having caught, amongst other fish, in the last three days, one barbel each weighing 4lb. 4¼oz., 6lb., and 7lb. The perch are also moving well. I had a good take in the Evenlode on Tuesday with lob worm, some weighing 1½lb., I also caught a few roach and some good dace, all with lob worms. Mr Geen and several friends are down here to-day, but shall not be able to give you result of their sport this week, as they will not be back here in time for me to post to you.—H. B. Howe.

### Fens (Boston).

A lot of anglers came down to Boston this week. On Saturday and to Monday every swim of any account was inconveniently crowded. Most of those near the town came for the eternal fishing match. The great majority of these people caught nothing, but experts really did well. Some nice rudd were caught at Marston Bridge, along with roach and perch, one angler named Turner showing a specimen 1lb. 4oz. On the Cowbridge Drain some of the anglers did well, and among them I may mention Mr. Shaw, who got 22lb. of roach and perch. The drains are very low, and want rain badly.—T. B.

### Ilfracombe.

Sea Fishing.—During the week good catches have been numerous, and day after day the coast has been dotted with parties eagerly taking advantage of the fine weather, and the fish being well on the bite, to pursue their favourite pastime. Thursday, F. S. Redmore's party, fishing off Pebble Cove, caught 28lb. of bream, Friday, 30lb., and Saturday, 20lb., and one fine mackerel; others had equally good catches. On the 17th, a party of gentlemen were out for three hours off the Seven Hills, and caught 40lb. of bream, whiting pout, and whiting. Monday, some very large bream taken from 5 to 7lb. each. Tuesday, fine catches of bream, with a few codlin and whiting pout. Wednesday, W. Redmore's party, fishing off the Torrs, in three hours caught 40lb. of bream and a large craw-fish. J. Bushen's party, fishing off the harbour, 15lb. of whiting pout. E. German, fishing from the rocks at Shallow Path, caught a fine bass 6½lb. weight. I see some gentlemen just going past my window with large strings of fish, the bream especially being very fine. Bream this year are in prime condition, and bite very freely. Anyone fond of this particular branch of fishing would meet with good sport by paying us a visit just now. The weather continues fine, prospects good, with light winds from the S.W. —E. Comer.

### Itchen (Winchester).

Very little been doing during last week. The fish have been taking the sedge flies moderately in the waters above Winchester. The red quill still *de rigueur*, however, for day fishing. The water is low but in fair condition, and fishing during the next few days ought to be good after the thunder shower of Tuesday, and the extra water it brought down.—Red Quill.

### Lea (Tottenham).

Water continues low and bright, and the fish keep pretty much on the surface. Anyone who can use the fly rod will have no difficulty in getting a dish of fish. Messrs. Bennett, sen. and jun., were down on Monday and Wednesday. Their take on Monday consisted of 7 dozen roach, dace, and chub, and on Wednesday 4 dozen and two. On Thursday, Mr. Bennett, jun., took 3 dozen fine roach with the "Welshman's Button." On Tuesday, Messrs. Beresford and Wheeler took some good roach bottom fishing. One or two of the knowing ones have been getting the perch from under the bridge early in the morning, baiting with worms.—Hackles Red.

### Leicester.

Angling operations in this neighbourhood have been rather quiet during the past week. This may be partly attributed to the clearness of the waters and the intense heat that has prevailed for some days, and undoubtedly from these causes the fish have bitten anything but freely. Roach and dace fishing have afforded the greater part of the sport, but not in any instance was there a large bag made, at least, that I could hear any mention of. The chub have been rising fairly well towards evening; but here also sport has been but moderate, 1lb. to 1½lb. fish being the rule. A carp was caught from the Leicester waters weighing 3½lb.. This is the first that has been taken from the Leicester Angling Society preserves, out of a lot of about two hundred placed in the waters about four years since. From the out of town angling resorts reports state that the fish have been biting very shyly. A good flush is still greatly needed at several places in this locality. The Leicester British Workmen's annual angling contests came off a few days since, the three first prizes falling to Messrs. Barsby, Green, and H. Wells. The weather of Thursday was very fine and bright, but still very hot.—Alert.

### Lugg and Arrow (Leominster).

There is no alteration in these streams, both still remaining clear and very low, but in splendid angling order, especially in the evening part. The fish are sporting well at the fly, and good baskets have been taken. Several lots of good trout and grayling have been landed with the wasp grub. A gentleman visiting this part tried the Arrow with the fly on Friday evening, and landed a very good dish of trout. Some very good fish were taken from the water near Eardisland with the wasp grub. In the Lugg the fish were sporting freely at the fly; a gentleman fishing near Kingsland landed a good basket of trout and grayling with the coachman and silver-twisted blue. Near to Aymestry some very good fish were landed with the wasp grub the same evening. On Saturday, a gentleman tried the Arrow at Ivington with the white-winged coachman, and landed a splendid dish of fine trout, averaging 10oz. each. The Lugg, near to Ford's Bridge, was tried the same day with the wasp grub, and a very nice lot of fine trout was landed. With the fly the same day a gentleman took some vory good grayling in fine condition. Fishing in the Lugg on Monday with the coachman, a gentleman landed twelve very good fish, averaging ¾lb. each. In the Arrow the fish were sporting freely. A gentleman with the fly took a very good dish of fine grayling. Some very good trout was landed with the red ant near Monkland, in the Arrow on Tuesday. Some very good fish were taken in the Lugg, near Bodenham, with the fly. A few very nice trout were taken with the wasp grub. The Pinsley is in capital order for fishing, but very low; the fish are sporting well. Some very fine trout were taken on Tuesday, with the coachman.—Gwynne.

### Medway (Tunbridge).

Water in good condition, though a shower would improve the fishing. During the week bream, roach, &c., have been taken in good quantites in well-baited swims. —Ye Medway Water Rat.

### Moy and Loch Conn (Ballina).

Since my last report very little has been done by anglers on river or lough. The river has risen a few feet the last few days, and anglers are anticipating good sport when the water clears, so that a salmon can see a fly, which will be in a day or two. The net fishing is now all over on the river, and the weir is open, so that salmon and sea trout can run when and where they please.—Frank Hearns, Ballina, Co. Mayo.

### Ouse (Huntingdon).

The recent rains have made an improvement in the condition of the water. Some fine takes of bream have been made the last few days. I have not been out fishing, but I have seen great numbers that have been caught by my friends and neighbours. The weather is as favourable as can be desired, and there is every prospect of a great many takes. Lob-worms are the principal bait for bream, and wheat for roach.—H. Rout.

### Severn (Shrewsbury).

This river still keeps exceedingly low, and very little sport has been obtained except by one or two gentlemen who know where the chub and roach lie. I have taken several of the former with a fly tipped with a gentle, the largest weighing 1¾lb. The roach continues to take the fly fairly well, a gentleman fishing every morning below the Cherry Orchard Ferry never leaving without a few good fish. I have not heard of any trout being taken of late, although there must be plenty of good fish in the water. A good flush is badly wanted to take away the sewage, which has accumulated on the gravel on all the fords near the town, and from which such bad smells arise that it is very unpleasant, if not dangerous, to fish there.—Sandfly, August 21.

### Severn and Teme (Worcester).

These rivers are very low and fine, and in good order for the fly fisher. The grayling are upon the fords, and in good condition for the time of year; but give me the October grayling. Those I saw last week were about three to the pound, and plump fish. It is now about the opening season for grayling fishing, and few of our local anglers have given them a turn without an amount of satisfaction. Mr. Preece, nine brace. A. V. Hollands, opening day, proved somewhat satisfactory, three and a half brace, beside a brace of trout, and a few dace and chub; myself landing, after breaking my rod and repairing it on the banks of the Teme, three brace. I missed some good fish, as it made my rod stiff. Mr. Gwillham, one and a half brace. The takes of roach, dace, and chub are many. The flies for the grayling are, in my opinion, not easy to name, as the flies upon the streams are so numerous, but I will give these to choose from:—Sky blue, red ant, iron blue, willow, whirling dun, and pale blue for evening.—John A. Griffin.

### South Level Cut (Littleport).

These cursed weeds are a nuisance, so much so that even the roach are getting tired of them, and come at our bait, when there is a chance, like demons. But the river is so covered with the weeds that even one of the veteran Lea anglers would find it a difficult matter to drop in between them now. The following represents about one-third of what ought to have been done:—Aug. 16th, Messrs. W. and E. Fetch, Cambridge, 7½lb. roach; Mr. Hailstone, Anglesey Abbey, Bottisham, a very nice take of perch; Messrs. J. and J. Cutlack, Ely, with two friends, about 17lb. roach, out of which I may credit J. Cutlack, jun., with 7lb. Aug. 18th, Messrs. W. and E. Fetch, Cambridge, 10lb. nice roach. During morning, Mr. H. H. Heading, Ely, 8½lb. nice roach; Mr. A. White, Newmarket, 3½lb.; and Mr. H. B. Flack, Cambridge, 3½lb. roach. August 19th, Mr. J. Gallon, Newmarket, 5lb. good roach in about 3½ hours; Mr. H. B. Flack, Cambridge, 13½lb. very good roach. Keeper Benton informs us that Mr. F. Piggott and Son, Ely, have had three very good takes of perch, from 70 to 90 fish each take. This is very pleasant news, for, as I have said before, five years ago there was hardly a perch to be taken.—Charlie South.

### Teme (Ludlow).

The waters are now getting low and somewhat foul, and a week's rain would do no harm. Many sportsmen have left the streams to look after the grouse, and the Church Stretton range of hills has afforded some good sport for the time being. All the tributaries of the Teme are bright, and the waters get lower day by day, and anglers bottom fishing say the wasp this week has not been so killing until dusk. We saw some very nice trout and grayling, which were landed up the Downton district of the Teme on Saturday night. Some of the fish were caught with the wasp grub and some with the white-winged coachman late in the evening. Some good fish have been landed down the Steventon waters by a gentleman visiting Ludlow, whose time is divided between sketching and the "gentle art." A visit to Ashford on Monday evening resulted in a capture of six roach, four perch, three trout, and a brace of grayling. All these 15 fish were caught with the coachman, pale blue, and gentles, the fish taking one bait for a short time only, and then on to another. Fishing up the Corve, near Culmington, a gentleman, on Tuesday evening, caught, with the silver-twisted blue, four brace of capital grayling in first-rate condition, which turned the scale at 7½lb. The grayling will rise at this fly during the latter part of August, when all others fail. The same gentleman tried the green insect, and caught three nice trout the same evening. Visiting the Ony, we found it very low this week from Bromfield to Wooton. Half a mile or so above the railway station a few good fish have been landed of an evening with the fly. Though the temperature has fallen, the thermomeler registered 101deg. in the sun at 12 o'clock on Sunday.—S. Ludlow.

### Teme (Tenbury).

There is but little difference in the state of this stream and all its tributaries: they are all still remaining very low and clear, but in very good fishing order. The trout are now rising well at the green insect, whirling blue, and red ant. For grayling the best fly at present is the silver-twisted blue. For bottom fishing, the wasp grub is the best bait, and some very good dishes of fish have been landed in this quarter with them. On Friday, a gentleman fishing in the water near the town with the fly, landed some splendid trout and grayling. In the water near Corn Brook, the same evening, a gentleman took some good trout with the green insect. The water near Rochford was tried on Saturday, and some very good fish were landed with the wasp grub. A gentleman visited the waters near Little Hereford, with the fly, and caught a very nice basket of fish averaging ½lb. each. Some capital sport has been had in the water near Berrington Court. On Monday, a gentleman with the wasp grub took twelve very good-sized trout and four grayling, all in fine condition. Fishing near Burford, some gentlemen with a fly took a very good lot of trout, averaging ½lb. each. Some very nice trout were landed below the bridge with the whirling blue. There was some very good sport had near the town on Tuesday, a gentleman who was fishing with the green insect and red ant landed a good basket of fish, weighing 5lb. the lot. There were some very good grayling landed the same evening with the wasp grub. Some good trout have been landed with the wasp grub in the Kyre near the park. A few nice trout were taken with the fly near Bruntlands. Some capital trout have been taken in the Rea with the fly. In the Ledwyche, a few nice trout have been taken with the whirling blue.—Worcester.

### Trent (Alrewas).

River very low and fine. A few good fish have been taken at long distances. Report as to perch biting continues very good, twelve weighing 9lb. falling to the lot of one gentleman connected with the Association. Grayling reported to be rising well at the fly.

### Trent (Lower).

On the Trent at Torksey there was some good sport during the week. Some good roach have been got. One gentleman managed to secure a fish of that kind 1lb. 8oz., and he had altogether upwards of 15lb. W. Newbould had a basket of 10lb., chiefly roach, near the same spot. The Trent is very low.—Trace.

### Trent (Nottingham).

The river in this district continues very low and clear, and really there is very little about which to write. Most of the recognised barbel swims at Holme, Pierrepont, Colnick, Wilford, and Shardlow, have met with attention during the week, but the takes generally have been moderate. At Wilford, two fish were caught on Monday weighing 9¾lb. Some of fair size were also taken at Shardlow; matters are very quiet in the reach above—I allude to Weston—and, excepting the capture of a few lots of eels and roach there is nothing to chronicle. The salmon are still unable to get over the weirs at King's Mills, and unless we soon have a change of water, I am afraid many of the fish will begin to "kipper." Already some are beginning to look unusually red. Fly-fishing continues good, especially in the evening, and at Clifton and Wilford some excellent dishes of dace and chub have been secured. Chub have also taken kindly to the wasp grub in the rapids.—THE MAN AT THE CLUBS.

### Trent (Newark).

The river now runs remarkably low and clear, and sport, taking it in a general way, is not very good. I have known first-class anglers bait first-class swims during the last fortnight, and only a very few barbel and bream have rewarded their efforts. Chub seem to have been the best, fairish bags of which have fallen victims to both wasp grubs and the fly. Roach have also been had, but in only one or two instances have the catches been worth recording. One of our local anglers the other day baited a first-class bream hole, but not a single bream did he catch—only nineteen flounders and a dozen eels—although he told me that towards evening the big bream were rolling on the top of the water by scores. I believe there are plenty of fish in the river, but we want a change of water to clear away all the insects and the weeds before we can hope to get among them much. I had a day last Friday among the roach, and by dint of hard work and judicious ground-baiting I managed to grass twenty-eight of them (the two largest being 1lb. 2oz. and 1lb. 1oz. respectively, and a dozen of the others up to ¾lb. each), a very good bag considering the state of the water, which, by the bye, I might state was a favourite roach-shop of mine in the Witham; the bait that I used was bread paste, mixed up with a 3d. packet of "King's Natural Bait," a lure that I can most honestly recommend to the notice of all roachers. Just before finishing this report I hear that the roach are on a bit at creed wheat and malt; in fact, from what I have heard, these fish and chub, with fly and wasp grubs, will pay the angler a lot better than baiting up any quantity of barbel and bream streams—that is, under the present circumstances.—THE TRENT OTTER.

### Torridge (Torrington).

River very low, owing to the dry, warm weather. Lots of dace have been taken lately both with the fly and float fishing. The best time for fishing with the fly is between seven o'clock and nine in the evening, when the sun has left the water, up to dark. A local man took two peel and three trout on Tuesday evening, fishing with trout flies. The otter hounds are on the Torridge this week; they killed two otters near Torrington on Monday.—PRACTICAL ANGLER.

### Witham.

All along the banks of the Witham there were anglers by the score. Wherever there was a swim that could be reached it was occupied. Southery, Kirkstead, Dogdyke, &c., were all full. At the first named place, Mr. Birkinshaw, of Sheffield, got a jack 4lb. 14oz., and a bream 3lb. 11oz., a brace of very nice fish, besides a lot of smaller. At Kirkstead, a good take was recorded from Mr. Freeman, 26lb. of roach, perch, and bream. A good tench scaling 1lb. 10oz. was landed at Dogdyke by J. Wragg, along with some 21lb. of roach and bream. The water is almost out of reach in some places, whilst in condition it is very fair.—YELLOW BELLY.

### Wye and Derwent.

Both the Wye and Derwent are exceedingly low, and very clear indeed; in fact, they are as low now as I every remember them to be, consequently the greatest care must now be taken in watching the rivers and brooks, for there is scarcely a single place in either river but what the poachers could net. I hear of a great deal of poached netted fish supposed to have come from various parts of the Derwent being hawked in this district. Mr. E. M. Watt had his private ponds netted last week, and caught a very great quantity of trout. Frederick C. Arkwright, Esq., of Willersby Castle, Crowford, had his length of the Derwent netted from Masson Hill downwards, on last Tuesday, on purpose to catch the pike and coarse fish. He succeeded in taking three small pike and a great quantity of roach and dace. The trout and grayling were thrown into the river again; and I am pleased to say that the water which the Matlock Bath new fishing club has just started has got a good quantity of graylng in the water, besides a fair sprinkling of trout; both the trout and grayling running a good size. Sport during the week, with the artificial flies, especially in the day-time, has been wretchedly bad. There have been a few brace killed chiefly the last thing at night, with the small honey dun bumble and little black-faced flies, some of the trout running up to nearly 2lb. each. The largest fish are killed mostly in the deeps just as it is getting dark at night. The bottom fishers only fish early and late, and they have taken some large tench and a few eels with wasp grub for bait. I have just heard of 3 brace of large trout being killed off the Charlesworth club waters by dibbing under the bushes and trees with the small blue-bottle flies. Weather excessively hot. Rain much wanted.—G. J. EATON.

### The Yare (Norwich).

Roach fishing on this river has been as good during the past week as I ever remember it. From Surlingham, Brundall, Buckenham, and Cantley, reports of excellent catches are to hand. I have not heard of anything extraordinary amongst the bream, except one nice catch of about 6st., taken in the Langley Reach, but nearly all anglers visiting our noted stream have had the best of luck with the roach, from Host Garrett's, Buckenham Ferry. I hear that on Tuesday last Mr. C. Scull and Mr. G. Eagleton, of London, succeeded in capturing 60lb. of handsome roach, small fish being rejected. This does not represent a day's fishing, but were caught in a few hours. During eight days' stay here, these gentlemen have landed over 400lb. of roach, Mr. Scull's average being 30lb. per diem, his largest take being 75lb. in two days, I tried my luck for one hour at Buckenham, on Saturday evening last, and caught 30 very fair fish, and most of the local men are doing well all down the stream especially this year, with boiled white and coloured wheat (Judson's dyes are the best). I would again venture to remind visitors who are unaccustomed to our waters, that it is necessary to plumb the depth very frequently, also to moor the boat well off the weeds, and use a float that will carry a score shot, except at slack water. Prospects are everything in our favour.—ROBERT MOLL.

## SCOTCH FISHING NOTES.

Since the thunderstorm, the rivers are now in good angling condition and on most of them satisfactory sport is being got, as will be seen from the following reports:—

THE TAY.—For the last few days good sport has been got on the Tay which is in splendid angling ply. Sea trout and whiting have not been so plentiful at this season for years. On Tuesday, Mr. Armstrong got twenty sea trout and whiting; and other anglers had from six to a dozen. At Thistle Bridge, Sir W. F. Elliott had one fish; and Mr. John Costgrove, fishing at the top of the North end, at Perth, killed a nice grilse of 8lb.

LOCH TUMMEL.—This loch is now in fine angling ply. There is a fine ripple on the water, and trout are rising freely. Fishing from one of the Loch Tummel Hotel boats on the 31st ult., Mr. Macfarlane, Dundee, captured four beautiful trout. One of them weighed 4lb., and the others averaged over 2lb. each. On the 13th inst. Mr. P. S. Cullan was out on the loch in one of the Loch Tummel Hotel boats, and procured a basket of 12lb. One trout of this catch weighed 4lb.

LOCH ERRICHT.—Fishing on Loch Ericht last week, Mr. Hodge, Dundee, had some fine play with two *salmo ferox*, which he succeeded in landing. They weighed 7½lb and 7lb. respectively. Mr. Birrel and friend, Dundee, from the Loch Ericht Hotel, Dalwhannie, had 53lb. of beautiful trout in two days. In the same period, Mr. Jamieson, Kirkcaldy, landed 61 fine trout and seven char. A splendid *salmo ferox* weighing 10lb. was captured by Messrs. Hardie.

LOCH RANNOCH.—Fishing from the Bun Rannoch Hotel on the 31st ult., Mr. D. Aitchison, from London, had a basket of trout weighing 8lb. They were all in good condition, and several of them weighed between 1lb. and 2lb. each. On the 1st inst., the same gentleman was out, and procured 10lb. of fine trout. Mr. Steele, of Glasgow, fishing on the same day, captured a trout weighing nearly 2½lb., besides a good basket of smaller ones. Messrs. Ravensford and Simeon, from London, had 8lb. of fine tench, and several other gentlemen procured fair baskets of fish. On the 2nd inst., Messrs. Ravensford and Simeon had 9lb of splendid trout. On the 4th inst., Mr. D. Aitchison had 8lb. of excellent trout, one of which weighed 1½lb., and Mr. Ravensford secured 5lb. of capital trout. This loch was very rough about the beginning of this month, but it is now in good angling trim.

LOCH-NA-CRAIG.—This famous trout loch was fished last week by several gentlemen from the Breadalbane Arms Hotel, Aberfeldy, and capital sport was got. The loch is well stocked with trout, all of very fine quality, but it cannot be fished without permission from the Earl of Breadalbane or the lessee of the Aberfeldy Hotel.

THE LYON.—This river was in excellent ply for fishing last week, and exceptionally good sport was obtained on the Meggerun Castle waters. On Thursday last Mr. Bullough succeeded in landing six splendid salmon, all in fine condition, and averaging from 14 to 17lb. weight. On the following day he landed five salmon of similar size. On the Chesthill Water, on the 13th inst., Count Chandon killed a fine salmon, and on Friday he had a fair basket, but lost a large salmon.

THE ARAY, ARGYLESHIRE.—On the 6th inst., Mr. Kilpatrick, from the Argyle Arms Hotel, Inverary, landed from the Aray two salmon weighing 7 and 3lb. respectively. On the 10th, Lord Walter Campbell, from Inverary Castle, landed several beautiful salmon from this river, the heaviest of which weighed about 13lb.

THE SPEY.—On the Arndilly water during the week ending 1st inst., five grilse were killed, two of them weighing 7lb. each. On the Birchfield water on the 28th ult., a salmon was captured by Captain Dunbar Dunbar's fisherman. On the Knockando House water, on the 25th ult., Mr. Millar got a salmon and a grilse; on the same water on the 28th, Mr. Moss landed a salmon weighing 18lb. On the Wester Elchies water, on the 25th ult., Mr. Lethbridge had a salmon weighing 7lb., two grilse weighing 3½lb. and 3lb. respectively, and also a sea trout weighing 3lb. Fishing on the same water on the 26th, Mr. Lethbridge had a grilse weighing 7lb., and a sea trout 3lb. On the 29th he had two grilse weighing 6½lb. and 5½lb. respectively, and on the 30th, a grilse 5½lb. For the week ending Ausust 8th, anglers had very indifferent sport on the Spey. The river was getting too low and clear, and although fish had been reported very plentiful very few were caught. On the Carron Cottage section, on the 4th inst., Mr. Jervoise Smith killed a salmon 10½lb. weight, and a grilse weighing 4½lb. On the same day a salmon was killed by a gentleman fishing on the Pilcroy Lodge water. On the Arndilly water Mr. Myburgh's fisherman killed five fish in fine condition during the week. On the Wester Elchies water Mr. Charles Lethbridge landed a grilse weighing 6lb., and another 3½lb. on the 1st inst. On the 2nd he had a salmon weighing 7½lb.; on the 4th he had a grilse 6½lb., and on the 5th two grilse weighing 6lb. and 7lb. respectively. Fishing on the Fiddoch on the 4th inst., Mr. T. Errard killed 6lb. of fine trout. Mr. Charles Stewart got 40 yellow trout while fishing in the some stream. Messrs. McGowan, sen. and jun., of Aberlour, killed 15lb. of trout, and Messrs. Middlemass, Laing, and Hendry reported an aggregate capture of 16½ dozen trout. On the Aberlour House water on the 9th, Mr. Duff landed a grilse weighing 7lb., and on the 11th he had a salmon of 6lb. weight. On the same day, Mr. Stewart secured a salmon weighing 7lb. On the Wester Elchies section, on the 5th, Mr. Lethbridge landed two grilse, weighing 6½lb. and 6lb. respectively. On the 12th, the same gentleman had a salmon and two grilse, weighing respectively 8lb., 6lb., and 5½lb. On the Fiddoch, on the 9th, Messrs. C. and S. Richardson had a basket of thirteen dozen trout, and Captain McEwan had one dozen on the same day. On the 11th, Messsrs. Middlemass and Beaton reported a catch of ten dozen yellow trout.

SPLENDID CATCHES OF TROUT IN ORKNEY.—Splendid sport has been recently got in Broadhouse Loch, Orkney, by a large number of anglers. Mr. J. S. Carsiter, Kirkwall, in one day, killed 13 fine trout, some of them 1½lb. and others 1lb. each. Mr. Fraser, in one day, landed thirty-nine trout weighing 24¼lb. Sixty-five trout were captured in this loch by Mr. Beker. This gentleman has fished the loch for the past two months with remarkable success, his average for each hour's fishing being 2½lb., and his best basket consisting of thirty-nine trout weighing 27¾lb. Fishing on the Loch of Twatt on the 8th inst., Mr. Smith, Edinburgh, killed forty-one trout, several of them over 1lb. weight. Trout in the Loch of Steinness, Orkney, are now reported to be taking well when the weather is suitable. Last week some good sport was made. Sea trout are large, strong, and in good condition. The following are the most of the takes for the week:—August 5th, Messrs. Chambers and Smith, Dumfries, in one boat had seven trout weighing 5½lb, Mr. McLaren, Aberfoyle, had a basket weighing 6½lb., two largest trout weighing 3¾lb. On the 6th, the same three gentlemen landed thirty-six trout, each basket averaging 8½lb.; and on the 8th, they had nineteen trout, the largest two of which weighed 2½ and 2lb. respectively. On the lower end of Harray Loch, two gentlemen from Kirkwall landed forty-five trout on the 4th; and on the following day, another party from Sandwich secured thirty-five trout.

EXTRAORDINARY CATCHES OF TROUT IN ARGYLESHIRE LOCHS.—For twelve days, from the 4th to the 12th inst., the various small lochs in the district of Kilmelford, Argyleshire, yielded no fewer than one thousand two hundred and seventy-two trout, all of good size and in excellent condition. Fishing from the Cuilfail Hotel, the various anglers' respective captures were as follows:—On the 4th inst., Mr. Robert French, Glasgow, fished Loch Dubh Mohr, and secured forty-two trout; Mr. W. J. F. Nelson, Edinburgh, procured ten good fish from Loch Loskan Mohr; Mr. R. D. Shaw, Hamilton, had a basket of seventy-seven trout from Loch Trailaig. On the 5th, Messrs. Robert and James French secured eighty trout from Loch Avich; Mr. Shaw had sixty-one from Loch Schrienge; and Mr. Nelson had fifteen from Loch Drimminin. On the 6th, Colonel W. S. Young and Mr. C. S. Sharpe, of London, captured forty-five trout from Loch Drimminin; Messrs. R. and J. French, fishing the hill lochs, secured seventy-two trout. Loch Trailaig was fished by Mr. and Mrs. Beachcroft, who captured twenty-four fine trout. General Sir Charles Stavely and Mr. W. Stavely captured fourteen trout from Loch Loskan Mohr; and Mr. Nelson took twenty-seven trout from Loch Pearson. On the 7th Messrs. R. and J. French had seventeen trout from Loch Tralaig, and Mr. Nelson had thirty-one from Loch Dubh Mohr. On the 8th Mr. Nelson had twenty-eight trout from Loch Tralaig; Messrs. R. and J. French had sixty from Loch Schrienge: and Mr. and Mrs. Beachcroft had three dozen from Loch Melfort, On the following day the latter party had twenty-seven trout on the same loch. On the 11th, Colonel Young and Mr. Sharpe landed forty-three sea-trout from Loch Melfort. On the 12th, Mr. J. S. Francis, London, had fifty-one trout from Loch Avich, and Mr. Gavin Shanks, Maryhill, secured fifty-seven trout from Loch Schrienge. On the 13th, Colonel Young and Mr. Sharpe had twenty-four trout, and two sea-trout from the Melfort River, and Messrs. Shanks had seventy-nine trout from Loch Trailaig. On the 14th, fishing on Loch Pearson, Colonel Young and Mr. Sharpe secured thirty-two sea-trout; Mr. Shanks took sixty-three trout from Loch Drimminin; Mr. J. S. S. Francis had fifty-one trout from Loch Dubh Mohr; and Mr. Beachcroft captured fifty-five trout from Loch Avich. On the 15th, Mr. Shanks captured fifty-seven trout from Loch Pearson, and took two sea-trout from the Melfort river; Messrs. Beachcroft and Francis had thirty-eight trout from Loch Schrienge. On the 16th, Mr. J. Francis fished the hill streams in the locality, and captured thirty trout; Mr. Beachcroft had eighteen trout from the Melfort river and Mr. Sharp had eighteen sea-trout from the Euchar river.

# CLUB REPORTS.

### AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Harding, bream, 6lb. 5oz.; roach, 1lb. 5½oz.; Mr. Moir, bream, 3lb. 3oz.; roach, 14½oz. from Dagenham. Mr. Dwelly, roach, 1lb. 9oz.; dace, 1lb. 10oz. from the Lea. Mr. Squire, roach, 3lb. Mr. Say, 4 bream, weight 11lb. 8½oz, two of them weighed 7lb.; roach, 1lb. 9½oz.; perch, 4oz. August 27th, general meeting night, and to arrange roaming match.—J. WORLEDGE, sec.

### BATTERSEA FRIENDLY ANGLING CLUB.

On Tuesday, August 12th, after the business of the club had been finished, the celebrated Woking Diver (Mr. G. Butterworth), and the Duck (Mr. Sheppard) were presented with a splendid ribbon, in remembrance of the way in which they have at various times fallen in the water. On the 17th inst. Mr. G. Munford, from Amberley, bream, the largest going 3lb. 2oz., total weight, 7lb. 4oz.; Mr. Andrews, roach and bream; M. F. Newton, roach and gudgeon; Mr. H. Martin, roach, perch, and gudgeon. Members are requested to notice that Mr. G. Edwards' prize is postponed from Aug. 24th to Sept. 7th.—A. T. SAMPSON, hon. sec.

### BIRMINGHAM AND DISTRICT AMALGAMATED ANGLING ASSOCIATION.

The annual contest of the Old Green Man Piscatorials was fished on Monday, August 18th, the lake at Westwood Park being kindly placed at their disposal for that date. The prizes were numerous, and very good; in fact I do not think I should be far wrong if I say that I think they are the best lot of prizes ever fished for by any club in the Midland Counties. On account of this the contest was very keen, and at the finish it was very close; in fact, so close were the first five together, that it was impossible to tell who had won till all the fish had been weighed. The rule was to fish for two hours, and we fished from 11 to 1 o'clock, and when the fish were weighed up the result was as follows:—First prize, Mr. W. Peakeman; second prize, Mr. H. Day; third prize, Mr. I. Woodcock; fourth prize, Mr. S. Hawkins; fifth prize, Mr. J. T. Allen; sixth prize, Mr. J. Jenks, sen.; seventh prize, Mr. B. Hawkins; eighth prize, Mr. A. Davis; ninth prize, Mr. J. Jenks, jun.; tenth prize, Mr. F. Eaves; eleventh prize, Mr. E. Thorn; twelfth prize, Mr. H. Medlicott; thirteenth prize, Mr. R. Howell; fourteenth prize, Mr. C. Evans; fifteenth prize, Mr. J. Gallagan; sixteenth prize, Mr. C. Lowe; seventeenth prize, Mr. T. Shaw; eighteenth prize, Mr. R. Yates; nineteenth prize, Mr. I. Stanley; twentieth prize, Master H. Allen; twenty-first prize, Mr. W. Davis. Great praise is due to the referee (Mr. T. Duddleston), and the umpires (Mr. Gill, Mr. Floyd, Mr. Grice, and Mr. Smith), for the way in which they performed their several duties. After the contest was over, we adjourned to the Rifleman's Arms Hotel, where a capital dinner was provided for us by Mr. W. Hurd, the worthy host, to which ample justice was done, and then we returned to the park to again practise the gentle art. and play havoc among the finny tribes till dusk, and some good sport was obtained. Some of the members who were not eligible to fish in the contest were at the water early, and some good baskets were the result. Notable among these were Mr. Beardmore, Mr. Mills, Mr. Hewett, and Mr. T. Egginton. The whole of the business and the whole of the pleasure passed off without a single hitch of any kind, and we reached home about 10 o'clock, after spending perhaps the most enjoyable day any of us will experience during the present fishing season.—JAMES T. ALLEN, hon. sec.

### BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

The annual general meeting of the above association was held on Monday evening, August 11th, at the White Hart Hotel, Old Market-street, Mr. J. Hadden presided, and there was a very fair attendance of members. The business of the evening was set apart for the election of officers for the ensuing year, auditors' report, &c. The chairman proceeded punctually at 8 p.m., as there was a lot to be got through in a little time, the first item of the evening being the principal minutes of the year, which were read and passed. The auditors (Messrs. Cornish and Ford), having read the balance sheet, said they were pleased to see such a handsome surplus, and hoped before long to report a much better balance. Several suggestions were thrown out for the welfare of the association, and a vote of thanks accorded to the officers and committeemen for the able manner in which they had conducted the business of the year. The election of officers resulted in the following being again re-elected:—Mr. J. Hadden, president; Mr. H. Inch, vice-president; Mr. Lewis C. Wride, secretary; Mr. W. G. Leigh. treasurer; Mr. Cornish, auditor; Messrs. G. Pain, J. A. Everett, F. David, J. Inch, F. A. Withers, F. H. Julion, W. H. Stephens, A. Matthews, and F. Cox, committeemen; the newly-elected officers being Mr. D. Ford (auditor), and Mr. S. Fox (committeemen). This brought the meeting to a close, which passed off satisfactorily.—LEWIS C. WRIDE, Sec.

P.S.—New tablets will be ready on September 1st, and we should advise members to procure them as soon as possible, as we anticipate having a contest about the 2nd of the same month. We should also say all visiting Highbridge should give Mr. R. Card, Coopers' Arms Hotel, a call, where they can get home comforts at reasonable rates.

### BROMPTON ANGLING SOCIETY.

Some of the members during the last week have been doing well in the way of big takes; Mr. Anstiss having 30lb. of good tench, the heaviest going 2¼lb.; Mr. Roach getting well amongst his namesakes, 18½lb., the heaviest 1lb. 10oz.; Mr. Ducken, 25lb. of good bream; Mr. C. Brown also having some good bream. On the 17th inst., Mr. C. Saunders having some nice bream, the heaviest going 3¼lb. Messrs. Moodie and Burbidge, dace; Mr. Ducker, bream; Mr. Stonebridge, dace and barbel; and myself, bream and roach.—W. DUTTON, Sec.

### CAVENDISH ANGLING SOCIETY.

Good shows of fish have been the rule with us since the opening. On the 17th we had an excellent show of roach, bream, perch and dace, contributed by Messrs. Granfield, Young, D. H. Reeves, A. Field, Brett, Brickman, Lee, &c., which not only filled the trays of the Cavendish Angling Society, but the teatrays belonging to their esteemed host, Mr. Humberstone. By a unanimous vote at a special meeting held on Thursday, the 14th inst., Messrs. C. Blackman and H. Reeves were expelled the society for illegal practices.

### CAXTON ANGLING CLUB (BECCLES).

The third pegged-down match (50 yards each boat), of this club took place on Saturday last just below Boater's Hill, twenty members taking part therein. Angling commenced at 3 o'clock and terminated at 7 o'clock. The fish were afterwards weighed at the White Swan, and presented a very nice appearance as they were laid out on dishes on the table, nineteen members weighing in their various catches, no fish under 7in. being allowed. Mr. Hooker succeeded in taking the heaviest catch, amounting to 7lb. 2½oz.; Mr. Ulph, 4lb. 13½oz.; Mr. Piper, 4lb. 6½oz.; Mr. Chase, 3lb. 4¾oz.; and Mr. Palmer, 3lb. 1¾oz. Mr. Palmer was the winner of the special prize for the largest fish in the competition, a roach weighing 1lb. 3½oz. Both the tide and clearness of the water were against the anglers, not much sport being expected under the circumstances. The next and last match for the season is fixed for the 20th of September.

### CITY OF LONDON ANGLING SOCIETY.

The following members weighed in from Amberley on the 17th:—Mr. Chambers, bream, roach, and dace; Mr. Hobbs, bream; and Mr. G. Blackwell, dace. Mr. Castell had bream from the Welsh Harp.—CAS.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly meeting was held on Monday last, Mr. Parry in the chair. The minutes of the previous meeting were read and confirmed. Mr. Wood had a splendid show of roach from private waters, thirty-one fish weighing 28lb., taken on Saturday last; the same gentleman had 24lb. on the following Monday, as well as some handsome perch and remarkably fine gudgeon. Mr. Beck, chub and dace with the fly, from the society's water at Sewardstone, also two trout, which he returned to the water. Mr. Hall, on the 14th and 15th, had 26lb. of very fine dace, and 5lb. 8oz. barbel, from the Thames; Mr. Rice, 18lb. roach, ranging from ½lb. to 1lb. each, from the Sewardstone waters; Mr. Colls, some fine roach and dace from the same waters. Monday next being the "musical evening," it is hoped that there will be a good muster of members and their friends.—HENRY HOWSE, hon. sec.

### DOUNE ANGLING CLUB.

The second competition of this club for the season took place on Loch Leven on Saturday, 9th inst. The weather was very hot, with a soft easterly wind, and very favourable for good sport. The club had three boats out, with five competitors engaged, whose aggregate catch consisted of 29 trout weighing 23lb. 6½oz., and the prizes being gained as follows:—1. Mr. Graham Reid, six trout, 7¼lb.; 2. Sergeant McMillan, 11 trout, 6lb. 8½oz.; 3. Mr. A. Ferguson, eight trout, 5¼lb. The heaviest trout proved a very fine fish, weighing 2lb. 13oz., and was killed by the first prize-winner.—J. McG.

### EASTERN COUNTIES ANGLING SOCIETY, GREAT YARMOUTH.

A special meeting of this society was held at the Duke's Head Hotel, Quay, on Friday evening, the 8th inst., the president, Dr. Mitchell, being in the chair, for the purpose of making arrangements for the first contest of the society. It was determined that Mr. Freeman's (the vice-president) cup would constitute the first prize; the president's gift the second; a pair of silver spoons presented by Mr. Seaman (the acting secretary) the third; and the society's special prize the fourth. It was arranged that the competition should be fished on Rolesby Broad, four boats. The day fixed upon was Tuesday, the 12th inst., and the time from 10.30 a.m. until 5.30 p.m. Fully twenty gentlemen entered their names as competitors. According to agreement, on Tuesday morning the match was commenced. Unfortunately, however, we were overtaken by a thunderstorm of unusual severity, which lasted the most of the day. This naturally had a damping effect, not only on clothes, but likewise on the spirits of the competitors, the result being that when time was called, and the various boats drew around the committee boat to weigh in, we could very easily see that our first match was a failure, so far, at all events, as weight went—some of our best anglers presenting faces much longer than their baskets. The greatest weight (and the one which obtained for the catcher the first prize) scaled a little over 6½lb., the second and third almost a tie at 5lb., whilst the president obtained the fourth prize with only 4½lb. Considering the large catches which have of late been taken off this justly-celebrated Broad, we cannot account for the smallness of ours, unless that the severe thunderstorm had driven the fish off the feed; this hypothesis is probably the correct one. There have been some good catches weighed in during the week. Messrs. Freeman and Mitchell, 46lb.; Messrs. Bunn and Bacon, 39lb.; Master Freeman, 96lb.; all off Rolesby or Ormsby Broads. Many minor catches have also been reported. It has been determined that a second match will take place in about three weeks' time.

[Received too late for last week.—ED.]

### GREENWICH ANGLING SOCIETY.

Three members, Messrs. J. Ware (secretary), H. Ware, and G. Allen, were out at Ormsby Broad, Norfolk, on the 18th, 19th, and 20th August, and weighed in 18st of bream. This place can be highly recommended. The Sportsman's Arms, kept by S. Richmond, adjoining the Broad, has very good accommodation, and the charges are very reasonable.—J. WARE, sec.

### GRESHAM ANGLING SOCIETY.

The usual weekly meeting of the above society was held on Tuesday evening at the Masons' Hall Tavern, Mason's-avenue, Basinghall-street, Dr. Lloyd in the chair. The minutes of the last meeting having been read and confirmed, a letter was read from Mr. Chambers, with reference to the efforts he is making to procure a piece of water for the society. Capt. Alfred explained that Mr. Bentley was also absent upon the same business; but that he would bring up a report to the next meeting. He also proposed Mr. P. Lesiter as a member of the society, and the proposition having been duly seconded by Mr. Crumplen, the ballot was fixed, in accordance with the society's rules, for the 2nd September. Some very good sport has been obtained during the past week by several of the members; Mr. Harding having done especially good business at Ringwood, where some very fine roach and dace have been landed. Arrangements are about being made for a musical evening; the date has not yet been fixed, but the secretary will be very glad to receive the names of any musical members willing to assist in the programme. The usual vote of thanks to the Chairman brought the meeting to a close.—H.

### GLOBE ANGLING SOCIETY.

Although the majority of our members were out on the 17th inst., they failed to produce a very great display of fish. Amongst those most successful were Messrs. J. J. Holmes, S. Howell, D. Thomas, H. Lake, W. Brown, S. Orrow, C. Ellis, G. Brown, H. Jeffries, and W. Fitzgerald, with 5lb. 14½oz., 4lb. 7oz., 3lb. 5½oz., 3lb. 7oz., 14oz., 1lb. 4oz., 1lb., 1lb. 1oz., 1lb. 12oz., 1lb. ¾oz. respectively, consisting of roach, bream, dace, perch, and gudgeon.—J. J. HOLMES, Sec.

### HIGHBURY ANGLING SOCIETY.

Mr. Frank Temple had a capital show of dace (15½lb.) from the Thames on the 17th inst.; also roach and gudgeon. Mr. S. Howell, jun., likewise weighed in some good dace and gudgeon. Members are particularly requested to attend at their headquarters on Wednesday evening next, the 27th inst., in order that final arrangements may be made as to the number intending to be present, at the 15th annual dinner, which takes place at Mr. Lyndsell's, the Pied Bull, St. Margaret's, on Saturday, the 30th inst.—J. E. WHEATLEY, sec.

### INDEPENDENT BROTHERS ANGLING SOCIETY.

Our show of fish on the 17th inst. was very fair, not so much in quantity as quality. Messrs. Leader, Clark, Coomes, and Moore were to the front with barbel, bream, perch, roach, and dace. Our return visit takes place on Tuesday next, August 26, at the clubhouse, Bird in-Hand, Long-acre, W.C. (host, Mr. Waldock), when we shall be pleased with the company of as many brother anglers and friends as can make it convenient to attend. Not having the addresses of the new clubs enrolled on the Association, we cannot communicate with them as to our return visit; but we hope they will accept this notice the same as if we had written, and pay us a visit.—H. MOORE, sec.

### IZAAK WALTON ANGLING SOCIETY.

The show of all kinds of fish have been very good this week. Messrs. G. and G. P. Rolt have twice filled the trays with fine bream. Mr. G. P. Rolt had the good fortune to secure a very handsome carp, on Saturday last, which weighed 7½lb. The three special prizes fished for on the 17th inst., at Dagenham Lake: Mr. H. Butt was first, Mr. W. Wilkinson second, Mr. B. Crook third.—H. B.

### LINCOLN ANGLING SOCIETY.

Our members were out on August 17th trying the much abused Regent's Canal. Their efforts were crowned by the undermentioned successes:—Mr. Blyth, nine roach, weighing 1lb. 10oz.; Mr. Gramlick, seven roach, 2lb. 9oz. Messrs. Blane and Pearce also had a nice show of roach. Mr. Bingle, our one-handed champion, had a fine take from the Thames, consisting of one chub, 3½lb. ; two perch, 1lb. 11oz. ; roach, 2lb. 8oz. ; dace, 2lb. 4oz. ; and 1lb. 15oz. gudgeon.—J. Bingle, sec.

### NORFOLK ANGLING SOCIETY.

On the 20th, Mr. Measures had a fine show of bream and roach from the Ouse, weighing 29lb. Mr. Foulger also a very nice show of roach, dace, perch, and gudgeon from the Thames ; Mr. J. Galloway showing a very handsome trout from the Hodder, the finest specimen we have had this season. — Thos. Buckingham, sec., August 10th.

### PECKHAM BROTHERS ANGLING SOCIETY.

The members of the above club fished at Kingston on the 17th inst., but could not bring the match to a successful issue, Messrs. Parson, Duke, and Matthews alone having fish. I hope the next time we fish there members will keep as far from the drain as they can. Messrs. Astley, Stidolph, Beard, Otzen, and Parsons give prizes for an open match on the 24th, all fish to weigh. On the 31st the match for the cup will be fished at Amberley, from the first push-down style to the railway arch at Bury. We shall be pleased to welcome any visitor on Monday next. The chair will be taken at eight sharp.—Gadfly.

### THE PISCATORIAL SOCIETY.

The usual meeting of this society was held at Ashley's Hotel last Monday. Among those present were Dr. Brunton, Rev. G. Sumner, Dr. Coates, Messrs. Fennings, Blundell, E. Russell, H. Gray, Goodger, W. Jesse, H. Brougham, H. Harden, Adlington, Meyer, Booker, &c. Mr. D. Goodger was unanimously voted to the chair. The minutes of the previous meeting were read and confirmed. A letter was read by the Secretary from Mr. Huggett, who is staying at Eastbourne, where he regrets the absence of his favourite sport. Since the last meeting Dr. Brunton has been to Hampshire, and although the water was very fine, and he only fished in the morning, he succeeded in basketing seven grayling, weighing 7lb. 2oz., besides returning several smaller ones to the water. The Doctor used a Scotch fly, which, in all probability, had never been seen on the water before. Mr. Jesse and Mr. Blundell, who have just returned from a holiday in Ireland, where they devoted most of their time to fishing in Lough Melvin, gave a description of the sport, place, and pleasures. Mr. Jesse fished five days, and Mr. Blundell seven days, the joint bag was one salmon 10½lb. (Mr. Blundell), seven ferox 22½lb., 103 brown trout 90lb., one grilse 3½lb., five gillaroo trout 9lb. Mr. Gray and Mr. Lauder produced a working specimen of a new rod ring of their joint production, and they claim that it is impossible for the running line either to catch or hitch in it. The model was critically examined and thoroughly tested by the members present, and the ring appeared to be a success. Mr. Harden gave his experiences of some of the Norfolk Broads, which were not wholly favourable, so he transferred his attentions to the River Welland at St. James, Deeping, and fished most successfully for dace and roach. Although Monday was the day for the bream competition, it was not until nearly 11 p.m. that these fish were represented on the table of the club. Mr. Foreman then arrived from the Northamptonshire Nene with a magnificent show, consisting of 14 bream weighing 59lb. 6oz., the largest being 6lb. 1oz. Some of these fish will hereafter doubtless decorate the rooms of the club. Mr. Meyer fished at Shepperton for bream, but was only rewarded with barbel. "Our Noble Selves" was proposed by the Chairman, and duly honoured. The Rev. Sumner, who has developed a penchant for statistics, in proposing the health of the Chairman, mentioned that recently, whilst walking from the Railway Bridge, Richmond, to Teddington Lock he counted the number of rodsters. There were, he said, 31 bottom-fishers on the bank who only confessed to the capture of one dace between them ; 19 fly-fishers, mostly using a gentle or bit of kid at the point of the hook ; 11 punts carrying 27 rods : making a total of 77 rods. The humorous remarks of the Rev. Sumner brought the proceedings to a termination amidst general laughter.—Pro. T. H.

### PERTH ANGLING CLUB.

This club held their third and last competition for the season on Loch Leven on Wednesday. The weather was clear, with a moderate wind until mid-afternoon ; but about five o'clock the sky became cloudy and a fine drizzling rain set in. The club had six boats engaged, with twelve competitors, who reported a total capture of 57 trout weighing 36lb. 12½oz., and the prizes were gained as follows :—1. Sergeant-Major Knight, eight trout, 5lb. 7oz. ; 2. Mr. James Hay, six trout, 3lb. 14½oz. ; 3 and 4, Mr. Turnbull, and Mr. F. C. Weiss, equal nine trout, and three trout weighing 3lb. 13½oz. ; 5. Mr. Wilson, seven trout, 3lb. 12oz. The heaviest trout weighed 1lb. 13½oz., and was killed by Mr. Weiss.—J. McG.

### ROYAL OAK ANGLING SOCIETY.

The members of the above club held their annual contest at Earlswood on Monday, August 4, when Mr. H. Attwood took the first prize, Mr. G. Hunt the second, and Mr. H. Granger the third. Mr. S. Wicksey, of Hockley, last week took 21lb. of roach and dace at Rudgebigh, Staffordshire, and they were all very fine fish.—E. Attwood, sec.

### SMETHWICK ANGLING CLUB.

On the 6th, Mr. Grey, two chub 1¾lb. and 2lb., besides roach and dace. On the 11th, Mr. Bannister, a jack 6lb. and a roach 1lb. 6oz., and some good dace ; Mr. Gray, one eel, roach and dace. On the 14th, Mr. Earle, three jack ; Mr. Goodyear, one jack ; and Mr. Woolaston, a nice dish of dace caught with the fly.—Thomas Bannister, hon. sec.

### STOKE NEWINGTON ANGLING SOCIETY.

The following members weighed in on the 17th inst. :—Mr. W. Webb, 3lb. 14¾oz., bream and roach ; W. Robinson, 3lb. 7oz., roach ; T. Millington, 3lb. ¼oz., bream ; C. J. Robinson, 2lb. 12½oz., bream and roach ; T. Gretton, 1lb. 13¾oz., bream ; C. Martin, 11¾oz., bream ; W. Watkins, 9½oz., bream. A pegged-down match at Pullboro' will take place on September 6th for three prizes presented by Messrs. Brookes, Watkins, and Harris. Mr. T. Harris will give a winch for the heaviest jack taken during the season.—T. Gretton.

### UNITED BROTHERS, DEPTFORD.

Our members were out on the 17th inst. and had some good sport. Mr. W. Tyler 22lb. 4½oz. of roach and bream from the Medway. H. Tyler, 13lb. 15¾oz. of roach from the Medway. W. Windred, 4lb. 3½oz. of roach from the Medway. J. Currans, 4lb. 12¼oz. of bream from Dagenham. J. Payne, 3lb. 7¾oz. of bream from Dagenham. F. Beak, 3lb. 7¼oz. of bream from Dagenham. Messrs. Watts and Smith also had fish.—H. T.

### THE UNITED LONDON FISHERIES SOCIETY.

The next meeting of the committee will take place on Monday, September 8th, at 9 p.m.—R. Ghurney, sec.

### WALTONIANS.

Aug. 17th, Mr. Morris, roach, 7lb. 5¾oz. ; Mr. Jakes, bream, 4lb. 4½oz. Messrs. Togwell, Rushbrook, and Roland also weighed in.

### WALWORTH PISCATORIALS.

On Thursday, the 14th, the members mustered in full force to witness the result of the competition which had been previously arranged to take place on that day, and as it was an open competition, great interest was shown as to the different takes and weights of fish. The prizes were 21s. first, 21s. second, 10s. 6d. third. Results :—Mr. C. A. Beckett, one roach and dace from Richmond (Wheeler), 21lb. 9oz. ; Mr. J. Bedford, two roach from Horford (Bank), 13lb. 14oz. ; Mr. S. T. Weatherhead, three roach and dace, Richmond, Bram, 13lb. 1oz. ; Mr. R. T. Russell, four roach and dace, Richmond, Bram, 11lb. 4oz. ; Mr. A. Broadie, five roach from Surrey (very fine), 10lb. 4lb. ; Mr. F. Grigg, six roach from Surrey (very fine), 7lb. 14oz. ; Mr. Delhaye, jun., seven dace, Twickenham (Cole), 4lb. 9oz. ; Mr. H. Mawbey, eight dace, Richmond (Howard), 4lb. 5½oz. ; Mr. Delhaye, sen., nine dace, Twickenham (Cole), 4lb. 2oz. ; Mr. A. Piolame, ten dace, Hampton, 2lb. 12oz. ; Mr. Griffin, eleven perch, Hampton, 9½oz. Total, 94lb. 4oz. Other members were out, but did not show up in time.—J. Boalch, secretary.

### WAVENEY ANGLING CLUB, BECCLES.

The ordinary monthly meeting of this club took place at the club-room, Caxton Arms, on Thursday evening, August 14th, the president, Mr. J. E. Crisp, in the chair, The minutes of the last meeting being read and confirmed, Mr. G. West, of Bungay, read a paper on "Roach Fishing Tackle." Mr. West's paper was of a thoroughly practical and instructive character, dealing with the various kinds of tackle used by the Nottingham, Lea, and Thames school of roach anglers. Mr. West concluded his paper by impressing upon every fisherman the necessity of attention to small things, for it is the paying attention to every little detail that in a great measure makes the difference in the success of fishermen. On the motion of the chairman, a hearty vote of thanks was accorded to Mr. West for his paper. The next monthly meeting will take place on Thursday, September 11th, when the subject for discussion will be "The Best Method of Fishing for Pike."—J. Hooker, hon. sec.

### WELLINGTON ANGLING SOCIETY.

At the meeting on Wednesday evening, it was arranged that the dinner on the 15th September shall take place at the Flower Pot, Sunbury. That members intending to fish in the competition must give in their names to the secretary on or before the 3rd September, and that those members who will join the excursion by road and dinner must give in their names not later than Wednesday next, the 27th inst. Mr. G. Rodman, of Denmark-hill, and Mr. J. Fyffe, of Leytonstone, were proposed as honorary members. A special meeting will be held on Wednesday, the 3rd September, for the purpose of electing members of committee. All members are requested to attend, as this is also quarterly night. On the 17th, Mr. George Andrews weighed in a handsome bream of 5lb. 4oz., which has been sent to Mr. Saunders for preservation, and a barbel 1lb. 9½oz. ; Mr. Wright, a barbel 1lb. 6¾oz. ; Mr. Newbury, roach 1lb. 14½oz.—W. W. Alexander, sec.

### WEST GREEN ANGLING SOCIETY.

Mr. F. Hoy won one of the prizes given by Mr. Guyver, with 5lb. 8oz. of roach taken at Tottenham ; the other two prizes of Mr. Guyver are continuous. Mr. Elder's prize, and also Mr. Mansfield's, are to be fished for on the 24th inst, from the first loch past the Jolly Barge, near Cheshunt, to Ware.—J. Guyver, sec.

## NOTICES OF FISHING TACKLE, &c.

Watson's Special Prize Reel Lines. — Messrs. W. Watson and Sons, 308, High Holborn, have sent us a sample of their fly-line for trout and grayling fishing of same make and quality as their splendid salmon lines, which obtained the special and only prize awarded for salmon lines at the Fisheries Exhibition. Messrs. W. had paid special attention to the manufacture and selection of material of these lines, with the hope of winning this special prize. They keep these lines in all sizes, and we can strongly advise anglers to write to Messrs. Watson for samples, as they will then at once see the excellent quality of these lines.

Bait Hooks.—Referring to the sliced hook invented by Mr. R. B. Marston, recently referred to in the Gazette, Messrs. T. Hemming and Son, of Redditch, send us samples of a fish-hook in which the top of the shank is pointed and bent at an acute angle. The gut or gimp is fastened on below this. They say, "We have used these hooks very successfully during the last three years, when ledgering and eel-fishing." We do not see why it should not answer very well, though there is risk of the whipping getting cut. Mr. Guise, of Redditch, last year showed us this hook, which he said was his invention. The following letter to the editor of the *Field* is by the leading authority on sea-fishing :—

### Sliced Hooks.

Sir,—The new sliced hook, invented by Mr. R. B. Marston, and manufactured by Messrs. Milward and Son, Redditch, is likely to be much used in sea fishing, and the following baits may be used with it : A large single rag-worm, or a lug, or a lob-worm, the small lamprey or pride, the river lamprey, and the small freshwater eel, all for pollack and bass, and the rag and lug-worms for bream. A piece of squid or cuttle-fish of elongated form may also be used with this hook. The sand-eel or launce may be used as a dead towing bait on this hook ; but, from the great gape of the jaws, the muzzle-lashing round the nose can scarcely be dispensed with to keep all snug. In trout fishing in Ireland with the elver for bait, about the eighth of the sharp top of the hook (Limerick) is left free to hold the head of the bait, and a small lip-hook is often used in both river and sea fishing. I have often found fish caught by the upper hook, especially in pollack fishing. At p. 152 of my work, "The Sea Fisherman," third edition, and p. 140 fourth edition, it will be seen that a stout bent pin is shown lashed on to the back of the hook to keep the piece of squid or cuttle-fish from sliding down on the bend of the hook. Mr. Marston's introduction of the sliced hook would seem to be a development of, and an improvement on, my arrangement above-mentioned, Mr. M.'s plan forming in its chief feature a portion of the hook itself. It will, of course, be necessary to slice the hook with skill and judgment, that the hook be not thereby weakened ; but this matter will doubtless receive due attention from the makers. The quickness in baiting which Mr. M.'s plan promises should recommend it to fishermen generally, who have felt that something was wanting to keep the bait upon the head of the hook.

J. C. Wilcocks.

Plymouth, Aug. 12.

Mr. W. Jones, of the Swan Hotel, Staines Bridge, has brought out a useful folding rule, on the back of which are marked the various sizes of fish below which it is illegal to take them in the Thames. As the T.A.P.S. is very strict in enforcing the regulation as to undersized fish, every Thames angler and every Thames professional fisherman should be provided with this rule, which is also marked off in inches and sections of inches, up to 17in., the length of a takeable Thames pike according to the by-law. Mr. Jones also supplies a similar gauge for fixing on to the side of a punt. One for the Lea would be appreciated by Lea anglers probably.

"The Authors' Ink" (Registered).—"A new and very fluent ink" has been brought out by Messrs. Friswell and Co., of Bushbury Works, Hackney. Mr. Friswell, son of the late Mr. Hain Friswell, author of "The Gentle Life," &c., is one of the first practical chemists of the day. The advantages claimed for this ink are : —1. It writes very freely. 2. It is easy to read. 3. It dries rapidly. 4. It is permanent. 5. It will copy well. 6. It is not sticky. We have given it a good trial, and feel sure that all who have to use much ink will find this "Authors' Ink" in every way a boon and a blessing. Many of our most eminent authors always write with an ink similar in colour to this—viz., a special blue. It is not expensive.

## THE FRESHWATER FISHERIES ACT, 1884, AND THE BY-LAWS WHICH FISHERY BOARDS ARE EMPOWERED BY THE ACT TO MAKE.

WE have received on this subject from the Fisheries' Preservation Association the following communication, now being forwarded by the Association along with the specimen by-laws (to which it refers) to the various secretaries of angling societies and clerks to fishery boards, &c. We have seen these suggested by-laws, and consider them to be very well drawn up, and in a form well adapted to meet the varying peculiarities and circumstances of different localities.

Fisheries' Preservation Association
(President—Lieut.-General Lord Abinger, C.B.),
11, Seymour-street, Portman-square, W.,
August 12, 1884.

SIR,—Referring to my late circular letter, I beg now to forward to you printed specimens of by-laws for the regulation of freshwater fisheries.

They have been very carefully drawn up by Mr. J. W. Willis-Bund for the guidance and assistance of such angling societies and fishery boards (whether boards already formed, or under the new Act to be formed) as may be desirous of adopting or carrying out the provisions of the Freshwater Fisheries' Act, 1884.

These by-laws, it may be added, have been so framed by Mr. Willis-Bund as to meet, he trusts, the varying circumstances and requirements of different localities.

Any further information which may be desired, and this Association can give on the subject, will be readily afforded.—I am, Sir, your obedient servant,

H. A. KINLOCH, Sec.

To the Secretary of the Angling Society, or, as the case may be, the Clerk to the Fishery Board.

BOOKS ON ANGLING, &c.

**Trout-Fishing in Rapid Streams.**
By H. C. CUTCLIFFE, F.R.C.S. Cloth, price 3s. 6d., post free.

**Notes on Fish and Fishing.**
By J. J. MANLEY, M.A. Illustrated. Crown 8vo., cloth extra, 10s. 6d. ; in leatherette, 6s., post free.

The Fishing Gazette.

SATURDAY, AUGUST 30, 1884.

## THE TRENT FISHERY BOARD AND POACHERS.

IF all the fishery boards in the country did their work in the energetic and thorough manner that the Trent Board and our T.A.P.S. display, poaching would soon be stamped out. We publish again this week accounts of most important convictions. The John Groome, of Alvaston, who was fined for spearing fish and threatening to put his spear through the water bailiff, is the man who was complained of by one of our correspondents for barbel snatching in the Trent. If anglers would at once complain to the board as well as write to the press when they see poaching going on, many more convictions would take place.

We hear that the "wholesale hawking of poached trout in Dovedale" turns out to have been a canard, and the fish offered are said to be part of the 1 cwt. of coarse fish poached at Spondon.

Some years ago a gentleman in Sweden sent us an elaborate account of fishing with the "Otter"—how to keel the board, fix the line, &c.,—and said it would be a new and capital method to bring to the notice of British anglers! We informed the writer that if he went to Killarney, he could learn how to use the otter from men whose fathers used it. We have seen it at work, and described it in last year's Tourist Number as a villainous thing. It must be remembered that although the Irish loughs are, many of them, very large, yet the feeding grounds of the fish are often very limited and well-defined.

## IRELAND FOR HOLIDAY MAKERS.

WE are glad to see that this year English visitors are flocking to all parts of Ireland—in fact, no such "season" has been known for many years. There have been hundreds of English anglers at the Westmeath lakes for the mayfly trout fishing, and the rivers and lochs generally are well patronised. This would be the case to a much greater extent if landowners combined to stop "otter" fishing—"cross-line" fishing, and other forms of poaching, which kill all the best fish and make the rest too shy for the fair angler. We regret to say so, but we believe it is a fact that some pot-hunting Englishmen are not above using these things, and selling the trout to London fishmongers.

## AN AMATEUR ANGLER'S DAYS IN DOVE DALE.—(No. 6.)

SATURDAY was an off day with me as to angling. The major plied his art alone, and brought home five brace of fine trout. For my part, as I have become so confidential and friendly with your readers, they may like to know what I do down here when I am not fishing. I will tell them. Saturday was a lovely day, so I and my daughter took a drive across country, and a pleasant drive it was. Buoyant and light-hearted we drove over hill and dale till we came to 'The Peacock," at Rowsley, hoping there to take up our abode till Monday, and leisurely explore the region round about. Beautiful "Peacock," the paradise of anglers! but we were forbidden to rest in thy ancient chambers. "Full, quite full;" was the somewhat stern reply to our modest inquiry. In truth I thought the good landlady regarded me with some degree of suspicion; my personal appearance, perhaps, was not quite up to the aristocratic standard of "The Peacock." Until that moment it had not occurred to me that my outer man was not attractive. You will remember how my felt hat was damaged, and my coat and trowsers had a sort of moth-eaten appearance, from the numerous little circular holes out of which I had dug so many of my troublesome flies. I thought I had given my old hat an air of respectability by twisting a couple of fly casts round it; but on the whole I am afraid appearances were against me. However, my daughter's pleasant face seemed to reassure our good hostess; that stern, firm look about the lips gave way to pleasant smiles. She said we would be certain to find rooms at the Edensor Hotel, and kindly advised us to drive on at once to Chatsworth, which on Saturdays is closed to the public at one. It was then half-past twelve, and the distance four miles. So we started, and got to the entrance just in time. Whilst we explored that wonderful mansion and grounds, we sent our coachman on to Edensor to engage apartments; but it being so close upon Bank Holiday, the Edensor Hotel had suddenly filled to overflowing, so we drove back to the picturesque, ivy-clad "Peacock"—a charming old hostelry, beloved by anglers, who make it their headquarters for fishing "The Wye" and other streams; it is also a pleasant resting-place for visitors to Haddon Hall. And just such another hotel is "The Chatsworth," at Edensor, which, in like manner, commands the patronage of "The Derwent" anglers and Chatsworth sight-seers.

We lunched at "The Peacock," visited Haddon Hall, and of course were enchanted by that quaint old mansion and its curious contents, and the lovely scenery with which it is surrounded. We had not time for a ramble by the beautiful "Wye," which there looked sweet and pellucid, as if nothing had happened to its head waters. (How different an impression did those head waters convey to us when the next day we encountered them in the neighbourhood of Buxton!)

We intended to take train for Matlock, but on reaching the station at a quarter to five we found the four-o'clock train for Buxton just starting with (as the exasperated passengers said) its usual punctuality. So we went to Buxton instead of Matlock, and there we remained till Monday. Buxton is a delightful place—that is all I need say about it. Being interested in the beautiful river we had caught a glimpse of at Haddon Hall, we here explored the sources of the "The Wye," the chief of which is in a remarkable cavern called *Poole's Hole*. These are three in number, called respectively *I*, *Thou*, *He*, and when this trinity becomes unity its singular names become the plural *We*, now changed to *Wye*. At least that is the origin of its name as given to me by a gossiping neighbour at the hotel. I cannot vouch for its accuracy.

We observed in the peat-fed, yellowish water of the stream, which, in passing through the conservatory gardens, is made very ornamental, a goodly number of fish rising. Subsequently we took a southerly walk, following the river with the intention of visiting a romantic spot called "Ashwood Dale;" but half a mile below the town we were stopped by the abominable stench which met us from the river. However healthy Buxton may be from its elevated position, and the natural salubrity of its air, these natural qualities must most assuredly be modified by this horrible effluvium, which seems to arise partly from the gas works, but, as it struck me, more from the town sewage.

From a piscatorial point of view, the conversion of the Wye into an open sewer and receiver of gas emanations must be destructive to the fish for many a mile. How far it counteracts the good effect of the mineral waters on human beings, I will leave the Buxton doctors to say. If the river below the gas works sends forth stinks perpetually, like those of last Sunday afternoon, the value of Buxton as a health resort must surely be greatly diminished; and invalids, unconscious of this disturbing element, may wonder why the Buxton air is not doing them as much good as its reputation may have led them to expect.

On Monday afternoon we returned to the Izaak Walton, and I began to think it time I had caught another fish! I had become rather tired—not to say aahamed—of constantly replying to kind inquiries, such as "What sport?" "Oh! nothing, nothing! Water too bright and low, you know, fish not on the feed, &c. Caught a fine brace" (first it was "yesterday," then "two or three days ago"), but now that it is more than a week since I caught that precious couple, I think it is about time to let them drop. In the evening we again invaded "The Manifold Waters." The major captured two and a-half brace of good fish. I hooked half a brace, and lost him.

Yesterday we devoted to "The Dove," but instead of carrying my rod I armed myself with a walking stick, determined to take a lesson in fly-casting by watching the action of the major. It was really a pleasure to see how tenderly he laid his flies on the water, in amongst the bushes and trees, between and over the mossy stones and rocks—how daintily he handled his fish when he had firmly hooked him. He captured a fine grayling of 1lb. 3oz. and a brace of trout after a morning of toil in the broiling sun. My waning ardour was revived by this piscatorial lesson, as I thought how I would do the same, so in the evening we again attacked "The Manifold"; but I am singularly unfortunate. At my first throw to wet my line I somehow got into a hopeless tangle which took me a quarter of an hour to undo. I then made another throw, and was firmly fixed a good way up in an overhanging beech tree; this was most unlucky just at a time when the trout were rising freely in front of me, and one of them I had intended to cover in that hapless throw. My gut gave way to the bough, so my fishing for the evening seemed to be over, for it was too dark to fix up again; but "necessity is the mother of invention." I invented a way of recovering flies suspended high up in an overhanging branch, and I give it for the benefit of your readers. I drew out my strong line to a little more than the length of my rod, and thus forming a loop of it, I swung the line over the bough, at the same time twisting it round the suspended flies. I felt sure that nothing worse could happen than the loss of my already lost flies, so I pulled vigorously, and down came the branch, and all my flies safe and sound. Once again, I set to work. By this time the full moon was shining brightly and most beautifully on the sparkling water. I threw and hooked a fish. "My first trout by moonlight," I said to myself. He splashed about in the shallow water and amongst the rough stones, but I was fixed on the edge of a slanting rock, from which I could not move forward an inch without slipping into a hole, so I had to make the best of it. I assure you, my reader, it is no easy travelling over the rocky sides of some parts of this picturesque river. I had no wading boots, so I had to keep to the bank, and you know how deceptive things are in twilight, how easy it is to mistake a piece of soft mud for firm rock. I might as well have waded as not, considering the many duckings I got off sliding stones and slippery banks, and all I can say as regards my trout is that I held on to him as long as I could under the difficult circumstances, but at last he broke away from me, and I fished no more. The major meanwhile waded up the stream, and was rewarded with two brace of nice trout as the result of a good deal of hard work; for if the sides of the river are rough, the shallow bed is abominable.

Even yet, with all my misfortunes and mishaps, I am unwilling to believe that I am not just as ardent a disciple as I was when I entered on this new career a fortnight ago; if one can catch no fish there is genuine pleasure to be got in walking by the side of a lovely stream; and it is specially charming when the full moon is shining on the water, and in a spot where the pine woods crown the heights, and the beech, the elm, and the oak combine their undulating and many tinted foliage on the hill sides and cast their shadows on the moonlit river, as it runs deep and slow in a semi-circular sweep beneath and around the beautiful hall of Ilam and the old churchyard.

But I am now beginning to think I can enjoy all such pleasures as these without encumbering myself with a fishing-rod, basket, and net, and uselessly whipping the stream. When I first thought of fly-fishing as a holiday amusement, my imagination had pictured to myself a walk by the side of a sweetly-flowing stream on a lovely summer's evening, when one had only to cast one's flies over the water and draw out the simple trout and grayling till one's basket required the aid of a strong boy to carry it. That was the sort of thing I looked for in fly-fishing. How that pretty, imaginary picture has been dispelled by the reality! how I have been soaked and sodden, torn and scratched, stung by nettles, pursued by wasps, bitten by venomous insects, my fingers lacerated, and coat and trousers torn by my own hooks! how, weary and footsore, with my angelic temper tried to the utmost, I have returned to my hotel! All these things, friendly reader, thou already knowest. Recollections, such as these, I am bound to admit, have a tendency to lessen the ardour which first inspired me.

August 8.—Of Wednesday, the 6th, I have nothing to record beyond the fact that the major—piscator major I mean—started alone after luncheon up the Dale, and returned in the evening with the finest basket that has been taken in the low and bright waters of The Dove for many a day—viz., six and a-half brace of trout and grayling. I, piscator minor, took an evening stroll with my rod. I hooked one fish and lost him, and then I hooked my flies and lost them, and so returned home calm and resigned to my unlucky fate, for it has been with me as usual :—

> " The more the eggs the worse the hatch,
> The more the fish the worse the catch."

Talking about "hooking" fish suggests to me a reason why the Dove trout are so markedly shy. "A burnt child dreads the fire." Every sportsman one encounters says he has caught none, but "hooked" a lot. Now, as this sort of thing is going on day after day, and week after week, I should think there can hardly be an adult trout in "The Dove" that has not some time or other been "hooked," and it can only be when his previous hooking has been so long ago that his piscine memory has forgotten it, that he again permits himself to be deluded, and for the last time, by some such "artful dodger" as our Major.

A. A.

## PRESENTATION OF THE TOURNAMENT PRIZES.

Mr. Thomas Spreckley, President of the Thames Angling Preservation Society, kindly consented to present the prizes won in the recent Tournament. The presentation took place at the Foresters' Hall on Friday evening in last week. The following is a list of the prizes and winners :—

First Competition.—Overhand Fly-casting, with 16ft. rod.—1st prize, Silver Egg Cup, Mr. Malloch ; 2nd prize, Painting of Pike, after Targett, Mr. Geo. M. Kelson.

Second Competition.—Overhand Fly-casting, with 18ft. salmon rod.—1st prize, Silver Cup, value £5 5s., won by Major J. P. Traherne ; 2nd prize, A Guinea Card of Miss Campbell's Baits, and Cassell's Domestic Dictionary, won by Mr. Malloch.

Third Competition.—Fly-casting (Switch).—1st prize, Mr. Bullmer's Landing Net, &c., and a copy of "Darwin on Worms," won by Mr. Malloch ; 2nd prize, Mr. Treloar's Carpet, won by Mr. Kelson.

Fourth Competition.—Fly-casting with single-handed rod.—1st prize, Mr. Malloch, a Postal Weighing Machine, given by Mr. Maddock, and Cassell's "Wild Animals and Birds" ; 2nd prize, Mr. R. B. Marston, One Dozen of Lavender Water, given by Mr. Malloch.

Fifth Competition.—Fly-casting with double-handed fly-rod.—1st prize, Mr. Malloch, Mr. Thomas's £3 3s. Silver Cup, which was placed on the table and greatly admired ; 2nd prize, Mr. Thomas, Mr. Farlow's 14ft. "Francis" Rod.

Special Competition.—Mr. Andrews' Rod, won by Mr. Malloch.

Sixth Competition.—Amateur Casting in Thames style.—1st prize, Mr. Alfred, jun., Silver-plated Tankard, given by Mr. Parker, of the Good Intent, and Cassell's "Illustrated Sports and Pastimes" ; 2nd prize, Mr. Hobden, Mr. Slater's Nottingham Rod, Reel, and 80yds. of Line ; 3rd prize, Mr. Simpson, Mr. Heaton's Spring Balance, and one of "Buckland's British Fishes," given by Mr. T. R. Sachs.

Seventh Competition.—Amateur Casting from Reel in Nottingham style.—1st prize, Mr. Slater, Miss Campbell's Smallest Dog in the World in Case, and a copy of Buckland's "Fishes," given by Mr. Sachs ; 2nd prize, Mr. Malloch, Pennell's three Works on Angling, given by Messrs. Routledge ; 3rd prize, Mr. Hobden, Telescopic Gaff, given by Mr. Richardson.

Eighth Competition.—Amateur Casting towards fixed mark.—1st prize, Mr. Simpson, Watson's "General " Rod ; 2nd prize, Mr. Grandfield, Hardy's Carry-All Creel ; 3rd prize, Mr. Alfred, jun., Hugo's "History of a Crime," and Buckland's "Fishes."

Ninth Competition.—Professional Casting, Thames style.—Mr. Andrews, 1st prize, 100yds. of Salmon Line (Foster's).

Tenth Competition.—Professional Casting, Nottingham style.—Mr. Martin, "The British Sportsman," and Mill's "Political Economy," given by Mr. Day.

Eleventh Competition.—Amateur Casting with 3oz. weight.—1st prize, Mr. Hobden, Miss Christie's East India Cane "General" Rod ; 2nd prize, Mr. Alfred, jun., Allcock's Standard Fly Book, and Macaulay's "England ; 3rd prize, Mr. Simpson, Mr. Gillett's Solid Cane Fly Rod.

Twelfth Competition.—No Competitors.

Thirteenth Competition.—Forked Stick Competition.—1st prize, Mr. Sawyer, Mr. Biggs' Punt Rod and the Rod Holder and Punt Clip ; 2nd, Mr. North, Hodgson's Landing Ring and One Rod Holder and Clip ; 3rd prize, Mr. Holmes, One Booth's Rod and Rod Holder and Clip.

Pegged Down Match.—1st prize, One Guinea cash and Mr. Warner's Guinea Season Ticket to fish Harp, Mr. Mavory ; 2nd prize, 15s. cash and 10s. worth of day tickets, Mr. Osborn ; 3rd prize, 10s. cash and 10s. worth of day tickets, Mr. Gadbury.

"Go-as-you.Please" Match.—1st prize, One Guinea and Guinea Season Ticket, Mr. Tucker ; 2nd prize, 15s. and 10s. worth of day tickets, Mr. Osborn ; 3rd prize, 10s. and 10s. worth of day tickets, Mr. Castell.

Mr. R. B. Marston called over the list, and those of the prize winners who were present then received them from Mr. Spreckley, who made a few appropriate remarks with each, and after the last name was called, referred in a short speech to the various benefits which were derived from these tournaments, even though the weather had been so much against them. They brought anglers together from all parts ; they showed various styles of fishing, and what could be done by ardent competitors in each. Competition was good—(hear, hear)—it kept us alive, made us open our eyes, and was the soul of all kinds of improvement. He referred to the great pains and care Mr. Marston had taken to get up these tournaments ; they had no idea of the amount of time it took to arrange all the numberless little matters, and the amount of correspondence involved. He had much pleasure in moving a vote of thanks to Mr. Marston for the great interest he had taken in getting up these tournaments in aid of the Anglers' Benevolent Society.

Mr. Manning, in a few kind words, seconded the resolution. He quite agreed with their respected chairman, that competition brought the best men together. Mr. Marston was certainly the Father of the Anglers' Tournaments in this country.

Mr. Murphy rose to move that Mrs. Marston's name be included in the vote of thanks—(hear, hear)—they all knew how kindly that lady had presented the prizes last year, and he was quite sure Mr. Marston had received great help from Mrs. M. in carrying out the affair.

Mr. R. B. Marston, in reply, thanked them all, both for himself and Mrs. Marston, for their very hearty vote of thanks. He could assure them that Mrs. M. had helped him very considerably in various ways, and took great interest in the tournament. Next year he hoped the weather would give them all a chance, for rain and wind were much worse for the competitors than for the spectators, and greatly affected the results.

Mr. Spreckley then proposed a vote of thanks to the judges and the other gentlemen who had acted as officers. He had noticed particularly how energetically and well they performed their duties, although wet through. The success of the affair was greatly owing to their tact and exertions.

Mr. Murphy and Mr. Chambers replied.

Mr. Field then proposed a vote of thanks to Mr. Ghurney, which, after being seconded by Mr. Simpson, was, like the previous resolutions, carried unanimously.

Mr. Ghurney said it was a duty as well as a pleasure to him to do all in his power to aid the Benevolent Society, and he was quite sure these tournaments had been the means of making the Society known far and wide. It was going on very satisfactorily. They had £120 in hand, after recently paying out over £80 for cases which required relief. (Hear, hear.) They had a considerable number of prizes which had not been won, but which would be most useful next year. Those who had not received their prizes could get them at 9 o'clock, next Friday, Sept. 5th, at Foresters' Hall, Clerkenwell. Country competitors should write and say where their prizes are to be sent.

The meeting then broke up, and the committee of the Anglers' Benevolent Society discussed a case which was before them for relief, and decided to send £4 at once to a poor widow whose late husband had been a member of the Society.

The annual subscription is only one shilling, and every angler ought to become a member of this most excellent charity.

## ALLEGED POACHING AT OXFORD.

Before the Deputy-Mayor (A. Wheeler, Esq.), president of the Oxford Angling and Thames Preservation Society, Aldermen Carr, Cavel, and Lowe, and W. Ward, Geo. Ward, and W. Brain, Esqrs., Thomas Johnston, of Osney, was summoned, at the instance of the Oxford Angling and Thames Preservation Society, for refusing to stop his boat, on the 19th inst., when so required by two duly appointed water bailiffs.

Mr. Dudley, who prosecuted on behalf of the Thames Angling Preservation Society, said the summons was not taken out with the idea of asking the magistrates to inflict a heavy penalty if they thought the offence had been committed, but simply to convince the general public of Oxford that conduct of this kind was contrary to the Act of Parliament.

Mr. George Randall Cooper, water bailiff, gave evidence, and said, about a quarter past seven on the night in question he went to the upper fisheries and another water bailiff went on the path on the other side of the water. Mr. English, the other bailiff, asked some men in a boat to allow him to examine it, and they immediately punted up river to the London and North-Western Allotment Gardens, instead of complying with his request. He and Mr. English followed them in a boat, and examined the punt in which the defendant was, and they found it was wet and dirty, as if it had been recently used for netting. Cross-examined by the defendant : He could swear to the defendant, but he could not say who the other two men were. He had inquired of persons in the Fisherow whom they had seen in the punt with Johnson, because he was anxious to discover their names. By Mr. Mattam, Magistrates' Clerk : What did you consider the defendant had been doing ? Mr. Cooper : Netting in the river, and that is an offence at that time of night. The defendant, labouring under the impulse of the moment, truthfully remarked, "I have been everything that is bad, but I have never been a poacher at night in my life." (Incredulous laughter.)

Mr. H. English, bookseller and newsagent, 38, St. Ebbes-street, gave corroborative evidence—three men were in the boat, and one was Johnson. He saw them putting something in a sack. He asked them what they were doing, and one replied they were cleaning out their boat. They punted towards the opposite side, and then went rapidly up river. He told the men that he was a water bailiff, and if they refused to have the boat examined they must take the consequences. He afterwards entered the punt, and found it was very wet. Cross-examined by the defendant : He did not tell the men that he was a water bailiff until they were going up the river. It was rather a dark night. He had not been "knocking about Hythe Bridge, treating people to find out who was in the boat. In reply to Mr. Dudley, Mr. English said he had been endeavouring to discover Johnson's accomplices. By Mr. Mallam : The men did not make any reply when he asked them to allow him to examine the boat. They must have heard him when he called to them. He did not see any of the men taking fish.

Mr. Mallam stated that, in his opinion, the men must first have committed an offence before they could be called upon to stop. Mr. Dudley maintained that if the bailiffs had reasonable suspicions that the men were on the river for the purpose of taking fish, they had a perfect right to call upon them to stop, and the refusal to do so was an offence under the Act of Parliament. The defendant facetiously said he frequently brought his young "gal" down the river in a boat. (Laughter.) If the man called on him to bring the punt, how was he to know who he was ? This was private water. When he was called in this way, was he to take the boat at once to the bank ? How did he know they wouldn't chuck him and his "gal " into the water ? (Laughter.) He was not on the river at the time it was stated. The neighbours would say these two men kicked up more row than if there were sixteen people being drowned. (Laughter.)

The magistrates retired to consider the case, and on returning into Court the Deputy Mayor said they had taken great pains to arrive at a decision, and they were of opinion that the words of the Act of Parliament were so vague that, notwithstanding the suspicious circumstances surrounding the case, they could not convict. Mr. Dudley asked, if it was necessary, would the magistrates grant a case ? It was an important matter, and the words of the Act of Parliament were so vague that it might be thought proper to finally settle the meaning of the word "stop." The Deputy Mayor said he thought the Bench would be pleased to grant a case. It was a matter that should be cleared up. Mr. Dudley : Then a case would be granted. The Deputy Mayor : Certainly ; that is the unanimous feeling of the magistrates.

Bewlay and Co.'s Tobacco.—We have received for notice some of the most excellent tobacco sold by Messrs. Bewlay and Co., 49, Strand, and 143, Cheapside—"Shag," "Bird's-eye," and "London Mixture." The shag we gave to a friend, who says he never smoked better, and the other we consumed with much gratification in a sweet, old "briar." It was while on an angling visit to one of England's greatest novelists that we were first introduced, and, with due ceremony, to Bewlay's bird's-eye. "I have smoked it for thirty years, and I can never get any equal to this," he says, as he hands us a magnificent and finely-coloured meerschaum in which to try it ; and certainly it is the perfection of "bird's-eye" tobacco. Their "London Mixture," while much stronger, is another equally good, and also absolutely pure, tobacco.

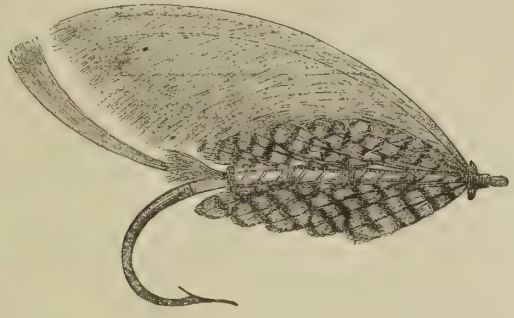
## ON THE DESCRIPTION OF SALMON FLIES.

BY MR. GEO. M. KELSON.

### MAJOR TRAHERNE'S PATTERNS *(Continued).*

### NO. 12.—THE "JAY P.T."

IT seems so strange that ideas which awaken and urge on the desire of what is erroneous in fishing and in fly-tying find so ready an access to our untutored minds. Is not the young wader roving about up round his waist in a bouldery pool certain to pick up objectionable tricks which invariably leave their trace behind ?—their indelible evidences to assuredly distract and discourage him in the future. Ask, for example, any angler who involuntarily "drops his fly" (an acquisition easily attained, let me assure you, and although the habit may not be attended with any special danger in certain localities, he would, in others, be breaking every hook)—ask, whether it is not next to an impossibility for him to keep the fly well in the air behind, and whether any attempt to do so is not dreadfully fatiguing. I think we may depend, that, in either pursuit, good habits are inculcated by acts of reason in a continued struggle through many tempting moments. And now that we are drawing near to the more confused and less comprehensible branches of this study where crippled creeds must not go groping about in twilight, I may remind those who have never yet made a tapered body that it is much more difficult to forget and overcome bad habits than to acquire good ones.



It was the hackle question we were on, and if we get wrong with these feathers, it will not be very easy to get right. Ordinary hackles—I mean from poultry—that run up the body of a fly are better fixed in at the beginning of the second turn of the ribs, than at the butt ; but in placing them there under a tinselled body, avoid making an unsightly ridge. Form a miniature gutter with the point of the stiletto in the floss silk underneath the tinsel before the varnish on it is dry, and you can stroke and shape the point of the hackle, if you wet it first, to fit in it. The hackle need not be tied there, as the tinsel holds it sufficiently.

When feathers are inserted along the body, such as "Jay" (see illustration), tippets, red crow, &c., this grooving business is very essential on both sides of the hook ; then the vice, which is of the greatest service sometimes to those who treat fly dressing as a hobby, is called into requisition. The hook, as usual, being secured at the bend, you take a fine needle at the point in one hand and at the eye in the other, and press it into the undried varnished silk, parallel with the shank.

These patterns, though so much more elaborate than any of the old, ordinary type, are not so expensive as fishermen imagine. One dozen toppings of this size cost about three shillings, and five would probably be ample for this one. The other feathers in it may be bought at a mere lynominal price. There are one or two first-class dressers to be found who would charge no more than £2 per dozen for some of these magnificent specimens.

The "Chatterer" (No. 9) is certainly an exception ; but salmon anglers are not always so very particular, if the flies are well made. I should think two-and-sixpence a fair price for "Bluebell" (No. 1). This is less than some metropolitan firms charge for Britannia, The Popham, and other standard patterns.

The time of year for most of these is past—to return in the opening of the season '85, when no doubt my remarks will appear insignificant, and my praises of them inadequate.

When upon the subject of "Jay" as a hackle, I may give an illustration as well as my ideas of its management. The feather is one of the cheapest and yet most useful to us. It is only in the old birds we find the blue bars bright and distinct ; the colours in the inferior feathers have the appearance of running one into the other, and are not nearly so attractive.

The above illustration is one of the best I have been able to get, and gives a fair idea of the perfection of the workmanship. I am aware some of the former are below par ; but engravers are not very familiar with the shape and perspective of salmon flies ; and as these were in the Exhibition for six months, and have been conveyed several hundred miles, the feathers are consequently slightly shaken and out of place. This one may be described as follows :—

Tag : Silver twist and canary-coloured floss.
Tail : Topping and red crow.
Butt : Black herl.
Body : In four sections, butted. No. 1 : Topping-coloured silk, with four Jay points (as illustrated)—two above and below. 2 : Tippet-coloured silk, and repeat the Jay's. 3 : Red crow coloured silk and Jays. 4 : Red claret silk and Jays, as before.
Ribbed : Fine oval tinsel.
Wings : Toppings.
Horns : Red macaw.
Head : Black herl.

## THE TROUT STREAMS OF ABERDEENSHIRE.

### THE EBRIE.

OF the many excellent trouting streams in Aberdeenshire, few possess greater attractions for the angler than the subject of this notice. Unless the water is unusually small, good baskets can always be counted on. The Ebrie rises in the parish of New Deer, and after pursuing an eastward course for about 10 miles, falls into the river Ythan, at Inverebrie, four miles from the village of Ellon. The chief proprietors are Lord Aberdeen, Mrs. Leslie, of Nethermuir ; Mr. Ross, of Arnage ; and the Gordon's Hospital Trust. The laird of Arnage alone preserves. The greatest extent, and perhaps the cream of the water, is bounded by the property of the Earl of Aberdeen, who generously allows free scope to anglers, provided no damage is done to his tenants' belongings. With this privilege accorded, it is distinctly stipulated that there must be no trespassing in the adjacent fields or injury done to the growing crop.

The Ebrie has little wood along its bank, although the country is generally well wooded round about. The district is more agricultural than pastoral, and though tending to be hilly and uneven, is entirely reclaimed unless where planted. Above Arnage there are some beautiful pools. Indeed, within a couple of miles of Arnage station, on either side, the best of the fishing can always be had. The Ebrie has a nice rippling flow in the main, pool and stream alternating almost every 10 or 15 yards. It is more sandy in the bottom than anything else—pebbly in some parts, rocky in others, but never muddy, except where weirs impede the current. Possessed of an abundance of aquatic vegetation and low water-rutted banks, the Ebrie affords its trout excellent shelter. Taking it all over, we may regard it as one of our best-fed streams. Insect life in great variety abounds in the rank luxuriant grass that grows along its margin. For miles in the primrose season its banks are turned into a veritable garden. In April, May, and June capital trouting is got in the Ebrie. Owing to the sharp nature of the stream, the trout are free risers, and though not large in size, are excellent in quality. In July, August, and September the sport is much inferior to that obtained in the earlier months. So soon as rainy weather sets in in the autumn sea trout and finnock ascend in great numbers. The last fortnight in September is good, but the month of October is always the best time for these. Splendid sport is always got when the stream is subsiding after a spate ; thirty a day to a single rod being nothing uncommon.

In fishing for yellow trout in May and June, a fair day's catch would be eight dozen, averaging three to the lb. In April, fewer would likely be got, but the average would be somewhat greater. Large trout are scarce. Though we ourselves have sometimes basketed about ten dozen in a day, we never succeeded in including any over 1½lb. in weight. Most of the trout are pretty clean, plump, and of fine proportion. Worm is a deadly bait when the water is anywise discoloured. The flies that take best in the earlier months are the March brown, hare lug, and partridge ruff : later on the professor, cow dung, coachman, grey dun, and black and red spiders will be found the most serviceable range. Fine tackle is very desirable.

The sea trout got in the Ebrie average 1½lb. ; the whitling about ¾lb. Black and red palmers, and a fly with orange body, woodcock wing, and cochybondu hackle are very deadly ; but perhaps the dew worm, more than anything else, ensures good sport when the water is fairly large. The dam dykes, about half a mile from the Ebrie's conference with the Ythan, create a long, deep pool in the river above, in which salmon rest in October after ascending. A few are got here every year with the Jock Scott, Lady Caroline, and Brown's phantom. The flies used for salmon are about an inch ; for sea trout and finnock, 7, 8, and 9 double irons are the most suitable sizes.

Grilse rarely ascend the Ebrie, and it is quite unusual to hear of any being caught in it during the summer. A few stragglers ascend with the salmon and sea trout in the autumn, but further than this there is no run. Anglers wishing to enjoy good white trout fishing ought to pay the Ebrie a visit in October.

Arnage station, the central point for the unrestricted Ebrie water, is distant from Aberdeen a full half-hour's ride per rail on the Buchan section of the Great North of Scotland Railway. The stream is distant about 300 yards from the station. Crossing the bridge and taking the south bank, anglers have three miles of good water either way, up or down—up to Auchnagatt, or down to the Ythan.

Undoubtedly the most convenient point for anglers to stay at is Auchnagatt, where excellent accommodation at moderate terms can be had at the Barron's Inn. Anglers can proceed from thence all the way down the south side of the stream till the Ythan is reached, and fish up again as far as Arnage station, from whence train can be taken to Auchnagatt. Lodgings at the farmhouses in the neighbourhood of Arnage is usually obtainable. The village of Ellon is a place of quiet beauty and worthy of a visit. Haddo House, the family seat of the Aberdeen family, is within easy driving distance. The Mansion House of Nethermuir is close to Auchnagatt, and its grounds are usually open to strangers. Rod season for the Ebrie, 28th February to 31st October ; rail to Aberdeen, thence as directed.

Enquiries for additional information addressed to us through the Editor of the GAZETTE will receive ready notice. W. M.

CLOSE OF THE TAY NET FISHING.—The fishing on the Tay closed for the season at twelve o'clock on Wednesday night, August 20th. The unprecedented success of the two opening months of the fishings had been somewhat counteracted by the scarcity of salmon and grilse during May and June. Several causes may account for this : the extreme lowness of the river caused by the protracted drought, the fact that grilse were about three weeks later than last season, or the great mortality amongst spawning fish last winter. With a rise of the water in July, the fishings improved greatly, and continued to improve until 9th or 10th curt., when the run of salmon seemed to be exhausted. During the last week the catch has been below the average for the last week of the season. The number of salmon got, weighing above 40lb., has been much above the average ; but on the whole, the average weight of the fish caught have been somewhat light, and scarcely up to previous years. Taken as a whole, the season has been fairly good, and but for the falling off in May and June, would have been extra good. The angling season in the Tay remains open to the 10th October, and on the Earn till the 31st October, and as there are plenty of fish in the river, good sport is anticipated.—J. M'G.

FISH CULTURE IN OLDEN TIMES.—From an early treatise on fishing and fish culture, entitled "A Booke on Fishing with Hooke and Line" (1590), we glean the following item concerning ancient pisciculture. "It shall be good for all gentlemen and others hauing the gouerment of any riuers, brookes, or standing pooles, to replenish them with all such kinde of fish as may there be preserued or bred as well of straying as others. There is a kinde of fish in Holland, in the fennes beside Peterborrow, which they call a poult ; they be like in making and greatness to the Whiting, but of the cullour of the Loch ; they come foorth of the fenne brookes into the riuers nigh there about, as in Wansworth riuer there are many of them. They stirre not all the Summer, but in the Winter when it is most coldest weather. They are taken at Milles in Welles, and at wayers likewise. They are a pleasant meat, and some do thinke they would be as well in other riuers and running waters, as Huntingdon, Ware, and such like, if those waters were replenished with them, as they may with small charge." [Probably the fish referred to is the eel-pout.—ED.]

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices : Point Flies, 2s. 6d. per Dozen ; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(ADVT.)

## ANSWERS TO CORRESPONDENTS.

**G. Henshall** (Bingham).—We should think your best plan would be to employ some farmer's boy in the neighbourhood to rob a wasp's nest for you. The only man who sells them in London, as far as we know, is J. Haydon, Coleman-street, Camberwell. He does a good business among London club anglers. They are a good bait for any coarse fish, as well as eels, trout, &c. We prefer to use them fresh and alive, throwing in a few now and then.—Ed.

**Red Quill Gnat.**—(1) The Thames Angling Preservation Society have no jurisdiction over the Colne or other tributaries of the Thames further than the power to see that the fish have free course and are not stopped by any artificial means. They have a case of this kind on near Sunbury now. They do not regulate the "sizes of fish in the Colne or the other tributaries." (2) The trout stream at St. Mary Cray is strictly preserved.

**H. W. Taylor** (Leeds).—It is not uncommon to find fish with roe in them months after the proper season. In future please put a little disinfectant with anything you send of this kind; we had to burn it at once.

**Jack Snipe** (R.Q.P. Yacht Club, Dover).—We have to thank you for kindly sending the names and addresses of officers who are also anglers. We shonld be glad to have a short account of the bream incident, and should be obliged if you would add a few words as to the nature of the fishing to be had in the neighbourhood of Ostend and Bruges. Do the fish run a good size? and is permission to fish easily got?

## FLOATING GROG SHOPS.

Sir,—Public attention has once more been called to that pest of the North Sea, the floating grog shop, which cruises with the trawling fleets. A writer in one of your weekly contemporaries remarks that what has already been done by legislation to check this evil "amounts to an excellent imitation of nothing." The fault is not, however, in the nature of the remedies, but in the difficulty of their application. The *Cooper* is practically beyond the reach of the law, and the question has been, not how the traffic may be put down, but how the *Coopers* themselves may be kept out of the fleets.

Let me illustrate what I mean. On a recent Sunday morning, in the "Short Blue" fleet, 25 smacks' boats were to be seen towing astern of the floating church, and only three astern of the *Cooper*. About the same date, in one of the Grimsby fleets, two Dutch *Coopers* appeared just as the smacksmen were assembling for morning service on board the Mission-ship, whose skipper, having witnessed on similar occasions scenes of rioting and drunkenness, feared their arrival would greatly diminish his congregation; but only one solitary boat pulled off to the *Coopers*, and the unwelcome visitors, declining an invitation to remain and attend Divine service, presently bore away in different directions in search of easier prey.

It is now three years since the Thames Church Mission, of which I am President, inaugurated its "Mission to Deep-Sea Fishermen," under the conviction, amply corroborated by results, that the best antidote for the evil wrought by the *Cooper* would be the presence with each fleet of a vessel which should be at once a church, Dispensary, Library, Temperance Hall, and Club—a vessel whose influence should extend to and be acknowledged by the roughest and most depraved.

Four such ships are now stationed in the North Sea, and by the men in the fleets and the wives and children ashore they are regarded with gratitude and affection.

Owners, too, have spontaneously acknowledged the vast benefit conferred, and one large firm, in writing to the Secretary, said, "Our men have been completely revolutionised, and we gladly become annual subscribers of ten guineas to the funds of the Mission."

Services are conducted on board the Mission Smacks by clergy or suitable lay missionaries, and medical and surgical assistance is dispensed to many poor fellows who but for this boon would be in imminent danger of losing life or limb. In fine weather the lending library is extensively used, while instruction in reading and writing is afforded to those who are ignorant of these rudiments, and in many other ways the men are taught to appreciate the Mission Ship.

This important and successful effort has, in my opinion, practically dealt a mortal blow to the *Cooper's* pestilent trade; and my friend Mr. Edward Birkbeck, M.P., whose sympathy with the fishermen is so widely known, when speaking of the many cases of direct evil wrought by the floating grog shop, observes: "Such facts convince me more and more that if there is one way in which great good can be done among deep-sea fishermen, it is through the instrumentality of the smacks sent out by the Thames Church Mission. They are doing in the North Sea a grand work, worthy of the support of a great maritime nation like England; and I believe that the results of their effort, great as they are in the present, would, if only supported liberally by the public, be of untold value in the future."

Such work as this does, indeed, deserve (as it greatly needs) liberal support, and contributions in its aid will, I know, be very gladly received by the Secretary, 31, New Bridge-street, E.C.

In the words of Lord Shaftesbury, "For moral purposes, for patriotic purposes, for social purposes, for religious purposes, there was never devised a better agency than the Thames Church Mission, and it ought not to want the means which are necessary to extend its operations."—I am, &c., R. N. Fowler, Lord Mayor.

Mansion House, E.C., Aug. 26.

[We see in the *German Fishing Gazette* frequently accounts of lawless acts on the part of British fishermen. There may be some truth in them; but this lawlessness is chiefly the result of the vile liquors supplied by Dutch, Belgian, and German bumboats. We are very glad to see the matter has been taken up by such influential and energetic gentlemen as the Lord Mayor, Lord Shaftesbury, and Mr. Edward Birkbeck, M.P. Whenever Mr. Birkbeck puts his shoulder to a wheel, it has to get out of the rut.—Ed.]

## WET OR DRY FLY.

Sir,—Throwing the dry fly neatly over a rising fish, whether he take it or not, is a very beautiful accomplishment, and deserves every success; but the constant whipping necessary requires so much exertion that old arms like mine are not capable of standing the fatigue; I must, therefore, be contented with the old method, and only occasionally throwing the dry fly. I am no glutton, and if I can get three or four brace of good fish in a day I am qu'te satisfied. I had a few days fishing in July, and on three of these days I had, as my companions, two well-known fly-fishers, both thorough adepts at throwing the dry fly. The comparison of our baskets may not be uninteresting to those who still continue to use the old system. On July 5th, water low and clear, wind S.W., sun and shade alternating, with very slight ripple on the water—we divided the water, my friend taking the upper, whilst I took the lower water—both having long stretches of still, deep water (two mill-heads) and also running streams.

At 3 o'clock, when we met for dinner, he had taken two brace of fish—fishing with the dry fly—all good fish—flies, small governor and quill gnat. I had got 2½ brace nice fish with the wet fly—flies, small alder and small governor—only using one fly at a time.

After 5 o'clock we went out again, and with red spinner and large alder, and got 2 brace of good fish.

On the 7th there appeared every prospect of a fine fishing day, but before 10.30 the clouds had cleared off and the sun came out very strong, the breeze died away. By sinking a small alder, I managed to get a brace of fish, one over 2lb., and although the fish were rising, they would not look at the dry fly. I hooked another, but lost him, and tired of throwing over them, we gave it up at 2 o'clock, hoping for better sport later. At 5 I went out again, with the remark from my friend, "What's the use, it is too bright, and it will be labour lost." However, out I went, and although the sun threw a bright glare on the water, by kneeling down and throwing up-stream close to the bank on my side, with a wet soldier palmer I killed two brace of very fine fish. They never broke the surface; but by watching for a slight movement of the water, I knew when to strike. Just a turn of the wrist was all that was wanted. At 6 o'clock I changed to the red-spinner, and got three more fine fish, and a brace of grand fellows with the large alder. My friend was unfortunate, for, although the fish rose well between 7 and 9 o'clock, they would not take the dry fly. He only got three, but they were good ones.

On July 14th, I was fishing with another friend, a great advocate for the dry system, and a first-rate fly-fisher. We had a day given us on some strictly preserved water on the Kennet, and, although it looked a first-rate day, the big fish would not rise. We both took about equal both in size and quality, and before 3 o'clock had returned to the water at least 10 brace of fish, most of them not quite up to the size, but some of them over 1lb. each. At 5 o'clock we went out again. I got 3 brace of fine fish with a small wet red-spinner, and a brace with the large alder; my friend 2 brace with the governor. I am, therefore, quite satisfied with the wet fly. I am, &c.—Silver Doctor.

[Silver Doctor's experience certainly justifies him in fishing as he does, and there is a great deal to be said (in this hot weather especially!) for any system which reduces the labour of fishing. The fact is it does not pay to tire oneself too much; it not only makes the pleasure too much of a labour, but when one's arms and legs are tired out it is impossible to fish properly. We townsmen are all so glad to get to the river that we grudge time for anything that takes us away from it; country anglers, who can fish almost when they like, wisely take things much more easily.—Ed.]

## THE STATE OF THE LEA BELOW TOTTENHAM.

Sir,—The other evening I took a *short* walk along the River Lea with a lady friend from the country, whom I wished to impress with the beauties of that sweet stream. The result is that I can fully indorse the remarks contained in your recent letter to the *Times* as to the abominable state of the river at the present time; the stench was so overpowering that we were glad to escape up the nearest road which led off again; and I think, for the strongest reasons, that if nothing else can be done at present, that the boating should be prohibited until the long-expected rain does the necessary work of purification.—I am, &c,,

H. Richardson.

77, Finsbury-pavement.

P.S.—Permit me to thank you for the very kind notice you gave me in connection with the tournament prizes.

## CRAWSHAW'S SCARLET DYE.

Sir,—In your issue of the 23rd inst. I see that Mr. George Bankart inquires for a fast scarlet or blood-red dye. If he dyes his own dubbing, let him try Crawshaw's "scarlet" dye, and I think he will obtain what he requires, both as to shade and fastness. If this does not suit his wishes, as to shade, I think he will get it from either Crawshaw's "Cardinal" or "Crimson." I inclose a few feathers dyed from the dyes I have mentioned, which perhaps you might consider worth forwarding to your correspondent Mr. Bankart. I have not tried these dyes myself upon any material used as "dubbing," but I have seen seals fur dyed, I believe. with these dyes, and the result was quite as satisfactory in it as it is in the feathers.

I much wonder if Ephemera's "Dunkeld" is known as a salmon fly to Mr. Bankart? or, dressed smaller, as a white trout fly? for I cannot but think that where a "Wickham Fancy" will kill, a small Dunkeld would surpass it, and if Mr. Bankart would try my recipes for dyeing "Golden Olives," and then give the hackles a dip in the Brazil wood decoction, I feel sure that he will get as much "lustre" as he can desire, or perhaps Crawshaw's "Orange" would give him the shade he wants. A few feathers dyed from it I also inclose.—I am &c. Eastern.

Ballymoney, Co. Antrim.

[The samples appear to us to be very brilliant, and "Eastern's" testimony to the durability of the colour is as good as a certificate. The following is "Ephemera's" dressing of the Dunkeld.—Ed.:—"Body, gold tinsel rolled close, and ribbed with silver twist and yellow hackle; tag of black ostrich, tipped with gold tinsel, small topping and small jungle cock's feather; a little blue jay at shoulder; wings, two small toppings, mixed with brown mallard and peacock's wing feather; and blue, yellow, and red macaw feelers, and black ostrich head."]

## OUSE (OFFORD), NEAR HUNTINGDON.

Sir,—My wife and self have been fishing for three weeks, from July 28th to August 16th, and the following is the result of our takes:—Roach, 965; bream, 50; perch, 29; chub, 5; eels, 9—total, 1,058. All these were sizeable fish, and the total does not include small ones which were returned to the river. The weather was very fine the whole of the time, sometimes too hot for fishing in the middle of the day. Our largest individual take was on August 2nd, fishing from four o'clock in the afternoon till dusk, my wife catching 42 roach and myself 45 and one large perch. The perch was caught in rather a peculiar manner. He came to the top of the water after a fine roach which my wife was playing, and so intent was he after his prey that I was able to put the landing net under him and lift him out. My largest take of bream was on the 14th, fishing from 4 a.m. till noon, at a place baited overnight; it consisted of 13 bream, weighing 2½ stones, besides, of course, a lot of roach. The largest roach I caught, strange to say, was my first, and I had not been fishing a quarter of an hour; it turned 1½lb., and the largest bream weighed 3¾lb. The water was in splendid condition all the time; if anything, rather too clear. Fished with boiled wheat for roach, and lobs and brandlings for bream; found the big bream preferred the tail of a lob. Many parts of the river are entirely free; in fact, from the Mill downwards towards Brampton it is so for miles. Am sorry I cannot give the total weight, as I did not take it on all occasions; time of fishing, 127 hours.—I am, &c.. Rover.

Preston.

## FISHING AT FOLKESTONE.

Sir,—Your correspondent, "J.," will get good sea-fishing now at Folkestone. I advise him to put himself into the hands of Baker, the fisherman, near the harbour, or another respectable man, Coghlan, well known on the beach.

I had a couple of hours in one of Baker's sailing boats the other evening, and we caught half a dozen nice conger eels, some of them 3lb. to 4lb. Two congers bit the sea lines as we were drawing them in. "J." may return the hooks if he catches the fish.

I killed two nice pollack, about this time last year, at Folkestone, spinning an indiarubber sand-eel with the rod, while running out to the anchor for the hand-line fishing. He ought to try this as well.

There is no freshwater fishing worth going for that I know of, the canal at Hythe being almost dried up.—I am, &c., James Canaghan.

Sydenham, 23rd August, 1884.

## SORREL-COLOURED GUT LINES.

Sir,—I first saw casting lines of this colour some seven years since at S. Price's, 8, Seymour-street, Euston-square. I purchased some, and was so successful with them that I rarely used any others. All roach fishers who use hair prefer this colour, as it shows less in the water than white.—I am, &c., E. Gosling.

Budleigh Salterton, Aug. 23.

## FINE ROACH.

Sir,—Seeing your mention of the fine roach you have in your possession, I thought I would let you know that a few years ago, I caught a fine roach at West Drayton; weight when taken to the house 2lb. 6oz., when taken next morning at Rowland Ward's 2lb. 4¼oz. It was in the Fisheries Exhibition last year, and is now in the Health Exhibition. If any of your readers want good sport in roach, dace, and tench, or even trout, they cannot do better than go there. If you have space in your paper for this, our club will be grateful to you. I am an old subscriber to your paper, having two copies weekly excepting No. 2, which I have tried to procure but cannot.—I am, &c., J. H. Davie.

Hammersmith.

## FISHING AT SKEGNESS.

Sir,—In reply to your enquiry, I can inform you that there is a fair amout of amateur fishing done here in the spring and autumn for hallibut, plaice, soles, lobsters, &c. We have not much freshwater fishing.—I am, &c., J. T.

Skegness, Aug. 23, 1884.

## LOSS OF A VALUABLE FLY BOOK AT HALLIFORD.

Sir,—Knowing the very generous way in which you so often come forward to assist your brethren of the angle, I am led to ask your assistance under the following circumstances. I may just mention my business has only very recently brought me to reside in London. On August 1st I, with a friend, made my first visit to the Thames. We were recommended to Halliford and went there, putting up at the Ship Hotel, with the intention of staying over the following Monday. On the Friday afternoon we engaged a punt, giving our rods, &c., into the charge of the fisherman before starting, and on our return in the evening to our quarters we gave them into his charge, and requested him to see everything safely brought into the hotel. This he distinctly stated he had carried out. But what was my disgust the following morning when I came to look my traps over, to find a small black leather handbag, containing a valuable fly-book and also a bronzed reel with sixty yards of fine tapered silk line, were missing. I promised, at the request and in due deference to the landlord, to wait a week or so to see if anybody had taken it away in mistake; but, having had no tidings, I placed the matter in the hands of the police, who informed me, much to my astonishment, that this was not the first case they had had reported of fishing-tackle being taken from the same place. I think, Sir, you can assist me by publishing in the Gazette this letter, along with the description of the book, which I hand you herewith, so that if any of your numerous readers should come across it in any shape or form, being offered for sale or otherwise, for I hold it can be of very little use to anybody but a fisherman, they will communicate the fact through you, and so assist in the recovery.—I am, &c., Thos. J. Hodson.

2, Dunster House, Mincing-lane, E.C.

### Description of Book and Contents.

It is made of light brown leather (calf skin), 10in. in length, 6in. in width, and 2in. in thickness, with a strap of same leather round the middle. On the inside of the flap is written in plain letters with black ink, Thomas Jno. Hodson, Manchester, 1882. There are four pockets inside, of leather, two on each side; one of them covers over with a flap. The two first contained a few feathers and silks, also a quantity of salmon and other gut and gut casts. There was also a small pair of scissors and one or two pairs of pliers for fly-dressing in the sheaths outside the two first pockets. The flys were arranged in the parchment sections of the book in the following order:—A few February reds and a number of March browns on the first page, some of these were dressed on horsehair; then follows on the next pages a number of blue duns, hares-ear duns, yellow duns, principally dressed by Mrs. Ogden Smith, of Cheltenham; after these follow a considerable number of Winchester patterns, dressed by Mrs. Cox; then come two pockets in the middle of the book. These are lined with buff, glazed linen, with flannel outside. On the flannels are a number of flies, many of them dressed on eyed-hooks. The remaining portion of the book is sectioned off for salmon flies, with strips of blue parchment across the pages. The sections I had filled up with a considerable variety of May flies—Loch Leven and sundry Irish patterns, finishing with a dozen or fifteen standard salmon flies on medium-sized hooks. In one of the two end pockets there were two artificial minnows, made of mother of pearl, and beautifully painted and set up with small triangle hooks. There was also a few floats and a little rough tackle, which accounted for my taking the book with me on this day. The book has been seen and could be easily recognised by a number of anglers on the Wye and Derwent in Derbyshire, if it should get in that direction, and also on other rivers up north.

## PREVENTITIVE FOR STAINS ON FLOSS BODIES OF SALMON FLIES.

Sir,—In your issue of August 16th, I see that Mr. George Kelson, in his article on "The Description of Salmon Flies," alludes to the remarks of a correspondent in a former Gazette on "cobbler's wax" spoiling the colour of the floss silk" used in the bodies of salmon flies; and that this same "spoiling" has been a source of trouble to others may be inferred from the different kinds of wax used by tyers, presumably as a preventitive to stains appearing on floss bodies. We have Rogan's "greaseless wax," Mr. Fennell's "colourless wax," &c., &c., all of them good, no doubt, but, in my humble opinion, none so good as cobbler's wax. But, so far as my experience goes, stains will appear at times on floss bodies when put over cobbler's wax. A friend of mine made the following suggestion to me as a preventitive to the staining of the bodies, and I have proved its efficacy beyond doubt:—"After tying on the gut, why not varnish the tying?" said he; and I need hardly say that this simple expedient renders any stain coming from the wax impossible, of course letting the varnish dry before winding on the floss. The varnish used is the common shellac varnish.

I think that there is another possible cause for stains appearing on the floss bodies, and that is the blood of the fish. We cannot say how much blood may come from a fish on being hooked, but I think it quite possible that it may be more than sufficient to permanently stain the body of a fly.—I am, &c., Eastern.

## DOUBLE-POINTED HOOKS AND COLOURED HOOKS.

Sir,—Under the heading "Bait Hooks" in last week's Gazette you say, referring to a sample of hooks submitted to you by Messrs. T. Hemming and Sons:—"Mr. Guise, of Redditch, last year showed us this hook, which he said was his invention." This is the first intimation I have received of the firm you name having made the double-pointed hook, for which I hold a provisional patent, No. 749, and dated from the Patent Office Jan. 29, 1884. When I took out the patent I was under the firm belief that the invention was original. I, however, afterwards learnt from Messrs. W. Bartlett and Sons, from a personal interview, that they had made a hook very similar for nearly twenty years. This, Sir, if my memory serves me, I told you in February last, and that I may possibly, in consequence, abandon the patent. Its validity has never been officially or legally disputed. So far, this is all I can say in the matter. While on the subject of new tackle, allow me to remind you that some time ago I sent you samples of flies with hooks so made as to blend with them in colour. You expressed your admiration of the samples so far as variety went, remarking you should like to see other colours, among which was a green. I have till now been too much occupied with other matters to give this my personal attention. I now send you a copy of the "Green insect" for trout and grayling, on a green enamelled rust-proof hook, also reds and yellows. Thanking you in anticipation,—I am, &c., W. Guise.

Redditch, Aug. 27.

[Mr. Guise has been very successful, especially with the green enamel. All green-bodied flies would be more natural if made on this hook.—Ed.]

## FISHING IN THE LONDON DOCKS, &c.

Sir,—Could yon kindly give me and my friends any information as to fishing in the Docks about London, as we are anxious to give them a trial? Can we fish there on Sunday? Last Monday, at Wimbledon Lake, 7 fine bream and one roach, a magnificent fellow. All caught with paste between 6.30 and 9.30 a.m., after which I did not have another bite for the rest of the day. The Lea, at Ferry Boat House, is swarming with multitudes of fine fish; but they are not yet well on the feed.—I am, &c., H. M.

[We do not think any of the Dock Companies would object to "H. M.'s" fishing; but we should be very much surprised if he caught anything but dead dogs, cats, rats, or other of the flotsam and jetsam which, with liquid sewage, forms the bulk of the Thames below London-bridge. It is many years now since there was any good fishing in any of the London Docks; but in old books on angling, they are often referred to as being good resorts.—Ed.]

## ROACH TAKEN ON SPINNING BAIT.

Sir,—Some years since I wrote to the Gazette, stating that I saw Dr. L. M. Thomas take a roach on a medium-sized Totness minnow, when fishing at Penton Hook. The fish was hooked well in the mouth.—I am, &c., E. Gosling.

Budleigh Salterton, Aug. 23rd.

## FISHING AT KESWICK.

Sir,—Can you or any of your readers give me any information as to the fishing at or about Keswick, other than that contained in the "Angler's Diary," also as to hotels or lodgings, the latter I would prefer to get (if possible) at a fisherman's house, where I could get some information about pike fishing, not being very well up in same. I see the season closes on the 20th September. Could I get permission to fish in private waters after that date, and where? Also as to the best kind of baits.

Any information will be greatly esteemed by yours— R. Shipton.

P.S.—Please accept my thinks for the sample of fly line suitable for the Marston rod.

[Perhaps some of our readers can help Mr. Shipton. We see from Little's "Angler's Annual") a most useful guide) that boats, which carry licenses to angle, may be had of Mrs. Bell, Portinscale Hotel, Keswick. Visitors to hotels have generally better chances of angling than those who go to lodgings, the privilege of giving permission to angle being generally accorded to the local hotel by the local landowner.—Ed.]

## FISHING NEAR SIDMOUTH.

Sir,—Is there any trout fishing to be had in this neighbourhood?—I am, &c.,

Tunbridge. Yellow-Hammer.

[There is a little trout fishing on the Sid. We believe that Lady Roll, who owns about ten miles of the best part of the river Otter, issues a limited number of tickets to her friends and tenants, and it is very difficult for a stranger to get permission. The Otter is one of the best streams in Devonshire, and its trout are said to be the finest and heaviest.—Ed.]

## PORTOBELLO, SCOTLAND.

Sir,—Can you or any correspondent inform me whether any sea fishing with rod and line from shore or pier is to be had at Portobello, Scotland, during the month of September, what fish are to be taken, and a few hints as to the time of tide, bait, &c.?—I am, &c., Montrose.

## WEYMOUTH.

Sir,—I think of taking my family to Weymouth for about three weeks; will any of your readers kindly give me any information as to the fresh-water fishing near here or Dorchester? If they will, I shall deem it a great favour.—I am, &c., H. T. M.

[There is capital sea fishing; but we think very little fresh-water fishing near Weymouth. The local fishing tackle maker would give information.—Ed.]

## THE SEVERN FISHERY BOARD, AND THE POLLUTION BY FACTORIES.—IMPORTANT CONVICTIONS.

William Munday, of Low Town, Bridgnorth, Salop, was summoned, on Monday, before Messrs. McMichael, Colley, and Southwell, Esqs., at the instance of the Severn Board of Conservators (under the Salmon Fishery Act, 1861), on the 21st and 23rd ultimo, for unlawfully causing, or knowingly permitting, to flow into the Severn, which is a salmon river, certain liquid matter to such an extent as to kill the fish. Mr. Stallard, Worcester, Clerk to the Board, prosecuted, and Mr. F. R. Haslewood defended. The hearing of the case lasted two hours. Mr. A. Moran stated that he had known the tan-yard in question (at Munday's) for some years. There is a pipe from the tan-yard which empties into the river. Soon after being appointed bailiff he received complaints as to fish being poisoned, on which he inspected the premises in company with the late proprietor and Mr. George (then Clerk to the Board), after which the nuisance was abated; and, until the end of May in the present year, no complaints had been received by him. He had noticed liquid matter coming from the pipe several times, similar to liquid in the tank. Cross-examined by Mr. Haslewood.—Witness knew it was lime-water by its appearance. He had seen over 100 fish close to the pipe, dead; they were of different sizes. He had also noticed spawn dead under the bridge in hundreds. He did not know of any other poisonous drain in the neighbourhood, and he had never heard of dead fish above the Town Mills. William Humphries, a fisherman, gave evidence as to the great damage done by the contamination. For the defence, William Corfield, waterman, whose knowledge of the river dates 50 years back, said he had caught bait when liquid was coming from the pipe. He had caught them out of the thick matter. He had never seen dead spawn. Witness admitted he had not fished near the pipe for the last few months. Similar evidence was addressed in a second charge. The Bench inflicted a penalty of 5s. and costs in each case.

[What is the use of such trumpery fines as these?—Ed.]

## STATE OF THE WYE AT BUXTON.

In this week's instalment of our correspondent, "Amateur Angler's" interesting letters from Derbyshire, will be found a reference to the state of that beautiful trout stream the Wye, which is both a disgrace and a danger to Buxton. Fancy turning all the raw sewage of the 6,000 inhabitants and 6,000 visitors and the refuse from the gasworks into this classic stream! The stench below Buxton is fearful.

SALMON & TROUT-FISHING.

**CHAS. FARLOW & Co.,**

A NEW PERFECT FLY AND SPINNING LINE.

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES; FREEDOM FROM IRRITATING ENTANGLEMENTS; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says:— "I find the Acme more valuable than all others."

Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. Samples, Post Free, to all Applicants.

| | 80 „ | Twickenham. |
| | 85 „ | Teddington. |

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

## THE LOWER THAMES.

### General Remarks.

Thames anglers writing from Bloaterland report some extraordinary takes of fish this season in the various Broads of Norfolk and Suffolk, and one of them says: "Fishing everywhere has been good, and both local as well as Thames anglers speak of the excellent character of sport they have been getting, especially at Fritton, Oulton Broad, Cantley, and Ormesby. In the Thames the angling still continues good, in spite of the want of rain and water. The report from the Tidal district is : "The water just now in the tideway is like pea-soup. The fish are plentiful, and good barbel fishing is quite remarkable, and nearly all are caught with the float." In writing from Kingston, John Johnson, sen., says : "There has been any amount of fine bream and barbel taken from the bank in night fishing. I have seen some of the bream over 6lb. each."

### Angling Results.

**Richmond.**—Christopher Brown, in four days, has taken twelve barbel and forty-eight dozen of dace, and in two other days, 45lb. weight of dace. Henry Wheeler, during the week, 80lb. weight roach and dace. Henry Mansell, in one day, with Mr. Johnson, 35lb. of roach and dace, and, in four other days, 80lb and nine barbel. Job Brain, during the week, 70lb. and seventeen barbel. F. Brown, in four days, forty-eight dozen and four barbel. Henry Howard, in the same time, 70lb. and twelve barbel. One of the bank anglers got five barbel and several roach and dace.

**Twickenham.**—Samuel Cole, in two days, with Mr. Howlett, forty-two dozen of roach and dace and seven barbel, and in five other days, thirty-five dozen of roach and dace, and a couple of barbel. Paul Hammerton, in six days, 120lb. of roach and dace and five barbel. James Coxen, in five days, forty-two dozen and five barbel. John Spong, one day, with Mr. Wagstaff, eight dozen and a couple of barbel ; another day, with Mr. Key, nine dozen, and in three other days, twenty-four dozen and two barbel. John Coxen, jun., in two days, twelve dozen and four barbel. George Coxen, in three days, 50lb. of roach and dace, including two barbel. Joseph Dobbin, in four days, thirty-two dozen of dace and five barbel, one of the latter scaling 6lb., and in good condition. C. Hennessey, in one day, 14lb. of roach and dace, and in two other days thirteen dozen and one barbel. W. Spong, in three days, twenty-four dozen. Edward Finch, in one day, with Mr. Whiteley, 30lb. of roach and dace, and five barbel ; and in two other half-days, six dozen of dace and a couple of barbel. Henry Spiers, in three half-days, seventeen dozen of roach and dace, two chub, and two barbel—one day ten dozen, and another day 18lb.

**Teddington.**—Charles Baldwin, in three days, five dozen of good roach, and ten dozen of dace. Joseph Baldwin, in four days, twenty-one dozen of roach and dace ; and B. Stevens, in the same time, nine dozen of roach and dace, and five good barbel.

**Kingston.**—John Johnson, jun., in five days, twenty-seven barbel (the largest 4lb.), a brace of jack, and twenty-four dozen of roach and dace. John Johnson, sen., twenty-nine dozen of roach and dace, four bream (the largest 4lb.), three dozen of gudgeon, and one brace of perch, in three days and one half-day. James Wilks, in three days, twenty-three dozen of gudgeon, fifteen dozen of roach and dace, and two brace of perch. F. Eastland, in four days, thirty dozen of roach and dace, and three dozen of gudgeon. The bank anglers have been doing some fine business, and it has been computed, in addition to roach, dace, perch, chub, and gudgeon, they have taken seventy bream up to 7lb. each, thirty barbel up to 4lb. each, and some good eels. They have also done well at Surbiton with perch, chub, and barbel.

**Long Ditton and Thames Ditton.**—C. Buttery, in one day, seven dozen of gudgeon. C. Tagg, nine dozen of roach, dace, and gudgeon. E. Tagg, three dozen of roach and dace. Mr. Lawlis, in one day, twenty-one dozen of roach, dace, and gudgeon. The bank fishers have been getting a nice quantity of roach, dace, and gudgeon.

**Hampton Court and Hampton.**—Charles Davis, in three days, six barbel, one dozen of roach and dace, and twenty dozen of gudgeon. Thomas Wheeler, in four days, sixteen dozen of gudgeon, six brace of perch, ten barbel (the largest 4lb.), and ten dozen of roach and dace. C. Stone, in two days, fourteen dozen of roach and dace, and five barbel, the largest 9lb. Thomas Davis, in two days, eleven dozen of roach and dace. William Millbourne, during the week, seven barbel, and twenty dozen of roach and dace. G. Martin, in one day, twenty dozen of gudgeon and two brace of perch. At "Tagg's Island Fishery" the anglers have shown in during the week thirty dozen of roach, dace, and gudgeon. James Langshaw, in one day, ten dozen of gudgeon. The bank fishers have had some capital sport amongst the perch, chub, roach, dace, and gudgeon.

**Sunbury.**—Edward Clarke, jun., in four days, twenty bream (the largest 5lb.) twenty dozen of roach and dace, and five dozen of gudgeon. Some good specimens of roach, dace, perch, and gudgeon have been taken from the banks, and they are all described as being in good condition.

**Walton.**—George Hone, one day, three dozen of roach, six dace, and three bream ; another day, with Mr. Cababe, five dozen of roach ; another day, with Mr. G. Lewis, three dozen of roach, two dozen of gudgeon, and two brace of perch ; and one evening, with Mr. Abbott, six dozen of roach. John Hone, one day, six dozen of roach and three bream ; and another day four dozen of roach and eight bream. R. Watford, one day, with Mr. Alderson, six dozen of roach, and six bream averaging 3lb. each ; another day, five dozen of roach and four bream ; and in two half days eight dozen of roach and three bream. George Hone, jun., has had some good takes of roach, dace, gudgeon, and bream.

**Halliford.**—E. D. Rosewell, in three days, thirty-six dozen of gudgeon, six brace of perch, and two dozen of roach and dace.

**Shepperton.**—F. Purdue, one day, eight dozen of gudgeon, two brace of perch, and four dozen of dace ; another day five dozen of gudgeon, three perch, and two dozen of dace ; and another day five dozen of gudgeon and two and a half dozen of dace ; and H. Purdue, in one day, twenty dozen of gudgeon and five perch.

**Weybridge.**—Herbert Carr, one day, with the Rev. H. Lewis, ten dozen of roach and dace and a jack of 2½lb., and at the end of the day were all returned to the river again ; and another day, in two hours, Mrs. Money-Coutts caught three dozen of gudgeon and a brace of perch.

**Chertsey.**—John Poulter, in one day, three bream, a roach of 1½lb., one perch, and some very fine dace ; another day one barbel, a couple of bream, and six dozen of roach and dace ; and another day ten dozen of gudgeon. The new proprietor of the Chertsey Bridge hotel, Mr. G. F. Spencer, well known to Thames anglers as the president of the Larkhall Angling Society, is, by his genial activity and satisfactory hotel arrangements, giving a great impetus to piscatorial matters in this neighbourhood.

**Staines.**—Angling has been very brisk during the week in this neighbourhood. Charles Hone, one day, with Mr. Randall, twelve dozen of dace and a barbel of 3lb. 6oz. ; another day three dozen of dace and two barbel ; another day, with Mr. Mason, four dozen of dace and one barbel ; and another day, with Mr. Solomon, six dozen of dace. G. Osman, one day, five dozen of roach and dace ; another day 28lb. ; and another day two dozen. T. Spicer, one day, three dozen, and another day six dozen. John Keene, jun., one day, eleven barbel ; another day nine dozen of roach ; another day six dozen of dace and three barbel ; another day fourteen dozen of roach and four barbel ; another day eight dozen of dace and three barbel ; and another day six dozen of dace and seven barbel. John Keene, sen., in two days, with Mr. and Mrs. Sutherland, 32lb. weight of fish and five barbel.

## UPPER THAMES.

The much-needed rain has not as yet descended, and the river is as low and bright, and the weeds are as rampant, as ever. I have been roaming near the river in various quarters during the past week, and although punts and bankers seem to have put in an appearance better than heretofore, I could not glean any very enticing information for the use of the "coming men." Roach, except in sharp mill-tails, seem dead off. Chub are dormant to all the attractiveness of fly, lob, or bunches of gentles. Perch disdain the well-scoured tail of lob or brandling, but may be tempted with a minnow on very fine float tackle, paternoster seemingly being useless, as the fish do not seem on the bottom but *in medias res.* At Henley and Hambledon, a few barbel have been had ; and one banker, from the Eddy below Hambledon lock, got two dozen and three pretty perch with the red worm from leaf-mould. At Hurley, Mr. Bastick, with Tom Barnes, has had some twenty-six dozens of good roach, one small barbel, and lost a nummer of about 12lb. through the hook breaking in two halves. Mr. Ellis and Mr. Lawrence have also been busy in the Hurley district, the latter gentleman getting some fine perch opposite Harleyford. The Marlow waters have recently had a grand stock of from 300 to 400 trout, of from 1lb. to 6½lb. each —two-thirds being over 4lb. each—placed in their water through the kindness of Mr. Harding Cox, of Missenden Abbey. It appears Mr. Cox's preserves are drying up from the extreme heat and want of rain, so to save their lives they have been successfully placed in the Thames. More fish are to follow to-day, I believe. This grand fish fall will immensely add to the previous trout celebrity of Marlow—for such a grand lot of fish has NEVER been placed in the river, and the thanks of Thames anglers will, I trust, soothe the pangs of the unfortunate loss to Mr. Harding Cox's preserves. Thursday evening—wind due west, with every indication of rain ; water low and bright—gudgeon the only coming fish.—Marlow Buzz.

### Thames (Dockett Point.)

Fishing with J. L. Meyers, since my last report : one day, five barbel, two chub, one perch ; next day, four barbel, one chub, roach, and dace ; next day, three barbel, roach, and dace, ledgering ; next day, gudgeon fishing, two punts, eighteen dozen ; three perch put back. Monday : wind in the north, very cold, fish off feed ; next day, two bream, roach, and dace, one perch ; next day, one barbel, two chub, one perch, roach and dace ledgering.—James Haslett.

### Goring (Thames).

Water very low ; not much doing in the way of fishing, and there will not be till we get a lot of rain ; my best day's fishing being fourteen dozen of gudgeon, one dozen of very good perch, and two small jack which were put back again.—John Rush.

### Thames (Oxford).

I quite agree with the American naturalist who sagely remarked that extremes, whether pertaining to wasps or weather, are bad. Since Monday, it has been piercingly cold ; and the contrast to the burning heat which preceded the change is, to say the least of it, unpleasant. Interesting fishy items are like swallows in the early spring—very scarce. The chief subject on the tapis being the defeat of the Angling Society in their case against a well-known character named Thomas Johnston. In engaging Mr. Dudley to conduct the prosecution the society committed a palpable error. There is no doubt Mr. Dudley is a fairly good advocate as far as assaults or cases easily argued. But where a delicate point, such as the wording of an Act of Parliament, is to be dealt with, it requires a lawyer with extensive legal knowledge. I am informed by one of our workmen that a nice trout of 2lb. was taken on Wednesday between Bessly's Cabin and the Manor House by a gentleman whilst spinning. On Thursday, the Angling Society held their second competition below Eynsham ; but owing to the heat the bags were poor, considering the overwhelming talent at work. At Shelton's Mill cut, at Osney, Mr. Brook landed two large barbel going 10 and 11lb. each. This being a private cutting under the eye of the proprietor, is the best piece of all-round fishing within ten miles of Oxford. On Friday, Mr. Fletcher had four splendid roach weighing 1lb. each, the whole making a very fine show. On the 24th, two small trout, estimated at ¼lb. and ½lb., were spotted by one of the knowing ones on the scour at the head of the deep hole at Ferrey Hinksey Bridge. Before now I have excited the derision of a few ignorant idiots who profess to be piscatorial alphas and omegas, by asserting the existence of trout in the Oxford waters, and I now go further by prognosticating that with careful protection we shall have some of the finest trout on the Thames, and without any stocking required. At Lechlade, Mr. Kelson has averaged from 10 to 12lb. of roach per diem. Below St. John's Bridge, Bryan grassed a barbel of 9½lb., and a roach of 4lb. 6oz. From Mr. W. Kelson, who has been staying at that halcyon fishing resort, I learn that he had two fine chub scaling 3½lb. and 4lb. On Monday, I despatched 100 of the finest crayfish I have ever seen to the Healtheries. Many of the specimens must have weighed from 5oz. to 6oz., and with a good supply of water they should do well.—Cherwell Otter.

### The Thames (Sonning).

It is some time since I sent you a report from this quarter ; in fact, there has been no fishing to speak of. I have been here over 17 years, and never saw the water keep so low. Mr. Hughes was out barbel fishing last Saturday ; he got nearly 100lb. He took the greater part where Mr. Wheldon took his large take a few years ago. I know of several gentlemen that have got some good chub ; they tell me they get them before any boat or steamer gets on the river early in the morning. What a shame it is to see so many people shooting the moorhens about ! I saw one boat with seven in it, some not larger than a blackbird.—W. Hull.

### Ancholme District.

A great many anglers have been over from Sheffield since my last report. Two hundred were there on Monday week, and still more have been this week. A local match, got up by Mr. J. Walker, with 20 competitors came off about a week ago. The waters are still very low and fine, and the fish have, owing to lower temperature, fed better during the day-time.—Thomas Ford, Caistor.

Fishing on the Ancholme has been somewhat flat, but from what has come to my knowledge, there is little doubt with a change of water the sport would become fine. Roach, dace, perch, &c., can be got, but they take a good deal of patience. Harvest operations are getting quite forward, and this always influences the fishing in waters where the drainage from cornfields or corn countries get into the water.—X.

### Bala Lake (North Wales).

The weather for several weeks has been very hot, dry, and calm ; consequently, there has been no pike fishing going on. Perch have been doing well during the hot weather, and several good baskets were taken. To-day (Wednesday) the weather is dull, with a nice breeze on the Lake, and the heaviest pike, so far this season, was taken, weight 25lb., in splendid condition, by H. Robertson, Esq., Pale Hall, a well-known angler. We hope to see a few more monsters taken during the season.

### Ballynahinch.

Since my last report the weather has been more favourable for angling. The following are the takes for the last fortnight :—Colonel Biden, in twelve days, two salmon (15lb.) and 131 trout ; Mr. Smith, one day, 10 trout ; Major Wilmot, in six days, three salmon (26lb.) and 28 trout ; Mr. Debenham and son, in twelve days, and Mr. Dutton, in eight days, one salmon (6lb.) and 161 sea trout ; Major Malone, in ten days, one salmon (9½lb.) and 100 sea trout ; Mr. Frewn and Captain Billington, in twelve days, one salmon (9½lb.) and 210 sea trout ; Mr. Mostyn, in six days, 56 trout ; Mr. Boughy, in six days, one salmon (8½lb.) and 24 sea trout ; Dr. Whipman, in six days, 50 sea trout ; Signor Foli, in five days, 30 trout ; Mr. B., in six days, 106 sea trout ; Mr. Grissel, in two days, one salmon (6lb.) and 25 sea trout—total for the fortnight, 10 salmon (76½lb.) and 931 sea trout. Weather much improved for angling, and water in very fair order.—Walter Blackadder.

### The Bure (Norwich).

During the past week sport on this river has been uncertain ; but, in several instances remarkably good catches have been made. Last Saturday three local anglers succeeded in landing upwards of 12 stone of bream at Wroxham. The reports from Host Whittaker, "The Horseshoes," and also from Simpson's, are very encouraging to those thinking of visiting the Broad district during the next month. Jack should be had easily with a spoon, or dead bait ; the reaches above Wroxham, up to Coltishall, should yield good sport, as should the reaches down past Salhouse and Horning Ferry. Those staying at Acle or Potter Heigham (Thurne), cannot do better than try spinning or trailing at Thurne Mouth. Reports from Acle are good, though, in some cases, complaints are made of the size of the fish, and I sincerely trust some means may be taken next year to rid this beautiful river of some of the small fry, to the advantage of some stream where roach and bream are scarce. Wroxham, Horning Ferry, and Acle are all as busy as can be, and the weather has been up to last Monday (when 26 degrees change at noon was registered) everything that could be wished. Prospects good.—Robert Moll.

### Chichester.

The canal has latterly much felt the want of rain, and is getting low. Good sport has been had among the smaller members of the order of Pisces, but I hear of nothing big coming to hand. Some break aways have occurred, of course, with monster fish. From Selham Mr. Willison sends me a good report: fish feeding well, and of fair size. With rain angling must greatly improve.—George F. Salter.

### Eden (Carlisle).

It is tantalising to read the reports in the Fishing Gazette of the sport there has been lately among the sea trout and whiting in some of the rivers and lochs in Scotland, for there is very little doing here. A good many anglers are out every night from 8 o'clock till nearly mid-night, but the average baskets would hardly pay for shoe-leather. The Esk fishers are doing better, such men as Dick Routledge getting from 8lb. to 12lb. nearly every night. I hear the whiting are more numerous in the Esk than the Eden this season. Some anglers will have it that the Eden is being systematically poached, in spite of the river bailiffs; but I think the alteration in the "lead" from the Solway into these two rivers has a good deal to do with it. The "lead" into the Esk is better than it was last year, whilst that into the Eden is worse. Another reason may be that the fish are more condensed in the Esk. They get lifted up by the tides, and left in small pools, from which they cannot get away without passing over very shallow water indeed. All the rivers hereabouts are lower than they have been all the summer.—Silver Gray.

### Exe (Exeter).

River very low, and the intense heat has cooled our ardour and damped our spirits. Some nice roach, up to 1¼lb., have been taken by Messrs. Whitelock and Kelley, also a few good perch and roach in the Canal; minnow, worm, and paste were the baits. There seems a prospect of change in temperature, and if we get it, and plenty of rain, we shall soon be busy. I had one nice trout, 1¼lb. with Guise and Son's blue-bottle fly, a masterpiece of deception, and I am beginning to swear by, and not at, the noted firm.—J. A. Kelley.

### Eynsham.

Thursday and Friday in last week Mr. Geen and friend had some good sport with roach and perch, a few chub, and barbel. Mr. Emery, in three days 10 barbel, weighing from 3lb. to 7lb. each, several smaller ones, a few good chub, and perch. Mr. Manning also took some good roach and perch—these all taken in the Thames. Mr. Emery and Mr. Manning, in two days in the Evenlode, a good take of roach and perch: one eel 2lb., one trout 2lb., weight altogether 30lb. I have also been very successful among the perch and roach and a few jack, all caught in the Evenlode, Mr. Emery to-day has again been busy with the barbel, having taken six fish averaging 4lb. each.—W. B. Howe.

### Ilfracombe.

Sea Fishing.—Visitors who have come here this season to enjoy the fishing have up to the present had good sport, fish being plentiful and in good condition. On Thursday we had an unlooked for visitor in the shape of a large sturgeon, measuring 7ft. in length and about 200lb. weight. It was captured in the Channel by a crew of tug-boat men. G. Ley and party, fishing off Lee, caught 120lb. of bass; J. Redmore, 50lb. bream; W. Redmore, 53lb. bream. Friday: J. Comer's party, 90lb. bream; R. Brooks, 85lb.; J. Redmore, 30lb.; R. Souch, 30lb. bream, and a few whiting pout; W. Redmore, 31lb. bream; they also hooked a large fish, which, after nearly half an hour's play, they got up alongside the boat, but before they could secure it it parted the gear and made off. Several times their gear was terribly entangled by big fish, They report fish biting like mad. On Saturday a gentleman named Neil, fishing off Pebble Cove Point, caught 30lb. bream, a conger 35lb., 4lb. whiting pout, a lobster 2lb., a shark 40lb., two sand rays, and two gurnet. R. Souch, from a hole in the rocks, caught a lobster, 6lb.; T. Tucker, 20lb. bream, and some whiting pout, and one ling. Monday and Tuesday wind blowing strong from the north; no boats out. Wednesday, change in the weather; B. Williams, 40lb. whiting pout; others had good catches. One fisherman caught in one of his lobster-pots six lobsters and one crab. Weather fine.—E. Comer.

### Leicester.

As your readers will be aware, an extraordinary change in the weather occurred at the commencement of the present week, and from extreme tropical heat we have been plunged into cold, chilly days of late autumn. This atmospherical change has been very generally welcomed by anglers. In the local society's waters on Monday some satisfactory takes of fish were had, roach, perch, and pike, each being well on the feed; consequently, some splendid baskets were made, large fish being the rule. A good many roach weighing over 1lb. were caught, the best scaled respectively, 1lb. 2oz., 1lb. 3oz., and 1lb. 8oz., and several pike were also landed, averaging between 4lb. and 6lb. from the Aylestone brook, and some fine lots of perch have been taken during the week. The following anglers have been well to the fore lately:—Messrs. Gamley, Bird, Hollis, Devereux, Bee, and Adams. Future prospects of sport in the home waters appear favourable. Hardly the usual number of anglers have visited the out-of-town resorts, but the sport has been, on the whole, of a fairly good character. From the Wreake and Narborough some nice lots of roach and perch have been weighed in at the clubs. The Leicester Folly Anglers' Club fish their annual contest at Asfordby to-day (Saturday.) The weather at the time of writing, late on Thursday evening, was of a somewhat milder kind.—Alert.

### Littleport.

The weeds are very troublesome. Looking from the bridge this (Thursday) morning the prospect was very discouraging, the river, both up and down stream, being completely covered; but with an east or west wind it is not so bad, as either of those winds will blow the weeds to one or other side, the river running nearly due north and south. A lot of good anglers have been out since last report, but the following is the best I can do:—August 17th, Sergeant B. Brashier, of Littleport, 8½lb. nice roach and perch before breakfast (omitted last week). August 21st, Messrs. H. F. and L. A. Cross, Cambridge, 15lb. very nice roach; Mr. H. B. Flack, Cambridge, 7lb. good roach; Mr. A. Clifton, Lynn, 3lb., in short time. August 26th, Mr. and Mrs. W. Clarke, Merton, Surrey, with Mrs. Tillett, Littleport, fishing early morning and late evenings, 11lb. nice roach. August 27th, Mr. and Mrs. W. Clarke, 7lb. nice roach during morning; Mr. W. Clarke, 4lb. again during afternoon. Mr. S. Ratcliffe, London, about same weight; Mrs. W. and J. Wilkinson, Ely, four dozen nice roach during afternoon.—Charles South.

### Lugg and Arrow (Leominster).

Both these streams are still in good angling order. They are very low and clear, and in great want of a good downpour of rain. Both streams have been visited freely this week, and the fish have been sporting well, and several very good dishes have been landed. The best flies are the pale blue, red ant, and whirling blue. Good dishes of fish have been taken with the wasp grub. On Friday, a gentleman visited the Lugg, near Kingsland, and with the pale blue landed a very good basket of fine grayling and trout. Fishing with the wasp grub a gentleman took nine very good fish. The Arrow was tried the same day, and very good sport was had, as the fish were biting well, with the whirling blue and the red ant. A gentleman landed a basket of 6lb. of trout and grayling. A few very nice trout were taken with the maggot. Some good trout were landed in the Lugg at Aymestry with the whirling blue on Saturday. A gentleman visited the Arrow with the wasp grub in the Eardisland water, and landed a very good dish of trout, averaging ½lb. each. Some very good grayling were taken with the pale blue the same day. On Monday, the Arrow was tried near Ivington, and a gentleman with the fly took a very nice basket of fine trout and grayling. In the Lugg, near Ford's Bridge, the fish were rising well at the fly. One gentleman landed seven very good trout with the red ant, and another good lot was taken with the fly. On Tuesday the fish were sporting well, A gentleman tried the Lugg at Bodenham with the pale blue, and landed a good basket of fine trout. With the fly, a little below the town, a very nice lot of grayling were taken. Some very good fish were taken in the Arrow with the wasp grub the same day. The Pinsley is in good angling order, but low. The fish rise well at the fly, and some very good fish have been landed with the wasp grub. Some very good trout have been taken.—Gwynne.

### Medway (Tunbridge).

During the week there have been some good bags of fish made by Mr. Ede and Mr. F. Law amongst the bream and roach, while other anglers have also been successful in the same time, and also amongst the chub, which rise at a fly well, and are not averse to a piece of wasp grub. To-day (Thursday) we have had a nice sprinkle of rain, but not enough, I fear, to bring the fish ravenously on the feed.—Ye Medway Water Rat.

### Ouse (Huntingdon).

The water is in splendid condition, and fish are well on the feed. Numbers are taken daily, both bream and roach. On the 27th I took 13½lb. of fine roach. I have not been out only the day mentioned, but I have witnessed several takes. On the 24th, one gentleman took 26 fine bream. Lobs and wheat are the principal bait. There is every prospect for fishing, for the weather is very favourable.—H. Rout.

### Pickering.

An agreeable change in the weather has very much improved fishing prospects in this district, although waters are still very low. Fine rains have fallen in all directions within the last few days. On Monday last, at the Pickering Petty Session, two important fishery prosecutions took place at the instance of the Yorkshire Fishery Board. In the first place, two youths were seen in the act of trying to snare trout in the Pickering beck. In the other case, three youths were caught by a police constable in the act of click-hooking trout, &c., in Thornton Beck. The offences having been admitted, the defendants in both cases were cautioned and ordered to pay costs—no conviction being registered. But few anglers have wasted time in the pursuit of their favourite sport during the recent tropical weather, but the fine rains have cooled the air, and rendered an outing by the streams pleasant, if not very profitable in the yield of fish. A large number salmon and sea trout are reported to have run up the river Esk during the freshet caused by the storm of 12th August, and two salmon, 12lb. and 8lb., have been taken by worm.—North East.

### Severn (Shrewsbury).

This river is lower than it has been known for many years, and little or no fishing has been doing during the past week among the members of the angling society. An outing of the club was to have taken place to-day (Thursday), but in consequence of the low state of the river only about half a dozen members turned out, and they travelled to Llanymynech by the 10 o'clock train, so that they would not be able to commence fishing before noon. I shall not be surprised to hear that some of them have been well rewarded, as rain fell heavily during the night, which will doubtless stir the fish. I have seen several good baskets of fish which have been taken with the nets. On Saturday last I saw two men with at least a hundred weight of pike and others; and yesterday, that well-known local fish hawker, Mr. "Punch," had several pounds of perch, some very good fish, which he assured me were "all cheap." I hear that several of the local fishermen have been laying their lines again within the borough, so that doubtless there will be more prosecutions. It is to be hoped that the result of the prosecution of Messrs. Newton and Gough, Tanners' Weir, will be a caution to the Shrewsbury tanners not to turn lime or other poison into the sewer; and if they do persist, I hope the board will take the same steps in their case as they have at Wem. In consequence of the rain which fell last night the river is this evening slightly discoloured, although up to the present it has not commenced to rise.—Severn Salmon.

### Severn (Kidderminster).

I have no news to report in respect to the fishing in this river, which still remains very low and fine. Though the clouds look ominous now and again, yet the much-desired downpour passes away. The land about here is getting very parched, and the different roots will soon begin to suffer if this dry weather continues much longer, to say nothing of the filthy state of the rivers. Some of the members of the United Brothers Anglers have had some fair takes of roach from the river Stour this last week, but the working of the different mills on the river tends to make the water in better condition for angling. Baits in use most are paste and gentles. The annual contest of the above society takes place on Saturday next, August 30th, at Holt Fleet, a small village on the Severn, situated about six miles above Worcester. I am afraid the takes will be small, owing to the fineness of the water. The first prize is a silver challenge cup and a silver medal, the medal to be the property of the winner. The cup was won last year by Thomas Pearsale, who brought it back to the club-room last club night, but not before he had seasoned it a few times with mountain dew. We have other valuable prizes which I shall name with the winners in my next report.—E. Earp, hon. sec.

### The Swale.

The Swale has now got over the killing of the fish which took place by the bursting of Moss Dam two or three years ago. There is good fishing now in the neighbourhood of Reeth, but the waters are low. In February of last year, Major Charlesworth put in a few thousand *Fontinalis* fry, and, singular to say, he is the first gentleman to catch one. Leaving the grouse for an hour or two the other day, amongst a nice dish of trout he had one of these which was nicely grown. They were supplied by Mr. Ford, of the Manor Fishery, Caistor.—Peter Pedagogue.

### Teme (Ludlow).

The Teme and its tributaries are all getting lower and lower, and in some parts the bottom of the Teme is as dry as the stone pavements of the streets, the rocky bottom being quite clear of water. Above the Ludlow Castle there is little difference from last week, but the water is getting foul and nasty. There has been plenty of fishing going on this week and since last week's report; but the hot weather tells against the fisherman and his pursuits sadly. On the 24th inst the thermometer in the sun was 100deg. at mid-day, just one degree lower than on the 17th inst. I heard of a gentleman on Saturday evening catching eighteen roach, at the point where the river Ony joins the Teme. They were fine fish, some of them ¾lb. weight each; the same gentleman landed a fine trout from the same spot; the bait used was the wasp grub. A gentleman staying in Ludlow for a week or two fishing, has paid several visits to the Saltmoor waters towards evening. He has always succeeded in landing some good fish each night with the wasp grub or paste. There was some strong talk about erecting a salmon ladder at Ashford weir; but, for some reason or other, it has to all appearance dropped through again for the present. There appears no real difficulty to the erection of a ladder if those interested would bestir themselves in the matter. We have not heard of the pike in the Folly and under Whitecliffe being hooked yet, though several have been trying their hands at the fish. I saw a gentleman on Monday who caught seven trout and nine grayling, all grand fish, in the Onibury waters with the wasp grub. There is comparatively nothing worth mentioning going on in the Clun. All quiet in the Letwyche. The Corve has produced some very good grayling and trout towards night-time.—S. Ludlow.

### Teme (Tenbury).

This stream has been visited freely in the evenings this week. The water is still very low and clear. The fish are sporting well, and some very good fish have been landed with the fly, which are on the water in great numbers. Good perch have been taken in the morning with the wasp grub and maggot. The water from Little Hereford to Tenbury was fished on Friday by a gentleman with the whirling blue and red ant, who landed a very good basket of fine trout and grayling, weighing 6lb, the lot. Near to Eastham, a gentleman with the wasp grub landed some very nice grayling. A very good dish of fish were taken with the maggot near the bridge. In the water at Berrington Court some very good fish were taken on Saturday with the green insect. A very nice lot of trout were taken by a gentleman who was fishing with the wasp grub. A visit to the water near Corn Brook resulted in a good basket of fish being taken with the whirling blue. On Monday, the water was tried near the town by a gentleman, who with the wasp grub landed eight very good trout and three grayling. At Rochford the fish are sporting well. One gentleman with the fly landed a very good dish of trout, and a very nice lot were taken with the maggot. The fish were taking the fly well on Tuesday morning. A gentleman fishing near Easton Court with the fly landed a splendid dish of fine grayling. Good fishing has been had in the Association waters, and some very good fish have been taken with the fly. The Ledwyche, Rea, and Kyre are in good fishing order, but very low. A few very good fish have been taken in the Ledwyche. In the Rea, at Neen Sollars, some very fine trout have been taken with the wasp grub, and some good trout have been landed up Stoddeston way. A few very nice trout have been landed in the Kyre with the fly this week, and some nice ones with the wasp grub.—Worcester.

### Trent (Newark).

The sudden and startling change in the weather, from nearly tropical heat to a British winter, seems to have knocked the fish completely off the feed. I have nothing worth reporting this week, with the exception of a few chub being had with wasp grubs, and a lot or two of roach, dace, bream, &c., being had with creed-wheat, gentles, and worms, during the latter part of last week and the beginning of this. The cold east wind of the last day or two seemed to upset all calculations, for several of the best swims have been tried ; but nothing has been done. Water very low and clear, and a bit of an improvement in the weather to-day, Thursday.—The Trent Otter.

### Trent (Nottingham).

There has been rain during the week, but the downfall has been insufficient to cause any difference in the height of the river, which remains as low and clear as when our last report appeared. The lower reaches account for a few barbel, and in the swims at Wilford moderate sport has been met with. Salmon have been showing in abundance at Shardlow and in Sir H. Bromley's allotment at Stoke, but, pending a rise, they do not seem inclined to feed. The bottom of the river is still thickly covered with weed, and "legering" is thereby rendered almost useless. In last week's Gazette a paragraph appeared relative to the death of an esteemed friend of the writer—Mr. S. Sills. Mr. Sills was an enthusiastic angler, and an occasional contributor to the columns of the Gazette. That his body was found in a part of the Trent where he had killed salmon is now a thing of the past ; but beyond this I must be pardoned for offering an explanation. Oftentimes pecuniary troubles occur, and men who are distraught by them are not responsible for their own actions. A rise just now would do an immense deal of good.—The Man at the Clubs.

### Trent (Lower).

The river is remarkably low. Sport is somewhat languid, and it is quite certain that it would be much improved by a downfall of rain sufficient to raise the river to its normal height. Chub may be caught occasionally, but bream seem to have gone off almost entirely. Roach are very shy, and take much coaxing, but flounders and eels are to be found in most swims. Sport will be capital as soon as the flush comes to clear away the insects from the weeds.—Trace.

### Waveney (Beccles).

I must offer you, Mr. Editor, and your readers, apologies for not sending you my usual reports, time having been very precious with me ; but according to all accounts which have reached me from various quarters, the season up to the present has been one of the most successful known for many years past. It would be very difficult for me to make special mention of particular catches of roach, but I can say, without fear of being contradicted, that anglers have not for many years seen such nice catches as have been shown this year, roach weighing over 1lb. being the rule, and not the exception, and ½lb. and ¾lb. roach are getting a very usual thing, and anglers begin to believe there are some good fish to be captured. You will probably have a report from the secretary of the Waveney Angling Club, from which it will be seen that upwards of 46lb. of roach were taken on Saturday last, in about four hours' fishing, by six anglers, which we consider good. I hope shortly to send you reports of good catches. Pike fishing will shortly be commenced here in earnest, and I have already heard of some big ones about. Wind S.W. Prospects good for all-round fishing.—A Waveney Angler.

### Weldon Bridge.

River low, owing to dry weather. Fair trouting has been done this week. Two gentlemen four dozen good trout on Tuesday last. All we want is rain to bring the salmon up. Gentlemen wanting good sport, try the Coquet, Weldon Bridge, after next flood. Comfortable apartments.—F. Brown.

### Wharfe (Yorkshire).

Still the same unsatisfactory state of affairs ; river lower than it has ever been known, and the fish consequently all in the deeps and disinclined to feed. Chub seem to have taken a sudden affection for brandling worms. Mr. Jas. Marston, of Pool, caught one the other day scaling 1½lb ; and I have heard of other two or three instances of them being caught with the same bait—wasp grub or gentles are generally the favourite with them at this time of the year. Evening fishing is almost at an end, and in another month or so we shall be amongst the grayling once more. August dun, red ant, knotted midge, and black midge are the best flies at present. At the time of writing (Thursday morning) it is raining fast and seems likely to continue. I am informed that the reservoirs at Swinstay and Fewston are almost exhausted, owing to the long-continued drought ; several very large takes of trout have been made from them, chiefly with the wasp grub ; two anglers from Leeds one day last week, caught from 12lb. to 15lb. each.—Fras. M. Walbran.

### Witham.

There was a large number of anglers upon the Witham on the earlier days of this week. There was a great angling sweepstakes at Kirkstead, and anglers joined in it from very distant places. Two or three came from Bristol or the West of England, several from Stockton or the North, whilst a goodly sprinkling of anglers from Leeds and York joined the main body from Sheffield. The sport was exceedingly good, and the winner of the first prize had a capital show. Many of those who did not join in the match had good baskets.—Yellow Belly.

### Wye and Derwent.

Fishing in this district is wretchedly bad just now, owing to both the Wye and Derwent being so fearfully low and clear—in fact, both trout and grayling seem to have gone completely off the feed in the middle of the day. They only feed the first thing in the morning and the last thing at night. Thin baskets, from three to four brace per angler, are made. Grayling are beginning to rise much better, and are feeding mostly in the rough parts of the streams. The killing flies have been honey dun bumble, ash dun, little black, and red palmer. The bottom-fishers only fish very early in the morning and late at night, and they have succeeded in killing some fine trout and eels, with wasp grubs for bait. There has been a fair quantity of coarse fish killed on the Derwent between Ambergate and Whatstanwill, with wasp grubs for baits. Last night (Wednesday) there was a great deal of steady rain fell all over Derbyshire, which caused both rivers to be slightly discoloured to-day (Thursday), which is sure to improve fishing.—Geo. Jas. Eaton.

### The Yare (Norwich).

Excellent sport amongst the bream has been had at Buckenham Ferry during the past few days. The sudden cold has just put them off feed in early morning ; but during the warmer hours of the day good sport has been had. Professor Day caught, in a very short time, 37 bream between 2lb. and 3lb. each, and next day had very nearly as good luck. Roach fishing has been very uncertain, and the fish appear to be very fanciful, sometimes preferring red paste or gentles, and at others being tempted with nothing but white or coloured wheat. Visitors staying at Yarmouth or Lowestoft cannot do better than pay Buckenham Ferry or Brundall a visit if they desire good roach fishing ; if they prefer bream, I would recommend Cantley. The Norwich Piscatorial Society held their annual match at Buckenham to-day ; but owing to the unfavourable state of the weather sport was not good, something like 9lb. winning first prize, although 40 members competed. Prospects good ; jack fishing will soon pay.—Robert Moll.

## GOOD INTENT ANGLING SOCIETY.

The summer dinner of this society, at which 76 members sat down, was held on Monday last at the Rye House Hotel.

In addition to this large company, many ladies, wives, sisters, and sweethearts of members were present to witness the sports which followed, and which were expected to be of the most exciting and pleasing character.

The chair was filled by Mr. Philip Geen, who was supported on his right by Mr. R. Murphy, the secretary, and Mr. R. Ghurney, the secretary of the Anglers' Association. In the vice-chair, surrounded by a number of prominent members, was Mr. H. J. Tibbatts, who exerted himself throughout the day in conjunction with Mr. Murphy, Mr. Wood, and others, for the comfort and enjoyment of all.

The toasts were "The Queen," "The Prince and Princess of Wales and other members of the Royal Family," "Success to the Good Intent Angling Society," "Angling Institutions," "The Host," "The Chair and Vice-chair."

The dinner was so well placed upon the table, and was in every respect of such a first-class character, as well merited the compliment paid to the host by the company before separating.

The speeches were short, yet of just sufficient length to be interesting, as was testified by the hearty cheers with which they were received.

Mr. Geen, in proposing success to the society, gave it as his opinion that to be a member of so well managed a club as the Good Intent, should be a source of pleasure and pride—pleasure at the privilege of being one amongst so many, all of whom were glad to meet him with a hearty shake of his hand either in the club house or on the bank of the river, and equally ready to share with him their piscatorial knowledge of how and where to find sport. Proud ! aye, very proud, and he himself, as only an honorary member, was proud to be one of a society which could produce such untiring workers for anglers as Messrs. Murphy, Tibbatts, and Beckett had proved themselves to be. Was it not also a cause for pride that their society was second to none, and, in many instances, a long way first, in movements intended to promote the sport they were so much interested in ? I know you will receive this toast with enthusiasm ; but I want you to remember that Mr. Murphy, whose name I will associate with it, deserves all the assistance you can give him, and the best and most comforting of all assistance is to be in time at your Tuesday meetings. Of late much has been said against the weighing in of any fish other than specimens. I am sure the majority of you will agree with me that nothing contributes so much to the success of a society as good shows of fish, and I want you, therefore, before adopting the idea of specimen fish only, to consider whether it is altogether wise to discourage the bringing up of the catches of your ordinary hard-worked, and little time to spare members who have no opportunity to stalk those specimens which the wise ones of the earth tell us are the only fish worth looking at. I can fancy—and so can you—that a man may be as proud of his twelve or twenty roach of 8in. each as ever others were of a sack-full of big jack ; and, in my opinion, he who strives for his 8in. roach, first for the pleasure it gives him, and second for the pleasure of showing them, is worthy of our respect, and should not be ridiculed out of his club-room by men possessed of the specimen craze. I quite agree that men situated as I, and many others are, feel in duty bound to return the larger portion of the vast quantities of fish we have the opportunities of taking ; but I also feel very strongly that it is possible to carry the idea too far, and by that means to nearly improve a society out of its existence.

Mr. Ghurney, in responding to the toast of "Angling Institutions," expressed the great pleasure he felt in being their guest once more, and hoped that so useful a society would continue to prosper, as it deserved to do, if only for the kindly and efficient aid it gave the Anglers' Benevolent, and "The Anglers' Association." He felt sure they would be pleased to learn that the new association was in a most prosperous condition, and he knew he might say, on behalf of its president and its committee, that it was their full determination that the protection of their much-loved river Lea should be fully cared for. They would remember that the privilege ticket, which was their only source of income, had been offered for sixpence by the Central Association. It was pleasing to find that, notwithstanding this very dishonourable attempt to thwart their work, the numbers were few indeed who had fallen into the sixpenny trap. Anglers must know that nothing could be done for preservation out of sixpence. One or two angling societies had hesitated until matters were settled ; but now that they knew the exact position, they were taking their tickets as usual, evidently satisfied that it was better to pay two shillings to an association that did good work and rendered a half-yearly account of it, than give sixpence to those who could do nothing, and had never yet published a balance-sheet.

Mr. Tibbatts, Mr. Murphy, and others having spoken, an adjournment was made to witness the sports.

Too much praise cannot possibly be given to the three gentlemen who had charge of the sports, as they contributed an afternoon's enjoyment the interest of which was fully sustained from beginning to end. An extra word or two for the handicapper must not be forgotten, as everyone was full of praise for his remarkable judgment, which brought about a close and hotly-contended finish to almost every race. It appeared to matter not to him how varied the orders of merit of competitors might be, or how long or how short a start was required to give them a fair chance of winning ; and it was not unusual to find the twenty yards start and the scratch to finish so close together as to put the judge on his mettle to decide which finished first. Argus.

Berwick Tweed Net Fishings.—The catches continue poor for the time of the year. Grilse and trout especially are very scarce. A few salmon of large size are now being got, Goswick having had two of 39lb. and 41lb., while Throckley Burn had another of 42lb., the largest of the season. It is somewhat singular that all the large fish are got on the sea coast, where the best catches are also obtained. Prices on Saturday were :—Grilse and trout, 1s. 5d., salmon, 1s. 4d. per lb. At the corresponding period last year prices were :—Salmon and grilse, 1s. 1d., trout, 1s. per lb.—Maxwheel.

---

There were nearly the usual crowds at Boston on Saturday and Monday, and again many holiday anglers. Sport was exceedingly good, and the water, though low, was in fair condition. Some capital baskets were made by the experienced anglers, but the particulars of the weights, &c., are not to hand. There was nothing very special about the sport that I am aware of, but I hear the Boston anglers are beginning to think of turning attention to the Fortyfoot, which will soon be in fishable condition.—Y. B.

# CLUB REPORTS.

### ALEXANDRA ANGLING SOCIETY.

The members of the above society were out on the 24th inst. and had a very good show of fish from the Lea and Dagenham. Mr. Gripton, bream; E. Wicks roach, C. Wicks, R. E. Hunter, perch; Mr. H. Baker, perch; Flanse, perch. On Wednesday last there was a distribution of 27 prizes; John Smith taking 1st prize for the heavy weight for the year. Mr. Gripton 2nd; Mr. Coxhead jack prize; Flanse, perch prize. We had a very full room and some excellent singing.—F. WAGNER, sec.

### AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Moir, bream, 10lb.; roach, 4oz. Mr. Harding, bream, 6lb.; roach, 9½oz. Mr. Lake, bream, 3lb. 15oz.; roach, 6oz., all from Dagenham. Mr. Partrick, one bream, 3lb. 3oz.; roach, 4lb. 12oz.; perch, 4oz.—J. WORLEDGE, sec.

### BATTERSEA FRIENDLY ANGLING CLUB.

On the 24th inst. several of our members, fishing at Amberley, met with very good luck. Mr. G. Mumford weighed in 7lb. 15½oz. of bream and roach, two of the bream going just over 5lb. Mr. W. Johnson, from Richmond, 1lb. 6½oz.; A. Meacock, same place, 1lb. 6½oz.; Mr. H. Martin, from Woking 4lb. 5oz.—A. SAMPSON.

### BIRMINGHAM AND DISTRICT AMALGAMATED ANGLING ASSOCIATION.

I have no large take to report this week, the majority of the members doing very little. Fishing at Droitwich on Saturday I took but very few, however, the quality made up for the quantity. The West End Fishing Club, held at Mr. R. Sanders', the Lamp Tavern, Bishopgate-street, Birmingham, fished their annual contest on August 25th, at Wexford, in the Arrow. They had but little sport, small catches being the order of the day. When time was called the following was the result:—1st prize, Mr. Careless; 2nd, Mr. Wainwright; 3rd, Mr. Gould; 4th, Mr. Jakes; 5th, Mr. Osborne; 6th, Mr. Randle; 7th, Mr. Cockbill; 8th, Mr. Clay; 9th, Mr. Peters; 10th, Mr. Haywood; 11th, Mr. T. Russell; 12th, Mr. A. Russell. Three prizes were not taken, and these will stand over till the next contest. 1 was present at the distribution of prizes on Tuesday night and they were very good, and reflected great credit upon the prize selection committee. A vote of thanks was passed to Mr. Morris, M.D., and the host for their donations towards the prize fund and the general support they gave to the club. Mr. Morris replying in suitable terms. Mr. James Beardmore, of the Old Green Man Piscatorials, a few nice roach from the serpentine; Mr. Thorn, from the same club, dace, eel, and perch from the Arrow; Mr. Woodcock, roach, from Tamworth. I had almost forgotten to tell you that Mr. W. Hewitt was referee to the West End contest, and gave every satisfaction.—JAMES T. ALLEN, hon. sec.

### CLAPHAM JUNCTION ANGLING SOCIETY.

Takes continue small, in spite of delicate tackle and tempting baits. Several of our members have been trying the different rivers, armed with carrions, greaves, &c., *ad lib*, with but little return. Mr. Bahfield got 5lb. 10oz. of bream and roach, one bream 2lb. 1oz.; Mr. Favell, one bream 3lb. 6oz. Messrs. Weyer, Moore, and Maslin also had fish. The match for Mr. Speed's prize commenced on the 25th and ends to-morrow (31st). Thursday next being quarterly night, members are requested to show up early.—W. MASLIN, sec.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly meeting was held at the club-house on Monday last, Mr. Parry in the chair. The minutes of the preceding meeting were confirmed. The Secretary reported that he had arranged with Mr. Coventry, the Fox and Hounds Hotel, Sewardstone, for his vehicles to meet any members visiting the society's waters at Chingford Station, to convey the members to the waters, and to fetch them in the evening, at a uniform charge for four persons of 4s. This was thought an excellent arrangement, as the service of the G.E.R. trains was very good, and all trains stopped at Clapton, both to and from Chingford. The Chairman exhibited a remarkably handsome, well-finished Nottingham and general rod, which he had had made for him by Messrs. Hardy Bros., of Alnwick. The rod was very much admired by the members present, the patent winch fastening was highly commended. A capital selection of music, vocal and instrumental, was well rendered and thoroughly enjoyed by the members and their friends. Mr. P. Geen, and several visitors were present, Mr. Winterbottom ably presiding at the piano, and a hearty vote of thanks to the Chairman brought the evening to a satisfactory close.—HENRY HOWSE, hon. sec.

### COBDEN ANGLING SOCIETY.

On the 17th inst., a fine show of bream were weighed in by Mr. Tucker, from the Welsh Harp. They consisted of 10 fish, and weighed just over 30lb. Mr. Salmon weighed in some nice roach, one of which scaled 15½oz. Mr. Sharland also weighed in some nice roach and dace, the total weight being 3lb. 14oz. On the 24th inst. there was a beautiful display of roach, Mr. Stead having nearly 7lb., some of them being very handsome fish. Mr. T. Cox weighed in several large roach, and Messrs. Sharland, Hammans, and several other members weighed in fish of various kinds, making altogether a very creditable display.—C. REEVES, sec.

### CONVIVIAL ANGLING SOCIETY.

The first pegged-down match of this club took place on the 24th inst. at Dagenham Lake, when sixteen members competed for seven prizes, the following being the prizetakers:—1, Mr. A. Dodd (bream and roach), 6lb.; 2. Mr. J. Coote, 2lb. 15½oz.; 3, Mr. J. Nash, 2lb. 12½oz.; 4, Mr. W. Sparrow, 2lb. 6½oz.; 5, Mr. H. Kelsey, 2lb. 5½oz.; 6, Mr. W. Adams, 2lb. 2½oz.; 7, Mr. G. Denyer, 1lb. 15½oz. Fourteen members weighed in their various catches, making a total of 29lb. 6oz.—P. JUCHAN, sec.

### EASTERN COUNTIES ANGLING SOCIETY, GREAT YARMOUTH.

A meeting of this society was held on Tuesday evening, the 19th inst., at the Duke's Head Hotel Quay, the President, Dr. Mitchell, being in the chair. It was decided that in future all specimen fish—that is, fish more than usually large, or fish possessing special peculiarities—caught by any member should be set up by the naturalist to the society, Mr. Lowne, Fuller's Hill, at the society's expense, and that said fish become the property of the society, and be displayed in the club room. It was also determined that the name of the winner of any cup fished for at the society's competitions should be engraved on the prize at the expense of the society. The prizes won at the late competition, consisting of a valuable cup, a fishing rod, two silver spoons, and a tackle prize specially granted by the society out of its funds, were presented to the successful competitors by the president, who in flattering terms eulogised the winners. Several gentlemen having been proposed and balloted for were elected members. It was arranged that the second competition of the season should be fished in about a week's time. All gentlemen wishing to compete who are not members are requested to have their names sent in, to either of the honorary secretaries—viz., John Lee, Esq., 10, Kent-place, or Mr. Seaman, Duke's Head Hotel Quay—on or before the evening of Tuesday, the 26th inst. If found eligible they will be admitted members of the society, and as such will be allowed to compete. Many good catches have been weighed in during the week. Amongst them we note that of Messrs. Freeman, Brasnett, and Craney, which amounted to 91lb.; Freeman and Mitchell, 40lb.; Brasnett and Craney, 42lb.; Bacon and Harbord, 71lb.; Bunn, 42lb. In Messrs. Bacon and Harbord's catch there were four bream, which scaled 12lb. 6oz. All reports go to show that excellent sport is being had at the various fishing stations. We, the other day, saw the catches of eight anglers, who had been fishing on Ormesby Broad, at Richmond's The Sportsman's Arms; such a catch has rarely been taken from these waters in one day, fully 200lb. of magnificent bream, all the undersized fish having been returned to the water, scarcely a fish weighing less than a pound, and many scaling well up to, if not over, 3lb. The bait used were lobworms and brandlings, the lobworms being, however, the more deadly. We have just heard of a fine take of rudd, which was landed at Heigham Sounds on Wednesday by one rod. The catch scaled over 56lb., many very fine fish being amongst them; one rudd weighed over 4lb. Such a fishing season as we are now having has never been known on the Norfolk waters, and this is the more astonishing, as the Broads, from the long drought, are between two and three feet shallower than they generally are. In last week's FISHING GAZETTE we observed that some gentlemen wrote complaining of the sport they had had on the Broads and rivers in this district. Their want of success can only be accounted for from the fact of their ignorance of the really good fishing spots on the waters in question. We would recommend gentlemen who wish satisfactory sport to apply for all information pertaining to where the fish are really on the feed, to our acting secretary, Mr. Seaman, Duke's Head Hotel, Quay, opposite Southtown-bridge, who weighs in all takes caught by the members of the society, and keeps a register of the same. A glance at this register would be sufficient to put anglers, coming from a distance, on the right track at once.—A. M.

### GLOBE ANGLING SOCIETY.

Only a few of our members were out on the 24th inst., consequently our shows of fish were not very numerous. Mr. H. Lake had 5lb. 5oz. of roach and bream; Mr. D. Thomas, 4lb. 9oz. of bream; Mr. F. Lawrence, some very good roach from Amberley; Mr. W. Brown, roach from the Stourt; Messrs. S. Orrow and S. Howell had some very good fish from the old river Wey, but did not arrive at the club in time to weigh in. At our ordinary meeting on Monday evening 25th inst., two new members were elected. I shall take it as a great favour if the members will attend in full force on Monday evening next (quarter night), as I have some very important business to lay before them.—J. J. HOLMES, sec.

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

On August 17th Mr. J. K. Fitch took 6lb. 8oz. roach and dace; G. Watling, 2lb. 7oz.; F. Watling, 4lb. 1oz.; Theobald, 3lb. 6oz.; Baillie, 3lb.; Stammer, 8lb. 3oz.; Watley, 2lb. 4oz. J. Page, C. Warren, Brown, Scott, Jukes, Cowper, and Armstrong also had fish. August 24, J. K. Fitch had 7lb. 11oz. roach and dace, one roach 1lb. 3oz., and several dace over 8oz.; G. Watling, 10lb. 6oz.; W. Theobald, 5lb. 13oz., one roach 1lb. 1½oz.; F. Watling, 6lb. 8oz.; Hockham, one perch 11oz.; Greaves, 1lb. 15oz.; Baker, 1lb. 8oz.; Stammer, 1lb. 3oz.; Watley, 2lb. 5oz.—J. FITCH, sec.

### GRESHAM ANGLING SOCIETY.

The usual meeting was held on Tuesday evening, when the chair was occupied by J. C. Bartlett. The minutes of the past meeting were duly read and confirmed. The Acting-Secretary announced that a handsome barbel, weighing 7lb. 2oz., had been weighed in by Mr. Arthur Benningfield on the 21st inst. Mr. Chambers reported to the society some interesting particulars as to a fishery which he considered would be a desirable acquisition for the members of the society, and suggested that a deputation should be appointed to inspect and report thereon. Mr. Bentley also made a report to the society of another private fishery which he had visited, with regard to which he gave a most amusing description of his travelling experiences, the result of the discussion which ensued being that a similar suggestion was adopted as in the case of that mentioned by Mr. Chambers. It was also announced that the next delegate meeting of the Central Association would take place on Friday, September 5th, at 9 p.m. After some further discussion on piscatorial subjects, a vote of thanks was unanimously passed to Messrs. Bentley and Chambers for their services in connection with their inquiries after waters. The usual business being concluded, the customary musical selections were given, and the meeting concluded with a vote of thanks to the chairman.—A.

### HIGHBURY ANGLING SOCIETY.

Our trays were not so well furnished on the 24th inst. as hitherto; but despite all drawbacks Mr. Anthony had about 6lb. of good bream from Dagenham; as also Mr. Lewis with roach, dace, and gudgeon from the Thames. Mr. McDermott, on the 27th inst., produced a nice show of roach from Windsor, some scaling nearly 1lb. each. On the 31st inst., we have two valuable prizes to be competed for between Broxbourne and Hertford, for the first and second heaviest weights of all fish.—J. E. WHEATLEY, sec.

### HOXTON BROTHERS ANGLING SOCIETY.

There was a good show of fish on the 24th inst., being the last day of our year. Messrs. Cole, Dean, High, Pledger, G. Hunt, and Brockett having roach, dace, and bream. Mr. Heywood, 16lb. rudd; Messrs Simpson and Harris, perch; and Ghurney, jack. The annual dinner will take place on Aug. 31st, at 2 o'clock, at the Rye House. —R. GHURNEY, sec.

### INDEPENDENT BROTHERS' ANGLING SOCIETY.

Several of our members went out on the 24th inst., and were well rewarded for their trouble, Messrs. Clark, Leader, Roberts, and Moore being the most successful with bream, roach, dace, and chub. We beg to thank all brother anglers and friends that favoured us with their company at our return visit on the 26th inst., the evening being most enjoyable. The chair was well filled by Mr. R. Clark, who sang the first song, "The Chinaman"; Mr. Coomes was next with "John Doyle"; Mr. Sheen, of the Lincoln Angling Society, was well with "Come Down and Open the Door"; also Mr. Tyler, of the same club, with "The Lights of London Town"; Mr. Cecil, of the Brompton Angling Society, obliged with two excellent songs, "In the Days Gone By," and "Good Old Days"; Mr. Keen, of the Savoy Brothers, was laughable with the "Suit of Corderoy"; Mr. Chambers, of the City of London, was also amusing with the famous song "Fishing Club"; Mr. Wannell, of the Lincoln, was also good with the "Muleteer"; also Mr. Hewitt with "Swinging on a Five-bar Gate"; Mr. Johnson with "Nobody Knows the Trouble He was In"; Mr. Webber, of the Little Independent Angling Society with "The Village Blacksmith," and Mr. H. Moore was asked to oblige with his usual "Timothy Black," which kept the harmony going to the last moment, when all had to part.—H. MOORE, hon. sec.

### IZAAK WALTON ANGLING SOCIETY.

Mr. W. H. Mecham had 5lb. 12oz. of nice bream on the 24th. Mr. W. Wilshire has had some very handsome roach, two of which weighed 2lb. 12lb. Mr. F. Dennison, sen., will give a prize, value 10s. 6d., for the heaviest fish of any kind taken on the four Wednesdays in September.—H. B.

### LIVERPOOL ANGLING ASSOCIATION.

Lovely weather favoured our visit to Windermere Lake on Monday last, and the outing was thoroughly enjoyed; and, indeed, who would not enjoy a visit to the beauties of the lake district, especially when the sun shines, and all is fair and bright? Our party numbered 25, and 18 competed, perch fishing being the order of the day. A good number were taken, but they were mostly under 3oz., and too light to weigh in. The scales gave the following result:—1st, Mr. Leaman: 2nd, Mr. Sergencoon; 3rd, Mr. W. Jones; 4th, Mr. Gass. An excellent dinner was partaken of at the Stag's Head Hotel, and so the day ended.—R. WOOLFALL, hon. sec.

### LINCOLN ANGLING SOCIETY.

Our members were out on the 24th inst. at West Drayton and fished a pegged-down match for two prizes, neither of which were taken; but a few nice fish were landed. Mr. Waddles took a bream of 1lb. 6oz., and Mr. Bingle had a nice show of perch, roach, and gudgeon from the Thames. Our return visit will take place on September 8th, when we hope that all clubs not on our list will attend.—H. Bingle, sec.

### NORTH-WESTERN ANGLING SOCIETY.

The members of this society visit Boxmore on September 1st, when seven prizes are to be fished for. On the evening of the 24th we had another good show of fish in the club room. Mr. Grindley a nice show of bream; Mr. Underwood, bream; Mr. Cross, a nice lot of tench; Mr. Aldis, jack and tench; Mr. Plumpton, jun., a very pretty jack from Rickmondsworth.—W. Hillier, sec.

### NORWICH PISCATORIAL SOCIETY.

The annual match of this club was held on the 28th inst. at Buckenham Ferry. The journey from Norwich to the Ferry was performed in a drenching rain, but this in no wise damped the ardour or spirits of the forty competitors who had entered their names. Unfortunately sport proved bad. The following are the prize winners:—1st, W. Capon (Hon. Sec.); 2nd, G. Cubitt; 3rd, E. H. Capon; 4th, C. Daniels; 5th, W. Page; 6th, O. B. Wilson; 7th, W. Butler; 8th, Mr. Wayth; 9th, F. Chapman; 10th, W. Mace; 11th, J. Barnes; 12th, E. H. Corbyn; 13th, D. Spelman; 14th, R. Bradley; 15th, A. Sims; 16th, G. Basingthwaite; 17th, R. Smith; 18th, W. Cushion; 19th, C. Page; 20th, G. Mobbs; 21st, J. Weyer; 22nd, H. Lacey. Every credit is due to W. Capon, the highly respected secretary, for first-class arrangements made for the comfort of the members, and also to Host and Hostess Garrett for the excellent attention and catering.—R. Moll.

### ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

A few of our members have been out since my last report, and with fair success. Mr. Roberts, on the 17th inst., dace and bream, 6lb. 15oz. (one fish weighing 2lb. 9oz.), and on the 24th a bream of 2lb. 10¼oz.; Mr. Craffard, bream, 9lb. 15oz.; Mr. Edwards, jack, 2lb. 6oz.; Mr. Laundy, jack, 2lb. 12½oz., and roach 1lb. 4oz. Members are requested to attend on next Monday to decide the date for the complimentary visit.—J. Obbard, sec.

### PECKHAM BROTHERS ANGLING SOCIETY.

The match fished on the 24th inst. resulted in the following gentlemen winning in the order named: Messrs. White, Duke, Otjen, Beard, and Gatty. A match for the cup at Amberley, on the 31st inst,; an open match for club prizes, on the 7th September. All members must clear the books to fish in the latter match. A visit was paid to the above society by the following clubs, on Monday last:—The Anglers' Pride, The Bermondsey Brothers, The United Brothers, The 2nd Surrey, "The Wellington," The Kennington, The St. Albans, The South Eastern, Rodney Piscatorials, Walworth Piscatorials, and three others. The chair was occupied by our president, Mr. Brodie, ably assisted by Mr. George Durant, and the vice-chair by Mr. Duke; Mr. Leonard D'Alberte presided at the piano and his playing was very much enjoyed, his selection of Irish airs fairly bringing down the house. The following gentlemen, among others, sang:—Messrs. Durant, Duke, George Tyler, W. Tyler, "The Great Bignall," Stidolph, Aram, Holman, Pitts, Goodall, Reed, and Watts. On behalf of the members of the P. B. A. S., I thank the gentlemen of the various clubs and assure them we shall not forget their kindness.—Gadfly.

### PUTNEY UNITED ANGLERS.

On the 24th and 26th inst. we had our first match this season. In the Thames between Putney and Richmond Bridges for four prizes, which were won in the following order:—1st, J. Connelly; 2nd, J. Small; 3rd, J. Strongtharm; 4, L. Gibson. Several other members had a good show of fish. Total amount of fish, consisting of barbel, roach, and dace taken and weighed in for these prizes, 70lb. 7oz. —J. Connelly, sec.

### THE PISCATORIAL SOCIETY.

The usual weekly meeting of this society was held last Monday at Ashley's Hotel. There were present Messrs. H. B. Brown, T. Gillatt, C. P. Wheatstone, W. B. Adlington, J. Lander, H. Gray, W. Jesse, F. C. Hatfield, Rev. Sumner, Dr. Coates, &c. Mr. E. Foreman was elected to the chair, and the secretary read the minutes of the previous meeting, which were duly confirmed. He announced that Mr. Foreman was the winner of the first prize of £3 3s. in the bream competition; the full particulars of Mr. Foreman's take were given last week. A letter was read from Mr. Fennings, who is staying at Ringwood, Hants. He did not speak very favourably of the condition of water, but said he would send up his day's catch. Consequently later in the evening Mr. Fennings was credited with 18lb. of roach, consisting of twenty-one fish, one a beautifully-shaped fellow of 1lb. 12½oz., and one dace 7oz. The secretary next read a letter from Mr. Elliott, concerning the fishing in the Ouse at Blunham. A discussion, in which many of the members joined, followed as to the desirability of the society renting a fishery. After the subject had been fully discussed, the chairman said that he thought it unadvisable, as the society was so large, for unless they could obtain a very big stretch of water, there would be very little advantage for a very great outlay. In his opinion he was backed up by several of the elder members. Mr. Thomas Gillatt presented to the society two valuable and ancient prints of Old London. for the album, which now contains a unique collection of pictures and prints of angling and other subjects. Mr. Lemann drew attention to the portrait-album, and said they would be happy to receive the photographs of those members who were not represented in that collection. Mr. C. P. Wheatstone, who was present for the first time since his serious accident, which happened nearly six months ago, was warmly welcomed and responded to his health, which had been proposed by the chairman, thanking all his friends for their sympathy and kindness. He had recommenced angling at Chertsey a few days ago, but river was low and water stale, owing to want of rain, so his bag was not large, but he was very glad to be able to go fishing again. Mr. Harden had been down to the Welland at Deeping, and had taken 10lb. of roach and dace. He started at five in the morning, and returned the same night, and therefore travelled 150 miles for a short day's sport. Mr. H. B. Brown had had two successful days' chub-fishing from the Thames: he had taken 19lb. 7oz. of chub in one day; on the other occasion 19lb 8oz., with the fly, from public waters. Mr. R. E. Booker, fishing with E. Boswell, of Halliford, for two days. Although his object was barbel he was only rewarded with bream, seventeen fish weighing over 30lb. The following day he fished Shepperton Weir, and captured two jack going 7½lb. the brace. After some remarks from Mr. T. Gillatt, concerning the shows of fish at the society's rooms, the chairman proposed the usual toast, "The continued Prosperity of the Piscatorial Society," and the business of the evening was closed by a vote of thanks to the chairman.—Pro. T. H.

### RODNEY PISCATORIALS.

Our worthy host, Mr. T. Hughes, had some splendid sport among the barbel up the Thames during the past week. The gross weight amounted to 151½lb., some of them turning the scale at 10lb. Mr. Grant visited Amberley on the 24th inst., and got a few bream and eels. Mr. R. Smith had a turn at Wraysbury, where he found a few roach. Mr. Arnsby got some nice dace at Ware. Several members and friends had some good sport in the Grand Junction Canal among the roach and gudgeon. Members are informed that Wednesday next will be quarterly night, and their presence is requested to decide the where and how the September competition shall take place. The prizes offered on this occasion are those presented by W. Cotton, Esq., Mr. G. Ball, and Mr. H. W. Flowers.—Pixie.

### ROYAL GEORGE ANGLING SOCIETY.

The majority of the members of the above society went out on the 24th inst., and brought home very fair bags, considering the condition of the river. Messrs. Guynan, Beales, Sinclair, Carter, and Kerby visited the Lower Thames. Their takes varied from 3lb. to 8lb. One of the above-named—viz., Mr. Guynan—had two very nice barbel, and well he deserved them, for a more inveterate angler I have not the pleasure of knowing. Messrs. Wood, Rider, Palmer, Halden, and Churl went further up the river and fared fairly well. We go to Henley on September 1st to fish a match. I hope to see a good muster at Paddington to meet the nine o'clock train. If not, great disappointment will be visible on the countenance of—W. H. Rider.

### STOKE NEWINGTON ANGLING SOCIETY.

On the 24th inst.. Mr. W. Robinson had three bream weighing 5lb. 15¼oz., and 1lb. 2oz. roach; C. Martin, 4lb. 8oz. bream; C. F. Robinson, 4lb. 3¼oz. bream and roach; T. Millington, 3lb. 1oz. bream and perch; W. Webb, 2lb. 8oz. bream; T. Harris, 1lb. 2oz. roach and dace; and T. Gretton, 12½oz. bream. This club is now located at the Royal Standard, Flemming-street, Kingsland-road. Mr. Godfrey, the proprietor, has become a member, and any old or new friends paying us a visit will receive a hearty welcome. The meeting nights are every Tuesday.—T. Gretton, sec.

### UNITED BROTHERS, DEPTFORD.

The following members weighed in on the 25th:—Mr. F. Watts, 5lb. 11¾oz. of bream and roach from the Medway; Messrs. Payne and Currans, some bream from Dagenham.—H. T.

### WAVENEY ANGLING CLUB, BECCLES.

The second prize competition took place on Saturday the 23rd inst., between the bathing-place and Dunburgh-hill. Fishing lasted a little over four hours. In the evening, when the competitors weighed in at the club house the fish made a fine display, and the following were found to have made the principal catches, no fish under 7in. being allowed:—Mr. H. Stimson, 11lb. 4oz.; Mr. J. Rouse, 10lb. 8oz.; Mr. J. Hooker, 8lb.; Mr. T. Rouse, 6lb. 4oz.; Mr. C. Chase, 6lb.; Mr. Knell, 4lb. 12oz. The Mayor's special prize for the six best fish was taken by Mr. J. Rouse, who also had the best fish of the day (a roach 1lb. 1½oz.). and the finest show of fish over 8oz.

### WELLINGTON ANGLING SOCIETY.

On the 24th, Mr. Andrews weighed in one bream 3lb. 7¼lb., roach 1lb. 9¼oz.; total, 5lb. ½oz. Mr. Jenner one bream 4lb. 5¾oz., and Mr. Newbury roach and dace 7lb. 4½lb.; all from the Thames. Members are requested to note that a special meeting for the election of officers will be held on Wednesday next, the 3rd September, when a full attendance is desirable; it also being quarterly night. The peg-down match set down for the 21st Septembor, has been postponed to the 12th October, and will take place at Weybridge. All subscriptions for the excursion and dinner must be paid up by next Wednesday.—W. W. Alexander, sec.

### WESTBOURNE PARK PISCATORIAL SOCIETY.

The members of the above Society will fish an open match early in September for various prizes, which will be announced later on. The fish recently weighed in have not been either particularly large or numerous. Mr. Lines has weighed in the largest barbel of the season at present, weighing nearly 5lb. Mr. Buttery has also had some very good takes of bream from the Ouse, averaging 4lb. each. Mr. Oatley has been successful with the dace, having weighed one of 14oz. and another 10½oz. Mr. Evans also had one of exactly similar weight to the latter. Mr. Adeane had weighed in barbel and bream from the Thames, one of the latter weighing 5lb., which is the champion at present. It is intended that a smoking concert shall take place on the 9th prox. at this society's club house, The Pelican Hotel, All Saints-road, W., when any angling friends will be welcome. On this occasion the services of the Hon. secretary, Mr. H. Thompson, will be recognised by making him a presentation.

### WEST GREEN ANGLING SOCIETY.

Mr. Coleman's prize will be fished for on the 31st inst., at Broxbourne, all-round fish. Mr. Magne weighed in a nice show of roach, scaling 11¼lb., also one rudd, weighing ¾lb., from the River Ouse, winning the first prize, given by Mr. Guyver. A good number of members tried the Lea at various parts, but all had blanks.—J. Guyver, Sec.

## STATE OF THE RIVER LEA.

An important correspondence has taken place on the subject of the pollution of the River Lea between the Hackney District Board of Works, the Local Government Board, and the Tottenham Local Board of Health. It originated in a memorial from the Hackney Board to the Local Government Board. The memorialists complained that the smell from the river was now intolerable, and resembled that of a cesspool, and that it was dangerous to health. Along the banks of the river there was a heavy deposit of foul matter, which rapidly accumulated and became an offensive and dangerous nuisance. This memorial was sent by Sir Charles Dilke, as President of the Local Government Board, to the Tottenham Board of Health, the clerk of which had replied that the local board were pushing forward the construction of new works at their sewage outfall, which, either alone or with some addition, would certainly when completed remove all reasonable ground of complaint so far as the Tottenham district was concerned. They were using, and would continue to use as long as it might be necessary, means for disinfecting and deodorising the dock and the stream passing through it into the River Lea at their sewage works, and had given instructions for the immediate dredging of the dock. Further, they had directed their engineer to prepare and submit a plan and estimate for the construction of a reservoir of sufficient capacity to hold at least a day's volume of sewage, preliminary to other works in contemplation.

## SCOTCH FISHING NOTES.

Tweed, &c.—For a fortnight past matters piscatorial have been very flat, and the occupation of the trout-angler may now be said to be over for the season. Indeed, "The winter of his discontent" has already set in with a vengeance. The rivers are about as low as they can be, and the beds of the streams are in a most exceedingly dirty state; and as regards trout or salmon-angling, things are at a complete standstill, while the reports from all districts at the present time state that all descriptions of fish are scarce. The following reports from the various districts will show the state of matters as they stand at present.

Tweed, Teviot, Eden, Kale, &c.—These rivers are in an exceedingly low state, and little or no angling has taken place on them for about a fortnight. Occasionally a small basket is got, but they are rare; and the trouting season in these streams may fairly be said to be over for the present year.

The Leader.—The season may now be said to be almost ended. So far as it has gone, the sport has been the best experienced for a number of years, the average size of the trout running about five to the pound. The best basket of the season has been 26lb., and takes of 12lb. and 13lb. up to 16lb. and 18lb. have been very common among the crack hands. Altogether the season has been splendid.

Coldstream District.—From this portion of the river our correspondent reports as follows:—The Tweed still continues small, and until we have a flood very few fish will be got. On Monday, on Lennel Haugh, only one sea trout was got, but yesterday morning four fish were killed. Most of the other netting stations have been drawn blank. The bed of the river is very dirty.

## FISHING TACKLE FOR THE GORDON RELIEF EXPEDITION.

Negotiations which have for some time past been proceeding between Her Majesty's Government and Messrs. G. Little and Co., Haymarket, London, were concluded to-day, resulting in instructions being received by that firm to provide and furnish the flotilla of 450 boats to convey the expedition for the relief of General Gordon, with all the necessary fishing tackle and appliances, details of which have been carefully prepared during the past few days. The order has to be delivered at Woolwich Arsenal by the 3rd prox., so that the actual departure of the expedition may be earlier than the country expects.

THE

GREAT REMEDY

For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. FISHING RODS AND TACKLE.

BULMER'S "FISHING GAZETTE" GOSSAMER GUT LINES,
Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—Fishing Gazette Notice, September 18, 1883.

See also notices in the Fishing Gazette for Dec. 17, 1881 ; June 28th, 1882 ; July 1, 1882 ; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d. each ; Fishing Gazette Gossamer Gut, Tapered 8d. each ; Salmon, 3 yards, 8d. to 1s. 9d., twisted do., 1s. 6d. each ; Hair, 3 yards, 3d. and 4d. ; Nottingham silk twist, 10 yards, 3d. ; stout, 4d. Best 8-plait silk line, 25 yards, 1s., 1s. 3d., and 1s. 6d. ; prepared ditto, 20 yards, 1s. ; stout, 1d. per yard ; good gut, 12in., 1s. per hank, about 100 strips ; 14in. 1s. 6d. ; Gossamer Gut, 12in., 3s. 6d. ; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz. ; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kenda hooks, 1s. 100.

FLIES.—Best Trout, 11d. doz., on Gossamer Gut, 1s. 2d. doz. ; chub flies, 1½d. each, 1s. 2d. doz. ; Pennels, 1s. doz., on Gossamer Gut, 1s. 2d. ; May Flies, cork bodies, 2d. each, 1s. 8d. doz. Devons, Totnes, or Minnows, from 6d. each ; Twisted gut and gimp traces, used with or without lead, 4 swivels, 10d. each.

RODS.—Good 3-joint rod, 1s., rung, 1s. 3d., rung, winch fittings, 1s. 9d. and 2s. ; Bamboo roach and bream rods, pack in 3, 2 tops, 15ft., 6s. ; 18ft., 8s. 6d. ; 20ft., 10s. 6d. Hollow butt fly rods, 4 joints, 12 feet, two tops, 9s. 6d., 10s. 6d., 11s. 6d., and 15s. 6d The "Marston" Trout Rod, 17s. 6d. and 21s.

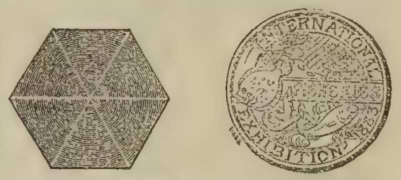
WINCHES.—Brass, 2¼in., 1s. 9d. ; bronze check 2½in., 3s. 6d. ; 3in., 5s. Bronze best make Salmon or Trout Reels, 2½in., 5s. 6d. ; 3in., 7s. 6d. ; 3½in., 9s. 6d. ; 4in., 12s. 6d. Four-line winder box centre, 8d. and 10d. ; rosewood, 1s. 2d. Full-sized leather fly books, from 1s. 3d. Tackle books from 6d. to 5s. each. Fishing Gazette Twisted Gossamer gut top casts, 1½ yards, 1s., stout, 1s. 2d. each. See notice in Fishing Gazette, May 10, 1884.

Postage extra on all orders.
All goods marked in plain figures.

A. BULMER, 62, WANDSWORTH ROAD, S.W.,
Corner of Nine Elms Lane.
Three minutes' walk from Vauxhall Station.

AS HEAD-WATER KEEPER or single-handed.—Advertiser, shortly disengaged, desires SITUATION as above. Life-long experience of all kinds of fresh-water fishing and fish-culture ; thoroughly practical ; last three seasons on a famous trout stream ; first-class references ; wages moderate ; permanency chiefly sought.—Address, River Keeper, 6, Jewry-street, Winchester.

SECTION OF THE GOLD MEDAL



FISHING RODS,

With and without Steel Centres. Guaranteed the lightest, most powerful, and durable manufactured. The only cane rods made that will stand wet weather and hard work. Gained the highest award in the world at the Great I.F. Exhibition, 1883.

Awarded Twenty Prize Medals, and Special Prizes since 1881.

See Hardy's Catalogue and "Angler's Guide" for 1884 post free three stamps.

HARDY BROTHERS,
LONDON AND NORTH BRITISH WORKS,
Alnwick, Northumberland.
NO AGENTS.

Are now exhibiting at the Forestry Exhibition, Edinburgh.

SATURDAY, SEPTEMBER 6, 1884.

## THE LAST DAY OF TROUT.

IN Kent it is an accepted axiom that "when partridges come in trout go out," and so it follows that Saturday, August 30th, was the last day of trout fishing on some parts of the Darenth for this year of grace, 1884. The season thus ended has not been a good one even for those favoured few who have the *entrée* to the best preserved and most exclusive lengths of this prolific river. I admit, Mr. Editor, that the queen of trout rivers is the Dove, and that the earthly paradise of the trout fisher is Dovedale ; but I none the less hold in loving memory the ever-varying beauty of the Darenth valley, and the ever-changing features of the silvery stream as it winds its sinuous course to the sea. I am, moreover, prepared to join issue with any man who dares to say that in point of numbers and in point of weight the Derbyshire trout have the advantage over the Kentish fish. It may be that my experiences in Dovedale were more in harmony with those of "Piscator Minor" than with those of "Piscator Major"; but anyone who has, like myself, devoted himself to patient and persistent trout-fishing in Dovedale will agree with me that the denizens of that historical stream are very highly educated, if not very bulky, specimens of the *Salmo fario* family. This, however, is beside the mark ; my present object being rather to record my last day on the Darenth than to discuss the merits of the river which divides the counties of Staffordshire and Derbyshire. Well, Saturday was the last day for Kent, so I put in an appearance, in spite of threatening clouds, which carried out their threats and emptied their contents at intervals, some of the downpours being equal to the douche of a shower bath. In a moment of indiscretion I weakly yielded to the importunities of a boy who wanted to carry my traps, and that boy proved my evil genius, for his sins were those both of omission and commission. He was never at hand when wanted ; he disappeared with my landing-net and fly-book in the most aggravating way ; and when a terrific downpour of rain occurred, and I sought shelter under an old alder stump, I saw this attendant of mine two fields away, standing under a hedge and comfortably enveloped in my mackintosh ! Then the way in which he occasionally got ahead of me as I waded up stream, and the way he playfully pelted the water-rats at some of the choicest spots on the river, was enough to exasperate even the most gentle and philosophical disciple of old Izaak that ever whipped a trout stream. Nor is this the full measure of the iniquity which I suffered at the hands of this interesting boy ; but let his final offence be told hereafter. Of course, the water was very low, and equally, of course, it was very bright, and the fish very shy. The wind was strong and dead down stream ; everything was, therefore, in favour of the fish and against the fisherman.

I commenced operations about one o'clock with an August sun and black gnat. I made my first cast in a favourite spot which has yielded me many a brace of fine trout in times past ; but they now refused to budge. I tried several changes without beneficial results. In a shallow piece of slack water, on the lee shore of the river, I found a quantity of minute black midges, with rusty bodies, and luckily my book contained a few tolerably fair imitations of these flies. At the second cast I found that I had, to use an Americanism, "struck ile," and the fish refused all other lures, rising well to these minute imitations even when the rain fell in torrents. As the hooks were of the smallest size made, and the river was choked with weeds, necessitating vigorous treatment and scant courtesy when fish were hooked, it may be concluded that I lost a few ; but my losses were aggravated by reason of the hooks being badly tempered, for they opened out straight under pressure. My temper, too, was somewhat affected by this want of temper in the hooks. In spite of the heavy rain which fell at intervals, the water in the river remained unclouded—in fact, no ordinary day's rain will discolour the Darenth ; and at nothing more trustworthy or substantial than these miserable little midges would the trout condescend to look. By dint of much industry I got together five brace, and as the light began to fade I made tracks for a quiet pool wherein I had, earlier in the day, got a slashing rise and missed the fish. Slipping quietly into the water, some 30ft. below the spot which my intended victim occupied, I dropped a couple of tiny midges lightly about a couple of feet ahead of him, and he went at them with a rush like a dog coming out of his kennel. A turn of the wrist made him captive, and he flung himself out of water as if he had received a shock of electricity ; then he made a rush for the friendly shelter of an adjacent weed-bed. The supple 10-foot spliced rod bent double as the butt was applied, and for a moment the chances of a smash appeared to be imminent ; but he presently caved in, and rushed down stream, almost going between my legs, and then, when pulled up steadily, he danced a hornpipe and pumped himself out, eventually turning up his golden belly and showing his purple sides—a brilliantly speckled beauty of fully 2lb. weight. Whilst this performance had been going on that attendant boy of mine had been dancing on the bank as if he was mad, flourishing his landing-net, and behaving himself like a lunatic, and when he begged of me to let him land the fish I foolishly yielded, with the result that the wretched yokel hit the fish on the head and knocked him off the hook ! I saw him slip back into deep water, and, with a groan of despair, I got out of the river, and packed up my rod. Thus ended my last day on the Darenth. C. W. GEDNEY.

Bromley, Kent.

P.S.—If any of your readers who fish the Darenth would like to avail themselves of the valuable services of that boy I shall be very happy to put them in the way of finding him.

## ENGLISH TOURISTS IN IRELAND.

"IT is an ill-wind, &c." is an old and a true saying, and in exemplification of it we may refer to the accession of English tourists who, driven from the beaten tracks of Continental travel by the existence of cholera, come to visit our Irish scenery. For many years the weather has not been so favourable for the tourist as it has this year, but as we are concerned merely with the angling element, the conditions which are so favourable in one case are the very reverse as regards fishing. The weather has been so dry that nearly all the rivers in the country have been literally dried up, and the tourist who comes with the expectation of finding good river fishing will be disappointed. There may be some lake fishing. I have no doubt that the visitors to the South of Ireland will find ample sport on the Inchaleagh lakes, near Macroom, or on the Killarney lakes. There are some stretches of water high up among the rugged mountains. Encircling Glengariffe, and in Bantry bay, deep sea-fishing may be pursued with pleasure, and even with profit. The number of tourists who have gone over the usual routes in the South have been double the number of last year, when the attractions of the Exhibition lured many people across Channel. To the angling community who may desire to try their skill in Irish rivers we would advise them to come direct to Cork. There are two ways by which the centres of attraction are reached ; but the angler would do well to proceed by train to Macroom, and thence by car to Inchaleagh. Hitherto, there has been no regular car service from Macroom to Glengariffe and Killarney ; but cars are always available for a "party." This uncertainty, however, will no longer exist, for the Macroom Railway Company are making arrangements to have a regular conveyance in connection with their trains from Cork to Macroom. The visitor, after spending a day or two on the Inchaleagh lakes, may push on to Glengariffe, the scenery on the way being varied and interesting. About four miles from Glengariffe there is a lake just off the road, which leads to Castletown. This piece of water can be fished from the bank. It is not very large, but if the trout are in "taking" humour, and a nice breeze prevails, some good-sized fish will be taken. There is a second lake some distance further on, but of this I have not had any experience. Mr. Roche, the owner of Roche's Hotel at Glengariffe, is an angler himself, and will direct the stranger to the best fishing ground. A few days spent among the scenic attractions of this locality cannot fail to give pleasure as well as health. A well-appointed coach plies between Glengariffe and Killarney, and a charming ride it is. At every point round Killarney the angler may indulge his favourite sport. I am not acquainted with the conditions of the rivers there at present, but as the climate is more variable than it is here the water may be in order. The autumn fishing is said to be particularly good in the Western rivers, and the white trout will now be found to be in season. The fishing at Rossbeigh, Co. Kerry, is always excellent, and there is a neat little hotel, in connection with which are some capital preserves. Altogether, the tourist angler may do worse than spend a fortnight's ramble through the South of Ireland, especially as the recent rains will improve sport.

Cork. ANGLER.

## FISHING NEAR BOULOGNE.

(FROM MERRIDEW'S "GUIDE TO BOULOGNE," WHICH EVERY VISITOR SHOULD PROCURE.)

THE Wimereux is strictly preserved from Wimille upwards, and interest is required to get a day's fishing. It is therefore unnecessary to dwell upon the merits of this pretty little river, further than to say a stray trout or two may be caught between Wimereux and Wimille, and grey mullet in September and October.

The Liane is considered the only stream in the Arrondissement wherein the sport may be pursued *not* under difficulties, and where trout and other fish may be found. The fishing commences at the village of Pont-de-Briques, where *minnows* and *gentles* are procurable. Bottom-fishing for roach, &c., prevails, and bran balls and potato baits are considered the best means of taking roach.

Within a few minutes' walk of the Lottinghen station on the Boulogne and St. Omer Railway the Liane takes its rise, and is fed by three or four tributaries, in which the minnow will prove a tempting bait. Pursuing the downward course of the stream, the village of Selles is reached, and the river Liane becomes a more important stream, where the fly will probably supersede the minnow. It may be well to observe that the natural fly, *the down-looker*, which may be found on nearly every tree in proximity to the river, may be relied upon as a killing bait. The river runs through or near to Bournonville, Wirwignes, Questrecques, Hesdigneul, and Isque, to Pont-de-Briques, at any of which places a good bed, and some addition to the day's sport, may be had to refresh the fatigued sportsman. What disciple of Izaak Walton seeks for more? The railway is available at Desvres, Samer, Hesdigneul, and Pont-de-Briques, as well as Lottinghen; and Piscator may leave Boulogne early in the morning, and return to Boulogne to dinner or supper.

Licques stands on the Hem, a river well stocked with fine trout. To get there, Piscator must either take a hired conveyance, or go by the Malle Poste from the post-office in Rue des Vieillards early in the morning to Colembert, from whence Licques is distant eight kilometres. From Licques he will fish the stream to Nordausque, passing through Tournehem, a place well suited for headquarters, if the sport be good; this of course depends on the state of the water, weather, and wind.

THE AA.—To fish this excellent stream, Piscator will do well to take the railway between Boulogne and St. Omer, and descend therefrom at Lumbres, which is on the banks of the Aa. From thence he may go up the stream to Fauquemberque and Renty, at either of which places he will find good quarters; or he may pursue the stream to St. Omer. The trout are fine, and of excellent quality. The scenery is magnificent, and a ramble through the country will occupy a day or two, if change of wind or other obstacles arise to sport. The Lys is within reach of Fauquemberque, and is well worth visiting. It may be well to state that the minnow is the best bait from Lumbres to Blandecques, except when the May-fly is abroad, between the 24th May and the end of June.

THE CANCHE AND THE TERNOISE.—There is little doubt that these rivers afford the best sport in the department, and as they are accessible by railway *via* Etaples and Montreuil, they may be considered the most convenient for either long or short excursions. These are now facilitated by the recent opening of the branch line of the railway intended to run as far as Arras through St. Pol, so you may stop at

MONTREUIL, where headquarters may be established to fish the Canche and its tributary streams the Bauge at Attin and Dordogne; afterwards the Canche may be worked from Montreuil to Beaurainville, taking the tributaries at Marles and Loison. A comfortable bed may be got at Beaurainville, and proceeding up the stream, a rivulet at Contes must not be despised, and then returning to the Canche, a mile or two will bring Piscator to Hesdin.

HESDIN stands at the confluence of the Ternoise and Canche, and may be reached from Montreuil by omnibus. Very comfortable quarters may be obtained here. Let us take

THE TERNOISE to St. Pol, and capital sport will repay the stroll, besides rich and magnificent scenery, which will be met with at every point after leaving Montreuil. Afterwards it will be as well to return to Hesdin and take the branch of the Canche to Frévent, from whence, if so inclined, Piscator may proceed by omnibus to Fauquemberque.

THE AUTHIE is a river containing good fish, but not much frequented by reason of the absence of any quarters on its banks, and its distance from any place in the interior. To get to this river, take the railway to Montreuil, and from thence a country vehicle.

## AN AMATEUR ANGLER'S DAYS IN DOVE DALE.—(No. 6.)

THURSDAY, August 7th, was a pleasant day for us; lovely and bright as an August day knows how to be. We, the major and I, drove over from "The Izaak Walton" to "The Charles Cotton," at Hartington, with the intention—which we carried out—of walking and fishing back through The Dales, a good 10 miles or more the way we travelled.

Whilst our chops were being cooked at "The Charles Cotton," in order not to lose time, we started off to Hartington mill to commence operations. Arrived there, we found the road to the mill dam entirely blocked by a row of old railway milk cans filled with "wash," and on getting over the side stile we were landed in a paradise of pigs. On the little triangular island formed by the mill, the mill dam, and the stream I counted forty full-grown, happy hogs, some huddled together in the sun, some lazily sleeping under the broad leaves of the wild rhubarb, others wallowing and rollicking in the stream—it was, indeed, a scene of Arcadian felicity; surely never before had pigs such a jolly time of it; but there was no fishing in this once noted spot. The scent upon the island was not quite like the dew of Hermon; still, it was preferable, infinitely preferable, to the "Wye" below Buxton.

We returned to our chops, and luncheon over, we sallied forth down Beresford Dale, a delightful walk in a very hot sun, but the odour of that piggery haunted us for many a mile. We had only two faults to find with the worthy miller of Hartington, both of them of quite a personal and selfish character—for what right have we to complain if he manufactures beautiful bacon where formerly was a bit of capital fishing ground? And why should we grumble, because just at the time we were sweltering down Beresford Dale he had stopped his mill and turned the already meagre water of the Dove into his exhausted mill pond? The result to us, however, was that we had no water to fish in, and the fish had very little to swim in.

If we got no fish, we did not the less enjoy that charming walk. We rested awhile outside Cotton's fishing cottage. Over the door we noticed the inscription, "Piscatoribus sacrum." Here, many a time, had Cotton and his venerable friend Izaak Walton rested from their labours, smoked their pipes, and fought their piscatorial battles o'er again. And here are we genuine piscators excluded by lock and key from this sacred abode! Surely the executors and administrators of Charles Cotton are not carrying out his wishes in thus excluding true disciples! The entrance to this sacred edifice is guarded by two lofty elms, beneath which are circular seats, and on these we sheltered from the burning sun, and thought how much more we should have respected the blessed memory of Charles Cotton had he left within that pretty asylum a constant stoupe of nut-brown ale, and eke a cup of tea, for weary and thirsty piscators.

Peering through the lattice windows, we could see a round table and six comfortable old arm chairs; surely a cool and pleasant resting-place, and made specially for such as *we*! Why, oh! heartless successors of the genial Cotton, are we so ruthlessly shut out? Why? Because, as a notice-board informs us, stupid and unmannerly tourists will insist upon scratching their names on window panes and carving them upon doors and lintels, besides committing other nuisances.

On leaving the cottage, we suddenly came upon as lovely a bit of the river as is to be found anywhere. Here nature has at some not very recent period been helped by art; here are rustic stiles and seats and bridges, and here and there beds of rhododendrons, lignum vitæ, and other shrubs and plants tastefully arranged, though now neglected. These artificial aids do but little to enhance the enchanting beauty of this little dell. Here one sees standing right in the middle of the water a very curious limestone moss-covered spire,[*] which has given an ugly name to a lovely spot. It is called "Pike Pool," not because the stream contains pike, but from this remarkable column. Here, under overhanging branches, the Dove runs deep and slow from one cascade to another. Here it was that Cotton's "Viator" caught his first grayling. "I have him now," says "Viator," "but he is gone down towards the bottom. I cannot see what he is, yet he should be a good fish by his weight; but he makes no great stir." Piscator: "Why, then, by what you say, I dare venture to assure you 'tis a grayling, who is one of the deadest-hearted fishes in the world, and the bigger he is the more easily taken."[†]

Naturally, the major paid special attention to this classic spot. Near the end of the dell, I suddenly heard a heavy splash, and on nearing him, I found him struggling with a big fish, which he fairly landed; but to my surprise, no sooner had he got his hook out of him, than he threw him back into the water! He was a grayling of over a pound. "What do you mean by such an insane act as that?" I cried. "Foul hooked; I caught him by the back fin," said he. "Well," said I, "what does it matter whether you caught him by that, or the head, or the tail, so long as you had him in your net?" "Unsportsmanlike and illegal," he replied. I said no more. I only wondered if this superfine doctrine prevailed in Izaak Walton's days. I have my suspicion that *that* was the way in which the inexperienced "Viator" hooked his first grayling. I only know that if *I* had caught him—— but I am not going to encourage young anglers to break the law.

This grayling certainly fought splendidly; but, perhaps, one cannot fairly judge from this what he would have done had the hook been in his throat instead of his back fin.

It was here I met again that little white-bibbed sister of mercy, my pretty water ouzel. She came and rested on a point of rock, and made me half a dozen of her prettiest curtsies. "Where are you going to, sir?" she said. "I'm going a-fishing, my pretty maid." "I'll go with you, sir," said she, "and tell you where the fishes be." And so she hopped along from stone to stone to the end of the little dell, and then with a few graceful bends over her white bib and tucker, she bade me good-bye.

Piscator major marched along regardless of these small matters. He was intent on fishing; but I forget to say in the beginning that I was not—I was only accompanied by my walking stick. I wanted to gain experience by watching the major's movements. We plodded on, without fish and almost without water, till we came to "Load Mill."

It was now nearly six o'clock, and we were very thirsty, so instead of pursuing the river down to Mill Dale, we took to the turnpike-road, and climbed a terribly tough hill for a very long mile till we came to The George, at Alstonefield, where we refreshed ourselves with most grateful tea and bread and butter, and then wended our way back to Mill Dale, and pursued the stream, passing the new fish-culture establishment just erected by Sir Henry Allsop, in the Dale. There we saw hundreds of young fry disporting in the well-built tanks; but as the hot sun was streaming down upon these open tanks it seemed rather desirable that the little fishes should have been protected by some covering above, or hollows underneath. Probably at this season the young fry would be grayling—in which case a shading from above would be preferable.

I may here remark that if during my piscatorial holiday I have not caught many fish, I have at least learnt something of their manners and customs in these streams. For example, in walking quietly along the banks of the Dove or the Manifold, I have occasionally seen a solitary trout "on the feed" which would allow me to approach within a yard and shake my stick at him without budging. "Surely," I have thought, "either that fish is paralysed by fear, or else he is one of those rare ones which has never yet tasted the fruit which conceals the villainous hook!" As a rule, you cannot approach within 6 or 8 yards of a feeding trout in these bright waters but he is off like a shot, and conceals himself under bank, or stone, or grass; but this is not so with the grayling. What stupid fish they seem to be; lying on the bottom of the stream, they appear to me to be a homeless race. Never have I seen a grayling rush away and hide himself like a trout under grass or rock; one generally finds them in little flocks, and when disturbed they scuttle about up and down and round and round, but never do they seem to be endowed with sufficient sense to hide themselves, or, metaphorically speaking, "to go in when it rains." That is why I have suggested that the young grayling fry should be protected from the sun by a covering from above rather than by overhanging banks or shady rocks under the water which they have not the sense to avail themselves of.

We approached our own ground, the Dove Holes, and just here we witnessed a curious instance of motherly affection. We saw a rat swimming down the stream with a young one nearly as big as herself in her mouth. I fancy she had been giving her son a lesson in swimming. How lovingly she carried him up the bank into her hole!

---

[*] *Pisc.* "Why, sir, from that pike that you see standing up there distant from the rock, this is called 'Pike Pool.' 'Tis a rock in the fashion of a spire-steeple, and almost as big."—*Walton and Cotton's Complete Angler.*

[†] Our *piscator major* does not agree with Cotton's *piscator* as to the want of pluck of the grayling. They differ in this respect, he says, in different streams and at different seasons; but as a rule they fight as well as a trout.

The major now began in earnest. Here he donned his wading boots which had been brought up the Dale to meet us. It was now 7.30, and, with the exception of the castaway grayling, only one fish had been taken. Piscator had long despaired of rivalling his feat of the day before ; but he was not likely to give in. The trout came into the basket slowly, and at long intervals, until we reached the Sharplow Cliff. There the major waded across to the Staffordshire side whilst I was compelled to follow the path and climb over the cliff, and an ugly climb it is in the dark.

It was now quite dark, and we could only guess at each other's whereabouts by cooing and whistling ; and when we emerged on the open green, called Sedgy Pool, we could not distinguish each other across the river ; for although the full, round moon looked down upon us from the V-shaped opening to this pleasant glade (formed by the slanting sides of Thorpe Cloud on one side and The Hazels on the other, the moon occupying the upper centre of the V), there was such a heavy mist surrounding us that our figures cast no shadows. Still the major fished on, and ever and anon I heard a loud flop and splash (for the fish seemed to rise with more noise and dash in the dark), and the words came across to me, "hooked him, "lost him," or "hooked him," "got him," till at last we met at the Stepping Stones.

We reached the pleasant old Izaak Walton by a little after ten, and although the major counted out but three brace of trout—good, heavy ones—still we felt we had not lost a day. Before I close I should like to offer a valuable hint to rod-makers : I noticed alike in the bright sunshine, in the evening twilight, and when all else was dark, that I could distinguish the flashing of Piscator's bright rod at a very considerable distance. Now, if I could see this, I fancy the bright-eyed fishes would frequently be scared by it. Why, ye makers, do you not make plain, unvarnished rods ? There is a fortune in this hint for any rod-maker who will take it and make an "invisible rod." What is wanted in this wideawake little Dove is a visible fly attached to an invisible hook, on an invisible line, thrown with an invisible rod by an invisible piscator, and you will fill your basket.—*Verbum sap.*

August 11.—Since the memorable walk on Thursday I have not much to report. I did not fish on Friday, but the major could not be restrained. He brought home in the evening one brace of grayling, weighing together 2$\frac{1}{4}$lb., and three and a half brace of fine trout, thus upsetting my little theory of fasting fish.

Saturday morning was the most close and sultry time we have yet had. In the afternoon the rumbling of distant thunder was heard, and in a short time the sky was black all round with heavy rain clouds. Presently the surrounding hills resounded with crashing peals ; but the rain only skirted our valley, and we did not get much of it. There is, I believe, a theory abroad that fish won't rise in a thunderstorm. We tested that theory with a very remarkable result. I once more donned my mackintosh and wading boots, and betook me to the Dove. It looked ominous ; not a rise could I see. I fished away for three hours, and I got but one solitary rise. I hooked my fish well, but he twisted himself round a bit of rock, and snapped off my most promising fly—my usual luck. I returned to the hotel fully satisfied that fish do not bite in thunder weather !

Meanwhile, Piscator major went to the Manifold, and returned shortly after me with—ye powers ! more fish than his usual bag would hold ! that was filled, and a bundle tied up in his handkerchief as well ! He counted out *nineteen trout*, some of them more than 1lb., and the whole lot, weighed together, nearly turned the scales at 10lb., or more than an average of $\frac{1}{2}$lb. each ! Now, what am I to think of this ? Do fish bite in a thunderstorm, or do they not ? Here, you see, is my own experience dead against it ; but, then, here is the experience of the major as dead in its favour. The only solution which occurs to me is, that they *don't* bite in the Dove, and they *do* bite in the Manifold. I make no allowance for my want of skill and experience, for I maintain that in that perfectly calm weather I threw my flies very cleverly indeed. If the fish had been on the feed, I certainly must have caught some ; but the fates were against me. Had I accompanied the major, as I at first thought of doing, I am sure I should have done almost as well as he. There are a good many other piscators here whose success about equals mine. What a display was this which our major spread out before them ! How they envied his skill, and venerated his prowess. A. A.

## "CRISP."

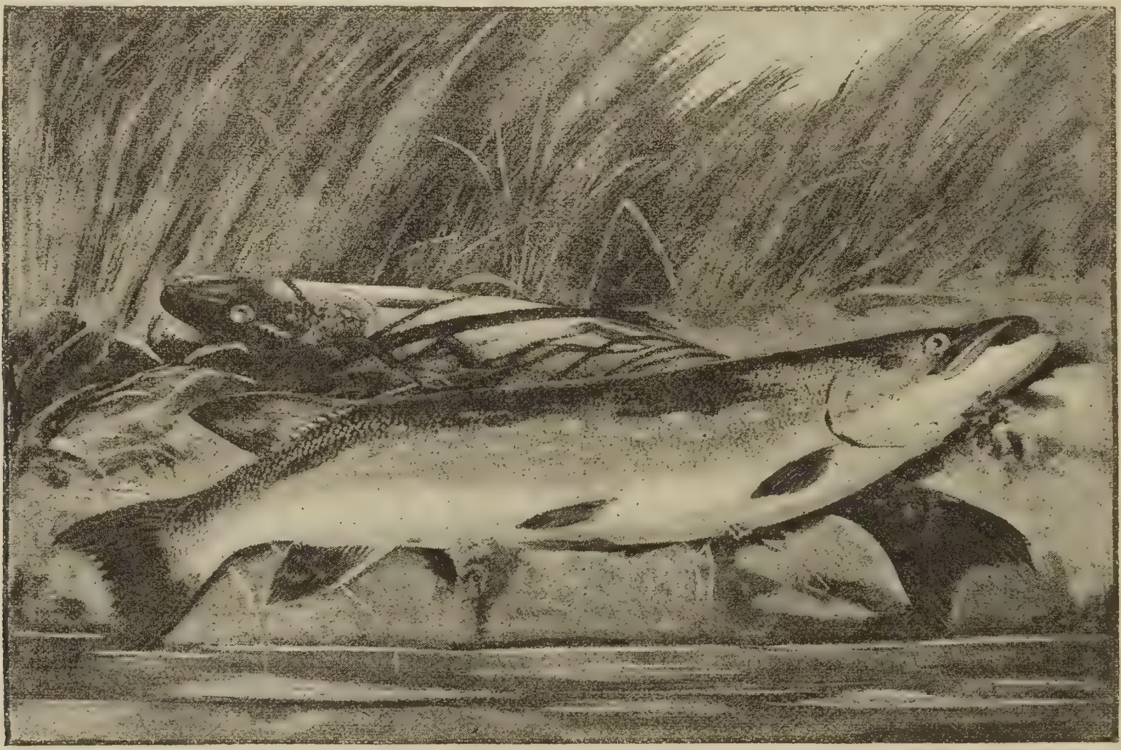
### A Holiday Sketch.

On a memorable day in the month of July, 188—, we—that is, my friend "Goosequill" and myself—started from the sleepy little town of C—— for a ten days' holiday in the Highlands. We had made arrangements to board with an old gentleman whose residence was in the neighbourhood of Killecrankie, as our purses, respectively, were insufficiently furnished to stand the strain either of hotel or hydropathic bills. The journey to Killecrankie was uneventful, and on our arrival at the picturesque station we found our host waiting, who greeted us with an outstretched hand of welcome. That worthy gentleman had been waiting for us an hour and a half, and his comments on the regularity of North Country trains would, I fancy, have convinced any reasonably conscientious railway official of the error of his ways. A pleasant walk of two miles through an avenue of fine trees brought us to our residence, which we were delighted to find a beau-ideal rustic cottage.

Perhaps at this stage of the sketch a description of the *dramatis personæ* with whom the reader is chiefly concerned will not be out of place. To begin with, "Goosequill" is my very particular friend, an ardent lover of nature, and, moreover, writes very clever poetry. To describe him by saying he is the "poet of his town" would be correct, but would not be saying enough, as his poems have had a widespread circulation. "Crisp," an abbreviation of our worthy host's name, was an original. A tenant of the Duke of ———, by all traditions he should have been a moderate Whig ; but, alas ! for the "coercive" power of that mighty chieftain, he was not. A fierce Republican, and admirer of Bradlaugh, he used to have warm work with us, two Tories, when we drifted into political arguments. "Crisp" was a good man of business, and smart to a degree, as was evidenced by a story which he was fond of telling. That was of a transaction with the Duke's wily factor, and from whom, by some species of boycotting, he had got his house at half the previous tenant's rent. His sister, a lady of uncertain years, kept house for him, and had but one characteristic—kindness. I, the reader's most obedient servant, have no special accomplishment that I know of. Doubtless, if I had, someone would have been kind enough to tell me of it. I am the proud possessor of a Roman nose, an ardent lover of all sports, and am especially modest. I had intended to finish *ego* in one sentence, but it cannot be thoroughly done, I find, in that short space, and I trust the presumably fair reader has not been superlatively bored by the recital of my virtues.

The first thing we did after dinner and a pipe was, of course, to unpack. "Crisp's" eyes glistened as I took my two salmon rods out of their cases, and explained to him that I had permission to fish on the Tummel and Garry. "Man, but ye're just cum in the nick o' time, as Monday'll see the watter in grand order," was his cheering comment. "Let's see ye're flees noo," and after a thorough inspection, remarking on their several beauties with a learned air, he summed up with, "They're very guid, but no sae guid as the 'creeper.'" He harped on the "creeper" for some time, but would not explain himself ; and as I believed it to be some famous bait, and did not wish to pay too much for the secret, I abstained from pressing him. The first evening G—— (short for "Goosequill") and I spent in exploring. The next day, Sunday, was a glorious day, and about twelve o'clock we climbed a hill overlooking our house. G—— recited poetry (which he does very well) while I lay on my back and smoked, "at peace with all mankind." Be not shocked, ye rigid moralists ! as there was not a church within four miles, and I am perfectly willing to make an affidavit our doings were innocuous. That evening we strolled through the pass to view my happy hunting grounds. I have very little poetry in me ; but I must confess to emotion when viewing from the railway bridge, across a dark pool, the fearful rush of water through the "Soldier's Leap." On our way back, "in the gloamin'," and attempting a short cut, we got mixed, and discovered ourselves trespassing on the lands of V. R. The rabbits rushed about by the hundreds, and, Sunday and a' thegither, I found myself, and I think I can answer for my friend, longing for a gun. After wandering some time we came across a keeper, who, for a small tip, soon restored us to the high road, and we reached home without further incident. On Monday morning we were astir early, and as the day promised to be bright, we agreed to give the trout our attention. Armed with my trusty "Hogg," a nicely-balanced one-hand rod, I felt confident of success, and managed to imbue G——, who is not an angler, with a portion of my high spirits. When we arrived at the water side, the weather was simply perfection. In ten minutes I killed half a dozen trout, averaging a quarter of a pound, and pricked as many more. In fact, it was a case of rising a fish every throw. This might have continued *ad infinitum*, or rather, until I had emptied the pool, but just at that moment Sol appeared in all his strength, and not a fish would touch the lure they had but a moment before been struggling for. I fished industriously up the river with fair success, and at length reached the limits of my "permit." G——, who was the basket carrier, and had been groaning at intervals at the weight of his load, flatly refused to stir another step until we had lessened its weight by eating our lunch and consuming the bottles of "Bass" which, with my usual foresight in these matters, I had provided. I, nothing loth, agreed ; and after a soothing pipe began lazily to cast my line into a big pool so as to get it into working order for the downward journey. This pool swarmed with little trout, and I had my three flies occupied many times in succession. I got tired of throwing back the troutlets, and moved downwards. At the tale of this pool, in a very difficult place, I saw what I took to be at least a "pounder" rising, and I resolved to hazard the possible loss of tackle upon the bush under which the fish lay. I, with all due caution, got into position, and after a half-dozen or so throws got the correct distance, and on a second attempt put the fly over the unconscious fish, which was feeding in a business-like manner. There was a little ring, and I smartly tightened the line. The fish, to my great joy, rushed straight out, and then up stream. If it had gone down I must have given the "butt" with the chance of losing the fish, or getting hung up in the bush. After a splendid fight the fish came to grass, G——, with a triumphant yell, netting it safely. We weighed the fish at once, and it just turned 2lb. Somehow after that I did not feel so interested in the $\frac{1}{4}$-pounders, which was the run of the fish, and several of that size escaped through gross carelessness on my part. About four o'clock we decided we had done enough destruction, and after trapping up we made tracks for "Crisp's," and just arrived in good time for dinner. The 2-pounder was boiled, and contributed to our enjoyment. On Tuesday, G—— started to climb a neighbouring "Ben," and I, with "Crisp" as my henchmen, started to whale the salmon. "Crisp" was strong on the subject of flies, and I allowed myself to be guided by his opinion. The first pool yielded none, not a fin stirring, and number two was carefully fished with a like result. Number three is a famous pool, and almost a certain kill, and I had at this time begun to think it a last chance. Three salmon rose at intervals, and although I tried them all my virtue was not rewarded. At this stage my doubts of "Crisp's" selection culminated, and I then and there changed the fly. After practising the angler's virtue for a short time I thought I might again venture to approach the lordly fish. I worked away industriously, cheered by the humorous remarks of "Crisp," and was at length rewarded by an offer. I struck smartly, having been taken by surprise ; but there came no answering leap. As I was on the point of taking a seat, in a disgusted state, to wait a little, "Crisp," in great excitement, whispered, "Gie'm anither trial," and following his advice I again cast over the fish. There was a big swirl, and the next moment a beautiful silvery salmon was safely attached, and jumping like mad. My work was cut out for me, as this was only my second salmon fight, and the "chiel," a fresh-run fish, was totally different to the small grilse I had several years before captured. "Crisp" proved very useful at this juncture, giving me skilled advice which I was not above taking. After much palpitation of the heart I managed to get the fish within reasonable distance. This, to me, was the critical moment, as, despite my friend's assurances, I was not convinced of his ability to grass the victim. With a little pressure the fish was induced to come into shallow water, and "Crisp," wading in, made a desperate lunge. I expected nothing less than to see the gut severed a foot above the salmon's mouth, and it frisking about with its tail held to its nose at the other end of the pool ; but "Crisp" was equal to the occasion. That lunge landed the fish handsomely. "Crisp" who, in my estimation a moment before, was much below below par, rose 100 per cent., and I handed him the whiskey flask, immediately after administering the *coup de grace*. I weighed my capture immediately—12$\frac{1}{2}$lb., a bonny fish. After the battle, and when we had done admiring the fish, we had lunch. Over the soothing pipe we fought the fight over again, and "Crisp" was loud in his praises of what he termed my "working-a-fish capabilities." About an hour's rest and then I went to work again, and fished till five o'clock, but with no luck. "Crisp" packed up, and we made tracks. In the home-going that gentleman, who had become pretty voluble through imbibing "the wine of the country," while allowing that I had killed a "vary pritty fush," remarked that that was nothing to what could be done by the "creeper." My curiosity was again aroused, and scenting some famous killer, I, with some importunity, and the aid of a refresher, got the following explanation, which will be interesting to brother anglers :—In "Crisp's" words, but not in the vernacular, which is beyond the reach of my humble orthography, you get a good thick wand (a clothes-prop is a good substitute), fasten to one end of it by way of reel one of those instruments which gardeners use with the line attached. For the hook, tie three big cod hooks, grapnel form, to the end of the line, which latter is to be weighted by a piece of lead attached, half as big as an ordinary fist. The line should be passed through a big loop of wire at the end of the pole. This is a poaching instrument. "Shade of Izaak Walton !" I hear some brother angler ejaculate. "Can this fiendish instrument have existed, save in the mind of some hair-brained angling maniac?" "Yes, my brother!" I answer. "It is too true that such instruments exist, as many a lordly salmon has found to its cost. The *modus operandi*, as described by "Crisp," is: Two go in company, one to work the "creeper," the other to watch. A deep pool with rocky banks is usually selected, and the man who works the "insect," knowing the pool, and where the fish lie, cautiously approaches, and, after adjusting his instrument, lets it into the pool, strikes, and seldom fails to lift out the goodly salmon. I noticed that "Crisp" got very enthusiastic over his description, a fact which appeared to me to be only accountable for by personal experience; so, stopping him, I said, with a stern face, "I hope you never indulge in these little games." His face the next moment was as solemn as that of the proverbial judge, and he replied: "Na! Na! but I ha'e seen my faither doe't."

(*Conclusion next week.*)



HAMPSHIRE PIKE, *from a Painting by* Mr. Targett.

## JOTTINGS—PROSPECTIVE AND RETROSPECTIVE—REGARDING THE DEE, DON, &c.

At the present, when Nimrod is on the ascendant, and Walton on the wane—when sportsmen are leaving the salmon pools and trouting streams, and betaking themselves to the far-stretching moors and heath-clad hills, we adjudge it will not be inopportune to afford them—when indulging in the luxury of the ottoman, after a sore, fagging day, with a little literary relaxation—prospective, we should say—of riverside sport in the coming autumn.

Our remarks in last week's Gazette bore special reference to the Dee and Don, and to these rivers, on the present occasion, we intend chiefly to confine ourselves. It will, doubtless, have been already noticed that Mr. Young, in his remarks, embodied in the report issued by the Scotch Fishery Board in London, the other day, confirms, on authority gathered from a mass of evidence, the statement we have already advanced, not without proof, that contrary to the generally received idea, anglers have captured, close to the sea, and with the sea-lice upon them, many salmon, giving more or less indication of being affected with the fungoid disease. This question you will doubtless be able to solve—to state when and how the disease was contracted, and by suggesting a remedy, earn the gratitude of all anglers.

It will be very gratifying to anglers to know that the fungoid disease, so prevalent in the Dee late in the spring and early in the summer, manifesting itself on the kelts, and spreading among the clean fish, especially in the higher reaches of the river, and doing great destruction, has now entirely disappeared.

The disease, by some, has been attributed to overcrowding, and if this theory holds good, the immense quantity of fish that took the river in spring, in consequence of a fine running water, and settled in the higher pools, gives it a colour of probability, because it was principally in the upland pools that the disease developed most extensively. It was little observed during February, March, and the first part of April; but from then to the end of June, by which time the river had got considerably thinned, its ravages were very noticeable.

In the spring of '83, if we take the whole extent of the Dee and Don into account, very few fish giving evidence of disease were seen in these rivers. In autumn, however, matters were less satisfactory, a considerable number of dead and dying fish having been found by anglers. This year, as we have already noted, has been different, and if, in the autumn, as in the spring of last year, the disease does not prevail, anglers will have cause for congratulation.

Some have attributed the prevalence of the disease during the past spring and early summer, to the low state of the water, and the consequent filthy consistency of the bottom; but we very much doubt whether anything more substantial than the mere statement can be advanced in support of this opinion, though it may doubtless have been, with other causes, not altogether without its influence.

With reference to the remarks in our last regarding alleged illegal netting having been practised in the Dee, the sheriff has now given a written deliverance, assolizing the defenders from the conclusions in the case, in respect that they, as authorised fishermen, and not poachers, were outside the pale of a criminal action, for the manner in which they had been operating with the nets. His lordship, on the motion of the defender's agent, awarded costs to cover witnesses' expenses.

A cry about night poaching arose in the month of March last. For a while, about that time, the Aberdeenshire rivers ran very low; and if these nefarious practices were carried on then, they could have been so effectively.

Anglers complained of the scarcity of salmon in the pools where they were wont to be. Letters on the subject appeared in some of the sporting papers, and a good deal of feeling entered into the matter. It is not for us to say whether illegal netting was carried on or not; but this we say, that sportsmen would not be averse to have the staff of river watchers augmented at the instance of the fishery boards. Adequate provision to cope with attempts at illegal netting on many of our rivers is absolutely required. Poachers, it must be admitted, go in gangs, and, if the staff of bailiffs were sufficient to frustrate their attempts, their occupation, like that of Othello, would be gone, and fewer complaints heard of from anglers.

On the subject of bottom fishing, we repeat the statement, in connection therewith, that we made in our last, viz.—that the extensive use in the Dee last spring of natural minnow, prawn, eel tail, "devils," and suchlike importations (printed imputations) gave rise to a good deal of protestation on the part of the fly fishers. This was not surprising, as experienced anglers, who have in any way studied the matter, bear emphatic testimony, that when fish are bottom fed to any extent, they disincline to rise freely when tempted with fly. Several sections of the Dee, we know for certain, were left in disgust by their fly-fishing tenants immediately operations were commenced on the other side by the minnow fishers; and how was this to be wondered at? For unless fresh-run fish are continually arriving and settling in the pools, the chances of the fly fisher are reduced to a minimum. If bottom fishing were entirely discarded, we feel convinced that the step taken would entirely dispel the woefully apparent, inharmonious state of feeling existing between many anglers. Success too, we have every reason to believe, would be greater; the instance adduced in our last being one of the many that could be given in confirmation of this opinion.

Many of the upper proprietors, interested in improving the Don fishing, are very desirous to see an illustration of the McDonald fish-way, so extensively used in Canada. The question of opening up the Don, long talked about, is yet in embryo; nevertheless, a little stirring in the matter might have some effect in stimulating action. Good waters have been flowing for some time, but few fish are yet ascending. Sea trout and finnock are numerous in the tidal waters.

## SUTTON'S BULB CATALOGUE.

Messrs. Sutton and Sons, the Queen's seedsmen, Reading, send us for notice their new bulb catalogue. We have much pleasure in doing this—first, because it deserves it; and secondly, because the partners take so much interest in the angling club which has been formed among their employés.

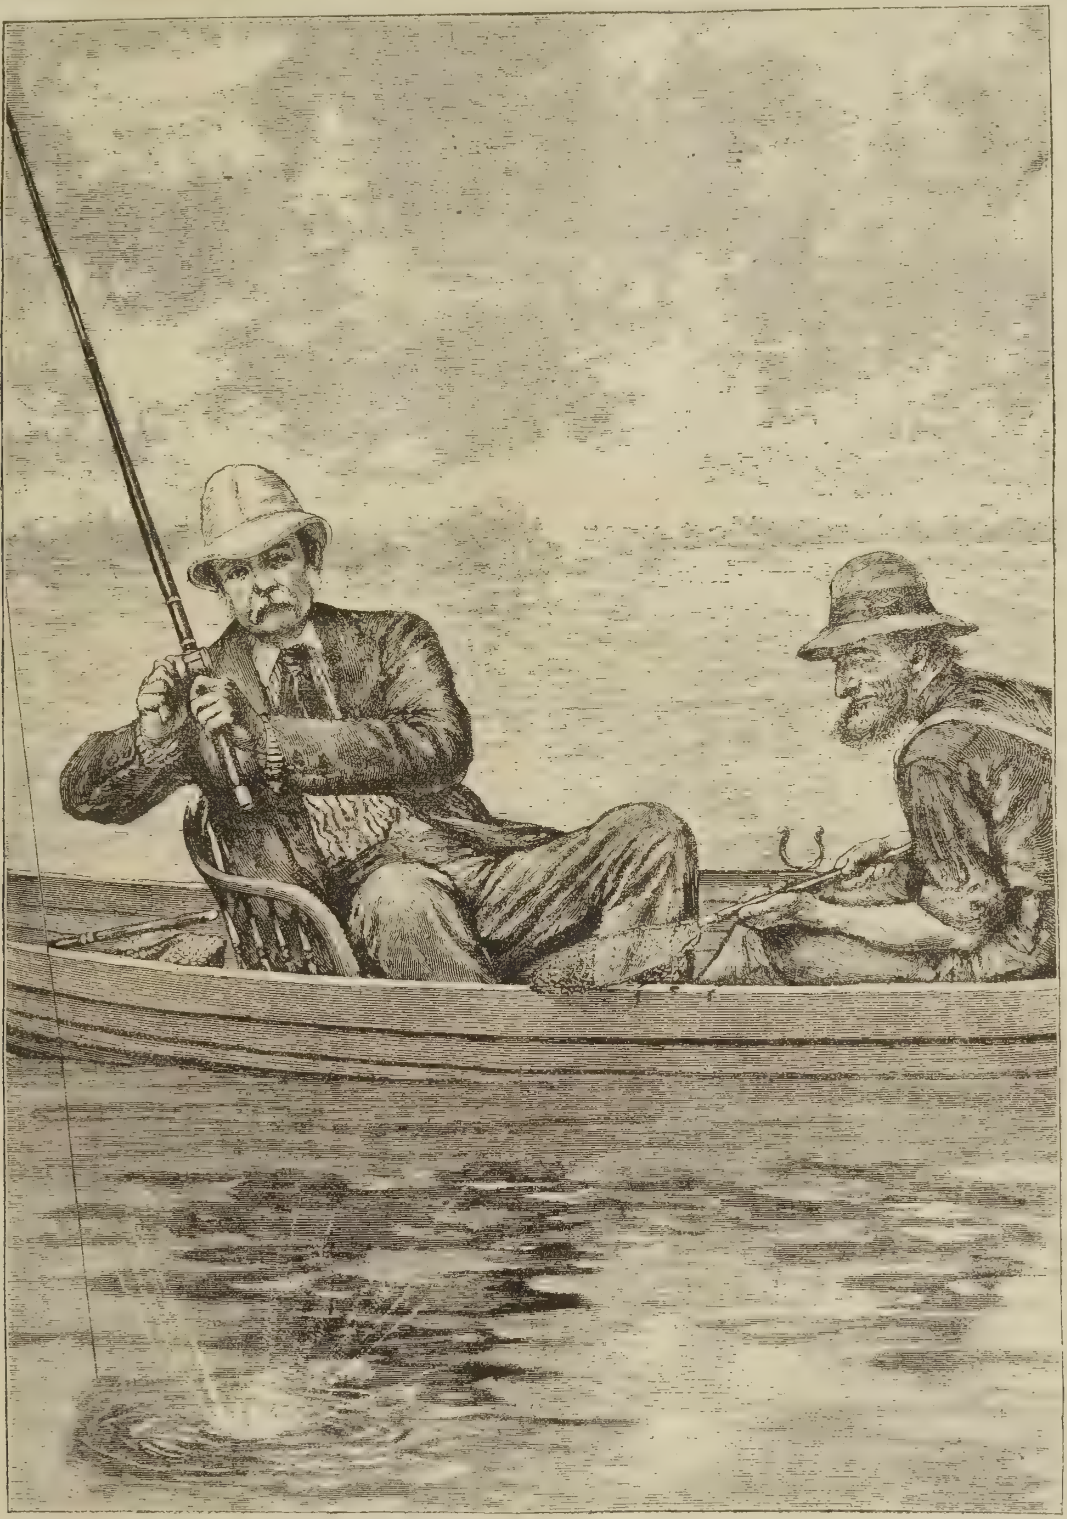
The catalogue consists of 20 quarto pages, with two full-page illustrations of their "Inimitable Hyacinths," and "Reading Beauty Begonias," bound up in one of the neatest and most effective wrappers we have seen. It not only gives a list of bulbs and prices, but also thoroughly practical instructions in their culture, and shows how easily the dark days of November, December, and January can be made cheery by the presence, in full bloom, of hyacinths of all kinds (grown specially for early forcing), tulips, begonias, &c.

Messrs. Sutton will send this beautiful catalogue gratis to any of our readers applying for it, and we can recommend them to get it.

Some Capital Grayling Flies.—Those of our readers who intend to fish for grayling with the fly this autumn ought to provide themselves with a dozen or two of the "Little Marryat," made by Mrs. Brocas, 5, Rochester-row, Victoria-street, London, S.W. It is one of the best dressings of this deadly trout and grayling fly which we have seen. Mrs. B. also sends samples of her red and grey quill gnats, and the "reg tag." They are all extremely well made; the gut is fine, and the hooks are the best shape, and well pointed and barbed. It is simply astonishing how often first-class fly-makers send out flies made on imperfect hooks. By the way, have any of our readers given the expensive detached bodied flies a good trial? We have been greatly disappointed with them, and find the ordinary dressing calls infinitely better for some reason,

## THE PRESIDENT OF THE UNITED STATES.

American Anglers are proud of the fact that the man who at present occupies the proud position of their President is a genuine and enthusiastic angler; and certainly it is a compliment to the art, that the chosen chief of fifty millions of people, General Chester A. Arthur, is also an angler. We have much pleasure in giving our readers a sketch of the President in the act of playing a big black bass. He is also an expert salmon angler. We should "guess" the President could tell us some good stories of the doings and sayings of that typical boatman who is holding the landing let.



GENERAL CHESTER A. ARTHUR,

President of the United States, Angling for Black Bass.

## SALMON FISHING IN THICK WATER.

When a river has become flooded and thickened, salmon fishermen are usually content to await with resignation the water being again in fishing order. Such had been my custom until, on a recent expedition, while strolling along the river-side during a "red flood," I came upon two fishermen—the one an amateur, the other a well-known local professional, the crack habitué of the district. As I reached them a fish was being played, and very shortly a fresh 5lb. grilse was on the bank, and added to an already good show for the day's work—a salmon, with several grilse and sewin. They had all been killed on the worm, and it caused me some wonder when the professional, taking up the rod, engaged to hook a salmon or sewin within five minutes.

The process appeared to be as easy as the proverbial falling off a log. He waded in a few yards, cast the worm up stream, and without moving from the spot, in the course of a few swims a smart upward stroke of the rod betokened, surely enough, he was fast in what proved to be a lively three-pound sewin. I reflected that in this thick condition of water it was necessary to bring the bait to the noses of the fish, and that one half of the secret of success must lay in selecting accurately the fishing places, which are different to those tenanted by fish in ordinary states of the river. The result of carefully watching the subsequent proceedings, and of full inquiries into many details, was that the same evening found me at work on a pool near my quarters; and that I returned home, after an hour's fishing, with two clean grilse and the happy conviction that I had acquired a method of obtaining a legitimate, exciting form of sport at times during which I had formerly perforce been idle. This fact in itself was no little enjoyment to one who hungers to go fishing every day (in spite of the elements) during brief visits to a river. I will attempt to describe in detail this style of fishing. For a careful following of, firstly, the general principles, and, secondly, the minuter details, is as necessary to success in this method as in any other acquirement. Under favourable circumstances (to be hereafter described) failure only will result, I can say with confidence, from the laws being in some one or more instances ignored. "When one thing is wrong everything is not right."

All methods of fishing may be classified under the now, the when, and the where. Clear ideas on each of these points are evidently of the first importance; I will therefore, in my description, deal separately, as far as possible, with each of these points. Inverting the order, and commencing with the *where* to fish, it should be remembered that the worm must be caused to travel slowly along the bed of the river in the exact line of the fish; for, if the bait swims a foot or two out of this line, or off the bottom, it will not be seized, for the simple reason that it will not be seen. To suit this requirement, then, it is essential that the river-bed at the selected spot should be of a shingley, level nature, free from boulders or other obstructions to the progress of the bait. Thus the catches, or parts of catches suitable for the purpose, must be examined and noted during a clear state of the river. It will be seen, for the above reason, that suitable places are to be looked for on the shelving, wadeable side of the catch, and the line of the fish will be found "between the waters," or exactly between the shallower water near the bank and the rapid body of the stream.

By noting carefully it will be seen that the main rapid stream is separated from the sluggish, eddying water by a smooth, steady current of about two feet or less in width, and in this current or swim "between the waters" the fish will be found to lie in Indian file, close to the bottom of the river.

In regard to the second bead—the *when* to fish?—the time of a flood that affords the best chance is upon the river first coming down thick and flooded; the fish may then be relied upon to feed keenly. At other periods of the flood the hours of the day at which the fish feed are more or less uncertain. Mornings and evenings are generally good; but the best take may occur (as occur it will) at some other time. To keep "a wet line" is the only safe rule.

The third section—the how to fish?—comprises: the rod, the line, the method of weighting the line, of casting the bait, and of fishing it during the swim.

The rod used may be the ordinary salmon rod of 16ft. to 18ft. in length. If the angler fishes properly, in a suitable spot, he need not be afraid of injuring his fly-rod, or of subjecting it to undue strain. The length of line used should not be more than that of the rod by more than about a yard, hence it will be necessary that the fisherman should stand at a distance of about a rod's length or less from his selected swim. The worm is cast by the overhead throw up stream, into the exact swim, to the full length of rod and line. Then, until the sinkers cause the bait to reach the bottom, the line will be observed to be slack; but, as soon as the leads ground, the line tightens; and not until then does the bait begin to fish.

The force of the current will, if the line be properly leaded, now cause the worm to travel steadily along the bed; and it must be followed down-stream, keeping the rod-tip perfectly steady, and the line *straight* without hindering the progress of the worm. If the fisherman will imagine himself holding a scythe across his body, it will convey an idea of his attitude when the bait is opposite to him—the handle representing the rod, the blade the line: as the bait travels downwards he follows it slowly, with a steady rod and a taut line, until it reaches the end of the swim, which the angler may then extend by moving a step or two down stream, his rod being then held horizontally. The proper weighting of the line is a highly important point, and will be determined by experience and by experiments in each place. It depends, of course, upon the volume and depth of the swim, and will be found to vary between 5 and 12 B B shots; but strips of thin, rolled lead will permit of changes being effected more easily than by the use of split shot. If the leads are too light they will not ground, consequently the line will not tighten; if they be too heavy the worm will not travel freely. The medium between these extremes will be hit upon by observation. A fine line approximating to a trout line is better than a stout salmon line, as presenting less surface to the stream, and thereby avoiding that lowering of the line, which is a great fault, for the line *must* be kept gently tight, and consequently straight, between the rod-tip at one end and the leads at the other. A down-stream wind is therefore very hampering, and up-stream wind less so, and a calm day is best of all.

Many thoroughly good fly-fishermen are unable to cast a leaded line overhand without injuring the bait. For this purpose there are one or two rules which it will be found of value to remember: Firstly, in the recovering of the line it should not be plucked off the water by a smart drag, as in casting the fly. The rod should be lifted until the bait is at the surface. It should then be swung out behind, keeping the line extended, and a gentle forward lowering of the rod should be made at the moment when the worm is near. The angler's shoulder and the point to be reached are in the same straight line. All the movements should be slow and well timed, and there should be an absence of anything approaching to a jerk throughout. The run of a fish will be known by feeling a gentle pluck at the line, on which the rod should be at once lowered and the line thereby slackened. Should the run occur, as very frequently happens, at the end of the swim, when the rod is already in a horizontal position, a yard of line should be paid out, having been held loose behind the uppermost hand in readiness for this emergency; or a step may be taken towards the bait. When the first pluck has been succeeded by two or three slight pulls the strike is effected by a smart upward drag of the rod, carefully avoiding the jerk of a wrist action which will lead inevitably to broken tackle and a lost fish. In early attempts at worm-fishing it is surprisingly easy to miss even a well-intentioned, sharp-set fish. The exercise of perseverance, patience, and nerve will be required. To attain the art of striking at the right moment, whenever this has been required, it will rarely happen that the fish is not hooked.

The worms used will usually be lobworms, one or two: if scoured they stand the casting better, and in that respect only appear to be preferable to newly-dug bait. Failing lobworms, half-a-dozen garden-worms will answer. A large-sized, round-bend worm-hook and two yards of stout salmon-gut complete the tackle.

The same principles may be applied, and successfully, to fishing with worm for salmon in clear water, when they refuse the fly; but the baits should be smaller, and the fishing generally must be finer and further off; in this latter point the chief difficulty exists. The steady current on the far-side of the main stream should then be fished.

I have known of an instance of seventy sea-trout, varying between ½lb. and 3lb. weight, being killed in a day by three rods during a thick heavy flood. This, perhaps, is the best proof I can give of the sport that may be obtained in the manner described. Good sport, too, has fallen to my lot on days that would otherwise have been passed in restless anticipations of fly-fishing being rendered possible by the clearing of the river. Scot.

## THE TROUT STREAMS OF NORTH DEVON.—I.

By Helwr.

Veracity is the glory of the journalist; and while a certain latitude is permitted to the writer on politics to glorify his own party or to malign that of his opponents, the sporting writer, when wishing to convey information to his brethren in sport, cannot be too careful in striving for strict accuracy. I propose to treat of trout fishing in that part of Devonshire with which I am more particularly familiar; with the district, in fact, the streams of which I have fished constantly during one whole season, and parts of many others. The district I shall now write about is the large and wild tract of country called Exmoor, and its immediate vicinity. Its boundaries are roughly, the Bristol Channel on the north, the Devon and Somerset Railway on the south, Dulverton on the east, and South Molton on the west. A portion of the country is thus inclosed of about 15 miles long and 15 miles broad. The streams watering this fine district are the Exe, the Barle, the Bray, the Mole, the Nymph, the Lynn, the Yeo, and many smaller waters, principally their tributaries.

We constantly read and hear it said that there is little good fishing now to be had in England, and that the angler who desires good sport and plenty of it must betake himself to Norway, and even to places much further from old England than that. Most anglers would, doubtless, like a few weeks' fishing in Norway, Canada, or any other place in "foreign parts," where good sport may be obtained; but there are many reasons which forbid such a delightful trip. Such being the case, I think I must be doing good service by giving directions how to find plenty of sport, and scenery worthy of the admiration of the most travelled, even in that country that the English traveller last thinks of exploring. Much good water in this island is not for the general public, as the owners thereof exercise their undoubted right in reserving it strictly for themselves and their friends; other desirable rivers are rapidly becoming spoiled by sewage contamination; and many places where good fishing can be had at a reasonable cost, and fairly accessible, are so well known and well patronised as to be somewhat overdone.

The district of which I now write is a veritable fisherman's paradise in many respects. Here there are innumerable streams, much free fishing, trout abounding, and, above all, anglers comparatively few. The last is, I think, a very important point; for, delightful as is the companionship of a brother angler over a friendly pipe after a fishing dinner, or to while away the tedious hours in a railway carriage with congenial talk on the subject so dear to our hearts, I, for one, like his room better than his company when on the banks of a trout stream, whilst there is nothing more annoying when fishing a good stream containing many good fish, than to meet a man armed with a rod and tackle every few yards, whipping the water until the trout are as wild as hares, and far more wary; so, on the other hand, it is one of the charms of angling to wander in complete solitude, through a deep and frowning valley, where the mountain stream rushes along with cascade and diminutive waterfall; and towering above on either side are the tree-clad slopes, terminated by the swelling, wide-stretching moors. In such a solitude, if any companionship is welcome, it is that of the heron fishing in the pool; the curlew with his lonely wail; the mallard and the flappers; and far away the hawk hovering over the "poults" cowering among the heather.

A man may fish daily for a month within a few miles of where I write and never see anyone similarly employed, provided he confines his attentions to the streams on the moors, in preference to those flowing near the "busy haunts of men."

It is my earnest desire to give all the information I possess, and all the results of my experience, and I think the best way to do so will be for me to divide my discourse into sections (as the gentlemen of the pulpit often do), taking a few towns where one can get good fishing quarters, as the heads of such sections.

And thus we begin at South Molton, a town on the Great Western Railway (the Taunton and Barnstaple branch), about 200 miles from London *via* Bristol. This quiet, neat, pretty, and clean little town is in many respects a very good centre for those operations, which are indicated by the heading of this article. Here are two good hotels, and much good fishing tolerably accessible.

The George Hotel (Mr. Kelland) is most highly recommended, being a large house with good rooms, and the cooking and all arrangements, for ease and comfort most satisfactory. One can board there by tariff, if preferred, and they are thoroughly accustomed to cater for fishermen. Mr. Kelland has plenty of horses and vehicles, and will drive his visitors to any desirable point of operations. The Unicorn Hotel (Mr. Cole) is a good house, and in every way suitable for the most fastidious angler. Mr. Burgess, fishing-tackle dealer, in the square, keeps good flies, &c., and is well qualified to give advice as to flies or anything else that the angling stranger may require to know.

We will now suppose the reader at "The George" for ten days or a fortnight, and that he will want to fish every day; and that, partly from that love of change and variety that characterises men (and women, for all I know to the contrary), and partly from a laudable desire to explore the district and compare the sport-giving qualities of the various streams, he will not care to favour the same water with his presence more than once or twice. First of all he may choose to try the free fishing to the southward, below the town. The water is wide, deep, and rapid in places, with pools alternating, and is composed of the Mole, Yeo, and Nymph in conjunction. The fishing is very good—that is, there are many trout, but the water is whipped a good deal, as free water near a town where all men and boys are anglers is sure to be. In due course we will visit streams where this is far otherwise, and in places there are too many bushes overhanging the banks to be convenient.

Notwithstanding all this, it is well worth a day or two's attention, and with moderately favourable wind, weather, and water, a man ought to kill from two to three dozen trout in a day. As to flies, the "blue upright" is what the natives swear by all the year round, and while I would not advise a slavish adherence to *all* the advice local anglers give one, I must say that this fly, with the "redspinner" and a rusty fly, are as good killers as anything. Small flies are recommended for the large streams, but larger ones for the rapid little streams on the moors. In this neighbourhood so much attention need not be paid to the fly as in some; the rapidity of the water and the general scarcity of food allows us to depend more upon the provocative and inciting bait than upon the deceiving and alluring one. Personally I use a cast with red, blue, and rusty upon it all the season, except during the brief time of the May-fly, when I fish with a grey drake and a green drake. As a rule the stretcher should always be a fly with red hackle and gilt twist. I propose later on to give a few descriptions how to make the kind of fly just referred to.

Harking back to the river below South Molton, I would further say that the fish are game, pretty, and delicate eating; but they are not large. Large is, I admit, a word of comparison, and what is a large trout in Devon, would be returned to the Thames with scorn. The fly-fisher will rarely take a trout over ¼lb. in the waters I am now alluding to, or, in fact, in any other of the streams of North Devon. Please note that I say the *fly*-fisher, for with a worm or minnow, in discoloured water, trout may frequently be taken ½lb. and more. Occasionally fish larger than ¼lb. will be taken with the fly, though the average weight will be found to be under that, probably about 5 or 6 to the pound; and many fish will be killed that will barely weigh 2oz., in the moorland streams. These little troutlings are wondrous pretty eating, and mighty quick and lively in taking (or rejecting) your proffered fly. You must be into them like lightning, their dash is most exhilarating. I have a few times killed trout of ½lb. with a fly, and twice fish of 10oz.; but never one a pound. These fish were taken last season, in June, with the grey-drake. But to return to the "double water," as it is called, though it is composed of three streams. The river is about a mile and a half from the town, and extends about five miles downwards (to the junction with the Bray), and about a mile upwards (to Bisto Mill). There is thus six miles of free fishing, which would alone recommend South Molton; I shall presently show that this is but a small part of the scope for the angler's efforts in the neighbourhood. The side next the town is recommended; but I forbear to give any advice upon the much-voiced question of up-stream or down-stream fishing, as so much depends upon the state of those natural elements over which we have no control; and so much upon a man's taste or style.

I am not aware that either artificial minnow or the worm is forbidden here; but as I never use either, I have not inquired. I have seen other anglers using both, and with much success. If the minnow be used, the "Devon" or "Totnes" is recommended, and it should be small; for clear water it should be painted; but for coloured water it should be scraped quite bright. By painted I mean that the minnow should be used just as it is when it leaves the fishing-tackle-shop. It is usual in this district to carry several minnows of different degrees of brightness. I cannot deny that with the artificial minnow the *largest* fish are caught, though the skilful fly-fisher will kill a greater number than he who uses the minnow only. If wading stockings are used, they will be useful here; but in the majority of the streams I shall refer to, they will not be necessary. They are very nice things as enabling a man to cross the stream at will, to fish places otherwise inaccessible, and to get close to your fish in up-stream fishing; but there are many objections to them. If you have far to go to the water, which is often the case hereabouts, they are a nuisance to transport; you cannot walk home in them when miles have to be negociated—and to take them off at the water side often gives cold; and when wearing them where there are many rocks, much "bush-fighting," heather, brambles, and the like, they are decidedly the right thing in the wrong place. I think, as a rule, perfectly watertight boots as high as the knee will be most useful, such boots as "the Field," the "K," and many others of the sort. Such a boot is very desirable when fishing on the moors, as the sides of the streams are frequently very boggy, deep enough to cover an ordinary ankle boot, but rarely deep enough to let a man in over the knee—provided always he uses ordinary care in picking his way. That it is possible to step into a slough—such innocent-looking green spots they are, too—up to one's thighs, I know only too well.

After the gentleman who is supposed to be staying at "The George," at South Molton, has had his fill (and filled his creel, let us hope) of the "double water," which will be the case in one day, part of a day, or several days according to various circumstances, he will, perhaps, desire to fish the river Bray. Some of the best water of the Bray belongs to Sir Thos. Acland, Bart., M.P., and a day ticket may be obtained *gratis* from Mr. Riccard, solicitor, South Molton. When calling upon the latter courteous and kindly gentleman, it will be well to ask him for a day ticket for that part of the Mole belonging to Lord Poltimore. This part of the Mole extends from North Molton to South Molton, a distance of about four miles, and might be taken up and back again, as a not too great day's work. But more of this anon. The Bray is the river now in question. Having obtained a ticket for the Bray, there are two courses open. The one is to go by train to Castle-hill station (next station to South Molton, towards Barnstaple), and walk to Brayley Bridge, about a mile. The other is is to walk (or drive) to Bray Bridge, which is about two miles above where we struck the river Bray, when we "reeled up" the day we were down the "double water." Bray Bridge is about three miles west of South Molton. A man who is a glutton after fishing would fish right down from Brayley Bridge to Bray Bridge, and then walk home to "The George" in the cool of the evening; unless he had ordered a trap to meet him there. In adopting the latter plan of operations, a slight *détour* must be made. Soon after commencing at Brayley Bridge, Castle-hill Park will be reached (Earl Fortescue's seat), and the angler must skirt the park until the river emerges from the shelter of that retreat. I give Brayley Bridge as the northern point on the river Bray, because it is near a railway station! but one may go much higher up—even up as far as Charles o' High Bray. The higher one goes, the better is the sport, especially in the summer and autumn. Very few fishermen patronise the higher reaches of this river, with the exception of those living in the vicinity. It is currently reported that this is the best stream in North Devon. I do not think so, but shall reserve mention of my pet water for a while. The fish in the Bray are the same size—no larger—than elsewhere; and from thirty to fifty should be taken with a fly in a day. This river will well repay one for a day's visit, and will please the visitor in every way more than the "double water" alluded to previously. Should any of your readers want more detailed information on any point, I shall be glad to give it, and perhaps you will allow letters to be addressed to Helwr to your care?

[We have no objection, provided stamped envelopes are inclosed; but in future we cannot forward letters if we are expected to pay postage.—Ed.]

## SHORE FISHING.

By E. G.

As it is not every one who has used or even seen a sliding float, I quote from the "Anglers' Instructor" the description of it and its use.

"This float is made the same as the cork float for barbel fishing, long and thin. Fix two rings just large enough to allow your line to pass freely through, one almost at the top, and the other at the bottom of the float plug, taking care they are in a direct line with each other. When you intend fishing with this float, pass your line through both rings, then tie your tackle on. Now you will observe the float rests on the knot at the junction of line and tackle. Suppose the water is 20ft. deep, allow the float to remain where it is, and measure 30ft. from the hook up the line, at which distance make a drawing noose in the line, put a bit of indiarubber in the noose and draw it tight. Then wind the line up and throw from the reel; as soon as the float drops give it slack line, so that it will pass freely through the rings on the float till it gets to the knot where the rubber is. When you wind up, the float will go back again to the top of the tackle."

To obtain the rubber, get a piece of the elastic web shoemakers use for elastic sided boots and remove the silk from it, then cut off a piece about ½in. long, double it and noose it in. A bit of a very thin indiarubber band will do, but it is not so effective as the former. It is necessary to have something at the junction of line and tackle large enough to prevent the float from going below it, a bit of the stem or mouthpiece of a wooden pipe about ⅛in. in length, or, which is best, a large perforated shot.

The tackle is made as follows, for use in ordinary waters:—

Take 2ft. of the best gimp, medium thickness; put a brass swivel at one end, taking two turns of the gimp through the eye and whipping close up to it. Then slip on a pipe lead same size as those usually put on pike tackle, and whip down a loop at the other end. If this lead is not heavy enough to cock the float properly, run another one on the line above the tackle.

Then take a yard of salmon gut, and at the bottom have a Limerick hook—made for sea fishing—the river ones are not strong enough in the wire—from No. 30 to two sizes less (this will depend on the size of the bait); then loop on another hook about a foot above it. As hooks, when looped on, are always slipping up and chafing the line, when you tie your gut bottom instead of cutting both ends off short at the knot, leave the upper one and tie it with a double knot round the line about ⅛in. up, then whip between the knots with waxed silk and varnish it; you can then loop your hook on without any fear of its slipping up or chafing the gut line. The same plan applied to paternosters. I have mentioned gimp for the top of the tackle, but in purchasing it see that you get it good; there is a lot of stuff in the market now that is not worth a shilling a mile. I enclose a sample of this rubbish for the Editor's inspection.

Of course, there is nothing better than treble gut, but it is much more expensive.

I forgot to say that you must loop the gut to the swivel on the upper tackle, and that the lead must rest on the swivel. Do not pinch the lead on the gimp, it weakens it; and, besides, the gimp has a better chance to dry when the lead is loose. If you are using this tackle where there is any current—as, for instance, at the mouth of a river—have one of Brooks' baby-spinners on the gut above the bottom hook. Now, supposing the stream has taken your float twenty to forty yards off when you are winding up, the baby is spinning, and it is surprising what a lot of fish will be taken this way. It is hardly necessary to state that you must plumb the water first and let your bottom hook just drag—in fact, fish the same as you would in corking for barbel: that is, if the bottom is level and free from weed. Strike at the least bite. In the stream the most likely fish to be got are bass, pollack, and coal-fish. Of course, if the fish run very large double or treble gut, extra thick gimp and very large hooks will be necessary; for, if a big one takes it into his head to run to seaward, you must have something that will bear a heavy pull. If the water is muddy, the thickness of the gear is of no consequence; but in clear, or even moderately clear water, the single gut will kill five times the number of fish. Besides, the strength of good single gut is very great. I once killed two congers weighing 16 and 17lb. on single gut on a drift line, and a friend took a 25lb. cod in a strong tideway.

If you get a lot of bites, or find your baits taken away without hooking anything, take off your gut and loop on a paternoster, with a very light lead, or you will sink your float; the hooks and baits must be small. You will then most likely get a lot of small pollack or coal fish for a time, but when you find them go off put on your other tackle again, as you may be pretty sure something bigger has come along and frightened them. It is a good plan if you have a bait-can to keep a few of these little fellows, and at the slack of the flood try them as live bait. Bass are uncommonly fond of a small pollack or coaly, and so are their larger relatives. When you get a bite act as in pike or perch-fishing.

Now, I have been going on the assumption that you have been fishing on the ebbing tide, standing on the rocks, shore, or jetty. Now, let us suppose you are at the mouth of a small river at dead low water. Get down as near the sea as you can, as bass and flounders will begin to run up as soon as the first few inches of salt water come in. If it is a sandy or gravel bottom, set your line so that the lead will be just on the bottom. Here you will not want the float to slide, so take two half hitches round the top of it, then throw to seaward as far as you can. If you cannot get it out well, put on more lead, and if you have no reason to believe there are any large fish then take off the larger hook tackle, and loop on the paternoster as before mentioned; this will give a better chance at the flat fish. The float will now lie flat on the water, and, in fact, you are doing something like what the Trent men call "tight corking." Wind in line slowly, and look at the baits every few minutes, as the green crabs are always on the look-out, and will soon clear the hooks. When you get a bite you will see the float cock; give the fish a little time, or if it is a flat fish you will miss him. There is generally a deep pool just inside the mouth of a river, and as soon as the tide flows into it go there and fish as you did at the ebb, being careful to keep altering the depth every few minutes. If there is no pool, and the water runs up a channel with a gravel or sandy bottom, take off your float and substitute two or three hooks, ledger made, in the same way as a river one, but of stronger gut, and a heavy lead either triangular or oval-perforated; bullets are of little use. Here note that if you want to ledger on a rough bottom it is as well to take off the lead and fasten a lump of lead to your ledger line with a piece of fine twine, letting it hang down about 3in. or so; then if it gets foul the string will part with a steady pull, and you lose nothing but the lead. Any rough lead will do for this. If you have not time or do not want the trouble of casting it, beat up a piece of old pipe or sheet lead—which can be got at any plumber's—into three or four ounce lumps. Examine the hooks very often, as the crabs will still be busy, and frequently there will be a great deal of floating weed, which, if you allow to collect round your line, will soon become of such a weight that a smash will be the result. It is well now, and also when the ebb tide is running its strongest, to lay by your rod and take to one or two of the throw-out lines as described by Wilcocks in "The Sea Fisherman." These lines, prepared by his directions, can be got from Brooks', at Stonehouse—price, with reel and everything ready for use, 2s. 6d. Then when the tide begins to ease, and the weed to go off, take to the rod again, and put on the float tackle, not forgetting the baby, and fish out as much of the ebb tide as you can. And now I think it is time I said something about baits, but before commencing that subject I will refer again to the throw-out lines. Your bait for these will be a piece of squid, cuttle-fish, or octopus, which may be got from the trawlers and mackerel seiners. After skinning, gutting, and splitting them, cut off a piece about 5in. by 2in., cutting one end to a point, and splitting it up about 1½in., then pass the hook through twice from the broad end. If you do not like to get your fingers dirty—but I trust you are not so fastidious—get one of the fisher boys to do the skinning for you; a few coppers will go a long way in a job of that sort.

In the absence of the above-named cephalopods, get a mackerel, split, and take the backbone out. You can cut four good baits from an ordinary-sized fish. To throw, take hold of the line about 6in. above the hook, keep the arm well out from the body, and swing the lead round till it gets a good impetus, having first coiled the line down so that it will go out clear. It is surprising what a distance can be thrown in this way with a little practice. But be careful not to throw yourself in as well, or get the hook in your stern frame, both of which are easily done.

## GREAT EASTERN RAILWAY.

Doncaster Races.—We have much pleasure in drawing the attention of those of our readers who contemplate a visit to the coming Yorkshire Carnival to the excellent arrangements made by this company, whose new line to Doncaster, *viâ* Cambridge, Ely, and Lincoln, is rapidly becoming the favourite route. Express trains leave Liverpool-street Station at 8.45 a.m., 11 a.m., and 4.32 p.m. for Doncaster direct, accomplishing the distance in a little over four hours, at ordinary fares. On Wednesday, 10th September, "The St. Leger Day," a special express excursion train will leave Liverpool-street Station at 6.55 a.m. for Doncaster, returning either the same day or on Friday, the 12th inst., at the return fare of 12s. 6d. third class. Excursion trains will also run from numerous of the company's London suburban stations, and from Yarmouth, Lowestoft, Ipswich, Norwich, Lynn, Cambridge, &c., returning the same day.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

## MR. FRANCIS FRANCIS.

We have the pleasure to give our readers in this number of the Gazette a full-length portrait of Mr. Francis Francis, reproduced from a photograph, permission to copy which was given by Messrs. Elliott and Fry, and we must specially thank the President of the Watford Piscators, Mr. Clarence E. Fry, for his kindness in the matter.

It is some years now since we first had the pleasure of becoming personally acquainted with Mr. Francis; it was in 1867, when his work, "A Book on Angling," was published, that we began to look upon him as the leading angling writer of the day, and it is quite certain that no man since Izaak Walton has done so much to make the art of angling popular and respected as Mr. Francis. For over a quarter of a century Fishing Editor of the *Field*, and during that time writing many hundreds of articles, answering thousands of questions on angling and fish culture, and making numberless fishing excursions to all parts of the country, it is not to be wondered at that he is universally looked upon as the authority on the subject.

Doubtless much of his success, both as a writer on angling and as a practical angler, is due to the fact that he is and always has been an all-round angler. He says in one of his delightful papers, "I can enjoy any kind of fishing; from the gudgeon to the salmon, nothing is barren. Indeed, from the minnow to the whale, I might almost say, so that it is fish, I can manage to get along somehow."

Since July last, when a rather severe stroke of paralysis compelled Mr. Francis, to give up work, Mr. Senior ("Redspinner") has been Angling Editor of the *Field*, and by his kind permission we make a few extracts from a notice of Mr. Francis, which Mr. Senior wrote in *Bell's Life*, Feb. 3, 1883, entitled "Angler and Author."

> "Angler and Author, alike masterly in either capacity, Mr. Francis Francis is *par excellence*, the Gamaliel at whose feet the anglers of to-day are proud to sit. What he has done with his rod and line, the true British metal of his character as a sportsman, the straightforward energy of his advocacy of the right, and wholesome denunciation of the wrong in all questions of sport—these are matters with which we are all acquainted. In one of his books Francis Francis, indulging in a winter reverie, gives us a delightful insight into the way in which he became a fisherman. He says he was born one, his juvenile revelling in Moses Browne's edition of Izaak Walton, his first fish in the shape of a noble wrasse, his youthful piscatorial outings in Cornwall, are all narrated with an infectious enthusiasm. He recalls the coaching days, and the time when there was no *Field*, no sporting papers, no nothing but *Bell's Life* and *Boxiana* . . . and a curious thing called *Bell's Gallery of Comicalities*; yet to see him by the river side, or to chat with him as he sits in his easy chair, fronting one of the best private angling libraries in the country, is to feel conscious of being in the presence of a man who never grows old, and who acts like a tonic upon you. 'Thank God,' he writes in one of his essays, 'for making me a fisherman; for in the fast life we young men led in my young days, it was the only thing that tore me from the reck and filth of town, and put new life and vigour into me, and much indeed do I owe to it."

Mr. Senior gives with most interesting notes on each work a list of the writings of Mr. Francis, which we shall take the liberty of copying presently. Little did Mr. Senior imagine, when writing these kind words of Mr. Francis, how soon he would be called upon to take his place on the *Field*, nor does anyone regret more sincerely than he does that illness should for a time, at any rate, have compelled Mr. Francis to give up literary work. Some months after his attack, Mr. Francis asked us to pay him a visit at his residence at Twickenham, and we shall always remember it as one of the pleasantest afternoons we ever spent, for the greater part of it was devoted to looking over his angling library under his own guidance. Mr. F. seemed to know every book by heart, and touched off its merits or demerits in the happiest manner, adding anecdotes of how he had picked this up for a mere song at a second-hand bookstall, how that one had been more difficult to get hold of than a Thames trout, how this pamphlet was only valuable because it was so scarce, &c. There are few things we enjoy more than looking over old angling books, and here were numbers we had often longed to see, and shown us by one who himself had written more than any angling writer. In the hall Mr. Francis told us the history of some fine specimens of fish in glass cases which adorn its walls; and related how the stream at the bottom of his field used to contain great numbers of very fine roach until he unfortunately, when away from home, once gave an angler permission to fish, and this "fish hog," as the Yankees would call him, fished day after day from early morn till dewy eve until he had fairly cleaned the place!

The work Mr. Francis has done is too well known for it to be necessary for us to say much about it—a glance at the list of his published works will speak for itself, and yet it was those articles of his in the *Field* which made his reputation chiefly. Often in out-of-the-way parts of the country have we heard anglers of all classes—clergymen and river-keepers—refer to them in terms of admiration, and certainly there is a breezy freshness and vigour about them, a hit-from-the-shoulder sort of style which is very enjoyable. Mr. Francis, whether in writing or speaking, never stops to consider what manner of man he is addressing—lord or lacquey, it is all the same to him. That this "out-spoken" style should have got him into rows sometimes was only natural, but then he has himself told us that he is never so happy as when in "hot water." But, if at times rather hasty in judgment, he is too magnanimous not to admit a mistake. As regards his character as an angler, we can only endorse what Mr. Senior has so well said, and we may here note that it is a fortunate thing for the *Field* that such a genuine angler and accomplished writer as Mr. Senior was at hand to take Mr. Francis's place. We will only add that whether by the river side, or in the cosy inn after the day's sport, or in the chair at that snug little club "The Knights of the Round Table," or at home among his angling books, we have always found Mr. Francis a true angler and thorough English gentleman.

The following is a list of works by Mr. Francis:—1. *Pickachifax*, a novel in rhyme, 1854. 2. *The Real Salt*, a yachting brochure, 1855. 3. *The Angler's Register*, 1858, 1860, and 1861. This, as Mr. Senior says, was the "father of the present Angler's Diary"—a work to which we owe many a pleasant angling trip. 4. *Newton Dog-vane*, a a sporting novel, 1859. 5. *Fish Culture*, a practical guide to the breeding and rearing of fish, 1863. 6. *A Book on Angling*, 1867. This, as we have often said, is by far the best general work on angling, and if any of our readers have not got it, we can only say they do not know what they lose. It is now in its third or fourth edition, and it really seems to contain the whole art of angling; often and often have we received articles and letters about some "new method" only to find it is fully described by Mr. Francis. 7. *Sidney Bellew*, 1870, a sporting novel. 8. *Reports on Salmon Ladders*, 1870. 9. *By Lake and River*, 1874. This is simply a delightful book for an angler, and has the unusual merit in an angling work of recording blank days quite as faithfully as successful ones. 10. *Angling*, its rudiments, 1877. 11. *Sporting Sketches*, with pen and pencil, illustrated by Mr. A. W. Cooper. This work proves Mr. Francis as much at home with the gun as with the rod, and is delightfully illustrated by that genuine angler, Mr. A. W. Cooper. We had arranged with Mr. Francis to edit, and Mr. Cooper to illustrate, an *edition de luxe* of Walton, when Mr. F.'s illness put a stop to what we think would have been *the* edition of Walton. We are still in hopes that the project will be carried out. 12. *Hotch Potch*, reprints of papers in the *Field*, &c., 1880. In addition to his *Field* work and the above, Mr. Francis has written many articles for magazines, &c. He established the Thames Rights Defence Association. He has been our ablest advocate for fish culture in this country. It is chiefly due to his exertions in collecting the eggs in Hampshire that the New Zealand and Tasmanian streams have been stocked with English trout. He suggested to us the idea of a "National Fish Culture Association for Great Britain and Ireland," to which we replied in the *Field*, saying that we would endeavour to establish such an association if he would undertake to assist. This he did, and in conjunction with Mr. W. Oldham Chambers, we then set the ball rolling which has resulted in the Association, strong in members, patrons, and funds, which has now the care of the Aquarium at the Health Exhibition. Up to the time of his illness, Mr. Francis attended nearly all the Council meetings, and we still hope that a valuable suggestion of his will be carried out—viz., that the Metropolitan Park waters should be stocked with fine fish, and thrown open (under certain restrictions) to London club and other anglers.

In closing this very inadequate notice of Mr. Francis, we are quite sure all our readers will join with us in wishing him a speedy and perfect recovery to health; nothing would please our Hampshire readers more than to find Mr. Francis was again among them, catching or losing those "busters" he used to tell us about so charmingly in the *Field*.

## THAMES ANGLING PRESERVATION SOCIETY.

### Large Takes of Fish during One Week in July, 1884.

A gentleman fishing with C. Brown, at Richmond, in one day caught 88 barbel, from 1½lb. to 4lb. each, the grass weight exceeding 860lb. 38 were returned to the river.

Henry Wheeler, at Richmond, in seven consecutive days made a total of of 140lb. weight of roach and dace, and two barbel.

One of the the takes in a punt at Twickenham attended by Pert Hammerton, was 35lb. weight of roach and dace, and five barbel.

A gentleman fishing with George Rosewell in one day at Halliford, caught 50lb. weight of bream.

A gentleman fishing with James Haslett at Docket Point, took in one day 60lb. weight of bream, and a trout of 3lb.

A gentleman fishing with J. Poulter at Chertsey got in one day 40lb. weight of barbel, the largest 7lb.; four eels and two chub.

The above records were made during a period when the river was suffering from a deficiency of water; and they have been selected out of a very lengthy list of other satisfactory takes.

The Thames is *free* for all classes to fish in it, and anglers are only restricted by illegal methods of angling and a regard to the sizes and seasons of fish.

The Society is entirely dependent upon free contributions for the protection and preservation of the fishery below the "City Stone," at Staines, and for increasing the stock of fish in the river by means of netting the reservoirs, and other waters, and in protecting the spawn of fish during the close season.

It is admitted by anglers and fishermen, the river at the present time was never better supplied with all kinds of fish.

The Committee receive very little support from those who enjoy the benefit of their work, and yet the Society ought to be wholly maintained by anglers.

The subscription for membership is one guinea annually, but subscriptions of half-a-crown and upwards are received, and printed in the "Blue Book."

A copy of the "Blue Book," containing a large amount of useful information to anglers, will be sent on application to the Secretary, and enclosing three stamps.

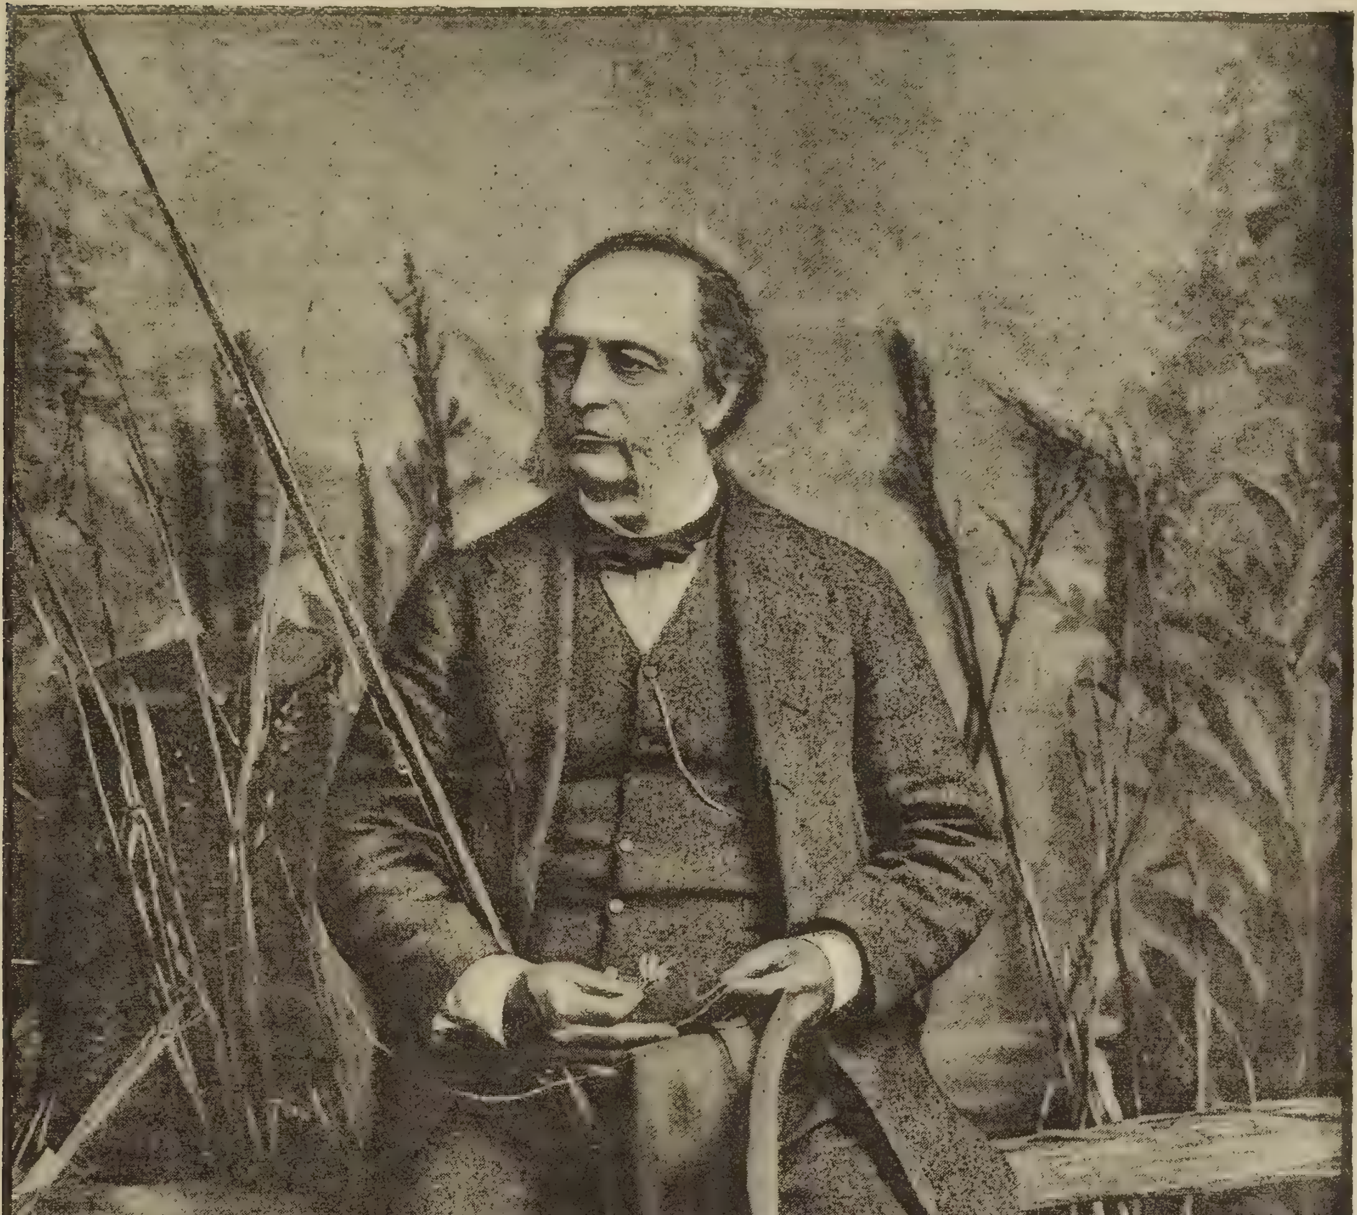
Thomas Spreckley, President.
7, Ironmonger-lane, E.C. W. H. Brougham, Secretary.

## FIXED LINES IN THE THAMES.

### Copy of a T.A.P.S. Notice.

"Numerous convictions have recently been made of anglers using fixed lines in the Thames at Brentford, Richmond, and Kingston. Anglers are hereby cautioned against using fixed lines by night or by day. Offenders after this will be proceeded against, and penalties enforced." Copy of by-law—"No person shall lay night hooks or night lines of any description whatever, or any fixed hooks or lines by night or day above Kew Bridge. Penalties: First conviction, £2; second conviction, £5."

Thomas Spreckley, President.
7, Ironmonger-lane, London. W. H. Brougham, Secretary.



MR. FRANCIS FRANCIS.

*By permission of* Messrs. Elliott and Fry.

## NOTES ON PERCH AND PERCH CAPTURE.

The style of angling for perch has not materially altered since the day of "Father" Walton. The trout, jack, barbel, &c. have each and all required new ideas and tackles for their circumvention, but the perch has in a remarkably conservative fashion retained its ancient nature. The "greedy perch, bold-biting fool," as Drayton terms him, still remains true to his fearless, careless character, whilst other fishes are gradually getting educated. Yet there are some baits other than those which Walton knew of, though it is questionable whether their case in any way gathers a bigger bag than do the primitive minnow or worm.

Walton, it will be remembered, mentions for baits the brandling ("well scoured in moss and fennell," says he), the cowdung bob, the minnow, and little frogs. To this list the learned but somewhat pedantic Professor Reanie, in his notes to the edition of Walton from which I am quoting, adds: "Horse beans boiled, cad bait, oak worms, bobs, and gentles." David Foster, in his capital "Scientific Angler," says the most sport is got whipping with a trio of artificial red palmers. This is a bait which is quite new to me, though I have caught them readily enough with artificial grubs made after Hewett Wheatley's grayling grubs. These latter I have always held to be mistaken by the fish for minnow. In addition to these lures there is one valuable little friend, the fresh-water shrimp, and the various larger nymphæ of water insects with which one may whip in clear water, and derive considerable success when other devices are frequently abortive. Then there is the common leech—the horse-leech I mean, not the medical gentleman—and this is, let me tell you, a capital bait. I fancy that Mr. Greville Fennel was the first to unfold the virtues of this bait in the columns of the *Country* some half dozen years ago, and though I have not tried it more than once, I can testify that chub and perch are very fond of it. In comparatively warm weather the horse-leech can be found in the ditches and drains of nearly all our larger rivers, especially the Thames, and should be kept in moss damped and clean. Fresh meat is also a recommendable lure, especially when very fresh, and a ground bait of raw bones will often call a school of perch together when other means fail. They should be tied to a stout cord at intervals, and sunk in the swim you resolve to try. A glass globe filled with small fish and lowered into the hole is also said to have irresistible attraction. Of course, some trouble is incurred in such manœuvres, but the perch is really so valuable a fish that in my opinion he is quite worth any amount of pains to secure.

It would seem almost superfluous to describe the tackle for perch capture. The reiteration of practical details is, however, as a rule, appreciated by the junior angler at least, and can do no harm in any case. Briefly, then, I prefer a shortish rod, say, of 10 feet, made stiff and solid, with upright rings of solid wire, the top one being large enough to allow a threepenny piece to run through it. The line should be of eight plait silk, or if the tyro really wants the very best line I have seen tried (and I have used hundreds, and tested more) let him get one of Foster's 16 plait 2½ dram lines, and dress it with the paraffin and resin dressing described by Dr. Weeger in the Gazette some time since. I am not saying this to puff Messrs. Foster, but because I have not seen or used a line at once so fine, strong, and durable. The reel or winch may be of the ordinary click pattern; it is not advisable to employ the Nottingham running reel unless the check or click is added.

The paternoster—why paternoster? can anybody really tell me without guessing at the application of the word—consists of a length of gut, at the end of which a cylindrical plummet or even perforated bullet is attached. At intervals of a foot, two or three hooks on stout gut or fine gimp are arranged. Sometimes small treble hooks are used, and I rather favour this plan when one is fishing with the worm. It is also useful with the minnow, for the perch—contrary to what Walton implies—*always* takes the bait head first.

The paternoster is *par excellence* a live bait tackle, and above all live baits I prefer small gudgeon. I have repeatedly tried these fish against others, and found them superior. Stone loach also make capital lures, but they are comparatively difficult to procure, and hence may be put out of court. The method of working the tackle is simplicity itself. Gather sufficient line out with the left hand, and gently urge the weighted and baited paternoster forward into the likely-looking eddy or limpid lagune. After the plummet has reached the bottom, still feeling it, let your baits remain a short time in that spot; if no response is accorded your invitation, draw the baits slightly towards you, and so on till your line is all returned. Repeat the operation, "working" every likely-looking spot.

When you feel the knock of the fish, don't be in a hurry. Count ten to yourself slowly, and then strike, not too sharply, but just sufficiently so to fix the barb. More fish are lost by quick striking than by its opposite. Of course the excitement of that delicious tug, tug is the cause of impatience, and, to a certain extent, of nervousness; but this must be controlled. As I have before indicated, perch are off at once on your losing a fish.

The whipping of either a worm or freshwater shrimp requires a different rod, of course, and though it is sometimes glorious fun, yet I prefer the paternoster, take it all in all. When the thermometer falls to below freezing point, and the rod rings have to be thawed every ten minutes, and the perch are packed as closely as sardines, then is the time for sport amongst the Zebra-sided gentlemen. And wishing many may get such sport, I must now reel in.

Chub Chavender.

## WHERE SHALL WE GO?

Is often the query of the angler when fortunate enough to have a few days "off duty." Finding myself with the prospect of 10 days' leisure at the beginning of this month, I consulted the oracle of this paper, and the answer was, "Write to Hugh McDonald, Swaelend Cottage, New Machar, N.B." So I wrote, and the answer was: "Sport good; come!" I telegraphed for a brother to accompany me, and on Monday evening, May 5th, we were in a coupé by ourselves on the Scotch Express; our rods and gear stowed safely away up in the rack. Happy thought—never trust these things out of sight when off for a trip.

Well, we arrived at Aberdeen next morning, before noon, and, having an hour or two, strolled through the town, called on Mr. Brown—the fishing tackle maker, and handled two or three fine greenheart rods. (After all, there is nothing like greenheart, if you mean real work and want power.) And some of Mr. Brown's flies would have delighted even a Winchester connoisseur.

On to Park Hill Station on the Buchan line, by the three something train, and in about three-quarters of an hour we are at Swaelend Cottage—a nice, cosy stone house, set in a clump of trees, approached by a private road. There is a neat garden and outbuildings. Some genial dogs give us a hearty welcome—pointers and setters. We note all this while waiting for dinner, and decide only to reconnoitre the river that evening.

Well, during our stay, we got two or three dozen trout each day, up to a pound; and we (not I) got four salmon—18½lb., 11lb., 9½lb., and 5lb. I only got fast into one, and, after about five minutes' play, my fly came back to me; but I stuck principally to the trout.

The weather was not settled. One day the wind tearing up stream, and then, the next day, rushing down or across, and the smolts (yearling salmon) were going down to the sea in swarms. All the decent trout were gorged with them, so there was "no rise." We picked up a small eel and dissected him, out of curiosity, and found in him four smolts and a mouse! This set us thinking what a tremendous toll these eels must impose on the young salmon ere they reach the sea.

McDonald has some miles of fishing, and about 2,000 acres of shooting, and anyone wanting a charming place with decent shooting and capital salmon and trout fishing could not do better than go to this place.

Hugh McDonald is one of the best all-round men I have ever met with. I never saw his superior in handling a rod, and making difficult casts. He can tie flies with any one. It's a treat to a used-up Londoner even to see him stride along. Then, his wife is a capital cook, and her soups and entrées are as nice as can be; in fact, all is as comfortable as can be. I envy the lucky family who can take the place for a time or for the season.

My *nom de plume* is the name of one of the best Don flies—

Grey Eagle.

## AMERICANS AND FISH-EATING PLANTS.

"Forest and Stream" says Prof. Baird has just received from Prof. H. N. Moseley, of Oxford University, England, a specimen of an aquatic plant holding in its fond embrace a considerable number of young fish which it has caught and killed.

This plant is the Great Bladderwort, known to botanists as *Utricularia vulgaris*, L. The species is widely distributed over England, and has been introduced into our waters, where it is often found in abundance in fresh-water ponds and ditches, and in the shallow coves along some of our river banks. It is a large plant, with stems often attaining a length of two or three feet. It has no roots, but floats free in the water, its root-like branches being covered with pinnatified capillary leaves, each bearing one or more small transparent hollow bladders, with openings at one end, which serve as traps to catch newly-hatched fishes, minute crustacea, worms, and infusoria. It has no digestive apparatus, but is thought to derive nutriment by absorption, from the decomposing animals.

The bladderwort has long been known to catch the lower forms of animal life, but it was only recently that its fish-catching propensities were discovered. Mr. G. E. Simms, of Oxford, was the first to call public attention to the fact, on finding that a specimen which had been placed in his aquarium for supplying oxygen to the water was actually catching and killing large numbers of newly-hatched perch and roach which had hatched from a mass of eggs lying at the bottom. The little fish were usually caught by the head, but some were caught by the tail, while others were doubly trapped, the head being held fast by one trap and the tail grasped by another, the body of the fish forming a connecting bar between the two.

To learn something of its destructive powers, Mr. Simms placed 150 perch fry in a glass vessel containing specimens of *Utricularia*, and at the end of two days all but one or two had been trapped.

Prof. Baird thinks the discovery has an important bearing on the future abundance of several of our important food-fishes.

Twelve to fifteen species of the genus, some of which have a wide geographical range, are found within the limits of the United States, and millions of fry must be annually caught in the little bladder traps.

The *Utricularia* occurs in abundance in carp ponds throughout the country, including the U. S. Fish Commission ponds in Washington, and in some localities has been introduced at considerable trouble and expense, as it was thought to be excellent food for the carp. Prof. Baird will cause every vestige of it to be immediately removed from the Government ponds, and will warn carp-culturists everywhere to examine their ponds, and destroy any that may be found there.

The specimen received from England has been placed on Exhibition in the Fishery section of the National Museum, where it can be seen by any who are interested in the subject.

R. Edward Earll.

National Museum.

## CLOSE OF THE NET SALMON FISHING ON THE DEE, DON, AND DEVERON.

The net fishings on the Dee and Don closed for the season on 26th August. Owing to the prevalence of drought, the number of fish got was considerably less than that of last year. The salmon, however, have been of excellent quality, and the average weight was 13½lb. The fishings on the coast, north of the Don, have been very successful, greatly owing to the southerly winds which continued for a great part of the season.

The Deveron season finished on the 25th, and has been next to a failure, in comparison with former years. The river has been in a very low state during the latter part of the season, consequent on the want of rain; and the accumulation of shingle at the mouth of the river prevented the tide having its effect, and hindered the fish from ascending. Altogether, the fishing has been considerably under that of an average year.

Before the close of the season, salmon and grilse came on in fair quantity. We append a list of the autumn fishings on the Dee:—

Monaltrie, Frederick Pickop, Esq.; Cambus O'May, H. L. Gaskell, Esq.; Pananach, Allan R. Mackenzie, Esq., of Brachley; Glen Tana, W. Cunliffe Brooks, Esq., of Glentanar, banker, Manchester; Aboyne Hotel, Sir George Campbell, M.P.; Aboyne Castle, the Most Noble the Marquis of Huntly; Desswood, Captain Davidson; Norton House, William Lamont, Esq.; Carlogie, Admiral Farquhar; Borrowstone, Walter Evans, Esq., Derby; Ballogie, W. E. Nicol, Esq.; Commonty, Dr. Farquharson, of Finzean, M.P., and Mr. Nicol; Woodend, R. C. Menzies, Esq.; Blackhall, J. T. Hay, Esq.; Cairnton, T. Turner-Farley, Esq.; Inchmarlo, Duncan Davidson, Esq., and another; Kineskie, J. White, Esq., of Overtoun; Crathes, General the Hon. Fane-Kane; Feugh, R. S. Hills, Esq.; Riverston, Major Milner; Invery, General Oliphant; Knappach, West and Middle Durris, W. Knowles, Esq., banker, London; Park, Potter, Esq.; Durris (lower water), J. Young, Esq.; Altries, A. J. Kinloch, Esq.; Drum, A. Forbes Irvine, Esq., Sheriff of Argyle, and party; Banchory Lodge and Maryculter, J. T. Todd, Esq., Tilbouries, and Sir Maurice Duff Gordon, bart.; Culter, J. Forbes Beattie, Esq., and R. W. Duff, Esq., M.P.; Kincausie, A. Irvine Fortescue, Esq.; Blairs, Colonel Flamstead; Heathcot, Deeside Hydropathic party; Ardo, W. P. Booth, Esq., and Wm. Lunan, Esq.

W. M.

# CLUB REPORTS.

### ACTON PISCATORIAL SOCIETY.

The members of this society had a fishing competition on Monday last, and although it rained the best part of the day, some of the members had very good takes. The conditions were to fish from 6 a.m. to 6 p.m. with one rod only, from the bank or punt, and in any public waters. At about 9 o'clock in the evening of the same day they all met at their club-house, the George and Dragon Hotel, for the purpose of weighing in, with the following result :—1st prize.—F. West, with 130 dace and 30 roach, weighing 22lb. 2oz., caught at Richmond. 2nd prize.—W. Pike, one barbel, roach, and dace, in all 17lb. 6¾oz., caught at Twickenham. 3rd Prize.—W. Howell, roach and dace, 16lb. 9½oz., caught at Twickenham. The following members also weighed in :—Mr. Townsend, roach and dace, 10lb. 8oz., at Twickenham. W. Eydmann, one very handsome trout, 4lb., for which he obtains a prize, being the heaviest fish caught during the day ; he also caught some bream, perch, &c., taken at Halliford. The trout is being set up as a specimen fish, being the first specimen taken by any of the members since the establishment of the society. W. Cook, jack and roach, weighing 3lb. 6¾oz., taken at Harefield. E. Eydmann and Mr. Parker also caught fish. Some six members of this club are going to fish the same number of members of the Hammersmith Club at Richmond, on Thursday, the 11th September, from 9 a.m. to 6 p.m., from the punt, all fish to weigh, and in the evening they will all dine at the club-house of the Hammersmith Society.—W. E.

### AMICABLE BROTHERS ANGLING SOCIETY.

On August 31st, Mr. Harding weighed in dace 21lb. 3½oz., roach 5lb. 14½oz., bleak 2oz., total weight, 27lb. 4oz. ; Mr. Moir, bream 3lb. ½oz., roach 7oz., from Dagenham ; Mr. Squire, roach 1lb. 1oz. ; Mr. Partrick, roach 10lb. 11oz., bream 5oz. A pegged-down match will be held on September 28th, at Pulborough.—J. WORLEDGE, sec.

### ANCHOR AND HOPE ANGLING SOCIETY.

About 25 members of the above society competed for three prizes on the 31st ult. in the Medway (roving), the following being the successful competitors :—Mr. Thomas Bowling, first ; Mr. Somers, jun., and Mr. Clerke, dead-heat for second and third. The following members also had fish :—Messrs. C. Watkins, P. Bowling, A. Hale, F. Hale, W. Dipple, D. Davis, and Somers, sen.—D. DAVIS, sec.

### ANGLERS' BENEVOLENT SOCIETY.

THE TOURNAMENT PRIZES.—All prizes that have not been applied for may be had on application at the usual fortnightly meeting on Friday, Sept. 12th, at 9 o'clock.—R. GHURNEY.

### BORDESLEY WALTONIAN SOCIETY.

The members of the above club held their second fishing contest of the season at Binton Bridges on Tuesday, Aug. 26th, when a most enjoyable day was spent, the result of the contest being as follows :—1st, Mr. Hill, with a grand catch of roach, weighing 17lb. ; 2nd, Mr. Bagot, with some fine roach ; 3rd, Mr. Pares, with dace and roach ; 4th, Mr. Byfield ; 5th, Mr. Tildesley ; 6th, Mr. Nicholls. The bait most successful was stewed wheat, at which in some parts of the river the fish bit very freely, though a flush is much needed in the river to cleanse it from the green matter floating in it. Thanking you in anticipation for the insertion of this in your valuable paper.—E. TILDESLEY, sec.

[We should be obliged if Mr. Tildesley would send us the recipe for stewing wheat. We know the boiled wheat recipe.—ED.]

### BOSTONIAN ANGLING SOCIETY.

Our trays were well filled on August 31, Mr. Jamieson having a good show of roach from the river Ouse, Messrs. Elton, Goodge, and Brothers roach, and Mr. Jennings 19lb. of roach and dace, and one trout.—J. J.

### CAVENDISH ANGLING SOCIETY.

Our recent takes of fish have been as follows :—Aug. 24th, Mr. Canton, bream 13lb. 12½oz., roach 1lb. ; Mr. Brett, bream 7lb. 1½oz., roach 3lb. 8½oz. ; Mr. Young, roach 4lb. 11½oz., dace 2lb. 1½oz. ; Mr. C. H. Reeves, roach 2lb. 12½oz., dace 7½oz. ; Mr. A. Field, roach 2lb. 12oz. ; Mr. W. Lee, one chub, 2lb. 13¼oz. ; Mr. Clark, roach and gudgeon 2lb. 6½oz. ; Mr. Austin, roach 1½lb. Aug. 28th, Mr. Canton, roach 10lb. 1¼oz. ; Mr. Brett, roach 5lb. 7¼oz. Aug. 31st, Mr. Clark, roach and gudgeon 4lb. 9¾oz. ; and Mr. Austin, dace.—E. C.

### CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 24th :—Mr. Chambers, bream and roach from Amberley ; Messrs. Castell and Nitz, bream from the Harp ; and Mr. W. Jones roach from the Lea. On the 31st, from Amberley, Mr. Clarkson roach, dace, and bream ; Mr. Chambers roach, dace, bream, and perch ; Mr. Nitz bream from the Harp ; and Mr. Bowyer perch and gudgeon from St. Margaret's.—CAS.

### CLAPHAM JUNCTION ANGLING SOCIETY.

The competition for three valuable prizes, extending over the week, from the 25th to the 31st ult., came to a conclusion, and the following were the winners :—1st, Mr. E. Wilson, with a splendid take of barbel, roach, and dace from Staines, 26lb. 6oz. ; 2nd, Mr. R. A. Banfield, 16lb. 8oz. dace and roach from Twickenham ; and 3rd, Mr. C. J. Speed, 8lb. 14oz. roach and dace from Staines. The total weighed in for the competition was over 70lb., a proof, taking the state of the rivers into consideration, that the members were well on the job. I wish to call the attention of members at a distance to the date fixed for the presentation of the testimonial to our late secretary and present able chairman, Mr. Wilson, which will take place on Thursday, the 18th inst., when I hope to see every member and as many friends as can make it convenient to attend. Mr. Wilson has worked hard to make the society the success it undoubtedly is ; and as he is well known to most of the Brothers of the Angle, I am sure it only requires to be known that such a presentation is to take place to fill the club-room, Lord Ranelagh, Verona-street, Clapham Junction, to overflowing. It will be recollected by many of the River Wey fishers that on the first Sunday of the present season some vagabond at Weybridge stole the whole of the fishing-tackle of R. Fortescue, of the London and South-Western Anglers, and late a member of the Clapham Junction. I am very pleased to state that one of our members has collected a nice little sum amongst the members of this society, and it is intended to purchase "Dick" a stock of tackle to give him a fresh start, which tackle will be handed over to him on the same evening as Mr. Wilson's testimonial.—W. MASLIN, sec.

### COBDEN ANGLING SOCIETY.

A number of our members were out on the 31st August, but very few of them were able to weigh in fish, although they visited their favourite localities. The only fish that was weighed in worthy of notice was a nice bream of 3lb. 7oz., taken by Mr. Webley at the Welsh Harp. Several members also went to the Welsh Harp on Sept. 2nd, and were successful in capturing some very nice fish. The principal takes were a fine carp of 7lb., and a bream of 3¼lb., taken by Mr. Kirby. Mr. Philpotts also took several large bream, one of them scaling 3lb. 6oz., and a beautiful roach of 1¾lb. Members are informed that the annual concert of the society will take place on the 22nd inst. at the Cobden Club, Kensal-road, when it is hoped that there will be a full attendance of members and friends. Tickets of admission, at 6d. and 1s. each, can be procured from the secretary or at the club.—C. REEVES, sec.

### DERITEND ANGLING SOCIETY.

This society held their annual contest on Aug. 25th, in the Canal, near Burton-on-Trent. The weather being fine, and the contest being timed for mid-day (12.10 to 2.10 p.m.), a large take was extremely improbable. Forty prizes were fished for, the chief among them being a silver watch, presented by Mr. S. Prescott, and a valuable and splendidly-finished rod, given by Mr. J. Keeling ; other prizes being given by members and friends. No less than sixty-eight members turned up for the event, and with a few friends interested in the affair, made a nice little party, about a hundred strong. The winner proved to be Mr. T. Onions, Mr. G. Jukis and E. Rotherham close up in the order named, while several ties taking place for other prizes made the referee's office anything but a sinecure. After the contest a few members fished the Trent, and showed some excellent fish at night. A meeting was held next evening at the club-house (the Spotted Dog), and a hearty vote of thanks was given to the donors of prizes, also to the referee, Mr. S. Prescott, and umpires. The president, Mr. J. Pratt, distributed the prizes. "Success to the Deritend Angling Society" being proposed and duly honoured, a few members contributed some songs and readings in excellent style, thus bringing to a close the most successful contest yet held in connection with this well-known club.—C. HAMES, sec.

### EASTERN COUNTIES ANGLING SOCIETY, GREAT YARMOUTH.

Since my last report was written two meetings of this society have been held in their club-room, at Mr. Seaman's, Duke's Head Hotel, Quay. On each occasion the president, Dr. Mitchell, was in the chair. At the meeting on Tuesday evening the 26th ult., it was decided to call a special meeting for Monday, the 1st of Sept., to which all intending competitors for the next match were invited to attend, in order that time and place might be fixed in a manner satisfactory to all. Through the generosity of several of the members, the officers were enabled to announce that five prizes would be fished for, presented by Messrs. Freeman and Turner, Mr. Brasnett, Mr. Crowther, Mr. John Lee, honorary secretary, and a tackle prize, to be paid for out of the funds of the society. A discussion ensued as to the advisability of having the society registered, and as a result it was decided that this should be done as early as possible. It has been arranged that when the conveniences of the members will not allow of them having their takes of fish conveyed to Yarmouth, to be weighed in by the acting secretary, Mr. Seaman, Duke's Head Hotel, they will be registered by that gentleman as having been weighed in should a society's certificate, signed by the person in charge of the fishing station at which the fish were caught, registering the amount, be shown him, and towards this end Mr. Seaman has been empowered to have a book of certificates printed for distribution amongst the members. A large and influential meeting was held on Monday, the 1st inst., the president having explained to the members present that the meeting had been specially summoned for the purpose of making arrangements for the proposed match, which was fished on Thursday, the 4th inst. A vote of thanks was unanimously accorded Mr. John Lee, the honorary secretary, for the trouble he had taken in writing the gentlemen who had been suggested as honorary members. Amongst others we notice that letters have been sent to Sir Edmund Lacon, Bart., Edward Birkbeck, Esq., M.P., and A. Burdett Coutts, Esq. As a proof that the popularity of this society is growing rapidly, no less than 17 gentlemen were proposed and balloted for at this meeting, all being admitted. Fish are still well on the feed in these waters, and several heavy catches have been weighed in during the week.—A. M.

### GLOBE ANGLING SOCIETY.

The majority of our members were out on the 31st ult., with a determination to make up, if possible, for the shortcomings of the week previous ; but, unfortunately, on their return to club in the evening, they had but very light bags. Among those gentlemen who got anything at all may be mentioned :—Messrs. H. Lake, roach and dace, 3lb. 14oz. ; D. Thomas, bream, 3lb. 7oz. ; J. Harman, roach, 1lb. 13oz.; G. Brown, roach, 1lb. 4oz.; S. Howell, roach and dace, 1lb. 3oz. ; F. Lawrence, H. Jeffries, and J. J. Holmes also had a few roach ; W. Brown, one small jack, 2lb. 7oz.; Mr. Titmus, 8lb. of very nice roach from the Medway. At our ordinary weekly meeting on Monday last, Mr. W. Fitzgerald gave notice to resign the office of chairman on account of ill health. Mr. W. J. Davies volunteered to fill the vacancy for the remainder of the season, which was unanimously accepted. Members will please note that a visit will be paid on Tuesday evening, 9th inst, to the Alexandra Variety Club, Princess Alexandra, Crouch End. The secretary and a number of the members will meet at the club-house at 8 p.m.—J. J. HOLMES, sec.

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

We had a fair show of fish on the 31st ult., the following members weighing in from Amberley :—Mr. F. Watling, 4lb. 2oz. ; S. Baker, 2lb. 3oz. ; G. Watling, 9lb. 14oz. ; W. Theobald, 4lb. 10oz. ; J. A. Fitch, 5lb. 3oz. Messrs. Cooper and Hewitt, roach ; Mr. Watley, 1lb. 14oz. from Welsh Harp ; Mr. J. K. Fitch, a nice tray of roach and dace, 13lb. 3oz., several of the dace over 8oz.—J. A. FITCH, sec.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening, at the Mason's Hall Tavern, Mason's-avenue, Basinghall-street, Captain Alfred in the chair. The minutes of the last meeting were read and confirmed, and Mr. Lesiter, who had been duly proposed and seconded at a previous meeting, was unanimously elected a member of the society. Mr. Chambers and the chairman reported on behalf of the deputation appointed at the last meeting to view some water which it was thought would be advisable for the society to acquire. They explained at great length the result of their visit, but did not feel justified in recommending the society to make an offer for it. A vote of thanks was unanimously passed to them for the trouble they had taken, and Mr. Chambers, in replying, mentioned another stretch of water which he thought the society would do well to look after, and, at the request of the meeting, very kindly offered to make inquiries respecting it. A vote of thanks to the chairman closed a very pleasant evening.—H.

### LEICESTER JOLLY ANGLERS.

The annual angling competition of members of the Jolly Anglers' Club, whose headquarters is the Earl of Leicester, Infirmary-square, Leicester, took place on Saturday afternoon at Ashfordby, near Leicester. Thirty members occupied swims in the river adjoining the land belonging to Messrs. Groves and Cart, who generously gave permission. The time allowed was two and a half hours, but the catches were only small, as is usually the case in contests of this kind. The successful anglers were—Messrs. Cross, Pawley, Voce, Gimson, Hunt, Hardy, Pool, Marshall, and Savage, who took prizes in the order in which the names are given. The match was carried out satisfactorily under the management of Mr. G. Chamberlain, and a very pleasant outing was spent.

### LIVERPOOL ANGLING ASSOCIATION.

Some of our members have been doing very well in the lake at Ellesmere, for, although the water was "broken," the fish were feeding, and baskets of 10lb. to 20lb. have been taken during the past fortnight. Our annual championship competition is fixed to take place in the Vyrnwy, at Llanymynech, on Wednesday, the 17th September, and to insure a long day's fishing we have arranged to go overnight, and thus enable the members to fix as early an hour as they think fit for commencing. A variety of prizes will be competed for, and trout and grayling will rank for Messrs. Ellinger and Boulding's silver challenge cup, and those taken will most probably determine this year's winner. Given the river in fair condition and 10 or 12 hours' fishing, there should be some heavy creels and tired arms. The train leaves Lime-street on Tuesday night at 6.5 p.m., and arrives at Llanymynech a little before 9 p.m. The return train on the Wednesday evening leaves at 9.17 p.m., and arrives in Liverpool at 12 midnight. The return fare is 5s. 6d. Circulars with full particulars will be sent to members as usual.—R. WOOLFALL, hon. sec.

### ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

We had a good show on the 31st ult. considering only a few weighed in. Mr. Roberts, 3lb. 7oz. of roach and dace; Mr. Crafford, 11lb. 2oz. of dace and roach—one roach weighing 1lb. 2¾oz.; Mr. Obbard, a few nice dace, 1lb. 14oz.; Mr. Longman, 14lb. 10oz. of roach and dace; Mr. Laundy, 10oz. of dace. Result of August competition: Mr. Richardson's prize was won by Mr. Crafford, with 21lb., two outings; Mr. Kent's prize was won by Mr. Laundy; Mr. Marle's prize was won by Mr. Longman. Our first complimentary visit will take place at our new quarters, the Three Kings, Clerkenwell-close, on September 23rd, when we hope to have a good one. —J. Obbard, sec.

### THE PISCATORIAL SOCIETY.

Amongst those present at the usual weekly meeting, held at Ashley's, last Monday, were Messrs. T. Gillatt, J. Meyer, H. B. Brown, H. Gray, J. Lander, C. Blundell, C. Banfield, J. G. Batt, G. Russell, E. Walker, Rev. Sumner, &c. Mr. H. B. Brown occupied the chair, and the business of the evening was commenced by the secretary reading the minutes of the previous meeting, which were duly confirmed. Mr. T. R. Sachs, who has recently returned from Deal, had a good "deal" to say concerning the sea-fishing obtainable in the neighbourhood; he met with his usual success, and explained that one of the best baits for pollack was a rough representation of a small fish cut out of parchment, attached to a large hook, and used in the ordinary method of fly fishing. He also handed round for inspection two of the prizes awarded at the recent successful Fishing Gazette Tournament. The Burmese beaker, won by Major Traherne, was justly admired; the delicacy and exquisite finish of the workmanship is a credit to the silversmith's art. The other prize was an elegant silver egg-cup, won by Mr. Malloch. Mr. F. H. Lemann presented to the society a very fine specimen of one of Rowlandson's etchings, which he said he had obtained in one of his recent peregrinations about London in search of the old and curious. The society benefits greatly by these expeditions of Mr. Lemann, and a vote of thanks was duly recorded on the proposition of the chairman. Mr. T. Batt had a few hours' flyfishing on the Thames at Bray, and showed 11lb. 12oz. of chub; the largest weighed 3lb. 13oz. Mr. J. Meyer, who had also been out on the Thames at Shepperton, weighed in two chub, 4lb., and three barbel, 9lb. 10oz. Mr. Fenning, who is still at Ringwood, sends up his fish almost daily, and the following are the weights of roach registered by him:—On 25th Aug., 18lb.; 26th Aug., 30lb.; 27th Aug., 12lb.; 28th Aug., 40lb.; 29th Aug., 24lb.; 1st Sept., 26lb. 2oz.—making the highly creditable total for six days' fishing of 150lb. 2oz. The size of weighable roach at this society is 8oz., which is considerably higher than the Thames standard. Mr. C. Blundell was credited with a salmon 12lb. 14oz. from the Orchy. He was unfortunately not present to give the members an account of his trip to Scotland. Mr. W. Jesse had been trouting in the neighbourhood of St. Albans, but was not rewarded with great success. The toast of "The Continued Prosperity of the Piscatorial Society" was proposed by the chairman. Mr. Goodger then proposed "The Health of the Chairman," who briefly responded, thus bringing the meeting to a close.—Pro. T. H.

### ROYAL GEORGE ANGLING SOCIETY.

The match that I spoke about in my last report took place with the following results:—Mr. Sinclair, 1st; Mr. Wood, 2nd; Mr. Palmer, 3rd; followed by Messrs. Rider, Charl, Holden, Healey, Henderson, Parsons, Guyham, Carter, and others; all had very good takes. Mr. Hewett, fishing with Pride Wheeler, on Tuesday last, brought into the club-room 17lb. of dace and a nice barbel. Mr. Carter, a gentleman recently elected, has presented a very nice prize to be given for the largest take of roach, from the bank, on the 7th, 14th, 21st, and 28th of September only.—W. H. Rider.

### SOUTH LONDON UNITED.

The committee of the above were summoned to attend the Alscot Arms, Alscot-road, Bermondsey, on September 1, in consequence of the numerous inquiries made by the members of this Unity as to when, where, and how the next competition shall take place. Among the committee present were Mr. Field, S.L.; Mr. Hotham, R.P.; Mr. Gafney, P.B.; Mr. Smith, O.A.P.; Mr. Allen, B.B., &c. The minutes of the previous meeting having been confirmed and passed as read, the next business was the proposition that had been made at several return visits, viz., that the next competition take place at Amberley, which was carried. The next question was the time. Several gentlemen who had watched the water at various tides gave their experience, and the opinion was that the next best tide to suit would take place on October 12. It was proposed that the competition take place on that day. All societies enrolled on the South London United Visiting List are desired to request their representatives to attend the Alscot Arms, Alscot-road, Bermondsey, on October 9, in order to receive information as to the place at Amberley where the competition is to take place; also to pay for and return all unsold tickets. Additional prizes will be given according to the number of tickets sold, which will be reported by—Pixie.

### UNITED BROTHERS, DEPTFORD.

Our members were out on the 31st ult., and met with good sport. Mr. W. Tyler, 14lb. 1oz. of roach and bream from the Medway; Mr. H. Tyler, 12lb. of roach and bream from the Medway; Mr. F. Watts, 6lb. 9oz. of roach from the Medway; Mr. F. Beak, 5lb. 3¾oz. of roach from Pulborough; Mr. J. Currans, a fine bream, weighing 4lb., from Pulborough; Mr. Payne, "fairies" from Dagenham. The members of the above club will fish a match on the 7th of September in the Medway. All members are requested to attend on Saturday night next.—H. T.

### UNITED LONDON FISHERIES SOCIETY.

The monthly meeting will take place on Monday evening, Sept. 8th. Chair taken at 9 o'clock.—R. Ghurney, sec.

### WEST GREEN ANGLING SOCIETY.

Mr. Coleman's prize was not taken on the 31st ult.; the only member weighing in fish was Mr. Firkings, having 3lb. 4½oz. of roach from Tottenham. Mr. Coleman's prize is to be fished for the gross weight through September; go where you please, and when you please; all fish to weigh, bar jack.—J. Guyver, sec.

## YE ANCIENT FYSHE.

(A Parody.)

I looked upon that pike of years,
My busy fancy idly dreaming
Of long-caught fish, and bites, and fears,
All ruddy red his gills were streaming.
It told me many a tale of truth—
Of ponds, and streams, and deeps, and dangers,
That had been passed in early youth,
When I and business world were strangers.
It told me, too, a tale of woes—
Of good fish lost, to my full sorrow;
It filled my heart with grief, and rose
To spoil my sport upon the morrow.
That aged fish, infirm and frail,
Was thin and pale (I'm tender-hearted),
I took him by his "mournful tail,"
And threw him in, and thus we parted.

Canonbury. Old Angler.

### ANSWERS TO CORRESPONDENTS.

G. Hoshea (Upper Clapton).—The seat basket can be had of Mr. Gillett, 40, Fetter-lane. It is made of wicker, on a strong frame. It is a capital affair.

H. Tricker, of Bishop's Stortford, asks if anything can be done to stop poaching in the Stort; and F. A. Butler, of Peckham, asks if anything can be done to stop poaching in the Suffolk Stour. We regret to say that, except during the fence months, the only parties who can take action to prevent netting are the proprietors, through whose land the water flows, and who own the right of fishing. If a fishing club is formed, they can prosecute, provided they are armed with authority from the owners of the rights of fishing.

J. J. G. (Bedford).—We hope to have some articles on the subject in the Gazette soon. You must kindly remember that though we should be delighted to publish nothing but what interests you, we could only do so on your guaranteeing to keep the paper going in its present very satisfactory manner.

"Strike from the Winch."—Mr. Heaton's new winch is kept in stock by Alfred and Son, Moorgate-street; A. Young, Oxford-street; Watson, Holborn; Holroyd, Gracechurch-street; Price, Seymour-street; Ramsbottom, Manchester; Whitby, Liverpool; Haynes, of Cork; Shaw, of Shrewsbury; Pearsall, Birmingham; O'Handlen, Bristol, &c.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### "EYED-HOOKS: THEIR EARLY HISTORY AND SUBSEQUENT DEVELOPMENT."

Sir,—In Mr. Hall's letter of July 26 (upon mine of May 31st), he allows his imagination to put very wrong interpretations on my meaning, and in spite of my earnest and repeated efforts privately to explain to him that no such meaning was intended, he persists in publicly perverting my intention, and has done his best to make me appear in the light of an impostor, and to have mis-stated facts for the purpose of claiming a position which is not my due. I must therefore go to the trouble of defending myself from his attack on my veracity, and to show that what he states to be "inaccuracies" are merely different views of similar circumstances, which he twists about to suit his own fancies. I admit one inaccuracy in my letter (due to a slip of memory), and that I corrected in my letter of June 21st.

I agree with you and Mr. Hall that it is desirable that the early history of this "Eyed-Hook" question should be "scrupulously correct," and in order to insure accuracy I have been at the trouble of wading through (since my return from Scotland, hence the apparent delay in my reply) a mass of three hundred old letters (60 from Mr. Aldam, and 240 from Mr. Hall, many of the latter of four to six *sheets* in length—rather a proof of our "close association"), in order to assist my memory, extract the pith of the history, and fix dates accurately, and I find there a few points which I had quite forgotten, and which may perhaps be new again to Mr. Hall. I have every letter written to me by him and Mr. Aldam, and I am in a position to prove what I am about to state in black and white if need be, but as I consider it unnecessary, and a breach of confidence and politeness between gentlemen to make public the contents of private letters written in friendship, I shall abstain from following his example of making fragmentary extracts from my letters as proofs in support of assertions which are not called in question. If necessary to my case, I may yet be obliged to do so, but in this letter I shall only indulge in one quotation (at the conclusion of my historical statement) which I do because I think it cannot give Mr. Hall the slightest offence, and it is so conclusive an argument that I trust it may not be considered a breach of the principle I have advocated.

First.—As to my motive for slightly mentioning the history of the "eyed hooks" in my letter of May 31st, which you, Sir, designate "an aimless digression." As I was about to give so positive an opinion on the knot question—viz., that the eye of the hook was to a great extent designed to suit the knot we used, and not the knot for the eye, and which opinion Mr. Hall has since expressed his entire approval of, I felt bound to show that I wrote with the information of *one* of the *first promoters of the hooks.*

I have not been a regular reader of the Fishing Gazette until this year, and therefore I have missed nearly all of what Mr. Hall has written on angling subjects therein. I have not seen his articles mentioning my name. He occasionally referred to his articles, and lent me Gazettes, or cuttings therefrom, on various topics, but I was not aware that I had been mentioned in connection with "eyed-hooks" (except as to the matter of the bronze colour), and therefore I entered slightly into their early history solely to give weight to my opinion on the knot—too carelessly as it proves.

Mr. Hall lays great stress on a letter in the *Field* of July 3rd, 1880, in which he meted out the honours (such as they are), to all concerned. I give him credit for perfect impartiality in that letter. I read it at the time, and approved of it (in the words he quotes), and I should probably do so again if I knew what it contained; but I then felt no personal interest in the publicity of the subject, I forgot all about it, and I have not the slightest idea of what the *discrepancy* now is between his then statement in the *Field* and mine in the Gazette, which has given him offence—quite unintentional on my part. If any reader of this letter happens to possess a copy of the *Field* of that date (July 3rd, 1880), I should be greatly obliged by the loan of it to restore the matter to my memory, and will return it. I have felt no interest in the publicity of this matter until I am roused by Mr. Hall's unjust public attack on my veracity; but, whatever that *Field* letter may contain is of little consequence to the question at issue. Now we have to deal with facts and dates which form the history of the "eyed-hooks," which I intend to relate minutely.

The principal assertion I made was that "Mr. Hall and I were closely associated in the first working out of these eyed-hooks," that is all I claimed, or desire to claim; but his remark that after my approval of his *Field* letter of 1880, "anything I may say to the contrary now cannot, at this distance of time, be considered of much weight" is, I think, beside the question. Feeling no personal interest in publicity, I kept silence; but because I have done so, is that any reason why my word and my account of the whole matter is not as reliable as his?

I think I am right in saying that neither Mr. Hall nor I had ever heard of small "eyed" trout hooks when we took up the matter, and that we both believed we were *working out a perfectly new idea*, and it is quite recent news to me that there ever have been any small eyed trout hooks before ours were brought out.

For convenience, I will divide the early history into three short chapters.

Chap. I.—At the beginning of 1877, I heard of Mr. Aldam's unique and beautifully got up book, "The Quaint Treatise." I bought a copy, and I was struck with the eyed-hooks on which his patterns of detached-bodied "drakes," were mounted. I wrote to him in March, 1877, enquiring where I could obtain such hooks or smaller ones, and he informed me that he had never possessed eyed trout hooks before these special ones were made for his book; but suggested that as I knew Messrs. Hutchinson and Son (from having, as I stated, "previously dealt with them in *such* matters," by which I meant ordinary hooks, gut, silks, and bird skins), I should try to get such hooks made by them; but, as he knew a good man to make them, he volunteered to get hooks made for me, and he incurred a very considerable amount of trouble to oblige me, for which I shall always feel grateful. The correspondence between us extended over a year before the first samples came, which were delivered on April 29th, 1878.

Mr. Hall and I met at The Peacock, Rowsley, on April 24th, 1878, to fish together, and there I received from Mr. Adlam, the sample eyed-hooks, he knowing that we were there together, and could consult about them. I have the very sample hooks by me now, japanned Limericks, with eyes straight on the shank. We consulted and decided to order a trial parcel of various sizes from No. 11 to 17 (Redditch scale). They were delivered on May 31st, and proved fairly good hooks.

Now, in reading these old letters, a curious point occurs to me for the first time. Up to the time of our meeting at Rowsley, I had received from Mr. Hall (between March 20th, 1877, and April 20th, 1878) fifty letters on general angling subjects, *but not one of them contains any allusion whatever to eyed-hooks.* He had also been in constant correspondence with Mr. Adlam, and if they had been also consulting about eyed-hooks, he must have heard what I was trying after, and would have mentioned it. Mr. Hall paid me a short visit in January, 1878, and we talked about the prospective hooks; but I feel certain of this, that he had not had samples or seen any eyed-hooks (except the Drake hooks in the book) until my patterns came from Mr. Aldam at Rowsley (April 29th), and I know he received his first patterns like those, from Mr. Aldam direct, on May 14th, after his return home. I therefore believe, and shall continue to do so until he can produce clear evidence to the contrary, that Mr. Aldam and I acted *alone* in the matter *for the first twelve months*, that it was at my suggestion and solicitation, and by his personal efforts *(with a maker unknown to me still)*, which produced the first effective samples of small eyed trout hooks.

During 1878 I had no opportunity of trying the hooks to any extent, but Mr. Hall used them in Hampshire in August of that year, and as he reported that they were rather heavy for chalk stream floating flies, we agreed to order a further quantity from Mr. Aldam *on finer wires.* They were delivered (to me Nov. 6th), but they were very badly tempered, and proved soft and worthless. They were returned to be retempered, and came back about Feb. 7th, 1879, still too soft and untrustworthy for fish over half a pound weight. This was no fault of Mr. Aldam's, but only of the makers; but it caused the abandonment of these hooks—and closes the first chapter of their history.

Chap. II.—Between the time the (second) hooks were sent back (Nov. 1878) and returned re-tempered (Feb. 1879) we were undecided what to do—to try Aldam's man again, or to try elsewhere. We consulted *for four months* about applying to H. and Sons, and what hooks to ask for first. It was at this juncture that what has been termed "The Kelly incident" occurred, which Mr. Hall affects to "Pooh! pooh!" I had before bought excellent small Limerick hooks from Messrs. Kelly and Son, of Dublin, and I thought if such hooks could be got "eyed" they would be what we wanted. I did not tell Mr. Hall beforehand, *but I wrote* to inquire for them *in our joint interest* (and in a letter dated as late as June 21st this year Mr. Hall admits this to be the case). If small eyed hooks had been procurable he would have welcomed them as gladly as myself; but as only samples of large ones came (sea trout and grilse), and were of no use to us, now he calls my effort "a mere accident and a private concern of my own." I say "No." The effort, though abortive, was made as much for him as for myself. Our interest was identical. He admits this in a letter dated June 21st, and denies it in the Gazette, July 26th. He says also (see italics), "It is a significant fact that we were not induced to alter the position of the eyes in consequence of Kelly's patterns." Exactly so; because Kelly's patterns contained samples of *both* kinds of eye, horizontal and upright, and it was only a question which was the best of the two; and though I once rather favoured the upright eye as being less visible to the fish from below, we settled not to alter from the old position of horizontal. This "Kelly incident" was an interlude partly filling up the space of uncertainty, and in my letter of May 31st, alluding to it I ought to have left out the words "first of all," because, chronologically, *it comes after the failure of Aldam's hooks*, and *before we applied to H. and Sons*, and therefore I am correct in saying, "While we were looking round."

Again, he says that "our choice of a maker was settled in (my) mind" before my application to Kelly and Son. Again I say "No." We had made suggestions mutually, we had settled *preliminarily* what hooks we would like to order, and were preparing to try H. and Sons, but we *were waiting for the return of the Aldam hooks from re-tempering*, and did not *decide* till *after they came back* on February 7, 1879; and on the conclusion of that failure, Mr. Hall wrote to me and said he voted to go in for some of the Kendal hooks. After the disappointment about the (2nd) soft hooks on November 6, 1878, Mr. Hall (probably and rightly expecting that I should take action in the matter) wrote to me in the words he has *partially* quoted, but which I will complete—"Do not write to Hutchinson's just yet, as I have long been thinking of doing so, *and when we hear from Aldam it will be time enough for us to confer before writing and making any definite proposal.*" I think this puts a different aspect on his assertion that "our choice of a maker was settled in (my) mind" when I wrote to Kelly and Son.

I gave way to his wish, and let him take the matter in hand; but this had slipped my memory, when I wrote hastily on May 31st.

About February 8th, 1879 (a day or two after the return of the re-tempered hooks), he placed our first joint order with H. and Sons, as agreed upon, for six gross of eyed sneck-bends, Nos. 1 and 2; they were delivered about March 10, and proved very good hooks.

We met to fish together at Abergavenny, at Easter, 1879, and we used them there for the first time, and Mr. Hall writes, "While there we agreed to have the eyes turned up in future," I beg to add a little to that statement. Up to this time the hooks had all been made with eyes straight on the line of the shank—Mr. Aldam's hooks had finely-tapered shanks with small eyes (too small, unfortunately) turned in a pear-shaped form. On May 20th, 1878, Mr. Aldam sent me a preliminary pattern hook with turned-up eye; this was submitted to Mr. Hall. I think I favoured it, but I cannot quite remember, and I also advocated a rounded eye; but on May 22nd, Mr. Hall wrote to me strongly objecting to the turned-up eye (twice over in the same letter), and in consequence the hooks were made with straight eyes, so were the second lot, and so were the first lot of sneckbends from H. and Sons.

At Abergavenny, I for the first time had a fair chance of trying the eye-hooks practically. I had tied flies on but had scarcely fished with any of the Aldam hooks. but my first experience with the eyed-snecks showed me the inconvenience of knotting the gut, and of obtaining a proper pull on the point, and before going out one morning, in Mr. Hall's presence, I got a pair of pliers and a candle, softened (only just) the eyes, turned up as many as were wanted for immediate use, and dressed flies on them, "blue duns," and "march browns." They were perfectly successful, and I maintain that *that experiment settled the question of the turned up eye for our future hooks.* It was Mr. Aldam's idea simply carried out by my own fingers. Mr. Hall informed me that he experimented with turning up the eyes of Aldam's hooks at Winchester in August, 1878, but he softened the whole hook too much and failed; and supposing he did not fail—if it had been a success he would most certainly have suggested the alteration in the first lot of sneckbends in 1879, but he never mentioned to me any successful experiments in that way till this dispute arose.

Chap. III.—Our consultations at Abergavenny resulted in the opinion that an improved eyed hook might be adopted of "Limerick" shape, with or without sneck twist. He obtained samples in the soft state whilst there, and snecked them to his own taste, and on May 15th, 1879, ordered the first lot of small eyed Limericks, Nos. 00 to 2, dark blue colour, very sharply snecked, one gross of each size, and on July 26 he sent me two dozen of each size to assort up my stock.

From this date our *active partnership in obtaining hooks together* was practically ended, the hooks were settled as practicable eyed hooks, either in "sneck bends" or "Limericks," and from that time we each followed our own inclinations and requirements in ordering for ourselves, he (absorbed in his pet chalk stream flies) ordered chiefly the smaller sizes, from 00 up to 2. I, for my northern fishing, chiefly No. 1 up to "Drake" hooks (No. 3 and 4 long), and "sea trout" sizes, but we each laid ourselves out to give the other a share of every kind obtained, and continued our exchanges up to Midsummer, 1880, when, in consequence of the increased demand, it became advisable to establish with the makers a set of standard sizes for public use; and after some discussion, and an alteration of bend by Mr. Hall, though slight variations have occurred at times, these were virtually settled as they are sold now.

The first lot I ordered for myself after our trial on the "Usk," were "Limericks," nearly flat, very slightly snecked, *not enough so*, Mr. Hall said, on receipt of several dozens of them, and I then (July, 1879) first adopted the olive-brown shade of steel in which most of the hooks are now made. I had *two good reasons for it*—First, that a "yellow olive," or "olive brown," shade of hook is less distinctly visible and *harmonises better* with almost every fly than dark blue or black (with the exception of blue and iron-blue duns and black gnat); Second, that as it is the early stage of colour which the white steel hook assumes *in tempering*, it is more likely that hooks of that shade shall prove good "springy tempered" ones than if allowed to pass on to the deep blue tint before "quenching," as they may become, and occasionally do so, too soft. Therefore, I say if you want hooks reliably tempered, the chances are greatly in favour of "olive brown," or even of "straw-coloured" hooks, which latter would be admirably suited for "green drake" hooks. The colour is an essential part of the tempering process. It is not a mere fancy of the eye as regards colour. It has distinct and practical advantages. Mr. Hall has already credited me with this slight improvement.

This closes the early history of the eyed hooks, and I finish the chapter with the one quotation I mentioned. Early in 1880 we had jointly prepared samples of the hooks, and flies drsssed on them, for exhibition at the *Field* office, and Mr. Hall had written a popular description for the general information of anglers to be inserted in that paper, and in allusion to the completion of the matter in settling the eyed-hook patterns he wrote to me on July 8, 1880, as follows:—"I feel that owing to the course matters have taken, the public are coupling 'the Hook of the Future' (this was the title given to them by no less an authority than Mr. F. Francis in an article on them), with my name more than I have any *sole* right to. I feel that a very great deal of the originality of the whole thing is due to you, especially the new colour (bronze); in fact, to put the thing fairly, I have had the greater part of the correspondence and bother (please remember that he took it out of my hands); but I should never have got such an all-round good thing without your practical hints and advice."

I think that statement ought to be sufficient. I don't want to claim more than an equal share with him in the production of the eyed-hooks, but coupling his freely expressed opinion with the *facts* of the early history I have related, and which I challenge Mr. Hall to refute, I leave the merit of the question with those of your readers who care to entertain the subject, and are qualified to judge for themselves, unbiassed by friendly acquaintance with Mr. Hall.

The real difference in our positions is simply this: He looks at the whole eyed-hook question from the point of his pet chalk-stream dry-fly fishing, and that only. I take a broad application of it to *all fly-fishing*, and I say that if the northern anglers knew the value of the eyed hooks as well as the southern ones do, the hooks would be sold by millions instead of by thousands. Pray, what are the numbers of chalk stream fishers and their wants as compared with the mass of fly-fishers north of the "home counties"? The hooks are quite as valuable to the users of large flies as to those of the smallest: more so, in my opinion.

The highest praise is due to Mr. Hall for his efforts and perseverance in spreading the knowledge of the eyed-hooks amongst the Chalk-stream angling community. He saw at first glance that the eyed-hook was the right thing if it could be got small enough, and he set to work to get the smaller sizes made, about which there was no difficulty to overcome, except, perhaps, the smallest 0 0 0. He had a select circle of acquaintances amongst the best Hampshire anglers; he called their attention to the hooks, they were not slow to appreciate them (and that reminds me that one of the best fishers amongst them proposed that H. and Sons *should patent the turned-up eye*); the circle of users soon widened, the hooks became popular, and Mr. Hall found himself (as I had predicted to him) well taxed in time and correspondence to keep his friends supplied, as, for some reason best known to himself, he made himself voluntarily the general provider; but he has his reward in his increased acquaintance with good fly-fishers, and, no doubt, increased opportunities of obtaining good trout fishing, all which he fairly deserves and fully enjoys; but he has no right to take up the position that because the *tiny*-eyed hooks have been a *success* in *Chalkstream fishing*, the other sizes are nothing to anglers in general, and that because through him Southern anglers first got and used them, therefore the chief credit of the whole affair is due to him. I assert that if it had not been for our *joint work* and application to the matter extending over a period of more than two years, no eyed hooks would have been in existence at the present time.

Mr. Hall says: "We have not only had to refine and elaborate the hooks, but we have had to educate the fly-dressers to the proper and neat use of them." I *could* say a *good deal* about the "Elaboration and Refinement" of the hooks, but I refrain. I have trespassed too much on your space already, but I could not compress my remarks without only half dealing with the subject; and now I have left points unanswered which call for reply, and I request your indulgence in granting me space. I will, however, at another time give you my candid opinion on that point if you permit me to do so.

Finally, I consider I have established the following chief points:—

A. The *first idea* was taken from *Mr. Aldam's* drake-hooks.

B. At my suggestion and solicitation *he* undertook to get made, and succeeded in obtaining the *first practicable samples of small "eyed" trout-hooks* (except such previous abortive attempts as we were totally ignorant of).

C. Mr. Hall and I made practical use of these hooks.

D. Accidental faults in tempering having made these useless, we (at Mr. Aldam's own suggestion) struck out a line for ourselves, and obtained the eyed-hooks (snecks) from H. and Son.

E. The turned up eye—Mr. Aldam's idea—was practically settled at Abergavenny.

F. Desiring a change in shape, they were shortly altered to "Limerick" bend with sneck twist (more or less), Mr. Hall's being *more*, and mine *less*.

G. The improvement in colour was adopted by me and endorsed by some of the best Hampshire anglers.

H. After a period of desultory orders on both sides (his large for the supply of his friends, not his own exclusive use, mine small for my own use, and small contributions to assort his stock), final patterns were settled in 1880, and so they remain; but I am prepared to prove by samples and by argument, that the pattern approved by Mr. Hall at this time is not so good a shaped hook as I have by me, made shortly after the first lot of Limericks were made in 1879, *and could be vastly improved.*

I repudiate Mr. Hall's allusion to "sleeping partnership." There was no partnership after the hooks were fairly established in 1879, and up to that time it was as equally active as two individuals could make it.

There I leave it. I don't care a button what anybody thinks about it, but I am not to be shown up as an impostor in claiming to have taken an equal share in the early history and actual production of "Mr. Hall's Eyed Trout Hooks."—I am, &c.,

George Bankart.

Leicester, August 26.

[We regret extremely that the eyed-hook, which is esteemed so highly by many (perhaps the majority) of the best fly-fishers of the day, should have this dual history —first by Mr. Hall, and then by Mr. Bankart, two genuine anglers and gentlemen, and that their pleasant acquaintanceship as anglers has been—we trust only temporarily—severed by this very "eyed-hook" with which they have both had so much to do. We do not pretend to judge between them; their statements are now before our readers, and they can judge for themselves. It seems to us, after carefully comparing these letters, that neither contradicts the other on any material point. Mr. Bankart accords Mr. Hall the lion's share in the production and exploitation of the new hook, and Mr. Hall acknowledges his indebtedness to Mr. B. for much advice, &c. We must say that but for Mr. Hall's most able and persistent advocacy of the value of the eyed fly-hook both in the press and in private, it would have proved a dead letter as far as the angling public generally is concerned. We agree with Mr. Bankart that the shape, especially in the smaller sizes, is open to slight improvement still. In using a fly with much hackle, like a small sedge or "wickham," we find the hook does not take hold when the strike is made, and for our part, we should much prefer the ordinary sneck, which gives a larger angle, and consequently more "hold" than the improved sneck, which is more of an acute angle, the old sneck being nearly an exact right angle. The old-fashioned "sneck," with the point turned the least bit in towards the shank, and the least bit sideways, is, we think, one of the best practical (not theoretical) hooks for small trout flies.—ED.]

## TROUTING ON THE BLYTHE.

SIR,—In this selfish world, in which we live and move and have our fishing, there is nothing more pleasing to recount than our own successes; but as some of your *unselfish* readers would perhaps care to hear of a real good day, I shall be happy to give a little account of my exploits on the 6th inst.

It may not be uninteresting also, to give some little account of the locality where the objects of our "art" are to be found, by any "hearty" brother, if only he is privileged to seek for them. We have no fishing club nearer than the Dove, but the fact that from our starting point (i.e. from home) we have in view the domains of four noble Earls and a Marquis, tell plainly that the angling is preserved. My friend S— is true to time, 8.30, but on his advent I smiled (perhaps imperceptibly), the heavy thunder rain of yesterday, and the fine morning had induced him to leave his macintosh behind him. Selfish man! I said nothing. Perhaps, Sir, you may doubt my habits of temperance, but I never leave home to go fishing without my flask being well replenished with a drop of the real "cratur," notwithstanding we were going into a land of milk and honey, and where the good old example of English hospitality is yet to be found. This, and all other the paraphernalia of a fisherman being ready, my pony was duly hitched to the vehicle, and a start was made. My friend is a teetotaller, and guess my surprise when he ordered me to drive some little distance from my house to the Cock Inn. I looked at the church clock as we passed that ancient pile of historical associations, and wondered what would happen. A basket was ordered and filled with lemonades, cool and refreshing, ginger ales, and the rest of it. Of course my friend politely dwelt upon the fact of my enjoying these delightful beverages with him at the water side; but I looked at the large basket, wondered who would have to carry it, and as politely declined.

We had no attendant, and often did I smile during the day to see him lugging his basket to some convenient shelter. The morning was bright and beautiful, and both being tenants, we were privileged by a four miles drive through the noble Earl of Chartley's ancient domain. The first object conspicuous was the old castle, with its glimmering sunlight playing through its battered turrets, giving, as yet, a frontage bold enough to receive battle from the opposite old encampment (Cags-hill) as of Yore. Leaving this, and gaining an elevation, the surroundings of the Earls of Harrowby and Shrewsbury's mansions are conspicuous by their beauty, whilst further in the background, but clearly in view, we see Cannock Chase, and the borderings of Beaudesert, the seat of the Marquis of Anglesea, with a glimmer of that of the Earl of Lichfield, at Shugborough, less conspicuous, and at a lower elevation. On we press, through the pheasant coverts of the noble Earl Ferrers, until we attain the elevation of the famous Chartley Park in all its wild and rugged beauty, but quickly descend into the valley of the much-loved river Blythe. It is not long ere we rig up our fancy at the hospitable house of my old friend Brown, one of the farmers of the old school of longhorns. Here a superfluity of his substantial strong ale and fare awaits us; but other attractions predominate. A word of doubt that yesterday's rain in the Staffordshire Potteries had not made its way here arose sadly in our minds, but a glimmer underneath the thundercloud at the bottom of the moor relieved us. The water was all that could be desired, not high, but slightly discoloured. Our fishing-ground is owned by another noble lord (Bagot), and from a reverend and worthy scion of his family we hold our card, and he, an angler too, keen as the hawk, that marks his quarry to the very spot. Several miles of admirable water teeming with fish is open to us; but a short four fields' length is more than ample from the side of the old mill upwards. The May-fly was not abundant upon the water, but just enough to tempt the appetite. So with that, an admirable example of Foster, of Ashbourne, and the alder fly, we opened, and the thunderclouds opened too.

To recount the misses were no use; or the rushes neath the bushes; 'twould be tedious, as my other eulogies may be; but in honest truth, when we pulled ourselves together for refreshments, the usual "What luck?" from my friend was the word. "A few," I answered, and not knowing, commenced to count up twelve brace, with a few undersized, and a brace of grayling, returned to the water. On resuming, an episode occurred, I turned round to see my friend S. had bagged up and looked disconsolate. Of course, I did not laugh, even to myself, but sympathetically asked him for a statement of his woes. His rod, usually in three, was now in five parts. "I'm done! It's all over!" He spoke with emphasis. I was equal to the moment, and fearing that he might wish to drag me away with him (for, in shame be it said, I've taught him until he is almost my master), I warmly invited him to take a draught from the large basket, and in less than five minutes splices were made, and firmly too, and we fished on. Ere long, drenched and draggled, but not tired, we yielded to the forces of the elements, and for many a long year I have fished the same water (and hope to do yet again). I never landed in a shorter time seventeen brace of more beautiful trout. I did not carry Reuben Heaton's "Little Gem," therefore I did not weigh. Indeed, I do not think I ever did weigh a basket of fish; but suffice it to say, Sir, that I did not take a fish that would go less than three to the pound, none quite a pound, but many three-quarters and upwards. My friend, who is a tyro at the art, came under a fourth of my take, but he was perfectly satisfied. Foster's May-fly (green drake) will please anybody; it is not a large pattern, but with a well-covered body, and for an hour at least, when my friend could not stir a fish with a finer-bodied fly, I took them out all round him.

Not one of the least pleasures of the day to us was a chat with my old friend Brown and his generous wife over a cup of strong Congou, and an eight miles' drive home brings to a close a day of pleasure that will ever dwell in our happiest recollections. If you think my remarks will be tedious, please curtail, or ignore them. If not, my grateful recognitions for your valuable space.—I am, &c.,

Stowe Cottage, Stafford. F. S. PERKIN.

## THE LIVERPOOL ASSOCIATIONS.

SIR,—As the correspondence respecting the close season shows signs of degenerating into a mud-throwing contest, I beg to make a few remarks on Mr. Woolfall's letter and then withdraw. The Liverpool Central Angling Association does *not* rent any ponds, but a number of the members hold tickets for the fishing over an estate in Cheshire, on which there are some forty or fifty ponds, containing certainly not trout like the Liverpool Angling Association's fancy, and inaccessible water, but of their kind as good fish as can be obtained in the neighbourhood, roach, perch, and tench being of good size and numerous, decent baskets of weighable fish being frequently brought into the club-room, and not fish, as Mr. Woolfall observes, of forty to the pound. Our books will show as good fish weighed in from ponds as ever came from Combermere or the Verniew. Nobody asked you, indeed! Associations do not send official invitations to anglers to join, but individual members have frequently entreated "Quill Float" to join the "Strawberry" (as Mr. Woolfall's association is known as here), and have always met with his refusal. I do not think Mr. Woolfall can produce a copy of the letter in which we were asked for our assistance in the matter of regaining the lost privileges, as we keep a copy of our correspondence, but fail to find a record of anything of the kind from the Liverpool Angling Association. With regard to members seceding from his association and joining ours, the less he says the better, for there are at present in the Liverpool Angling Association individuals who left the Central under not very creditable circumstances. However, I rest contented with the thought that nothing alleged by "Quill Float" and "Piscator" has been denied, and that the Liverpool Angling Association have sought shelter under a shower of mud thrown at the Central. Apologising for trespassing so much on your valuable space, Mr. Editor, and expressing regret that the truth told about his association should have "riled" Mr. Woolfall so much, I take my leave of this discussion.—I am, &c.,

Liverpool. BABY ROACH.

## THE STOKE NEWINGTON ANGLING SOCIETY.

SIR,—On the 31st ult. Mr. C. F. Robinson weighed in 5lb. 7$\frac{3}{4}$oz. of bream and perch, Mr. C. Martin 4lb. 12$\frac{1}{4}$oz. of roach and bream, Mr. W. Robinson 2lb. 2$\frac{1}{4}$oz. of bream and roach, and Messrs. Harris, Millington, and Gretton had roach, bream, and perch. Mr. C. F. Robinson won Mr. Millington's prize for the heaviest bream with a fish weighing 3lb. $\frac{1}{2}$oz. Mr. W. Robinson took the sweepstakes for the gross weight competition with 12lb. 10$\frac{1}{2}$oz., Mr. C. Martin being second with exactly 10lb. A pegged-down match at Pulborough for three prizes on the 7th inst., and members are to assemble outside the station upon the arrival of the first train.—I am, &c.,

T. GRETTON.

## GOOD PERCH.

SIR,—On Thursday last Mr. G. D. Woolgar, of this place, and myself were fishing with the live minnow for trout at West Hoathly in private waters, when he caught two perch in splendid condition, one weighing 2lb. 12oz., and the other 3lb. 4oz.—I am, &c., JAS. HOPKINSON.

East Grinstead.

## GOOD GRAYLING FISHING WANTED.

SIR,—Can any of your readers inform me where I can get good grayling fishing in the middle or South of England? Is there any to be found in the Test or about Salisbury?

I have tried Bakewell, but heavy rains in the autumn quite put a stop to the fishing in the Wye. FLUVIUS.

Gerrards Cross.

## COLOURED HOOKS.

SIR,—Under this heading in last week's GAZETTE, Mr. W. Guise (to save an advertisement, I should think) again refers to coloured hooks, and would make your readers believe that he was the sole maker, I should like to see something new and original from this gentleman.

It is a well-known fact that red, green, blue, and yellow coloured hooks were first introduced by Mr. Charles Court eight years ago, and more recently Mr. Court introduced the brown enamelled hook, which I remember you spoke so highly about in your valuable paper.—I am, &c., JOHN E. WILKES,

Secretary for Piscatorial Society.

Redditch, Sept. 2.

## FISHING NEAR WEYMOUTH.

SIR,—In reply to inquirer, "H. T. M.," I beg to state there are two private streams near Weymouth, also the Association water at Dorchester, by ticket, which closes Aug. 31.—I am, &c., H. R. HAYMAN.

Weymouth.

## LIVE BREAM AND RUDD WANTED.

SIR,—Can any brother of the angle tell me, in your columns, where I can purchase live bream and rudd for stock purposes, and the price per 100? Our infant association is fairly started, and promises well if the present support is continued. —I am, &c., YEOVIL.

## STRIKING FROM THE WINCH.

SIR,—My remarks on "striking from the reel," at a recent meeting of the Piscatorial Society, were to the effect that no good fly-fisher would dream of doing anything else; but that the expression itself was not happily chosen, since the real point at issue is that the hand should always be under the line, and not on it. This is, of course, an elementary principle; but the danger of disregarding it would not arise until *after* hooking a fish. There would not be an atom of advantage in "striking from the reel" if, immediately after doing so, the fisherman grasped his line between the rod and his hand. If you had had a complete report of what I said before you it would have been evident that I used the word "myth" in the sense of "a very old story that may be a misleading one."

I am sorry to see that you have been unlucky lately in getting hung np on trees behind you. They are a great help in one respect—fish don't seem to take so much notice of a man with a good background of something solid, say a stone wall or a rising bank, or even a plantation of Scotch firs. The knack of casting under such circumstances is easily picked up. Talk to Mr. Kelson about it; or if he doesn't happen to be handy, a chat with you on the subject at any of the piscatorial meetings would give great pleasure to—Yours, &c., GEO. SUMNER.

[We are much obliged to Mr. Sumner, and always ready to learn; at the same time, we never expect to master any "knack" of casting which will entirely do away with the nuisance of getting caught now and then in a tree or the fringe of grass on a high bank behind. By careful and constant attention in fishing even a very wooded river, you can avoid catching, especially by using the switch and the under-hand cast; but when you have to return your flies every time between two boughs, perhaps only two feet apart, you don't always manage it—at least, we confess we don't.

"Striking from the winch" may not be a happily chosen expression, but it exactly describes the action, and Mr. Sumner does not suggest a better; and as far as we are concerned, it *is* the whole point at issue. We maintain the line should not be held in the hand at all until after the fish is struck; then, of course, the line is controlled by the angler winding in or letting go as the play of the fish requires, and you are a hundred times more likely to lose a fish if you don't keep a tight line on him after he is hooked than if you do and play him with your rod, only giving way by removing your pressure on the line for a second or two when necessary. In direct opposition to Mr. Sumner, we say, do not hold your line between rod and hand while casting or striking, but hold it when you have struck your fish, so that you can give him the butt instantly if you see he is making for dangerous cover.—ED.]

## VARIOUS ITEMS.

SIR,—Will you please to send me the July 5th No. of the FISHING GAZETTE if you have one to spare. I like your paper very much. I should not have known where to get gossamer silk of Le Page's liquid glue if I had not taken the FISHING GAZETTE. Pearsall's gossamer silk is the best I ever had for small flies, and Le Page's glue saves a wonderful lot of time and trouble, as it is always ready instead of having to warm a glue-pot to splice a top rod.

A gentleman asks how to preserve wasp grubs. I believe if it was boiled and soldered up in a tin can in the same way as the cooked meat that comes from America, it would keep. I have not tried it, but a friend of mine is going to.

I saw another letter about a material for making the wings of flies; the idea struck me that if it was possible to manufacture silkworm gut flat, thin, and say, three-sixteenths of an inch wide, it would be the best thing, as it would stand the water well, could be scraped thin at the top of the wings, and could be dyed any colour; the wings could be cut out with a punch made proper size and shape.

Will some gut manufacturer kindly tell us if practicable?—I am, &c.,

Ludlow. T. B. HODGES.

## A CORRECTION.

SIR,—Will you kindly correct a slight error in last week's FISHING GAZETTE in the description of a lost fly-book? It is put Mrs. Ogden Smith, of Cheltenham; it should have been Clapham Junction, not Cheltenham. There is no fly-dresser of that name there. With many thanks for all past favours.—I am, &c.,

London, S.W., Sept. 1. MARY OGDEN SMITH.

## WHAT IS A "GENTLEMAN ANGLER"?

SIR,—If the Messrs. Satchell had commissioned Mr. Westwood to go on a Paul Pry expedition into every pretty village in England through or close by which a trout stream meanders through the meadows, and where the genial lords or squires and the more or less "scholarly" vicars and rectors are nearly all fly-fishers "to the manner born," and the scribe in question had then written and published his denunciatory libel because perhaps the said "gentlemen anglers" gave him the cold shoulder, or the keeper kicked him out of a parish or two, some excuse might be found for his distorted notions. Again, if Mr. Westwood had gone into many a small or large country town through or close by which a river flows, he might then have found plenty of "gentlemen anglers"—men who had combined and preserved the water for the common good, with restrictions as to the size of fish to be retained, "close" months, &c. David said in his wrath, that all men are liars; but this self-constituted critic deliberately writes and prints a libel on all anglers.

What, however, are the qualifications of a "gentleman angler"? Not necessarily he who rushes into print, or turns his money for luck on seeing the pale young crescent moon; or one who goes picking the pink-tinted hedge-rose, and the red poppies, or the bluebells and cowslips, or apostrophises the lark as he rises out of some daisy-dotted sod for a carol in the sky, or listens to the nightingale, or the cushat, or the songthrush, or the blackbird, or the little whitethroat serenading in suspension his little patient wife "sitting" on her eggs in the hedge below, and the angler is all the while neglecting his sport. There is a time for all things; the deepest, holiest feelings of the human breast often find no expression in words. And Izaak Walton learned to love the flowers and the rest—not all at once, but, as many thousands had since done, and as doubtless many among the thousands of anglers are still learning, and will in future learn to love God's wonderful works in our river valleys, and in the fields and byeways.

A "gentleman angler" is he who, be he a peer or be he a peasant, possesses the same abhorrence of all meannesses while angling as in his conduct towards his fellow men—one who scorns to take his fish other than by fair play, fairly fished for, fairly played, and fairly bagged. Such is the good old estimate of a "gentleman angler" and a gentleman. Besides, among English anglers and sportsmen generally there are many "gentlemen" in heart, action, and feeling who would resent any third party who attempted to poke his nose in, or going about pumping for information. How else could this modern Diogenes distinguish a "gentleman" from a "gent." (perhaps he had got no *light* in his lantern) on the Upper Thames, or the Test, the Kennet, or the Lea, in Scotland or Ireland?

Special excellence in sculpture and in painting, and even in fly-fishing, can be only acquired by continuous effort combined with genius in the former, and diligence in the latter. A "thing of beauty" destined to *live* is rarely the result of desultory effort.

Upon what grounds or proof, then, has this audacious critic bade the Francis Francises, the Seniors and the Kelsons, the Jardines and the Marstons, the Wheeldons and the venerable John Bright, and the thousands of other anglers in every station in life take a back seat and be told that they are all for "fish, fish, fishing"? that if their hook got hitched in a hedge-rose, wilfully shut their eyes to the beauty of the flower, simply because they do not rave about these things in print?—I am, &c.,

108, Bridge-road, Battersea. W. FRY.

## STATE OF THE DERBYSHIRE WYE AT BUXTON.

SIR,—I inclose you two copies of a report on the very point complained of at Buxton, as regards the pollution of the Wye. The works to remove the sewage are very nearly completed. I am not aware that gas water enters the river. Indeed, it distinctly does not do so. Perhaps you will kindly give the copy of the report to your correspondent.—I am, &c.,

ALAN BAGOT, for the Trent Conservancy.

[On reading "An Amateur Angler's" remarks about the Wye in the GAZETTE, Mr. Alan Bagot, consulting engineer of the Trent Conservancy, sent us the above note and his official report on "The Pollution Inquiry" at Buxton, as regards the river Wye. That report is dated Sept. 27, 1882, two years ago, and it offers several very valuable suggestions to remedy the evil. We have shown one to our correspondent, who says:—"My own impression, derived from one half-hour's walk, is amply confirmed by this report. From it I learn that one death from typhoid is directly traced to the river, that fish have been killed by the sewage, and are getting scarcer every day, and that the bed of the river is spoilt for spawning purposes. One witness 'does not think the *smell* of the river so bad as its *state*.' Good Heavens! then what must its state be? It is very satisfactory to learn from a private note from Mr. Bagot that 'his suggestions are now being carried out, and that the works to remove the sewage are very nearly completed.' He also informs me that 'gas-water does *not* enter the river.' Well, I had only my nose to guide me, and with that organ I did not attempt to analyse the smells. I only supposed there must be gas emanations flowing, finding their way to the river, as I saw gas works so near the water." Two years seems to be a long time to take to get ready to stop the nuisance, and we hope the Buxton local authorities will see how much it is to the interest of their town that the river should be cleansed. We hope it will be kept in view that no poisonous matter must get into the river. We believe the grayling disease in the Wye is entirely traceable to sewage.—ED.]

## FISHING IN THE TEES.

SIR,—Will you kindly inform me what part of the river Tees, between Darlington and Barnard Castle, is free to anglers? Is there any association connected with that part of the Tees, and, if so, what is the name and address of the Secretary? If you have not this information at hand, will you kindly insert the question in your next week's GAZETTE? Thanking you in anticipation, I am, &c.,

West Dulwich. H. W. SPENCE.

[We sent Mr. Spence's letter on to Mr. Sang, of Barnard Castle, author of "Trout Fly Synopsis," and he kindly replies as follows:—

Barnard Castle.

DEAR SIR,—In answer to your favour, with the exception of an occasional fieldswidth or so, there is no *free* angling between Darlington and Barnard Castle, the major portion of the river passing through the grounds of large land owners, who restrict their leave to their personal friends. Taking the Durham side of the river first, leave may be obtained from the Duke of Cleveland, upon application to his steward, W. T. Scarth, Esq., Raby Castle, Staindrop, Darlington; to *non*-residents of Barnard Castle *after* the 1st of May. This leave is available for a small slice of the Tees, above the village of Gainford, for some miles above and a quarter of a mile below Barnard Castle. Mr. Pearson, farmer, Osmondcroft, Winston, Darlington, has over a mile of excellent fishing, which he lets by the season, or he may, perhaps, give a day or two leave. Mr. Bowes' steward, R. J. Dent, Esq., Streatham House, Darlington, may give a day or two on his portion of the Tees. Now for the Yorkshire side. By *naming* a *special day*, one or two day's leave may be obtained from F. Raine, Esq., Wycliffe Hall, Greta-bridge, Yorkshire. Leave may also be obtained for a day or two from R. A. Morritt, Esq., Rokeby Hall, Greta-bridge, Yorkshire. The very Rev. Monsignor Witham, Lartington Hall, Barnard Castle, gives leave for some miles of the river above this town. I trust your correspondent has other business that brings him into our neighbourhood, otherwise our small fish are not worth coming so far north for. I might also state that on the greater portion of the river between the villages of Coniscliffe and Wycliffe, *no* leave *whatever* is granted. There is an angling Association at Darlington, Mr. Barron, solicitor, secretary. It is mainly to restrict the pumping powers of the Water Boards, and to look after the pollution of the river.

Angling here is at the lowest ebb. The recent floods have done very little to improve it. Taking it all through, it has been a very poor season, only some half dozen anglers having done at all well. Through failing health, I have not done any angling myself this year, but purpose trying when the salmon get up. It will always be a pleasure to answer any question respecting the fishing here when it is in my power to do so.—Yours faithfully, WM. SANG.

P.S.—Very glad to see of your doings in the "F. G." new series.

P.P.S.—All the above mentioned leave is *free* upon application, and in *all* cases a *stamped* addressed envelope must be enclosed.—W. S.

## A TREMENDOUS HAUL.

SIR,—I have just been told that Lady Ossington, of Ossington Hall, near Carlton, Notts, has had one of her ponds cleared out, and the result was five tons of pike, tench, and eels. My informant assures me "some of the pike were as long as a man's leg," this from an eye-witness.

"The Trent Otter" was commissioned to manufacture two tremendous landing nets for the occasion," (so he says), so you may depend upon it there is some truth in it.

What I want to know is, Mr. Editor, what did those pike live on?

Presuming there were a few roach and bream in the pond it is quite evident they would not last long; at least, I should think not, for you must not forget the eels, and I fancy it would take rather a large jack to swallow a bream 2½lb. What do you think? Say, all over 3lb. were secure.

Can you inform me how long have jack been known to go without food?

By answering the above you will greatly oblige.—I am, &c.,

MARK ANTONY.

P.S.—Have you ever known a solitary pike in a country pond live there for months and months without a particle of food in the shape of flesh of any kind? If so, how did it exist?

[There are cases on record of solitary pike having been found dead in ponds after they had eaten all the other fish, including their smaller brethren. Fish will certainly live for months without food, but for how many we cannot say. When the fish are gone a pike often gets a good meal in the shape of a young moorhen, coote, or duckling, or a frog or water-rat. Pike will eat tench, and eels they prefer to anything. A heavy pike, say, over 15lb., would think nothing of a 3lb. or 4lb. jack or bream. We have seen a big pike kill and eat jack two feet in length.—ED.]

## DEE-CEITS AND DEE-LUSIONS.

By COTSWOLD ISYS, Author of "An Angler's Strange Experiences."

I.

We came to Dee one hot July,
And hoped for splendid angling;
But with us disappointment came
To give our hopes a mangling;
For, soon as we arrived, we heard,
"The time for Dee is over—
You'd now catch trout almost as soon
From off the pier at Dover."

II.

We find the river all extremes,
'Tis or too dull or bright thing;
'Tis now too high; 'tis now too low;—
It never is the right thing!
And every stream around's the same,
Success we never shall win;
For, sure as fate, there's something wrong
Whene'er we fish the Alwen.

III.

We try for grayling, then we hear,
To-day those fish were ailing!
We try for trout, and then are told
We should have fished for grayling!
We try the lake, and then they say,
"They'd on the river take well."
Next day the river, then we hear,
"They rose upon the lake well."

IV.

Whene'er we spinning-minnows take,
There is a splendid rise, sir;
When we take flies, the fish take worms,
When worms, they fancy flies, sir.
Thus, all we do for right is wrong,
Dame Fortune won't befriend us;
Wind, weather, water, fish, and flies,
Conspire bad luck to send us.

V.

And when at eve we notes compare
With some successful brother,
We find the flies we used were wrong,
We should have tried—some other.
"And how long did you fish?" "Till three,
Then home till eve we wended."
"The very hour the rise began,
And just at five it ended."

VI.

We thought the fishing free, but found
Subscription tickets needed;
Tho' many fish who do not pay.
Perhaps we're fools that we did!
We brought no stockings waterproof,
Nor thought that Dee invaders
Demanded for success; but find
No chance except for waders!

VII.

Our patience needs for worthy praise
The pen that writes evangels;
And could you see our merriment
You'd say we're more than angels.
For jovial are we under all
That turns out thus mishaply;
And quite as jolly under woe
As ever was Mark Tapley!

**LAMPLOUGH'S PYRETIC SALINE.**—Mr. Lamplough has sent us a bottle of his world-famed "Pyretic Saline" for notice, and as hundreds of our readers are just off for their holidays, we can strongly advise them to include a bottle of this delicious and refreshing saline in their outfit. A sudden change of air often has an unpleasant effect for a day or two, but a teaspoonful of this effervescing salt will soon put that straight, and also prevent any ill-effects from over exertion or exposure in the sun. We have used it for many years, and can with every confidence recommend it as a perfectly safe, simple, delicious medicine for old and young. It is the best "pick-me-up" anyone can use who has to attend many dinners and drink all kinds of doubtful drinks.

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE, SALMON AND TROUT FLIES, SUITABLE FOR ALL PARTS OF THE WORLD.
Mahseer Tackle in Great Variety.
Makers of Split Cane Rods.
Improved Folding Trout Landing Nets
(Very Light).
New Patent Lever Salmon Winch
(Can be regulated to any stiffness at will).
PENNELL'S TACKLE KEPT IN STOCK.
CATALOGUES GRATIS. PRIZE MEDALS. IMPORTERS OF SILKWORM GUT.

JAMES OGDEN,
28, WINCHCOMB STREET, CHELTENHAM,
PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE,
JAMES OGDEN'S NEWLY-INVENTED PREMIER SPINNER,
Regd. Nov. 13th, 1883. This Bait is constructed upon an entirely new and improved principle. Salmon or Pike, 6s. 6d. ; Trout, 5s. ; smaller do., 3s. 6d.
SILVER OR GILT.
Also coloured, similar to the Devon Baits, &c.
The Editor of the FISHING GAZETTE says :—" It is a splendid bait for pike. It spins so easily, and holds so well when the fish strikes."

A NEW PERFECT FLY AND SPINNING LINE.

" IT'S SIMPLY PERFECTION." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES ; FREEDOM FROM IRRITATING ENTANGLEMENTS ; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by ? Every follower of the art deemed GENTLE will admit the value of such attainments.

" As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian SPORTING TIMES, says :—" I find the Acme more valuable than all others."

Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction, will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. SAMPLES, POST FREE, TO ALL APPLICANTS.

## RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | |
|---|---|---|
| Add | 30 minutes for | Chelsea. |
| | 40 „ | Putney. |
| | 45 „ | Hammersmith. |
| | 50 „ | Barnes. |
| | 55 „ | Kew. |
| | 75 „ | Richmond. |
| | 80 „ | Twickenham. |
| | 85 „ | Teddington. |

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

FOR TIMES OF HIGH WATER AT LONDON BRIDGE.

| | Morning. | Afternoon. |
|---|---|---|
| Saturday, September 6 | 2.17 | 2.34 |
| Sunday, „ 7 | 2.52 | 3.11 |
| Monday, „ 8 | 3.30 | 3.49 |
| Tuesday, „ 9 | 4.7 | 4.28 |
| Wednesday, „ 10 | 4.49 | 5.9 |
| Thursday, „ 11 | 5.31 | 5.54 |
| Friday, „ 12 | 6.20 | 6.47 |

### THE LOWER THAMES.

GENERAL REMARKS.

It is remarkable, the amount of angling that is done in this portion of the Metropolitan river. There is no diminution in the attendance of anglers, and there is no decrease in character of sport. On the contrary, the returns evidence this week there are any quantity of fish in the Thames. In the tidal waters the reports are thus prefaced :—" The water is not quite so thick here, but plenty of mud is left behind. The fish they are catching are so numerous that the fishermen do not take the trouble of counting them ; they send their customers away with a good bag-full, and under-estimate their takes rather than overdo it." The rain is certainly improving the upper waters above the locks, but it will take a great deal more to bring it to its normal height. Mr. Spreckley appears most anxious to increase the sport of catching chub with the fly, and his opinion is if the chub-fishers will be careful to return all fish under ten inches in the extreme length, the chub in time will give the same pleasure and amusement to fly-fishers as the dace now do in the Tideway. It is reported that the flounder-catching season is so far one of the best on record. The netsmen say they are not only getting the fish in better quantities, but much larger in size ; and this improvement is entirely due to the visits and work of Mr. Spreckley during the last two or three years.

most promisingly for the fishermen, but unfortunately, through the lack of rain there has been an absence of "freshes," the consequence being that the river has been in such a state as to render it almost impossible for the fish to make headway up the river. The small amount of fish that has been taken has been caught by top-fishing with the bow-net, and the regular fishermen have met with much opposition from persons who only in such seasons as the present trouble to take out a license. Many of the poor fellows are considerably worse off now than they were at the opening of the season; indeed, it has been stated by one of the older men that many of them are penniless and in debt. There can be little doubt that the fishermen have many grievances, and with a view to obtaining a remedy they intend to memorialise the Board of Conservators at their meeting on Saturday, asking them to petition the Home Secretary for an extension of the fishing season. Mr. Phillips, the secretary to the Board, is favourable to an extension, but suggests that the fishermen should go direct to the Home Secretary themselves; but they feel that if the Board of Conservators would assist them in obtaining the necessary powers, the deputation would have much greater weight. The fishermen of the Trent, the Esk, and the Tees are combining in this action, and are memorialising their respective Boards, having a similar object in view. There are other grievances of which the men complain, the principal of which is that owing to the river being a tidal one, and that the weekly closing time extends from twelve o'clock at noon on Saturday to six o'clock on Monday morning, they lose an ebb every fortnight. This would be avoided if the time was altered to close at 6 p.m. on Saturday to 3 a.m. on Monday. The men are sanguine that the movement will be successful, and before another season the fishing will be extended for an additional fourteen days.—H. T. Gardiner.

### Ouse (Huntingdon).

Very little has been done this last week with the exception of the 2nd, when one gentleman took one hundred and forty roach, bream, and perch. The water has been, and is now, in splendid condition, and the weather very favourable.—H. Rout.

### Severn and Teme (Worcester).

Since I last wrote, there have been many anglers upon the streams, and on the whole, sport has been good; fly-fishing for grayling is now one of the leading methods of angling, and a few fine fish have been landed. Mr. A. V. Holland, 2½ brace; Mr. Gwillham, ½ brace; Mr. Meredith, 1 brace; myself, 4½ brace. Some excellent roach, perch, dace, and chub have been weighed in; best basket 7lb. Mr. Davis and Mr. Bird caught two good dishes of trout, each had fish over 1lb. each, one dish of fish, 7lb., the other 6½lb. The members of St. John's Amateur Angling Club held their third contest on their club waters, the Lower Teme; there were about a dozen met; the result was thus:—Mr. Barter, prize 1; Mr. Porter, 2; Mr. Cole, 3; Mr. Burgess, 4. At six o'clock Mr. Bennett put in his appearance with everything ready to take our photographs; that done, the party returned to the club-house, the Cock Inn, St. John's, and there after doing justice to a good repast, the evening was spent in song and sentiments.—J. A. Griffin.

### Severn (Shrewsbury).

The rain which fell in the early part of the week caused the Severn to rise about two feet. Several good minnow-spinners were out, but not a fish could be moved. Prior to the flush Mr. Beddle hooked a good trout, but the fly used being very small, unfortunately came away. I have seen some very nice lots of roach taken by bottom-fishing with gentles. Water is now getting into nice order for the fly, but the wind is rather strong from the N.N.W., and unless there is a change for the better little or nothing will be done.—Sandfly.

### South Level Cut (Littleport).

The weeds are still dead against anything, though I think not so thick. The following are a few of the best takes:—August 29, Mr. W. L. Agger, Cambridge, 14lb. of good roach; August 30, Dr. Cooper, president of the Cambridge and Ely Angling Society, 10lb. of nice roach; Sergt. B. Brashier, Littleport, among 6lb. of good roach, a nice specimen roach going 1lb. 2oz.; and Mrs. W. Clarke, Merton, Surrey, 6lb. of good roach during morning; September 2, Mr. W. L. Agger, Cambridge, 14lb., and Mr. H. Lee, Cambridge, 8lb. of very nice roach; Mr. J. P. Gray, Cambridge, 4lb., and Mr. S. Ratliffe, London, 8½lb. of good roach; September 3, Mr. H. Mills, Cambridge, 6½lb. of good roach, Mr. D. Flack, 12lb., Dr. Cooper, Cambridge, 5½lb. (largest 1lb.), Mr. W. Dewberry, Cambridge, 5½lb., Mr. H. F. Cross, Cambridge, 8lb. of fine roach; Messrs. A. J. and B. S. Knowles, Cambridge, 9½lb. of roach; Mr. S. Ratliffe, London, 14lb. of roach, the best sample of the season. Keeper Benton gives me the following:—September 2, Mr. J. Turner, lay clerk, Ely, a nice catch of roach; Mr. J. Bickley, Ely, a nice catch of roach; September 1, Mr. Piggott, Ely, forty nice roach and perch.—Chalie South.

### Teme (Ludlow).

Since last report some welcome showers have fallen, and on Sunday a gentle rain descended during the whole of the morning, though very refreshing, that did not raise the Teme to anything worth mentioning, but the tributaries benefited to a slight extent. Since the showers the fish have risen to the fly very nicely; the bottom-fishing is also much better. On the 31st, or last day of the month, the thermometer showed a great change from the 24th (that day week); instead of registering 100 deg., in the sun, it only registered 65 deg,—a deal more pleasant for anglers. A gentleman named Machell was fishing on Friday below the Ashford Weir on the Teme, when he managed to land fifteen fine grayling and several trout. I saw a gentleman below the Moss House, on Monday night, who caught, with the wasp grub, four trout, twelve grayling, and five "rough" fish, also two small eels. A gentleman last night went up Lord Windsor's waters and tried the coachman and the white-winged coachman. He fished down as far as the Burway Meadows, and then the fish failed to take the bait. He landed, however, up the park waters thirteen grayling, six trout, and four roach; the grayling and trout turned the scale easily at 15lb. Grayling are very plentiful all up the Teme. I am informed that up the Knighton waters the Teme is so low that the fish are to be caught by hundreds in the deep holes, where they become an easy prey to the river poacher. A few fish have been caught up above Clun, in the deep portions of the river. Seven grayling and five trout were landed with the red ant on Monday in this river by a riparian owner from Ludlow. The Ony is low, but the deep waters have afforded some good fishing. In the Corve, from the railway bridge to Felton, good fish have been caught. Very little doing in the Letwyche. A case of fishing without license in these waters has been partially heard at the sessions here, and adjourned for the attendance of the Clerk to the Severn Fishery Board, the question arising whether "A tributary of a tributary" comes under the act or by-laws of the board.—S. Ludlow.

### Teme (Tenbury).

There is quite an alteration in the state of the water in this district. Rain having fallen in heavy showers the last few days has made the water in capital fishing order, and is now gradually, but slowly, rising. The fish have been sporting well, since the rain, at the fly, and some very good baskets have been taken. The best killing on the water are the green insect, whirling blue, and silver-twisted blue. Some capital sport has been had with the wasp grub. Some capital sport has been had with the wasp grub. Some very good trout and grayling were shown to us by a gentleman who had been fishing, near Corn Brook, with the whirling blue, on Friday, averaging 10oz. each. The wasp grub was tried in the water near Burford the same day, and some very good grayling were landed. In the water near the town some nice fish were caught with the green insect. On Saturday, the fish were sporting well at the fly. A gentleman fishing the water below Easton Court, with the whirling blue and twisted blue, landed a good basket of 7lb. of fine trout and grayling. Below the bridge, a gentleman took six very nice trout with the wasp grub. At Rochford, some very good trout and grayling have been taken by a

MUTUAL ASSURANCE WITH MODERATE PREMIUMS.

SCOTTISH PROVIDENT INSTITUTION,
No. 6, ST. ANDREW SQUARE, EDINBURGH.
*LONDON—No. 17, KING WILLIAM STREET, E.C.*

SHORT STATEMENT OF PRINCIPLES.

This Society differs in its principles from any other Office. Instead of charging rates higher than are necessary, and afterwards returning the excess in the shape of periodical Bonuses, it gives from the first as large an assurance as the Premiums will with safety bear—reserving the whole Surplus for those Members who have lived long enough to secure the Common Fund from loss.

A Policy for £1,200 to £1,250 may thus, at most ages, be had for the Premium usually charged for £1,000 only; while by *reserving* the surplus, large additions have been given—and may be expected in the future—on the Policies of those who live to participate.

Its terms are thus well calculated to meet the requirements of intending Assurers. They are specially adapted to the case of Provisions under Family Settlements, or otherwise, where it is frequently of importance to secure, for the smallest present outlay, a competent provision, of definite amount, in the case of early death.

EXAMPLES OF PREMIUM FOR ASSURANCE OF £100 AT DEATH, WITH PROFITS.

| Age. | Payable during life. | Limited to 21 Payments. | Age. | Payable during life. | Limited to 21 Payments. | Age. | Payable during life. | Limited to 21 Payments. |
|---|---|---|---|---|---|---|---|---|
| 25 | £1 18 0 | £2 12 6 | 35 | £2 6 10 | £3 0 2 | 45 | £3 5 9 | £3 17 6 |
| 30 | 2 1 6* | 2 15 4 | 40 | 2 14 9 | 3 7 5† | 50 | 4 1 7 | 4 12 1 |

* Thus a person of 30 may secure £1,000 at death by a yearly payment, *during life*, of £20 15s. This Premium would generally elsewhere secure £800 only, instead of £1,000. Or he may secure the same sum of £1,000 by *twenty-one* yearly payments of £27 13s. 4d., *being thus free of payment after age 50.*

† At age 40 the Premium, *ceasing at age 60*, is, for £1,000, £33 14s. 2d., being about the same as most Offices require to be paid during the whole term of life. Before that period, the Policy will have shared in at least one division of profits.

THE ACCUMULATED FUNDS EXCEED £4,850,000,

Only two Offices (both older) have as large a Fund.
CLAIMS ARE NOW PAYABLE ONE MONTH AFTER PROOF.

Copies of the Report, with Statement of Principles, may be had on application.
Edinburgh, September, 1884.
JAMES WATSON, Manager.

Secretary in London: J. MUIR LEITCH.

gentleman who was visiting there, with the fly and wasp grub this week. The water below Little Hereford was tried on Monday, and a very good lot of fish were taken with the whirling blue. In the water near Eastham some very good fish have been taken by a gentleman who was fishing with the twisted blue and green insect. On Tuesday, the water near Berrington Court was tried with the fly, and some very good grayling were taken averaging ½lb. each. Some very good grayling were landed near the bridge with the wasp grub. The Kyre and Rea are both in good fishing order and are slightly risen, the fish are sporting well, and some very nice samples of fish have been taken from them. A gentleman fishing in the Kyre, near Burntlands, landed a very nice dish of fine trout; a good dish was taken in the water near the Parks with the wasp grub. Near Cleobury North, some very good fish have been landad from the Rea. A very good dish was taken near to Neen Sollars with the wasp grub. A few very good fish have been taken in the Ledwyche this week with the wasp grub.—Worcester.

### Torridge (Torrington).

River now in good order for fishing after the big flood on Monday, when lots of eels and other fish were taken; since many peal have been hooked, mostly with the Devon bait. During the last three days a quantity of large dace have been caught float fishing.—Practical Angler.

### Trent (Alrewas).

The late rains have coloured the water, and it is now in capital condition for all kinds of fishing. Some very fine baskets of roach have been secured, one fish scaling 1lb. 10oz. Perch still continue to feed freely, a member of the Association taking fifteen one day this week, some of them 1lb. each. Grayling are rising well at the fly. Trout in the tributaries full of spawn, and should not now be taken.

### Trent (Newark).

After sending off my last week's report the weather improved, and, consequently, angling was followed with some little degree of success. A friend of mine out for two or three days succeeded in getting a nice lot of roach and bream, seven or eight good chub, and a nice jack of seven or eight pounds, captured with a spoon-bait. Bream and roach were taken with tail-end of lob-worms, and the chub took a fancy to a few wasp-grubs. We have had some heavy rains, which brought the water on a bit. but it soon went down again, and I fancy we had a little extra again yesterday. I hope we shall get a good water down the Trent before long to sweep away all the flannel-weed. I might add the flannel-weed begins to show signs of decay; but still, a good flood would do a lot of good. I heard of one or two of our local anglers operating on a barbel swim the other day, with the result of getting seven or eight good fish, but I did not hear particulars; but I understood the swim was in the Holme fishery two or three miles below here. To-day we have had a nasty cold north wind, and nothing much has been done. Water not in very bad form, and tail-end of lobs seeming the best bait.—The Trent Otter.

### The Trent (Nottingham).

There has been a flush of water on the river this week, and the vast quantities of "flannel" weed, of which I had mentioned in previous reports, have for the most part been swept away. In the early part of the week anglers were unusually numerous, but owing to the weeds sweeping down, only moderate sport was met with. In the upper reaches roach and dace were found to accept the maggot somewhat freely, and takes of fish from 7lb. to 12lb. were made. On Wednesday the river had nearly reached its normal summer height, and should fine weather continue there is still a chance of the barbel-anglers killing some of these most-desired fish.—The Man at the Clubs.

### Usk.

Up to this week the river has been so low that very little sport was obtained by the rod and line; but the river during the past three or four weeks has been frequently netted and several hundred fish taken. On Monday last, however, the steady rain during a day or two previous, rose the water between three and four feet, and the river is now in good order for angling. On Wednesday Col. Rocke landed four nice fish. Mr. Berrington's keeper, four; Mr. Humphreys, two; and Mr. Waring, one. On Thursday the report of the day's sport had not reached us.—Argus.

### Waveney (Beccles).

Nothing extraordinary has come to my knowledge this week from angling quarters, as weather has been rather unsettled. Nearly all last night and to-day (Thursday) it has been raining cats and dogs, and unless it ceases shortly I fear the results will be very disastrous to fishing. Mr. G. Algar, on Tuesday, angling near Six Mile Corner, grassed 130 roach, all over 7in., and many ½lb. fish amongst them, and one monster, 16½in. long; also three pike, averaging 3lb. I also hear that a lad, by name Francis, captured a fine roach weighing 1½lb. Several members of the Waveney Angling Club were out fishing on Tuesday, but owing to unfavourable state of the weather the catches were very small. Present prospects *nil*.—A Waveney Angler.

### Witham.

The water in the Witham has been much improved by the rain of the past few days. Fish are being very freely caught at most stations, and some excellent bags are made. The number of visitors was not quite so large as usual, probably owing to the proximity of Doncaster racing holiday, a holiday which anglers, as well as others of the general public, so well patronised. Details of the captures have not come to hand as yet, but excepting that they are large, there is nothing special about them.—Yellow Belly.

### Wye and Derwent.

There was a very great deal of heavy thunder and rain fell in Derbyshire both on Sunday and Monday, which was the cause of discolouring both rivers a little. In fact, the Derwent has had a beautiful nut-brown coloured water on it the whole of the week. The bottom fishers on various parts of the Derwent have done fairly well with both maggots and wasp grubs for baits, killing trout, grayling, chub, roach, dace, and several eels. One eel of 4lb. was killed last night (Wednesday) with wasp grub while fishing for trout. The fly fishers have done much better since the rain, and baskets from 4 to 8 brace per angler have been daily made, chiefly by the aid of honey dun bumble, red, and ash dun flies. A hear great complaints from the anglers who have fished the Darley Dale club waters, as to the smallness of the fish in their water. I am afraid the fish have been taken out while the Derwent has been so very low.—Geo. Jas Eaton.

### The Yare (Norwich).

The weather has been unsettled since Sunday, and sport, both with the roach and the bream, has been indifferent, though host Garrett told me last night that one or two parties had caught 3st. of roach. One boat, at Cantley, on Tuesday, caught about 60lb. of bream, but several others there did nothing. From Brundall, Flowers tells me they have had better sport than at any time during the season; several gentlemen there have been successful nearly every day. Prospects not over bright; been raining all day.—R. Moll.

---

NOTICE.

Several River and Club Reports have come to hand too late this week; and Mr. Kelson's article on "Fly Dressing—Major Traherne's Flies" has to be omitted in consequence of the engraving not being ready.

---

THE SCOTTISH WIDOWS' FUND
(MUTUAL) LIFE ASSURANCE SOCIETY.
THE WHOLE PROFITS ARE DIVIDED AMONG THE POLICYHOLDERS.

**Magnitude of the Operations.**

| | | | |
|---|---|---|---|
| POLICIES ISSUED | £39,000,000 | CLAIMS PAID | £13,500,000 |
| BONUS ADDITIONS | £8,100,000 | ACCUMULATED FUNDS | £18,230,000 |
| POLICIES IN FORCE | £25,500,000 | ANNUAL REVENUE | £,1,030,000 |

**Profitable Character of the Business.**

| | |
|---|---|
| CASH PROFIT for Seven Years to 31st Dec., 1880 | £1,347,756 |
| BONUS ADDITIONS for the Seven Years | £2,449,072 |

This was the Largest Distribution of Profit made by any Life Office during the period. It yielded Bonuses from £1 14s. to £3 17s. 5d. per cent. per annum on the Original Sums assured, according to the duration of the Policies—facts which clearly prove

THE INTRINSIC VALUE OF THE SOCIETY'S MUTUAL SYSTEM, AND THE HIGHLY PROFITABLE CHARACTER OF ITS BUSINESS.

LIBERAL CONDITIONS OF ASSURANCE.

Surrender Values allowed after payment of one year's premium.
Paid-up Policies allowed in lieu of Surrender Values.
Loans Granted within a small margin of the Surrender Value.
Extensive Foreign Residence free of charge from the first.

MOST OF THE SOCIETY'S POLICIES BECOME WHOLE-WORLD AND INDISPUTABLE AFTER THE FIRST FIVE YEARS.

THE ATTENTION OF

*Persons desiring to effect Life Assurances for the benefit of their Families, or in connection with Business Transactions, is called to the above Financial Results and Conditions of Assurance, which show how peculiarly suitable the Society's Policies are for Family Provisions, and for all Trust and Security purposes.*

### Major Traherne's Patterns *(Continued)*.

### No. 13.—"Rouge-et-Noir."

**Frosted** thread, manufactured and sold by Mr. George Kenning, Little Britain, E.C., has won considerable favour, and is one of the most acceptable of our modern novelties. I was pleased to see it had found its way to the Standard Works, Redditch, where I noticed a goodly share of flies in readiness, nicely dressed with a few of the varieties. Messrs. Allcock and Co. are well-known wholesale manufacturers, and have a first-class superintendent at the head of this department, one whose name has been familiar for many years ; his work is always good and true—not to be wondered at, perhaps, as he hails from the right school at Sprouston.

All Major Traherne's patterns may be obtained here now at short notice ; but application must be made for them through the fishing-tackle shops. I may add that under this supervision, this special care, of Mr. Robert Wright, even the "Chatterer," the most delicate fly in creation to make properly, can be satisfactorily dressed and supplied in all sizes.

Referring to these threads, the first that I introduced for this work some six or seven years since was that more intimately known by the name of copper-coloured tinselled chenille. Endurance, perhaps, is not one of their special qualities ; but, at any rate, they provide us with a thorough change ; and, perhaps, for grubs, there are few, if any, that are preferable to this one.

We are all aware that salmon soon become accustomed to anything fresh, and that which they may favour most one year is often treated by them with utter contempt the next ; like ourselves, they want change sometimes—why not ?—that confounded test, "Toujours," is as galling to them presumably as it is to us. However, fishermen generally look to the present, and leave the future to take care of itself. Still, some "thorough change" does work wonders at times in every salmon river in Europe. I believe the tricoloured is best for bright low water during the day time, and the steel assortment in the evening. The former, gold, silver, and copper, on three threads, makes rather a robust body ; but in low water time, there is very little hackle used, and in some rivers, then, no wings at all—a fashion well worth a trial everywhere.

A body, say half of silver tinsel, with King Paradise above and below, completed with any of these chenilles, having the throat of scarlet Tanager and Jay, and Peacock's herl wings, would be something sombre, and fresh and pretty sure to kill in bright or in coloured water.

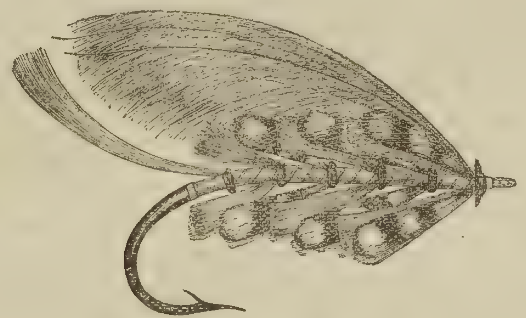
The network of tinsel on these threads being concrescible, is naturally easier to manage on those that are single ; but it can be massed to suit one's fancy on any of them with care by cutting off a little extra in length, and leading it along the thread as you progress in making up the body, taking the supply from the opposite end. While, on the other hand, a little divesting process is sometimes advantageous ; for instance, the "Glowworm" is entirely of copper, but when this sort is used for very small flies, unravelling is necessary, instead of coalescing the tinsel into a closer mass.

The hackle should be wound along the body before you press and shape the chenille, and when this is done, pay attention not to hem in and thus imprison the fibres, which are always to be allowed their freedom.

The only secret in managing the oval tinsel for bodies is simply to wind each lap very tightly. But the embossed kind will not bear this hauling, neither can it be bevelled. Still, it makes a useful fly. "Dunkeld" was, and is, a great favourite here and there ; but this dented tinsel is not one to dote on—it is dreadfully brittle, and cannot be touched with the silicon tablet. Some of the coloured samples of the plain make splendid bodies. "Birdyboy" and "Canadian Wonder," the former of ruby, the other of aqua marine, are old and valued specimens, and kill anywhere ; the brilliancy, though, does not survive long, and the dye disappears altogether after a certain amount of work. There was a "sovereign remedy" not long ago—some sort of white-hard varnish ; but I am sorry I have lost sight of the directions for making it. I hear of a waterproof glue which would probably serve pretty well, but have not tried it. And here again the silicon tablet is not only useless, but injurious. The Japanese tinsel we should never use at all ; it is a mistake altogether.

In alluding now to this week's illustration, I need not quote old, hackneyed, and threadbare dictums, which derived their origin from some similar combination to this used in tailing worn-out old Scotch patterns. Perhaps the mixture of these two Indian birds was not seen to quite so much advantage in those days ; neither were novel attractions so keenly sought after.

But, just now, anything and everything is useless. Having no water and no fish, anglers are weary of waiting for work, and many of them are flown to forests of heath and heather, or to the eternal calm of mountains for other exercise, and for other enjoyment. After the great heat of an unparalleled summer, a short spell among the grouse in wild, romantic scenery, which ever lends a delightful charm to this health-giving pursuit, will brace them up for the "Blackberry fish," which, now that the barometer is falling, and depressions foretold, there is still a hope of seeing.



Anticipation is robed in infidelity in such dry angling seasons ; and when the turnips are thin and patchy, and when even that famous low water catch on the Tweed, the Sycamore Pool, with its trees "spreading in gentle pomp their honeyed shade," holds no rod ; we may, indeed, pack up—we may well seek other amusements to exhilarate the spirits, as all anglers ever can.

Now, if we could dip into the future, "far as human eye can see," we might tell that sooner or later we shall be provided with other and still more suitable materials for our fly cabinets. If this vision ever be realised—and I earnestly hope, in the interest of fishermen, it may—I, for one, should give my whole vote for some serviceable provision for low water. We have, in all conscience, all we require if we make the most of it for favourable times ; but though there is much skill required in "travelling" with a worm or a prawn, and even some fun, still the enchantment is gone, and one cannot enter into such kind of sport with so much spirit. "The most" certainly appears to have been made in all of these patterns, and it seems to me there has not been one single iota overlooked. Some people with the same materials we know build palaces—others, only hovels ; but who knows—I do not—how we could billet these feathers to greater advantage, for every point seems to have been mastered—every problem probed ?

It has been suggested that inventors must be born, like the poets, the painters, or the sculptors ; well, even so, like them, study alone makes them perfect. Inspiration may lead us in a moment to the truth in any art ; but effect is the mechanical part which only long application will acquire, even as the very best actors may take a lifetime before they can command that wonderful instrument—the human heart—and strike its chords into merriment and laughter, or into sorrow and sympathy. Nevertheless, do not let any such passing remark dishearten us.

"Rouge-et-noir" takes my fancy very much—we should always have one with us ; but size is everything. It is described :—

Tag : Silver twist and topping coloured silk.
Tail : Topping.
Butt : Black herl.
Body : In five sections, butted ; the first and third, four red crows as illustrated over and under the same coloured floss silk ; the second and fourth jungle cock, as shown over blue rock coloured silk (the blue rock is the medium coloured chatterer), and the fifth division of red claret silk.
Ribbed : Fine oval tinsel.
Throat : Two jungle top and bottom as before, but placed over two red crow, the points of the latter in advance.
Wings : Toppings.
Horns : Blue macaw.
Head : Black herl.

## AN AMATEUR ANGLER'S DAYS IN DOVE DALE.—(No. 7.)

> "All pleasures but the angler's bring
> I' the tail repentence, like a sting.
> Then on the banks let me sit down,
> Free from the toilsome sword and gown;
> And pity those that do affect
> To conquer nations and protect.
> My rod affords such true content,
> Delights so sweet and innocent,
> As seldom fall unto the lot
> Of sceptres, though they're justly got."
> —THOS. WEAVER, Master of Arts.

MONDAY, Aug. 11th, was not an uninteresting day for us. In the morning I walked down to the water with the major; he piscatorially equipped, I with my walking stick.

The sun was scorching, and the water bright, and low, and glistening, and yet, with these things against him, the major captured three brace of fine trout before luncheon; whilst the success of other piscators at "The Izaak" may be summed up in these lines:

> "The sun was burning in the skies,
> And de'il a bit would the fishes rise;
> We fished from half-past ten till four,
> And de'il a bit would we fish any more."

The afternoon we devoted to a small picnic in the woods on the Staffordshire side of the river, returning home to dinner—that is, all of our party except the major; he, with a packet of sandwiches, pursued his calling up the Dove.

Let me mention here that as I was strolling through the wood I saw a poor little field-mouse right in the middle of the grassy road, making the most curious contortions: first it would stand up on its hind legs with the two fore-paws resting on its breast, and its tiny nose peering upwards and around—one could almost fancy it was saying its prayers; then suddenly it would twirl round like a whirligig, then fall down and roll over and over as if in agony; it would then hide under the grass, perfectly quiet, as if dead. It did not seem to mind my presence at all.

I fancied it must have been stung or injured in some way, so I took it up in my hand, where it seemed to be contented and easy for a time; then it would resume those curious contortions, then rush up my sleeve, then lie perfectly still with its little cheek huddled against the palm of my hand.

I examined it as carefully and tenderly as I could; but I could discover no injury. I carried it in this way on the palm of my hand for a considerable distance, till I met the old donkey-woman, who told me it was called a *shrew* in those parts, that it gives out a musk-like smell, and that cats would not touch it; but I still maintain that it was a field-mouse. I have since learnt that a *shrew* has very small eyes and a much longer snout; in other respects the resemblance is almost exact.

On stroking its fur once or twice the wrong way, with my best spectacles on, I think I discovered the cause of its misery; the little wretch was swarming with an active little insect, the scientific name of which, I believe, is *pulex irritans;* but it is more commonly known as the bed flea!

It is, perhaps, needless to say that my tender sympathy for my little mouse received a severe shock, and without more ado I hastily deposited it in the hedge-row out of harm's way from wheel or hoof.

I have heard of swallows being thus inhabited; but until now I was quite unaware that this interesting insect is common alike to "mice and men." Doubtless this is another example of my crass ignorance; a well-educated countryman would have passed him by on the other side for fear of the fleas! A clodhopper, perhaps, would have put his hobnailed boot on him without compunction.

After dinner I once again sallied forth with my rod, more, however, with a view of following up the major than with any expectation of success on my own account.

I fished till it was too dark for me to fish any longer, but nothing happened; and then I waited under the grey rocks the return of the major.

About half-past eight I dimly discerned across the water, and descending the the Sharplow Bank, a fisherman, with rod, net, and basket. "Here at last is the major," said I. and I shouted, "Is that you, *piscator?*"

"No, sir," came the reply. "My name is Taylor." "All right," said I.

It grew darker and darker, and walking very slowly under the grey cliffs, my grey suit must have rendered me quite invisible across the water, when I could just distinguish two dark moving figures.

"Probably night poachers," I said, and when I shouted, "Cooey! cooey!" with a hoarse and rather cracked tone of voice, my two friends took to their heels like madmen, and I could soon distinguish their dark figures 'twixt sky and hill as they disappeared over the top. I guess them to have been a couple of cockney tourists scared by the unearthly sounds which reached them from across the water.

It had now become quite dark, and I began to feel anxious for the return of the adventurous major, who would have to walk two or three miles after leaving off fishing at dusk.

I sat upon a gate for half an hour or more, constantly whistling and cooeying, but no response came out of those weird and ghostly valleys.

I had waited and whistled so long that at last I had worked myself into a state of morbid terror lest some untoward accident should have befallen him in those slippery, dark, and most dangerous places.

At last, to my great relief, a responsive whistle came up out of the dark, and we soon reached home, when the major turned eleven fine trout out of his bag, making, with the three brace caught in the morning, 8½ brace as the result of his day's work.

By the way, I wonder if there is a nunnery hereabout. The river was invaded yesterday by a small army of nuns, or Sisters of Mercy, old and young, many of them very pretty, and it was really quite amusing to see them paddling about with their naked feet in the water, not in the least abashed by the knowledge that they were "cynosures of neighb'ring eyes."

Farther down the Dale, I saw a troop of donkeys, all with side-saddles. Were they waiting the return of the nuns? If so, I should have liked to see them mounted. What a grotesque cavalcade it must have been! We might have fancied ourselves in Spain, to see these stately dames in their closely-fitting hoods, white kerchiefs round their blooming cheeks and flowing snowy lappets, ambling down the Dale or scrambling in double file over the rocky banks.

Aug. 13.—Now our pleasant holiday is drawing to a close; this is our last day. Alas! to-morrow must we quit these pleasant hills and lovely dales, and return to the land of Egypt and the house of bondage.

I came here three weeks ago a dyspeptic old man; I return considerably improved in health. But it just occurs to me that to complete the cure I require another month at least!

What if I call on the doctor in Ashbourne, and get his certificate to that effect? No, it cannot be; men must work and women must weep, for there's work to do and babies to keep!

Before I go let me sit under this wide-spreading beech, on the banks of the Manifold, and tell my friendly readers, if I can, what "The Izaak Walton" is like.

As the Dove is not like other rivers, so is the Izaak unlike all other hostelries. It does not stand by the roadside inviting every passer-by to step in and refresh.

If you wish to visit this hotel you must leave the turnpike road, pass through a handsome, park-like gate with stone pillars, surmounted by an escutcheon bearing the Walton and Cotton monogram, and the date 1660, and follow an open coach drive for an eighth of a mile or so, which winds upwards through a pleasant green and banky meadow; and when you reach the Izaak Walton you will find little or nothing to indicate that it is an hotel; it has more the look of a substantial rose and clematis-clad farm-house.

There is no outward signboard to invite your entrance; it is too well known to need such commonplace insignia.

It stands on a gentle eminence, backed up by the handsome hill called Bunster, and flanked on the left by green meadows leading down to the Dove and the entrance to the Dale, and beyond that, by the most conspicuous of all the hills, the well-known Thorpe Cloud, and on the right by more meadows and a spur or angle of the Bunster.

Looking southward from the front is the green meadow already mentioned, at foot of which runs the road leading to the pretty village of Ilam, and beyond this road at a meadow's breadth and parallel with it runs the river Manifold, which curious river oozes from its many miles of subterranean travelling, a short distance higher up in the grounds of beautiful Ilam Hall.[*]

Part of "The Izaak Walton" is as old, or older, than its name, for there is a tradition that in this old farmhouse the great piscator himself used to take up his abode when he had fished down the dales from Beresford Hall with his friend Charles Cotton. My chief authority for this tradition is the chatty old woman, whom I have already mentioned, who used to keep the donkeys for tourists up the Dale, but who now politely opens the gate for all comers.

The tradition is so probable that it may be taken for absolute truth, for where else could dear old Izaak Walton have more comfortably taken his ease and smoked his evening pipe than in that cosy old parlour, which still affords a welcome resting-place to weary piscators?

When the old farmhouse was converted into an hotel, now many years ago, a new wing was added to it facing Thorpe Cloud, so that now the house forms a right angle, with stables and farm buildings at the back.

I will only add that the inside of "The Izaak Walton" is as pleasant as its outside is unpretentious and picturesque.

Here, on such a spot as this, one of those brand new palatial hotels which seem always to spring up with railways would be entirely out of character with the surrounding scenery; here, if you have not the showy appearance of modern days, you have the comfortable realities.

The house is presided over by a pleasant hostess, who, although now in her 80th year, rises early, and late takes rest, and looks well after the affairs of her household.

She is an active, energetic, bright, and very genial old lady, and I hear that at the annual ball at the Hall she still dances with the best of them.

Then there are her good son and daughter-in-law, as popular as she, for they spare no pains to please their numerous guests.

The old inn at Henley, where Shenstone wrote the following well-known lines, must have been such another inn as this:

> "Whoe'er has travell'd life's dull round,
> Where'er his stages may have been,
> May sigh to think he still has found
> The warmest welcome at an inn."

If "The Izaak Walton" were twice its present size, it would still be filled with guests, for it is unique in its management, its position, and its surroundings.

You may suppose from its name that this hotel is chiefly the resort of anglers; but this is not so. Here come all sorts of people—young men and maidens, old men and children, artists, and lovers of the picturesque, clergy and laity, field naturalists and butterfly-catchers, tutors and students.

This is the very place for honeymoonists; four sets of them have been here during our short stay, and how they did moon about and enjoy themselves! How they would pretend to fish, and catch nothing but sly kisses behind the bushes! Happy young people! It does one good to see you so bright, and so unconscious of the troubles to come.

> "In the blythe days of honeymoon,
> With Kate's allurements smitten,
> I loved her late, I loved her soon,
> And called her dearest kitten.[†]

Whilst I am thus engaged in trying to bring "The Izaak Walton" home to you, my brother angler, *piscator major* is bidding a last and lingering farewell to the trout and grayling of the Dove.

I must now add, as my final record, that yesterday he brought home nine brace of splendid fish.

During our holiday we, the major and I, caught one hundred and ten well-fed trout and four grayling; or, if I must needs be more explicit, the major caught one hundred and twelve fish in ten days, and I caught *two* in three weeks. But I no longer envy him. I am humbly content to be regarded as "an amateur angler,"—as *piscator minor;* or, if you please, no piscator at all.

"I have now discovered that angling is an art," as, says Cotton's *Piscator*, "Is it not an art to deceive a trout with an artificial fly? A trout! that is more sharp-sighted than any hawk you have named, and more watchful and timorous than your high-mettled merlin is bold? And yet I doubt not to catch a brace or two to-morrow for a friend's breakfast; doubt not, therefore, sir, but that angling is an art, and an art worth your learning. The question is rather whether you be capable of learning it, for angling is somewhat like poetry, men are to be born so."

---

[*] The seat of R. Hanbury, Esq., to whose great kindness we are indebted for the unusual privilege of fishing in the Manifold.

"We viewed a remarkable natural curiosity at Islam, two rivers bursting near each other from the rock, not from immediate springs, but after having been for many miles underground. Plott, in his 'History of Staffordshire,' gives an account of this curiosity; but Johnson would not believe it, though we had the attestation of the gardener, who said he had put in corks where the river Manifold sinks into the ground, and had catched them in a net, placed before one of the openings where the water bursts out."—(Boswell's "Life of Johnson.") This incident of the corks seems to have been quite forgotten in the neighbourhood. I was told, as though it was a new discovery, that the underground course of the Manifold had been proved —only a few years ago—by some one throwing *chaff* into its upper waters which came out at Ilam.

[†] I give the second verse as a footnote; its sudden sequence to the first would be too cruel.

> "But now my kitten's grown a cat,
> And cross like other wives,
> Alas! alas! my honest Mat,
> I fear she has nine lives."

I have had a pleasant time, and it has given me pleasure to record it. If I have wearied thee, gentle reader, I regret it, and now I bid thee a hearty farewell. If thou be an "honest angler," I will end as I began, by wishing, in the words of thy master, that "the east wind may never blow when thou goest a-fishing." A. A.

[Conclusion.]

## TROUT FISHING IN NORTH DEVON.—II.

We will suppose that the next day's sport will be sought in the Mole. The point of commencement is near the railway station, about half a mile to the north of the town, and the angler will probably go right up to North Molton and back again. The Mole passes under the railway a few hundred yards from the station, to the eastward—that is, to the right, as one approaches from the town—and we must get on to the left bank of the river, by means of the railway, because that side should be adhered to both on the outward and homeward journey, being more convenient to fish, and better travelling as regards fences and other impediments that have to be surmounted. Some splendid pits will be met with, and the fish run large. During the first half of the journey outwards much of the stream will be found to be so bushed that one cannot throw a fly upon it, but the farther we go upwards the better things will be in many respects. When the last three or four fields approaching the bridge at North Molton are reached, every inch of the water must be fished carefully, and the angler must not be satisfied with his care and skill if he does not, at least, *move* several trout, and they will prove to be ¼lb. and upwards, unless, by some want of diplomacy, the older and warier inhabitants of the deep pits have graciously allowed their younger and simpler brethren to accept the fly.

A few yards below the bridge is a large bend, and a deep, still pool next the bank on which the angler stands—still that is, in comparison with the rushing main current, but not actually still; there is a "swirl" or gentle back current. Here I have always moved a good fish, and have caught one, except on those rare occasions when worn or defective tackle, or undue excitement and haste, has caused a rupture that has given the trout his freedom and life for a little longer.

Above this bridge we may not go, although the fishing above is better than it is below, for that portion of the water is strictly reserved. If it is a fine hot day a valuable thirst will by this time be attained, and a walk to the Poltimore Arms will amply repay that man who likes a little good "bitter." And here I feel constrained to remark that, in the smallest and poorest-looking country inns throughout the district I am writing of, one is nearly sure of getting a good glass of real Burton ale. The vaunted home-brewed that country "publics" used to keep for thirsty travellers is well-nigh a thing of the past, and I am truly thankful that such is the case. Home-brewed was very proper for those fine and noble men—our ancestors; but "Bass" is good enough for me.

To reach the Poltimore Arms we must take a walk of half-a-mile up hill, through a long, straggling, dirty street, which will materially intensify the thirst; but the quaintness of the village and the inhabitants thereof will condone its dirtyness. The stranger must not omit to salute everyone he meets, and he will, in return, be treated with much respect, courtesy, and kindness.

After the business is despatched at the "hotel," a few minutes might be devoted to a walk round the church, which is just opposite; and, should the doors be open, a walk inside would disclose some particularly fine oak carving in the chancel, and one or two good windows.

Two or three anglers would find comfortable but plain quarters at the Poltimore Arms for a few days, and the landlord would send a trap to the station to meet visitors upon receiving due notice. This trap would be at the service of gentlemen staying in the house, to enable them to reach some of the more distant streams in the neighbourhood. The commissariat here will be found very homely, but this would be atoned by the moderateness of the charges. Streams to be reached from N. Molton are: The Bray, the Mole, and their tributaries (already mentioned), and the Barle, Dunn's Brook, Sherdon Brook (to be mentioned hereafter).

The return journey should be so timed that South Molton would be reached about dusk, and, as that period approaches, many places that failed to yield a fish in the morning will be the scene of a splash and a brief struggle as the captured one is gently lifted from his native element, having been seduced by the "white moth" or "coachman." The latter is a fly I have been peculiarly successful with, not only in the evening, but all day long when the streams are high from recent rains, and just a trifle high-coloured (not muddy).

The stream I shall next write about is the Yeo; it joins the "double water" at Bith Mill, about a mile and a half south-east of South Molton. This will be a good point to begin at. Both sides of the stream are equally good, and the angler will be decided in his choice of sides by the position of the sun and wind. We have about five miles of nominally free fishing until Molland Station is reached. I say *nominally* free, but I should have said *practically* free, as the water belongs to various owners who never forbid anyone fishing.

The Yeo is by no means free from bushes; but it is a very nice river indeed, and, when the water is tolerably high, I have had better sport here than in any of the rivers previously mentioned. The trout here, moreover, are more delicate in flavour than those from any other stream in the neighbourhood. With very low and bright water I have sometimes had very poor sport indeed. Catches with a fly in the Yeo vary from half-a-dozen to fifty *per diem*.

Molland is the next station above South Molton (the village of Molland is two good miles to the northward), and there is a good inn close at hand. Here one can satisfy the inner man, but they do not let beds. At this inn—the Black Cock—one must get a ticket to fish the river for some miles above the station, and, as the last half-mile we have fished in coming from South Molton belongs to the same owner—Sir W. Throckmorton, Bart.—it will be necessary, in any case, to call and do so. The cost is not excessive, being 1s. for the whole season.

When there is plenty of water, the stream above this point is most highly recommended. One may use any description of bait.

The angler will probably go a little way above Molland Station, and return to South Molton by train; or he might make a special journey here, and devote a day to these upper waters, for which the charge is so *high!*

The village of Molland would be a most desirable centre, as there are some capital moorland streams at the back of it; but, though it contains two respectable inns, the accommodation is not suitable. I shall, however, proceed to show how the streams in question can be got at; and, to do so, I must take the next place that may be made a centre.

Hawkridge is a small but exceedingly pretty village, about ten miles north-east of South Molton, from which place it can be reached by trap. The best way to get to it is to alight at East Anstey Station (next above Molland on Devon and Somerset Railway), where a trap can be obtained at the inn kept by Mr. Smith, who should be written to previously. Mr. Locke, carpenter, Hawkridge, lets very nice apartments, which can be highly recommended. Wine, spirits, &c., might be taken, otherwise they could be obtained from the inn at the station.

Arrived at Hawkridge, we have two streams—the Barle river, and Dunn's Brook—both quite close, and both practically free.

The Barle is a very fine river, with romantic and beautiful scenery, and large baskets of fish are sometimes taken, but sport in it is precarious. In the summer if there is much dry weather, the Barle gets very low, and the water is transparently clear, owing to the stony bottom. When this is the case, none but a very skilful angler would do much good. The skilful angler, even under these adverse circumstances, fishing "fine and far off," would probably kill a dozen trout in a day, but they would be small, and would be caught early in the morning and late at night.

Should the visitor be on the Barle when it is just going down and clearing after a "spate," he would have grand sport.

Dunn's Brook is the best trout stream I know, either here or elsewhere, for giving sport at all times and under all states of weather and water. Whilst here one will, of course, catch twice as many fish under favourable circumstances as under unfavourable ones; yet sport is always to be had. The trout are always inclined to sport at the fly, and all day long, even in hot, bright weather. The portion of the stream that would be fished from Hawkridge would be that between Castle-bridge and Upper Willingford-bridge—a distance of about six miles. Castle-bridge is about two miles below the village of Hawkridge; but, if it is desired to strike the water at a nearer point, the stream will be found at a bridge a few minutes to the south of the village, facing Anstey Moor. The last mile or two of Dunn's Brook, before reaching Castle-bridge, is worthy of being called a river; but, before Willingford is reached, it is decidedly a brook.

This is a typical moorland stream—wild, lonely, rapid, rocky, and edged with boggy ground. Frequently the angler will not meet man, woman, or child from one end of the stream to the other. It flows between wild moors, where the scream of the curlew and plover are the only sounds of life, and very melancholy sounds they are. The greater part of Dean's Brook (locally called Willingford Water) is quite bare of bushes, but the banks are here and there studded with rushes, behind which the angler, kneeling, is capitally screened from the watchful eyes of his prey. There are two bridges at Willingford (the name of a *spot*, nothing else), and, when the lower one is reached, the angler must not turn back, as the few hundred yards to be traversed before the upper bridge is reached is very good water. The lower bridge is the road from Molland to Hawkridge. The road over the higher bridge leads to Withypool—a place which I shall have something to say about hereafter. In this little stream the trout will be found to vary from the size of a small minnow to a quarter of a pound; but three ounces must be considered a very nice fish. The minnow-sized troutlets will, of course, be returned, so that the writer (or other angler) may have them when they are more worthy of death.

Up-stream fishing, a short line, complete concealment of body, rod, and shadow, and great quickness in hooking and striking, will lead to fine sport. The angler will be surprised and charmed to find how freely the fish will rise. Every yard, and all parts of the stream, whether in the centre or the sides, in the current or the eddies, will yield a fish. The grand spots for them are the stills, often only a few inches square, behind a stone that breaks the current. The moment the fly is pitched into these places it attracts the attention of the resident, who, in the twinkling of an eye, is either on the bank gasping, or has been "missed," and is consequently *missing*. In such streams as this I use only two flies on a short collar, for it is easier to watch two flies than more, and, as I have attempted to show, much watching is necessary, or these veritable gymnasts gambol over the fly and reject it.

Gaudy flies are the thing here—a red hackle and gilt twist for the stretcher, and a small "blue upright," with a little silver on it. Should the water be at all sherry-coloured from recent rains, the "coachman" will be found most deadly, and two should be used. In Dunn's Brook, one should *never* kill less than a score, and a hundred would not be deemed a remarkable catch for a "good man."

There is one spot on this stream to which I desire to call special attention, both on account of its beautiful natural surroundings, and because many large fish lurk there. If a half-pounder is to be captured in Dunn's Brook, this is the place.

A very short distance above a farm-house called Zeal, where is a crossing, and about a mile above the bridge that connects Anstey Moor with Hawkridge, we find a weir over which the stream falls tumultuously—the drop being probably five feet. Where the stream falls is a deep pool with a whirling eddy at each side. This pool is about fifteen feet wide, and of great depth. The angler is supposed to be on the side next the moor, and, on the opposite side a thorn-bush overhangs the pool. If the fly be dexterously flung, with an underhand cast, beneath this bush a "plop" will instantly ensue, and (let us hope) a good fish will be fast hooked. This operation may be repeated twice, or even thrice, if due care be used. The side next the angler will be found to contain nice fish, and, perhaps, it would be advisable to attend to the residents therein first.

In front, for miles, can be seen the sweet little stream rushing and rolling along, occasionally broken into miniature cascades, where it foams and roars as if emulous of Niagara; and, anon, presents only a gentle, undulating surface, with here and there a bend and still, deep pool—sure "hover" of the larger fish. It is a deep valley, and high on each side rise splendid hills, glowing with bracken and heather and many kinds of mosses. In the distant background lie the Tors, whose bold, craggy heights resemble somewhat the famed Snowdon range (though on a lesser scale), or the beautiful valley of the Conway. I assert, without fear of contradiction, that it is well to be in such a place.

Helwr.

[Having often fished Dunn's Brook both up from the Barle (the best way) and down, we can heartily endorse our correspondent's remark that it *is* "well to be in such a place." We are sorry to say it has been fearfully poached during the drought, and so have most of the Moor streams.—Ed.]

On Tuesday night last the Lea Conservancy keeper, T. Verdun, at Spring-hill, Clapton, came upon a noted poacher named "Fred" or "Brandy Herne," and after a severe struggle with the keeper he managed to get away, leaving behind him a net measuring 42ft. long, 6ft. deep, with a bag pocket of 8ft. The capture was made at Copper Mill Point, a place containing plenty of fine jack, roach, chub, perch, &c. The police are on the track of Herne, and when caught, which he certainly will be, he will get his well-deserved punishment. Mr. Verdun showed the net at the Swan, and its deadly proportions were commented on. This is the same keeper who a short time since caught five poachers. He is most earnest in the discharge of his duties, and were other keepers to be as watchful as he, the poachers would soon have to find another occupation.

## SALMON AND GRILSE DEE FLIES FOR SUMMER USE.

### Final Notice.

On the subject of casting, we venture to remark that any experienced angler for grilse knows well the advantage at times of a long precise cast, and equally well that that alone is not all that is required. Not to make a random guess, but to possess an accurate knowledge (learned by observation) of the proper fly to use, and how to work it with a medium rod—say, sixteen feet long—requires attentive study, and careful practice. To fish well the line thrown, and not to pay out and whip away the fly, is what every thorough angler seeks to accomplish. Nothing is more ludicrous than the sorry figures some beginners cut in endeavouring to make long casts. In the extent of our knowledge of rods, we may say that we never had in our hands a sweeter medium make than one of Messrs. Blacklaws and Sons (Kincardine O'Neil) best greenheart rods, tried by us on the Dee, at Banchory, some short time ago. With the rod in question we could send out thirty to thirty-five yards quite easily, and play the fly entirely to satisfaction. In fishing on the Dee for grilse, unless the water is muddy, very fine tackle must be used, and the fly dropped on the water as if for trout. Just now we have before our mind's eye three noted Dee anglers, and each has a different method of allurement when fish are disinclined to rise freely. One throws straight across stream, and holds the point of the rod well up, inclining it higher as the fly works nearer in order to prevent the line "bellying." Another casts in the ordinary way, and works the rod with a tremulous motion called "jiggling"; while the third pays out line sufficient to cross the fish, rests it a while, and then reels in rapidly. The first method cannot be practised in perfection unless pretty fine tackle is used; the other two systems, though quite simple, are decidedly worthy of attention.

Our description of flies takes end with this article. Even to our own favourites we have endeavoured to show no bias, no desire to prop them up above their own merit. Stimulated all along by an earnest wish to contribute to the angler's success, we have sought to describe each pattern with as much fidelity and as minutely as possible. To those who have assisted us in any way we accord our sincerest thanks. From the fact that we have taken into our counsels a wide range of amateur and professional angling and fly-dressing skill, we venture to think that most Dee anglers will find in our collection a few at least of their highest-prized patterns.

### The Devan.

This fly is a great favourite with many excellent Dee fishermen. It first came under our notice some years ago, when angling on the Dee in the neighbourhood of Ballater. If it stood in need of improvement, a little, we venture to think, has been made on it since then. The Devan, it is generally thought, can be used with greatest advantage when the day is bright and the water clear. It is, however, a fairly good lure for grilse and sea trout, even when the water is somewhat discoloured. The inventor we have failed to trace. Description :—

Tag : Gold thread and magenta floss.
Tail : A small topping.
Butt : Bronze herl.
Body : Yellow and bright green silk floss ; one third (that nearest the tag) yellow, the rest green.
Ribbed : Gold twist, five turns.
Wings : Double strips of teal, topping over.
Hackle : Cock, black, half-way down the body.
Head : Green herl.
Double Limericks, 7, 8, and 9 are the best sizes.

### The Vero.

The parentage of this fly is claimed by one of our most experienced and skilled Dee anglers. Used for grilse the Vero gives good account of itself. We describe it as follows :—

Tag : Silver thread and yellow floss.
Tail : A small topping.
Butt : Black herl.
Body : Blue (peacock) silk floss.
Ribbed : Silver twist—five turns.
Wings : Double strips of mallard ; topping over.
Hackle : Magenta ; well-down body.
Shoulder : A small quantity of teal.
Head : Black.
Double Limericks, 5, 6, and 7 in size.

### The Badger.

Cannot be excelled as a sea trout pattern for the Dee or the Feugh. Speaking from experience, we can recommend the use of this fly, for killing purposes, in either a brown or a peat-coloured water. It has little resemblance to any other Dee pattern, and, though used principally for sea trout, it kills grilse as well.

Seen first in the collection of a gentleman at Banchory, we, after the lapse of a year or two, describe it as under :—

Tag : Silver thread.
Tail : A small topping and fibres of tippet.
Body : Turkey red mohair.
Ribbed : Silver tinsel ; four turns.
Wings : Light, mottled turkey strips—the lighter the better.
Hackle : White, with black roots.
Head : Red.
Limericks, 7, 8, and 9, double irons.

Other flies, bearing more or less a resemblance to various standard patterns, are highly in favour with several anglers on certain sections of the Dee.

W. M.

---

**Death of an Old Leek Angler.**—Mr. Henry Waterloo Ind, an old and much respected inhabitant of this town, went fishing in the Churnet, near Wall Grange, on Tuesday afternoon. He was alone, and quite well when he started. He was subsequently discovered in an insensible condition by a man employed on the railway, who, seeing the case was a serious one, placed the unfortunate old gentleman on a trolly and brought him to Leek Station. He was taken thence to his home in Osborne-street without delay, and Dr. John Gailey was in immediate attendance, but consciousness never returned, and he expired about six o'clock. Mr. Ind was an enthusiastic fisherman, and though 71 years of age, looked stout and hearty. The cause of death was apoplexy."—*Leek Times.*

## "CRISP."

### A Holiday Sketch.

*(Continued from page* 112.)

We found G——, on our arrival, looking rother fagged; but, when he saw my brave capture his face assumed a cheerful business-like expression, and he immediately began to talk like a cookery book. At dinner that evening I regaled him with the "creeper" episode, and a startling explosion took place. He asked all sorts of questions about the capture of the salmon, and I had to fight the battle over again for his benefit. He declared his faith in my angling prowess firmly established, and nothing would please him but that *we* should start the next morning at 4 o'clock *and kill a fish*—that was his way of expressing it. However, I promised, and, at 3.30 punctually, Crisp aroused us. I felt much inclined to have another snooze, but, for my friend's sake, I subdued the "drowsy god." After a cup of hot coffee, with a suspicion of whiskey in it, we sallied forth. The morning was lovely—passing description by any words of mine. (I made several abortive attempts to write a sonnet to come in here, but somehow the inspiration was awanting.) I, indeed, thought it too lovely for fishing. We went to the big pool first, and there our astonished eyes beheld a striking spectacle. The salmon were jumping by the score, like—well—like mad (for want of a better word), and there were some beauties. I put on a fly in double quick time, and soon had tried every fish within reach. I changed my fly twice, but no luck, and, finally put on minnow tackle. The minnow looked irresistible, and had been warranted a sure killer. I spun away a long time without getting so much as a touch. Suddenly a big fellow jumped out of the water close to my feet, with the effect of nearly making me tumble in. Cautiously retreating, I spun the minnow about where I thought his lair to be, and, after six or eight spins, I felt a tremendous tug. Through my mind flashed the vision of a minnow lost on a rock; but, in an instant, my line was rushing out at express speed. G—— gave a cheery shout, and I braced my wits to circumvent the enemy. The fish instantly ran down stream, and, as the river at that point divides, I had to rush through 10 or 15 yards of water up to the waist to reach a small island, and, from its banks, follow the course of the fish. The perverse beauty shortly thereafter rushed up stream, and I had to repeat the wading process, or have a good deal more line out than in the circumstances was advisable. I did wade, and, just as I again reached terra-firma, I had the second and last sight of the fish—for, leaping out of the water, it came down with a smash, and was gone. The gut had cracked at one of the knots—clearly a defect in the tying. G——, who had been in a frantic state during the short engagement, and I looked at each other with blank despair depicted in our countenances. Thereafter we, in a quaint Turkish oath, "cussed" the defaulting tacklemaker and all his belongings to the nethermost depths of Hades. This seemed to have a beneficial effect, as, after a short delay, I started and rigged up another minnow tackle, the trace of which was treble-twisted gut of great strength. This, I knew, would hold a small whale, and I began, or, rather, recommenced, operations with no apprehensions on account of the tackle. But, alas! I seemed to have had my share of luck for that day; and though, to make a long story short, I fished till eleven o'clock, not a run did I have. I was determined to kill something, however, so, fastening on a cast of trout flies, I wended my way up to the pool which had proved so fruitful on Monday. In a short space of time four quarter-pounders had fallen victims to the seductions of a "woodcock." Just then, however, I got fastened in a tree, and, both of us being too lazy to climb, I pulled, and left the major part of my tackle up aloft. Wielding a heavy double-handed salmon rod had told on me, so we agreed to retrace our steps. After a breakfast-lunch, we related the morning's adventures to Crisp, and were duly sympathised with. G—— proposed we should retire and have a snooze, a proposition which was carried *nem. con.* My efforts to woo balmy sleep were rendered abortive by the terrific snoring my companion indulged in. At last I could stand it no longer, so I sprang on to the floor, and cheerfully proceeded to stuff with cotton wool the tuneful organ of my friend. He did not quite seem to realise the position for a few seconds, but finally awoke, and sat bolt upright in bed, and I had just time to dodge a choice volume of Wordsworth, the nearest missile to the poet's hand, which rushed by my head with a suggestive whirr. Hereafter I slept the sleep of the just. In the evening we arose considerably refreshed, and after dinner strolled down to the village of A——. We made friends with a good many of the villagers, and finally ended with an amateur concert, which was much applauded. N.B.—G——, in the stillness of the night, tells me he knows a lady of *great beauty*, and means to win her. He met her to-day, and says she was very much impressed. I asked him for an introduction, but only got reviled for my pains. We retire to bed in a bloodthirsty state. The next morning (Thursday), after breakfast, we had a consultation, and ultimately agreed to go mountaineering. I agreed to this (my friend's proposition) the more readily as the sky was cloudless, and the day promised, for fishers, *nil.* The mountain we agreed to tackle was Ben-y-Gloe, and although I suggested one on a smaller scale, G——, fresh from his conquest of Ben Vrachy, scoffed at the idea. Crisp gave us all the necessary directions as to the quickest road, the side to climb, and from where best to see Glenshee. The day was blazing hot, and with a sigh of relief we stopped at the foot of the mountain and had some lunch. After a quarter of an hour's rest we began the climb. That mountain is a "tartar," especially on a hot day. Its sides are very steep and rocky, and the heat was reflected off the rocks so that one had the feeling of being baked in an oven. After five hundred feet or so, we mutually agreed to rest. The sensation was singular. On one cheek the air was icy cold, while the other, which was exposed to the sun, was being slowly roasted. After repeating the above experiment half a dozen times or so, we reached the top. The air at the summit was cold enough in all conscience. There was a party up before us, and one of their number, a veteran tourist, kindly gave us the benefit of his experience. The view was magnificent. I am afraid to say how many counties we saw. We went down the opposite side, and, *en route* for home, saw Glenshee. Well does it merit the pathetic line :

> "I'll ne'er gang back to *bonny* Glenshee."

The italics are mine. We thought the Mc——'s loch would furnish the crowning effect to our day's enjoyment, so, without more ado, we stripped. My friend is rather more agile in his actions than I am, and accordingly he was disporting himself before I had half undressed. Shortly after, and as I was assuming a nude aspect, I heard a cry for help, and, on looking round, I saw G——, puffing and struggling like mad, a good way out in the loch. I thought it a very well-assumed sham; but there was no mistake in the next yell. Bolting in, I made my way over, and found him stuck in the weeds—a very uncomfortable position. At that particular part of the loch it was full of weeds, so we decided to look out for a safe place. This we found, and had a very enjoyable bath. After dressing we shook the dust from off our feet and retired, mutually execrating all artificial lochs. On our way back over the moor we made a bet as to which of our guesses would be nearest the number of grouse that would arise at our approach. I had said ten, and G—— twenty-five, and, as we flushed nineteen, I had to pay." We, on our arrival, gave Crisp a history of the day's adventures, not forgetting to colour the bathing experience. He remarked something about "venturesome de'ils," and, further, that, "had the Mc—— coch us in his private loch, we'd ha'e hae'n sair banes." In the evening G—— went to visit his lady-love, and declining the pleasure of my company, I strolled down to interview our friends the villagers. The "boss" of the village was an old pensioner named McIntyre, who had been through the Indian Mutiny and any amount of other "scrummages." He was in a loquacious mood, and told some good stiff tales. He at last came to the subject of fishing. I guardedly led him up to the "creeper," and asked him for his experiences with the instrument. He looked rather surprised, and asked in a scared sort of tone how I knew anything about that "insect." I replied that Crisp had told me all I knew. At this he regained his composure, and, smiling in a quiet way, he asked if Crisp had told me any of his own experiences. I said, no; and he denied ever having worked one. "Ah! the old d——l, he used to kill mair salmon than ony fisher in the twa rivers," said McIntyre. "Man, he micht ha'e been takin' his three and fower sa'mon a nicht, if he hadna' had the plisky wi' the keeper," added the old chap. I smelt a good story here, and finally persuaded the old warrior to "trot him out." The bare remembrance of the fun made him laugh immoderately, but at last he started:—"About four years ago Crisp was a grand killer, and he and a companion used to supply the whole village with cheap salmon. One lovely night they started intent on doing a big job. The scene of operations was a pool immediately opposite to where we are now sitting. Crisp, being the more expert, cautiously approached the pool, 'creeper' in hand, while his companion watched. He, with the greatest care, adjusted his line, and cautiously dropped it into a favourite spot, where he was morally certain at least one salmon had its abode. After settling all the preliminaries he gave the customary mighty strike. No salmon was attached, however, and the line, with the impetus of the stroke, swung back over his head, and seemed to lodge in a bush behind. Crisp gave a slight tug without troubling to look round, but bush never gave utterance to such a yell as was then heard. Crisp dropped the clothes pole in terror, and, looking round before he fled, was horrified to find he had hooked a full fledged gamekeeper. He knew he was done for, and that it was useless to fly, so he stopped and assisted to extract the hook from the gamey's neck, which was considerably lacerated. Crisp hardly knew whether to be more afraid at being caught or angry at his companion's treachery—in fact, both feelings struggled for the mastery in his ingenuous countenance. He calmed down considerably when his captor explained that he had been watching the pair all the time, and had threatened the watcher if he gave a note of warning to lay him in 'quod' instantly. He had cautiously approached the *angler*, who, being so intent on his sport and without guile, was completely taken unawares." The old soldier paused to take breath and have a good laugh, in which I joined heartily. "And what was the upshot?" I asked, through my tears. "Oh! the gamey and Crisp were old friends, who had often before divided the spoils; but this time he threatened to 'lag' the poacher, as he indignantly called him, and was only pacified by a present of 7s. 6d., and the custody of the 'creeper.'" "'Crisp," he added, "has never tried the old game since." After thanking the old chap for his story, and promising to look him up before we left, I walked home "in the starry light of a summer's night," and G—— arrived shortly afterwards. He was in great spirits, and I suspected had been testing what some of my lady friends term "Kissingen." He declined, however, to vouchsafe any answer to my pertinent questions. I related my evening's experience—the story completely fetching him. We mutually agreed to bait "Crisp" with it on the morrow. Friday was a pattern day for fishing, and we resolved at once to go salmon fishing, "Crisp" to accompany us as ghillie. On the way we plied him with all sorts of knowing queries about his experiences with the "creeper." He did not at all like it, and "d——d the folks who couldn't mind their own business"; and he looked considerably relieved when we arrived at the waterside. I was soon at work. Within ten minutes from the first cast I was into a fish, and the cheery ring of my reel was responded to by equally cheery shouts from the other two, who had just been getting into position for a comfortable smoke. The salmon hooked moved pretty bobbish and gave me some fun, but I had always a good pull on him, and in a comparatively short time "Crisp's" services brought his short life to a close. I demurred to the "dew" being begun on at so early an hour, but "Crisp" prophesied all sorts of bad luck unless the old custom was adhered to, so I yielded and we all had a "tot." In the next pool two fish broke the water, but seemed to have charmed lives, as, although I struck promptly, there was no attachment. The next pool was also drawn blank. Number four, however, yielded the fish of the season. I had stuck to the one fly the whole time, and when this finny monster took it I was a little anxious as to its holding abilities. The pool was difficult, and several times I had to give the fish the butt strongly. After an exciting twenty minutes the fish turned sulky and would not move. I put all the strain on I dared, but it had no effect, so keeping a watchful eye and tight line I calmly waited for developments. In five minutes or so the fish came to the scratch and entered upon the death struggle. An anxious two or three minutes—longer it seemed—and the fish, dying gamely, was safely banked. A second "tot" of whiskey, and then lunch followed. Though I fished till five o'clock, and pricked several fish, one a "whopper," I could not come to terms with any, and so at that hour we retraced our steps. The two salmon weighed together 24lb.—the largest 15lb. After dinner, G—— asked me to accompany him on a visit to his fair friend, but feeling a little knocked up I declined, in the words of the song, "Two are company, three are none!" Left in solitude, I tried to compose a melody for one of my friend's songs, but too many cigars, I fancy, had robbed me of my musical knowledge, as the melody, tried afterwards, was not a success. On Saturday we expected a boon companion, to stay over Monday, so in the morning we started and walked into P—— to purchase some delicacies for his special benefit. We returned at mid-day, after exploring the whole town, and gave orders for a feast to be prepared against our friend's arrival. Then we sauntered down to the train, and after waiting two hours, our friend made his appearance. After dinner, and over a bottle or two of claret, we discussed the sporting events of the week. W—— (our friend's initial) was in ecstacies, and promptly arranged to stay over Monday and have a try at the salmon. That evening we trained into B——, and at one of the hotels there, which shall be nameless, we got together a decent audience, and gave an impromptu concert. W—— has a capital tenor voice, and his *rendition* of the "Death of Nelson," "Come into the Garden Maud," &c., was much appreciated. Then I sang my favourite, "The Midshipmite," also well received, and some trios, &c., ending with "God Save the Queen," brought the fun to a close. Had we consumed all the liquor that we were pressed to take, not one of us would be alive to tell the tale. We walked home in an extremely poetic mood, at intervals "awaking the echoes," and we arrived somewhat outside of what is termed in Scotland "Elder's hours." On Sunday G—— and W—— started for the Falls of Bruar, while I, my foot feeling seedy, read. The day was uneventful as Sunday could well be. On Monday the water had "fined down," so that salmon fishing could not be tackled with any reasonable hope of success. W—— and myself therefore journeyed up the Tummel with the object of stirring up the trout. We had a good day's sport, killing sixty-seven between us, but no "whoppers" among them. W—— lost a big chap—so he said; but for my part, I never rose a fish above a pound that day. During the evening we had a convivial meeting, and invited Mr. and Miss "Crisp" to grace the assembly. They were highly delighted, and applauded the music and speeches impartially. "Crisp," in an aside, told me that when my friend the old warrior heard we were to leave, he remarked that "he was perplexed whether he should get up a subscription to present us with a piece of plate, or should call in the services of the sole policeman from B——." I duly communicated the story to my *confrères*, and we agreed to send the old chap a bottle of real "northern cream" as a reward for his wit. The next morning, after having satisfied the modest demands of "Crisp," and giving him a honorarium for his services as henchman, which made his eyes glisten, we, followed by the "God speeds" of Mr. and Miss "Crisp," walked to the station, and were soon whirled to our respective "abiding cities." I hope my readers will agree with me in thinking that we had a good time.

W. M. R.

## FISHING AT DEAL.

I HAVE several times visited Deal for the sake of the pure air and rod-fishing off the pier, and have invariably been successful. This time I took my youngest son, Claude, with me, and he caught the most and largest fish. At dusk one evening five pollack with one of Gregory's nickel 3in. spinning fish. The locals always fish with Hearder's indiarubber sand eels, or a piece of parchment cut into the shape of a small fish and hook attached. One gentleman caught thirteen early one morning with this kind of lure. My son missed a large shad (a species of shark); he had just caught a pouting whiting when the shad seized it, chopped it in two, but escaped the hook.

We caught plaice, flounders, bream, codlings, silver and pouting whitings, pollack, sea devils or sting fish, and conger eels. Also an extraordinary star fish as big as a dinner plate, red coral in colour, with twelve so-called fingers instead of the usual five. This has been preserved with some small cuttle fish in spirits of wine.

Monday, 25th August, was the regatta day, and very stormy in the afternoon. One of the pair-oar'd punt boats got water-logged, and were rescued from their perilous position by a steam tug boat. The last race was a plank race, each plank 6ft. by 1ft., a long nail and a string at one end to hold on by. The boys dived from the pier, each one clutching his plank and get ashore the best way they could. One of them would have drifted across the Channel if he had not been fetched back by the men in the boat in attendance. Being so wet on Monday, the fireworks took place on Tuesday, and were very good indeed.

I stayed with my friend, Dr. D., of Twickenham, at the Royal Hotel. The proprietors, Mr. and Mrs. Foster, are most obliging, and cater for their visitors in first-rate style. There is a garden attached facing the sea, and is the only shrubbery and flowers to be seen from the pier. There is also an excellent billiard-table, with Burroughs and Watts' patent markers, one on each side of the table, doing away with the usual attendant, the mechanism being so simple. The company I met, locals and visitors, were very agreeable gentlemen. We went to Dover one day, but the once famous fishing from the north jetty is now spoiled through the Admiralty pier. The fish travel in the tide-way past the head of the pier straight on to Deal and Margate, without giving a look into Dover Bay.

The barracks are being built on the cliffs to house the convicts who are to make another Admiralty pier from the north end of Dover to meet the present one. When done the bay will resemble Dublin Bay. Some of the Friendly Anglers are staying at the Star and Garter, near the Royal, as the latter was full. Some went sailing, long shore-fishing, and trawling. Dr. D. declares Deal to possess the finest air in England, and is a health-restoring place for most invalids.

There are three small ponds at Sandwich, six miles from Deal. I went there one day with a celebrated musical composer for jack-fishing. We caught plenty of roach for baits, but no jack. I found out that the largest pond was pumped out in the spring to get brick earth, and was shown the bricks in an adjoining field. It was a "sell" going there. There is an excellent band on the pier, awnings top and sides to keep off the sun, wind, and rain. The charge is 3d. on and off all day, angling 3d. extra. Cockles, hermit crabs, and lug worms sold cheaply on the pier.

We spent a most pleasant fifteen days, and recommend the Royal to others. The fishing the latter end of this month and October is prodigious. We used salmon gut, paternosters, and Nottingham reels—which is the best tackle I can recommend, as salt water spoils brass winches.

T. R. Sachs, Piscatorial Society.

## THE LONDON DOCKS—A CORRECTION.

WALKING down Fleet-street the other day, we met, and had a chat with, Mr. J. P. Wheeldon. In the course of conversation he remarked:

"By the way, I have been pitching into you lately in the *Morning Advertiser*. Have you seen it?"

"No! What's wrong this time?"

"Why, in answering some correspondent in the GAZETTE, you say that the only thing he is likely to catch in the docks are dead cats and dogs. Would you be surprised to hear that the timber-ponds of the Surrey and Commercial Docks simply swarm with big bream, carp, pike, roach, &c., and that the fishing is restricted to a few annual five-guinea season tickets? I have taken twenty and thirty pounds' weight of bream there in a day."

We acknowledged we were greatly surprised, and explained that we had made inquiries of a gentleman who knew the docks, and he said the water was so foul that there could be no fish in them. Mr. Wheeldon said this was certainly not the case as far as the timber ponds were concerned, and that he had only recently seen such fine roach caught in the Surrey Canal that he intended to give them a trial. We are always only too glad to be able to correct any mistakes, and are much obliged to Mr. Wheeldon for pointing out this instance.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(ADVT.)

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE,
SALMON AND TROUT FLIES, SUITABLE FOR
ALL PARTS OF THE WORLD.
Mahseer Tackle in Great Variety.
Makers of Split Cane Rods.
Improved Folding Trout Landing Nets
(Very Light).
New Patent Lever Salmon Winch
(Can be regulated to any stiffness at will).
PENNELL'S TACKLE KEPT IN STOCK.

CATALOGUES GRATIS. PRIZE MEDALS. IMPORTERS OF SILKWORM GUT.

A NEW PERFECT FLY AND SPINNING LINE.

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES; FREEDOM FROM IRRITATING ENTANGLEMENTS; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says:—"I find the Acme more valuable than all others."

Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction, will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

## THE NEW FRESHWATER FISHERIES ACT.

### Important Inquiry.

An important inquiry, arising out of the Freshwater Fisheries Act of last Session, which fixes the minimum size of the mesh of nets at 1in., was held at the Old England Hotel, Bowness, Windermere, on Tuesday, when a committee of the Kent, Bela, Winster, Leven, and Duddon Fishery Board sat to hear the views of the fishermen as to the size of the mesh and the modes of fishing prior to the formation of new By-laws. The new Act has caused something approaching a panic among the fishermen at Windermere, and they declare that with 1in. mesh their calling will be ruined. Mr. John Fell, of Barrow, presided, and the proceedings excited much interest. John Borwick said he had netted Windermere Lake eight years, and used a net 36 yards long for bottom-fishing. In the centre there was a square of ½in. mesh, and round about the top and bottom 1in. mesh, and then 1½in. The smallest size fish caught in such a net was from 2oz. to 1lb. It would let a fish of ¼lb. through. The floating or long net, which was used about Whitsuntide, was constructed the same way as the bottom one, and with the same mesh. It was used until October. James Fisher, who was frequently interrupted by the other fishermen in consequence of the views he expressed, said he could remember the lake for 60 years. Everything was in drawing the net up quickly, and he considered a fair size of the mesh to be not less than 1in.; no part should be less. The nets at present used were double the length of those in use when he began to fish. Fishermen followed the fish all over the lake. Two other fishermen were called, and stated that it would be no use for them to fish with the 1in. net. The inquiry was then closed. The committee sat in private to consider their recommendations, which will be made to the Board, and considered in connection with the new By-laws.

[We trust the Committee will consider the fishing as well as the fishermen, who are ruining it by their short-sighted policy of catching everything.—Ed.]

"Art, empire, earth itself, *to change* are doomed."—The Hermit.

## EXCHANGE.

### Things Wanted—to BUY, to SELL, or to EXCHANGE.

:o:

N.B.—We take no responsibility whatever in connection with advertisements inserted in this or other parts of this paper; but beg our readers to expose any case of imposition. The prices for inserting advertisements in this "EXCHANGE" Column are 6d. per line for one, or 4d. per line for more than one insertion.—Address, Manager, Fishing Gazette, 12 and 13, Fetter Lane, London, and send stamps with the order, or the advertisement cannot be inserted.

WANTED.—Particulars and Prices of Second-hand Books on Angling and Fish Culture. Must be in good condition.—Address Editor, Fishing Gazette, 12 and 13, Fetter-lane, London, E.C.

## RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

Add
30 minutes for Chelsea.
40 " Putney.
45 " Hammersmith.
50 " Barnes.
55 " Kew.
75 " Richmond.
80 " Twickenham.
85 " Teddington.

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | Morning. | Afternoon. |
|---|---|---|
| Saturday, September 13 | 7.18 | 7.53 |
| Sunday, " 14 | 8.32 | 9.16 |
| Monday, " 15 | 10.2 | 10.43 |
| Tuesday, " 16 | 11.21 | 11.55 |
| Wednesday, " 17 | 12.0 | 12.26 |
| Thursday, " 18 | 12.51 | 1.15 |
| Friday, " 19 | 1.35 | 1,56 |

Note.—New Moon September 19.

### THE LOWER THAMES.

#### General Remarks.

The same amount of sport and an equal attendance of anglers continues on the Thames below Staines, and it is really astonishing the quantities of roach and dace that are caught and taken away from the tidal waters of Richmond and Twickenham. There is one item of sport at Kingston which is entitled to special reference, and being supplied direct, it may be fully relied upon. Mr. Alfred Nuthall (Mayor of Kingston) and Mr. John Knechtli, fishing with John Johnson, sen., in the afternoons of Thursday and Friday in last week, caught forty barbel from 2lb. to 4lb. each, three bream from 3lb. to 6lb. each, five chub up to 3lb. each, several roach of 1lb. each, and some good eels. It is also worthy of notice that fully one-half of the barbel were returned to the river again.

#### Angling Results.

**Richmond.**—Christopher Brown, during the week, 120lb. of dace and twelve barbel. F. Brown, in four days, 64lb. of roach and dace and three barbel. Henry Howard, in the same time, 60lb. and five barbel. Job Brain, during the week, 90lb. and four barbel. H. Mansall, in the same time, 100lb. and four barbel. John Bushnell, one day, with Mr. Houghton, a jack of 4lb. 10oz., and eight dozen of dace, and in two other days, 20lb. of roach and dace, four barbel, and a perch of 1½lb.

**Twickenham.**—Mr. Edward Wright, fishing at Twickenham Deep, one day, got three nice tench, and another day, three more, the largest 2½lb. Joseph Dobbin, in three days, 20½ dozen of roach and dace, and five barbel. Pert Hammerton, in three and a half days, 70lb. of roach and dace, and five barbel. Charles Hennessey, in one and a half days, twenty-two dozen. William Spong, in four days, thirty dozen and a couple of barbel. John Spong, in the same time, forty-four dozen. James Coxen, in three days, fifty-eight dozen and four barbel. George Coxen, one day, with Mr. Carter, twelve dozen and four barbel; another day, with Mr. Jones, of Norwood, 10½lb. of dace, and a barbel of 8lb.; and in four other days, 50½lb. of roach and dace, and three barbel. E. Finch, in six days, 90lb. Samuel Cole, in seven days, 150lb., and three barbel. J. Dunn, in one day, seven dozen of dace; and H. Spiers, in three days and four half-days, eighty-four dozen and six barbel.

**Teddington.**—Joseph Baldwin, in five days, thirty dozen of roach and dace; John Stevens, in three days, twelve dozen and two barbel; and Charles Baldwin, in four days, thirty-one dozen and two barbel.

**Kingston.**—In addition to the fishing recorded in the general remarks, John Johnston, junr., in six days, got twenty-seven barbel, the largest 5½lb., one chub of 3lb., two jack of 3lb. each, five perch, and twenty-eight dozen of roach and dace. James Wilks, in two days, five barbel, two bream, one brace of perch, and three dozen of roach and dace. Luke Francis, in two days, five dozen of roach and dace, and two chub. F. Eastland, in six days, fifty dozen of roach and dace, a bream of 4½lb., and two barbel of 4½lb. each.

**Long Ditton and Thames Ditton.**—H. Buttery, in two days, thirteen barbel, the best 4lb., one chub, one eel, and two dozen of roach. E. Tagg, in one day, 13½ dozen of gudgeon, six brace of perch, and one barbel; and C. Tagg 11½ dozen of gudgeon and two brace of perch.

**Hampton Court.**—Charles Davis, in one day, three barbel, three chub, and two dozen of roach. Thomas Davis, in two days, four dozen of roach and dace, and six barbel. C. Stone, in four days, thirteen dozen and one perch. T. Watford, in one day, four dozen of gudgeon and four dozen of roach and dace. W. Milbourne, in four days, twenty-one barbel, the largest 8lb. T. Wheeler, in five days, thirty barbel of 2½lb. and 3½lb. each. At "Tagg's Island Fishery" about twenty dozen roach and dace, four barbel, the largest 6lb., twenty-four dozen of gudgeon, and some good eels have been taken.

**Hampton.**—J. Langshaw, in two days, seven barbel, four dozen of dace, four dozen of roach, and a jack of 5½lb.

**Sunbury.**—Edward Clarke, jun., in six days, thirty dozen of roach and dace, eight chub, the four best weighing together 10lb., eight barbel, the largest 4lb. H. Clarke, in three days, twenty dozen of roach and dace, ten dozen of gudgeon, and one brace of perch. Edward Clarke, sen., in one day, seven dozen of roach and dace, and a fine perch.

**Walton.**—G. Hone, one day, six dozen of roach and dace, two bream, and a jack of 2½lb., and another day six dozen of roach and dace. R. Watford one day with Mr Addison, ten bream and two chub; another day, with Mr. Witter, three dozen of roach and dace, and a barbel of 3lb.; and another day, four dozen of roach, six bream—the largest 3lb.—a barbel of 4lb., and a chub of 2lb. George Hone sent, one day, five dozen of roach and dace, and a barbel of 2lb.; and another day, with Mr. Mackrill, ten bream, two chub, two barbel, and four dozen of roach and dace.

**Shepperton.**—H. Carr, one day, with Mr. G. H. Buckland, hon. sec. to the Guilford Angling Society, two barbel weighing 5lb., two eels 4½lb., and four dozen of roach and dace; another day, with Mr. Foster, five barbel weighing 12lb., a perch of 1½lb., and two dozen of roach and dace; another day, with Mr. Boyton, nine dozen of roach and dace, some of the roach weighing 1lb. each; another day, with Mr. Hughes, ten dozen of roach and dace, a barbel of 3lb., and a chub of 2lb.—all of which were put back again; and another day, the last but one of the trout season, a nice trout of 3lb. Mr. John Wotton, fishing with David Hackett, on Tuesday, caught ten barbel weighing 50lb; and Mr. T. Spreckley and Mr. M. H. Blamey, with the same fisherman on the following day, got twelve fish weighing 30lb. George Rosewell has ended the season with a nice trout of about 5lb., and James Haslett, one of the anglers on the last day at Shepperton Weir, hooked a big trout and lost it.

**Staines.**—G. Osman, one day, 8lb. of roach and one barbel; another day, six dozen of roach and dace; and another day, four dozen. John Keene, jun., one day, five barbel and one jack; another day, eight dozen roach and dace; another day, seven barbel; another day, eleven barbel, and two dozen of roach and dace; another day, five barbel; and another day, one barbel and two dozen of roach. Charles Hone, on the 7th, a fine trout of 5½lb., and a perch of 1lb.

## UPPER THAMES.

River in fair trim after the recent rains, but not quite coloured enough. My reports from Bray, Maidenhead, and Cookham all tell of fair takes of roach, barbel, perch, and chub. Gudgeon are being had all at once by the twenty-four dozen per punt of two rods, Mr. Clarke, of Maidenhead, with Wilder, getting twenty-one and a half dozen, and some pretty perch in one outing. At Cookham and Marlow the tale is that roach are fairly coming on; but my own experience in two hard days' fishing is that the roach are not well on. This is really in consequence of the water being so bright. Medmenham and Hurley Waters have been frequented by Messrs. Kidd, Keats, King and Co., fishing from that comfortable hostelry, the East Arms, the result of a day's doings under adverse circumstances of wind and water being some 12lb. of roach, perch, and gudgeon. Thursday evening.—Water in fine trim for roach and chub. Good bags may safely be now counted upon.

### Thames (Datchet).

The water seems to be going back to its late condition, and a beautiful fortnight has been let slip by. J. Horace, with a patron, on the 8th, 15 barbel; G. Keene, on the 7th, a jack (3lb.) My takes have been as follows:—12 barbel on the 6th; on the 10th, with J. L. Meyer, Esq., six barbel and a trout between 3lb. and 4lb. To-day, with Mr. Gilbert, six barbel and three chub, and a few dace; one chub a beauty. —G. Lumsden.

### Dockett Point.

Missed the post last week. Since my last report, fishing during the week with Mr. G. L. Meyers; took several barbel, bream, chub and roach; the best barbel about 6lb. Fishing with another gentleman, 1 trout just under measure; put back again. On Monday with Mr. C. Waterhouse, 2 chub, 1 trout; I do not know the exact weight yet, but about 3lb. Water the same as ever.—J. Haslett.

### Thames (Goring).

Water very low and clear. Nothing biting much; good gudgeon biting very well. My best day, two jack—largest 3½lb.—and one dozen of perch; next best day, one chub—about 3lb.—and about eight dozen gudgeons and few perch.—John Rush.

### Thames (Oxford).

The gentle sons of toil who prefer to earn what they term "an ornest bob" by a little quiet netting after night-fall, appear to have had their tenderest feelings outraged by the recent captures which have been effected by the city police and the honorary river keepers of the Oxford Angling Society. To add fuel to the smouldering fire, another unfortunate has been taken using a scoop-net in the back stream at the Friars, and, I am very much afraid, if these unfortunates, who have the deepest sympathy of all the disreputable characters in the place, have their business interfered with in this untoward manner by (as an indignant lady once expressively put it when I seized her husband's nets) "any young jackass as choosed to come a-walkin about the place, poking 'is nose into wot did'ent consern 'im," they will be compelled to seek fresh fields and less dangerous pastures for the exercise of their peculiar talents. The Thames and its affluents still continue in splendid condition for any kind of fishing, and for everthing, from pike to the humbler but succulent gudgeon. On Monday the river was slightly clouded from the heavy rainfall; but the sunny weather of the last two or three days has done everthing requisite to fine it down. Despite these favourable conditions the fish have not bitten. My perambulations in search of news have been long and fruitless. The only items I have been able to gather are two bags of 10lb. and 5lb., made by Mr. Surch, on September 4th and 7th. This gentleman, who is a very clever hand with a roach rod, was fortunate enough to take a splendid roach on Thursday evening, which weighed 1½lb.—Cherwell Otter.

---

### Ancholme District.

I had three hours yesterday afternoon on a small private water, catching three dozen nice *fontinalis* and Loch Leven trout. The thirty which I retained weighed just 10lb.; for fish of only eighteen months old these results are really excellent. They showed most capital sport, and all were taken with the fly. I used a red double palmer and March brown. The *fontinalis* are getting very full of ova, and it is time to cease catching them. I think these fish would stand a tolerable chance in the Ancholme, as they grow so fast. The greatest drawback would be the absence of suitable spawning-beds. A good many fry have been placed of late years in the tributary streams, and we shall doubtless hear of some of them again on the main water, as we do of the common trout, several of which have been caught recently. Good sport continues to be had at Croxby Lake amongst the perch. The weather is close and dull. A few fish have been taken at the Riverhead, but Ancholme notes are not yet to hand.—Thomas Ford, Caistor.

[The *Salmo fontinalis* is a fraud in this country unless placed in ponds where it can be confined, and then it is not half so good a fish as our English trout. Thousands of pounds have been thrown away in trying to stock English streams and Scotch lochs with the *fontinalis* (which is a charr, and not a trout); they have been a perfect failure.—Ed.]

### The Bollin (Heatley).

It will perhaps be of interest to your Manchester readers to know that Sam Brooks, the well-known Manchester angler, whilst fishing with a Mr. C. Cartwright, in the river Bollin at Heatley, on Wednesday afternoon, the 3rd inst., caught the largest basket of fish that has been taken in the Bollin for years. The catch consisted of one trout, 15oz.; one roach, 14½oz.; and twenty-six roach and dace, averaging, one with the other, 7½oz. Mr. Atkinson, of the Green Dragon, at Heatley, says he never saw a more handsome dish of fish taken out of the Bollin before.—John Thomas.

### The Bure (Norwich).

At all points from Wroxham to Acle and up the Flume sport has been about the same. Large numbers of fish have been killed, and in some instances (few and far) fine fish; but the lover of nature is fully repaid by a visit to this lovely stream if little sport attends him, as, if he has any love of the beautiful in its natural state, he will revel in the Broad districts. The past season on this river has been most successful, although I fully expect many visitors will feel much disappointed, but this results more from their want of knowledge of the waters than from the absence of fish. All the river-side stations have been full, and private lodgings have had no reason to be empty. I trust next season may be as successful. Prospects with a change of wind good, especially for jack.—Robert Moll.

### The Dove.

Sport this week has been only moderately good: the water has been clear, while the weather has been very dull. The bumble, especially the red or furnace variety, has been the best taking fly, though the worm and the minnow have been fairly good. On Saturday last two trout, one weighing 2lb. 1oz., and the other 2lb. 3oz., were taken from the Henmore, in a coloured water, with the caterpillar. The Universal Killer has also proved an effective bait in the brooks. Bottom fishing has been good among barbel and bream on the lower length.—Mentor.

### Ilfracombe.

Sea fishing. Bream fishing has been slack this week, the only catches of note being: Mr. Neil, 30lb., and P. Redmore, 20lb. There has been some good catches of whiting pout, boats averaging from 15lb. to 20lb. per tide. Congering has commenced, and some fine fish have been caught; one boat, fishing off Lee, caught six, weighing from 16lb. to 20lb. each. There is every prospect of the lovers of this sport having a good time of it. Rod and line fishing from the jetty has improved. On Thursday evening Mr. Mingo caught four conger eels; Mr. Gratte, one; Mr. Cox, one, and several other gentlemen, whose names I do not know, have had good sport from there. Prospects good, and weather fine.—E. Comer.

### Lea (Tottenham).

No change to report in the condition of the water; nevertheless, there has been some very good takes of fish. Mr. Bell took some good roach, several of them going ¾lb. Mr. Beresford, on Tuesday, two jack, the heaviest going 6lb. The same day Mr. Thompson took one weighing 3lb., and 6lb. of roach. Mr. Bennett, on Wednesday (whipping), four dozen dace and two chub, and, on Thursday, five dozen dace and roach. Some good fish also fell to the rod of Mr. Wheeler.—Hackles Red.

### Leicester.

Signs are not wanting of the near approach of a change in the season, as although anglers are still numerous at the river side, the shortening days prevent any good late fishing being had. The Aylestone preserves, belonging to the Leicester Angling Society, are just now receiving the most attention, and some fair all-round takes of fish have been had during this week. Several good baskets of roach were among the lots shown, and principally taken with the wasp grub. One basket contained between 8lb. and 10lb. of chub, and in several other instances a brace and a half, from 3lb. to 5lb. each fish, were among the takes that were secured. The weather lately has been in favour of pike fishing; but the largest fish that I could hear of being landed was one weighing 6lb., taken by Mr. Faulkner from the Parting Pool. Out of town anglers have not been numerous. Mr. Chamberlain and two friends, whilst bream fishing, took between 50lb. and 60lb. in two days. A good number of the fish in this lot were over 4lb., and the largest scaled 5lb. 4oz. Sport continues good at the Narborough waters, several of the subscribers having some fair takes of roach and pike. A good many anglers are eagerly looking forward to the annual contest, which takes place in the Soar to-day (Saturday). The weather of Thursday was fine and mild, and angling prospects remain good.—Alert.

### Lodden.

The late rains have very much improved the river, although they did not cause it to rise as expected. Sport all round is first-rate. Perch, chub, roach, and dace feeding freely, and are in splendid condition, and large; half-an-hour's fishing to-day produced the following: 1 trout, ¾lb.; 1 perch 1lb.; 21 roach, average 1lb. each; 2 small chub and 1 gudgeon; this number in so short a time seems large; but I fished with two rods, my own and my son's, my son taking them from the hook, as they were landed; the weather is very hot again, with light winds from south-south-west. A martin entangled itself in my son's line while fishing on Monday last. We are aware this is by no means rare.—F. Gosden.

### Lugg and Arrow (Leominster).

Both these streams are now in splendid angling order. The water is still low, but has run itself very clear again. Rain fell in this district at the end of last week, but it did not colour the water, which is now very clear. The anglers of this part have visited the waters freely this week, and some very good baskets have been taken. The fish are rising freely at the coachman, silver-twisted blue, and green insect. Some very good fish were taken by a gentleman in the Monkland waters, when fishing with the coachman, on Friday. In the Arrow, near the town, some very good grayling were caught with the wasp grub. Good sport has been had in the Lugg, near Bodenham, and some very good dishes have been taken by a gentleman fishing with the coachman and whirling blue. A gentleman, on Saturday, fished the Lugg near to Kingsland, and with the green insect landed a very good dish of fine trout. A very good lot of fine grayling were taken with the wasp grub, near the same place. The Arrow was tried, near to Eardisland, with the silver-twisted blue, and a very good dish of fine trout and grayling was landed, averaging ½lb. each. Up the Stanton waters some capital sport has been had, and some very good grayling have been taken with the green insect and coachman. Some very good fish were taken with the maggot. A very nice dish of trout was taken a little below the town with the fly. On Monday, some very good fishing was had at Fords Bridge, a gentleman, with the fly, landed six grayling and four trout, all in good condition. Near to Aymestry, some very good grayling were taken by a gentleman who was fishing with the twisted blue. A few very nice trout and perch were landed by a gentleman, with the maggot, in deep water. On Tuesday, in the Arrow, a gentleman, near to Irvington, took a nice dish of fine trout with the fly. A few very nice eels have been taken in this part with the worm. A gentleman tried the Lugg the same day and took a splendid lot of grayling and trout with the green insect. The Pinsley is in splendid fishing order, the fish are sporting well at the fly. On Friday, a nice lot of fish were taken with the coachman. On Monday, some very good trout were landed with the green insect, averaging ½lb. each.

### Medway (Tunbridge).

The river during the week has been very thick, but it is now fining down nicely, and there should be plenty of sport. Pike, particularly, are ravenously on the feed. —Ye Medway Water Rat.

### Morpeth.

Coquet in grand trim for fly and worm fishing; 5lb. basket, one gentleman on Tuesday. Small salmon now up.

## Ouse (Huntingdon).

Anglers have been very busy among the roach this last week. Several good takes have been made of some splendid fish, weighing from ½lb. to 1½lb. Since my last report a friend informs me that on the 2nd and 3rd inst. he took 205 fine roach and five bream, besides a great number he put back to the water not sizeable, and the water is in splendid condition for more takes, and the weather very favourable. Wheat is the principal bait for roach, and the red worm for bream. On the 8th I was with two gentlemen working for pike, but did not succeed; but the time is drawing close when every prospect is in view, for there is a great number in the waters.—H. Rout.

## Severn (Shrewsbury).

This river has again been in flood, and some good trout have been taken with the minnow by Messrs. Williams and Perkins. The latter succeeded in landing one weighing 2¾lb. Nothing has been done by the bottom fishers, the fish not being on the feed. Water clearing nicely, and will be in good order for the fly by Saturday. Barometer rising, with an easterly wind, and fine weather may be expected during the remaining fortnight of the trouting season.—Sandfly, 11th September.

## Severn and Stour (Kidderminster).

There is very little news to relate in respect to these rivers. The Severn continues very low and fine, notwithstanding the amount of rain that has fallen this last week. The flush at Shrewsbury spent itself before reaching us, and only a 2in. rise on the river, without any stain, told us there had been a drop of extra water at the head of the river. The Stour, that runs through Kidderminster, was in slight flood two days. While it lasted the anglers took advantage of the rise and travelled to Stourport, where the Stour empties itself into the Severn, discolouring the river for a considerable distance. Some good baskets of roach was the result. Bait, bread-paste. Nothing has been done with the fly. I have not put fly on the Severn this two months. The reports I have heard are not encouraging enough. The United Brothers angling contest came off on Saturday, August 30th, and, as I anticipated, the takes were small; the water was very low, fine, and at a standstill, or nearly so, ounces, not pounds, being the rule. Only twenty-seven entered, and nineteen took fish out of that number: F. Millington, 1st, taking the challenge cup and silver medal, the medal becoming his own property; E. Earp, 2nd; George Robinson, 3rd; R. Yardsley, 4th; Thos. Pearsall, 5th; S. Hinett, 6th; Mr. Briggs, 7th; J. Brooks, 8th; D. Sheldon, 9th; Jno. Evans, 10th; Charles Walters, 11th. An extra prize was given for the best fish; this fell to your humble servant. The annual dinner will take place in a week or two, when the prizes will be given to the winners.—E. Earp, hon. sec.

## South Level Cut (Littleport).

The following are a few of the best takes for the week:—Sept. 5th, Mr. H. C. Hearne, Cambridge, 12lb. very nice roach; Mr. D. Flack. Cambridge, 8lb. good roach; Mr. Fuller, Cambridge, a very nice take of roach; Messrs. E. and H. Fetch, Cambridge, 9lb. roach. Sept. 6th, Dr. Cooper, Cambridge, 15lb. nice roach; Mr. S. Ratliffe, London, 14lb. splendid roach; Messrs. E. and H. Fetch, Cambridge, 8½lb. roach; Mr. B. Brashier, Littleport, a dozen nice perch; and Mr. Tillett, Littleport, six nice perch and three eels, the lot of perch for the two anglers forming the best dish I have seen for fifteen years. Sept. 8th, Messrs. E. and H. Fetch, Cambridge, 16lb. very good roach; Messrs. Pryor, Gray, and Butcher, Cambridge, 16½lb. roach, &c.; Mr. T. Hunnybun, Cambridge, 9lb.; and Mr. W. Rowton, Cambridge, 6½lb. Sept. 11th, Mr. Butcher, Stratford-on-Avon, five dozen nice roach; Mr. Pryor, Cambridge, two dozen and eleven roach; Mr. L. Agger, Cambridge, 18lb. very fine roach. —Charles South.

## Taw (N. Devon).

I have this day, 11th September, made my first appearance upon one of our little streams which has been very low all the summer; but the late rain brought up the water, and when rising many fish were killed. I managed, in two miles of water —although the fish were very shy and taking short—to get twenty-two fish with the rusty blue; and found three others besides myself upon the water, but was surprised to hear that the river is flooded with bank clerks, whenever they are let out of bank. It seems a nusiance that in a small place the rivers are always flooded with five or six, and they mean enough to use worms and minnows when fly only is permitted. I have heard of some perch—some forty—taken, and one or two salmon; but it will take much more water to raise it enough for a good run. The article I noticed last week upon N. Devon fishing is rather misleading, as only one or two days are given a month upon the Bray river, and that ceases after August, so if one should find himself at the hotel, strongly advocated they will find it a sell. I think everyone should read Cutcliffe's books, and remember the days of large catches are over, and fear even the number of two dozen per day is a little multiplication practice. I know two or three who have not got as many fish, and they have known the river for forty years, and agree with me that the days of large catches are over for the Bray—too much draining, Would the writer just say a word or two about flies?—Rusty Game.

## Teme (Ludlow).

This stream and its various tributaries have all improved considerably, and are all in excellent condition. The heavy rains which have visited us, have, to a great extent, restored the tributaries to nearly their proper state. We have heard of a pretty good lot of eels being caught; we ourselves witnessed some very fine ones being caught at the Castle Mills. Large quantities of small ones have been landed at night, many fishermen staying on the river's banks in the moonlight far into the night. We met a woman in Broad-street, who had 27 eels in a basket, which, she informed me, her husband caught the previous night by moonlight, the wife sitting by the river banks and keeping him company. Down the Steventon waters a gentleman, on Monday, plied the wasp grub for four hours; he succeeded in landing seven roach, four grayling, three perch, and two trout, the whole lot weighed about 8lb. A fisherman, on Saturday, caught, between New Bridge and Ludford Bridge, a trout, which weighed 2½lb., with the fly. Up the Oakley Park district the fishing has been pretty fair. One fisherman caught, on Tuesday evening, about six grayling and eight trout, besides some small fish; the grayling and trout turned the scale at 9lb. We have heard little of the doings of the Leintwardine Club waters, but believe the late state of the waters prevented any visitors attending the club water. The rain has so far improved the Clun that fishing has become pretty general, and some nice grayling have been caught with the silver twisted blue. The Ony is getting itself again; the pale blue and red ant have done fair execution this week. A splendid lot of grayling were caught with the maggot in these waters near Onibury, on Monday night. The fish bite well at the wasp grub up the Corve; though this stream is somewhat coloured, good fish continue to be landed from the Railway Bridge up to Mr. Farmer's waters. In the Letwyche a few fish have been caught, but the fishing in that quarter is hardly worth notice.—S. Ludlow.

## Teme (Tenbury).

This stream is now in splendid fishing order; the recent heavy rains which have been had in this district has made the water slowly rise. It is now very clear and in splendid condition for the fly, at which the fish are sporting well. The best flies on the water at present are the green insect, red ant, and whirling blue, and some very large dishes have been taken with them. Some good fish have been taken with the maggot, and a few with the wasp grub. The water on Friday was in very good order for the fly. The fish were sporting well. A gentleman tried the whirling blue and green insect near Little Hereford Bridge, and landed a good dish of grayling, weighing 7lb. the lot, all in splendid condition. In the water near Rochford some capital sport was had with the maggot, and a very nice dish of grayling was taken, some weighing 1lb. each. Some splendid trout were taken with the fly. In the water near Berrington Court, a gentleman fishing with the red ant and green insect landed a very fine lot of grayling and trout, averaging ½lb. each. At Eastham on Saturday some very good fish were taken by a gentleman who was fishing with the wasp grub. Near the bridge a good basket of grayling were landed with the fly. Some very good grayling and trout were landed near to Easton Court by a gentleman who was fishing with the fly. On Monday a gentleman fished the water from the bridge down, and with the whirling blue landed a splendid basket of fine grayling and a few trout. A few very fine grayling were taken with the wasp grub near to Little Hereford Bridge, averaging 10oz. each. A gentleman on Tuesday tried the water near Corn Brook with the fly, and landed a very nice dish of fine trout and grayling. Some very good trout were taken with the wasp grub. In the Ledwyche some very fine trout were taken on Monday with the fly. The Kyre and Rea are now in good order for the fly. In the Rea, up Stoddeston way, some very good trout have been taken with the whirling blue. A splendid dish was taken near Didlick with the maggot. A gentleman landed a good basket with the fly near to Neen Sollars. In the Kyre, near the park, a gentleman took a good dish of fine trout with the green insect. Good sport has been had in the waters near Bruntlands, and some good trout have been taken.—Worcester.

## Trent (Alrewas).

The weather has been very unsettled during the past week, but the river is in excellent condition. Few members have been out, but some very fine samples of roach have been taken. The grayling are now well on the feed, and eagerly taking the fly; one member landing three very fine ones, one scaling 1lb. 3oz.

## The Trent (Nottingham).

Rain fell on Saturday and Monday, and anglers were in hopes that a rise would follow. But in this respect they were disappointed, the only difference consisting of a rise of one or two inches. When our report was despatched on Thursday the river was as low as at any part during the season. Barbel anglers have mustered in force, and at Shardlow more fish than previously were caught. Some have also been killed at Wilford, and a few have been taken in the Holme Pierrepont length. In the early part of the week the roach-anglers fared uncommonly well at and near Trent Lock, and some fine specimens of chub have been obtained at Sawley, and the waters above with the wasp-grub. Fly-fishing has been pursued with success at Wilford and Clifton, and it is not a little singular that another amateur recently caught at one cast a dace and an eel.—The Man at the Clubs.

## Trent (Newark).

Owing to the very heavy rains the water came on a bit, but it very soon went down again, and at the time of writing it is as low as ever again; but it has done one thing, and that is, carried a lot of the weeds away, so that it is possible to float fish comfortably now. Sport, on the whole, has not been of a very brilliant character this last week. A few odd lots of roach, dace, bream, and chub have been captured. A friend of mine out most days this week, says the water is in fairish form. One day he got half a dozen good chub with wasp grubs, and a few dace and roach with gentles another day, while yesterday he says he got the bream on a bit at tail-end of lob, getting ten fair sized fish in the afternoon. Water very low again to-day, but he has gone again to try the bream, and has not yet got home, so I cannot report particulars of his sport to-day. The engineer of the tug that plies between Hull and Newark says that fish are very difficult to catch all down the river, although, where knowing anglers have operated on a well-baited swim, they mostly manage to secure a few fish. He also told me that he saw an angler get four fair-sized jack in about half an hour, with a spoon bait. According to the opinion of these anglers (who are well qualified to give an opinion), tail-end of worm will be the best bait for bream and barbel; creed wheet or gentles for roach and dace; wasp grubs for chub; while jack seem to prefer a glittering spinning bait; water in good form for jack and chub.—The Trent Otter.

## Waveney (Beccles).

In spite of the heavy downpour on Thursday last (a pelting rain which continned for 24 hours straight away), the results to fishing have not been so disastrous as I anticipated in my last report; in fact it has been more beneficial than otherwise. The river was very full for two days, but did not get to overflowing. It has now gone down, and left the water a good colour, and therefore in good trim for angling. To-day it is quite a bronze colour, caused, I am told, by the grass. The rain, besides making the water a good colour, has had a most beneficial effect in clearing the river of weeds, which are very disagreeable to the fishermen wherever they abound. I much regret to learn that the fish are sickly up river, and some of them have been seen dead. No confirmation of this news has reached me, and I am at a loss to know what it is that's doing it. I hope, however, the report is not true. Nothing very wonderful has been done this week. Mr. Algar has had 7lb. nice roach; and Mr. W. Balls a nice jack, weighing about 7½lb., taken with natural bait spinning. Water good, but wind very unfavourable (N.E.)—A Waveney Angler.

## Wharfe (Yorkshire).

There has been a little fresh water in the river during the past few days, but the fish have not been in a humour for rising at fly; indeed, everyone in this district appears to have doserted the river side for the stubble fields and covert. The Leeds and County Angling Association (which is the new appellation chosen for the club lately known as the Rockingham) held their annual fishing match on Thursday, Sept. 4, at Brafferton, on the river Swale. The catches, upon the whole, were decidedly satisfactory. The first prize fell to the lot of Mr. E. Atkinson for 6lb. 9½oz. weight of fish; the second on the list was Mr. C. Hogg with 5lb. 9¼oz.; while the third and fourth were Mr. Fletcher, 5lb. 5½oz., and Mr. W. Ward 4lb. 5oz. respectively. Weather to-day (Wednesday) colder, and inclined for rain.—F. M. Walbran.

## Witham (Dogdyke).

On Monday, 8th inst., we had a small match fished here for amateurs residing within five miles of Dogdyke, when 28 entered for 19 prizes. The takes were small, owing to the state of the water—the fish were not on feed at all—but we are pleased to say all appeared well satisfied with the sport, and wished it might become an annual event. We have had some gentlemen from Manchester who have done very well indeed, more especially Messrs. T. and S. Hill, who have been fortunate enough to catch 55lb. weight of roach, perch, and eels.—Packet Hotel.

## Wye and Derwent.

The Derwent has a beautiful nut brown colouring water on it the whole of the week—a very killing water, and I am pleased to say that both the bottom fishers and fly fishers have had good sport, and baskets from six to ten brace per angler have been daily made. The present time is a very fair one for fly fishing. The killing flies have been bumbles, red and ash dun, and the fish have rose the best in the flats and stills, and have fed the best from 11 to 4. Weather to-night (Thursday) is very close and hot, thunder hanging about.—Geo. Jas. Eaton.

## The Yare (Norwich).

The weather during the past week has not been at all favourable to sport, though a nice change has set in during the past two days; still, from what I can gather, anglers on this river have not been at all successful, here and there one or two have had exceptional luck, and bagged a few good roach. Host Garrett, Buckingham Ferry, tells me that the past season has been by far the best he has experienced during his twelve years' tenure of the "Ferry," and, as regards sport, he never remembers the general run of catches so good; larger individual catches have been had in years past, but, taking the season through, he does not remember a summer in which such uniform good luck has attended the efforts of the disciples of "Old Isaac." From Blundall, both at Flowers' Boating and Yachting Station and also at host Brown's, Coldham Hall, the reports are just as good, and the roach fishing at this station may be said to be as good as of old, Cantley has been only fairly productive of sport amongst the bream;

still, this is only the fault of local anglers, who do not give this station the trial they ought, bream fishing not being in favour whilst the roach are to be had in such numbers, and so fine. I notice several correspondents have referred to large roach being caught at various parts; but I believe I am right in saying the Norwich Angling Club possesses the champion fish, weight just over 3lb., and caught by Mr. T. Lord near St. Benet's Abbey, on the Bure. Any anglers staying near Norwich are welcome to see this fine specimen at the club house, Walnut Shades, Market-place, Norwich. The water is now getting into nice condition for trailing for jack, and I shall expect shortly to hear of some being (not grassed) but gaffed. Taking the past summer as a whole, it may be put down as a most successful season on this river. Prospects (bar wind) good.—Robert Moll.

### Yore (Hawes).

Seeing that Mr. Walbran's remarks for the last few weeks were very applicable to the Yore, and, I having nothing to report, my long silence is explained. The long drought has played havoc with the river in this part. Close to my own residence is a hole or dub which, until this last fortnight held upwards of 18 nice trout, but now only two remain. Other holes have been similarly used. I know of a party who were out for one hour with a little net about 1ft. high and 4ft. long, and they killed 23 nice trout. Rather rough on the trout, I think, especially when this was done in one of the tributary streams. A net of this description is qualified to clear any small stream. Grayling seem very numerous; but the water is, and has been, so very low and clear, that angling is not of the least use. The barometer has been down to "Much Rain," and is now at "Change," without sufficient rain to stir the water sufficiently for successful angling. The season so far has been the worst for many years. Cray-fishers have had fair sport; one man I heard of captured 369 one evening. The crayfish have been fished for so ardently, that they are getting both small and scarce in comparison to what they used to be a few years ago.—Jos. Corry.

## CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### THE TROUT STREAMS OF NORTH DEVON.

Sir,—I have read "Helwr's" article with considerable interest, but it is as well that he should be corrected at once. The fishing on the Mole below South Molton to its junction with the Bray is not free. It is true that, owing to the courtesy of the riparian owners, gentlemen well known in the neighbourhood are permitted to fish; but, sir, your readers must understand that permission is required.

I have lived in South Molton all my life, and members of my family are some of the largest riparian owners in the district referred to, so I speak authoritatively.—I am, &c., S. B. C.

### GELATINE FLY WINGS.

Sir,—Your correspondent "Bittern," and other of your readers, may be glad to know that a modification of the sensitised gelatine, used in carbon printing process, furnishes a material insoluble in water, and suitable in other respects for artificial fly-wings.

I take Coignet's gold-label gelatine (broken in small pieces) 3 sheets, water 2oz., glycerine 6 drops, adding colouring matter as desired, and melt at a gentle heat (too high a temperature decomposing the gelatine).

Having prepared some small sheets of glass by cleaning one side thoroughly and rubbing it with a damped cloth on which a little ox gall has been smeared, I pour a pool of the above solution on the centre of each glass, which must then be tilted to allow the gelatine to spread out in a thin, even film.

When set and dry, I immerse the glasses in a solution of bichromate of potash 1oz., liquid ammonia (880) 5 drops, water 20oz., after remaining in which for about 5 minutes they are taken out and dried in a warm room. They are then exposed to strong daylight for about 20 minutes, after which the gelatine may be stripped off the glass and cut with scissors to the shape of wings.—I am, &c.,

76, Avenue-road, Regent's Park. Richard de Q. Quincey.

[The gelatine leaf is certainly very good, in some respects, for wings of flies, but we still prefer the pike scale—it is so much stronger.—Ed.]

### COLOURED HOOKS.

Sir,—On reading the letter of John E. Wilkes, in reference to myself in your last issue, I at once, through my solicitor, wrote to Mr. C. Court to know if the spiteful and untrue statements therein contained were published with his knowledge and consent, and the reply I received from Mr. Court was that Wilkes had no authority from him for making the statement in the letter under notice, and that "he knew nothing about it." With regard to the *green*, *red*, and *yellow* enamelled rust-proof hooks, J. E. Wilkes states that "it is a well-known fact that *red*, *green*, *blue*, and *yellow* coloured hooks were first introduced by Mr. Charles Court eight years ago." I will forward to you two guineas if J. E. Wilkes, Mr. Court, or anyone else, will submit to you a sample of green enamelled hooks similar to those I sent to you a fortnight ago for your notice, and at your request; or if they will show an invoice where they have sold such hooks prior to this date. Money to be handed over by you to any charitable institution connected with fishing you may think proper to name, on condition that the other party will send you a like amount for the same purpose if they fail to prove their ever having sold or made them, as stated by J. E. Wilkes. If these hooks have been in the market for eight years it is easy of proof; certainly no single sample was exhibited at the "Fisheries" last year. If your paper circulated in Redditch only it would not be necessary to reply to anything John Elias Wilkes may have to say; but the Gazette goes far and wide among sportsmen and business men, with whom all men are equal until they are known. To give a weight to his letter it would not (in your columns) otherwise possess, John E. Wilkes signs himself secretary of the *Piscatorial Society*. This Piscatorial Society to which he signs himself *secretary* is not a fishing society at all, but simply a cheap railway ticket society—the class of clubs so often denounced in your columns. The members pay a shilling a year, part of which goes to pay John E. Wilkes; the remainder, I believe, is given away, as they have no water and no expenses, except the "secretary," who is in no way connected with the fishing tackle trade, either as maker or seller, and, as a fisherman, never wetted a line in his life. One of the members of this "Piscatorial Society" told me the other day that he never fished, but he bought a shilling ticket and a sixpenny walking-stick rod, and with these he could ride to any of the fishing stations at the reduced rates, and it paid him very well. If John E. Wilkes will find some respectable person who will be responsible for what he (Wilkes) says I shall be willing to talk to him; otherwise, as the line has to be drawn somewhere, with myself it must be drawn at John E. Wilkes, secretary of the Redditch "Piscatorial Society." Trusting to your sense of fairness to print this, —I am, &c., William Guise.

Redditch, Sept. 8th.

[This correspondence is closed.—Ed.]

### GOOD NEWS FROM BUXTON.

Sir,—My attention has been directed to a paragraph in the columns of last Saturday's Fishing Gazette relative to the condition of the Wye, near to Buxton. Will you allow me to state that the Buxton Local Board are busily engaged upon the construction of sewage disposal works in Ashwood, and that in the course of six weeks we trust the sewage treatment will be in full operation under a scheme propounded by Dr. Thresh and upon plans approved by the Local Government Board. The scheme has also been laid before Alan Bagot, Esq., C.E., the consulting engineer of the Trent Fishery Board, who last year held an inquiry at Buxton. Unfortunately, the work was let in the first instance to a contractor who most shamefully delayed it, otherwise the treatment of the sewage would have been in operation two months ago. We have been obliged, on account of the delay, to take the work in our own hands, and it is now being proceeded with rapidly. I trust, and have no doubt, that if your correspondent again visits Buxton, he will find the stream restored to its original purity and brightness.—I am, &c.,

Jos. Hague,
Assoc.M.Inst., C.E., Engineer of the Works.

Buxton, Derbyshire, Sept. 6.

### GOOD SPORT AT WALTON-ON-THAMES.

Sir,—I fished on the 8th and 9th inst. at Walton-on-Thames, with old George Hone, and caught nine dozen roach and dace, seventeen bream, two chub (1lb. and 2lb.), two barbel (2lb. and 4lb.), one perch (½lb.), and a beautiful Thames trout (6lb).—I am, &c., Alfred Mackrill.

Tenby Lodge, Kingston-hill, Surrey, Sept. 9.

### THE EXE.

Sir,—I wonder whether your correspondent, J. A. Kelly, could give me any idea as to how they are getting on with the new salmon pass over St. James's Weir, commonly called Salmon Pool Weir? As an "Ex-Conservator of the river Exe," I feel interested, and being well known to J. A. K., no doubt he will reply.—I am, &c.,

Frank Gosden,
Strathfieldsaye. Fish Culturist to his Grace the Duke of Wellington.

### A 15lb. SALMON ON DACE TACKLE.

Sir,—As a bit of fishing news, I send you the following account of landing a salmon last Wednesday, by the veteran angler, Frank West (my father). We were fishing a place in the Donnington Park water, near Derby, a noted barbel swim, and as we could not get them to bite, the old gentleman said he would try dace fishing, and put on *a dace tackle, with drawn gut, and a No. 8 hook.* He had not been fishing many minutes when he hooked a good fish which he thought was a barbel, and, as he appeared to come up easily, he at once shouted for me to come and land him; but as soon as he brought the fish up, and he saw me, he made off at once, and flew out of the water three or four yards, when we saw he was a very fine salmon. "Oh! my poor dace tackle," says the guv'nor. "Be careful," says I, "we shall land him yet." With that, the fish ran back again into the hole where he was hooked, and sulked for half an hour; then he made a rush across the river to a sunken tree that lies straight down the river, with its roots uppermost, and, it being impossible to stop him, he went right round the end, and stayed about in the middle of it; then the float got fast on a bough, and we thought he was gone. I took possession of the rod, and, going a good way up the river, managed to set it at liberty; then I ran down again, keeping my rod well up, I got the line over the bottom-end of the tree, and putting a little pressure on, I got the fish to move down stream 40 yards below, and the guv'nor came and gaffed him, after an exciting struggle of nearly an hour: he just scaled 15lb. A most wonderful performance, considering the tackle. This makes four salmon this season to him, the largest 18lb., and three to me, the heaviest 21lb., which I hooked and landed myself. As we fish an eight mile stretch of water, I can send you some news about angling, if acceptable. One of my friends got a barbel next day, in the same length, 6lb., and another six nice fish on Saturday.—I am, &c.,

Albert West.

[This is certainly a feat of which any "veteran angler" might well be proud. It was probably Mr. West's experience, gained from playing heavy barbel, which enabled him, with a single tiny hook and drawn gut, to keep touch of a 15lb. salmon.—Ed.]

### FISHING AT FOLKESTONE.

Sir,—If "J." will try the small river that runs by Smeeth, he will find very good roach fishing above the mill, the fish running from 6oz. to 1lb.; very seldom under the former size. He should be careful not to trespass on the preserved water above; but four years ago, when I fished there, there was no hindrance to fishing the mill pool. There is a comfortable inn at Smeeth. I once killed 25lb. in a short day on this water.—C. F. W.

### THE WAVENEY AND OULTON FISHERIES' PROTECTION SOCIETY.

On Thursday afternoon the annual general meeting of this society was held at the Suffolk Hotel, W. L. Everett, Esq., presiding. The financial statement for the year ending the 6th of July showed—total receipts, £123 10s. 8d.; disbursements, £77 15s. 5d., leaving a balance of £45 15s. 3d. The chairman proposed the adoption of the report, and said, with regard to the finances, he regretted the Lowestoft residents did not sufficiently support the society. Last year Beccles subscribed £16 11s. 3d., and this year £39 19s. 6d., being an increase of £23 19s. 3d.; whereas Lowestoft gave last year £26 9s., and this year only £27 2s. 7d., being an increase of only 13s. 7d. The society had a great area of water to preserve, and unless lodging-house-keepers and hotel-keepers contributed, the society must abandon the preservation of Oulton Broad. The Broad attracted a great number of visitors, and therefore the angling on the Broad was a great benefit to the town of Lowestoft. The society had only £45 in hand to carry on their work during the ensuing year, which would cost between £70 and £80. The report was unanimously adopted.

### WELLINGTON ANGLING SOCIETY.

On the 7th September, we had next door to a blank, only one member weighing in—Mr. Wright, roach and dace, 1lb. 4¾oz. On the 10th, Mr. Andrews weighed in, barbel, 4lb. 13½oz. Mr. James Weare was duly elected a member. The next South London United visit will be paid to this society, on Monday, the 22nd September.—W. W. Alexander, sec., Prince George, Hill-street, Walworth.

### A FINE TROUT FROM THE CHURNET.

One of our subscribers at Leek, Mr. Albert F. Bingley, has had the good fortune to take a trout of over 5lb. in the Churnet—length, 23in., and 13½in. girth. The Churnet joins the Dove about 12 miles from Leek. It is a capital trout stream, although the fish seldom exceed 1lb. in weight, and the last "big" one was taken with a net. The oldest piscator in the place does not remember such a fish as this being taken by rod and line before. Mr. Bingley caught it with gentles.

Important Decision under the Salmon Fisheries Act.—At the Inverness circuit court, on Wednesday, Lord Mure gave decision in a case of considerable importance to the public and to proprietors of salmon fishing. Higgins, it appeared, was convicted of taking a finnock and a salmon from the river Findhorn, in March last, at a point specified as being the property of the Earl of Moray. Higgins maintained that as a member of the community of Forres, which it was stated had a charter giving the right of salmon fishing in the Findhorn to the burgesses, he was entitled to angle for fish of the salmon kind at the place in question. Mr. Mackay, advocate deputy, who appeared for the Earl of Moray, held that the burgh of Forres had not even a colourable title to the right of salmon fishing on the Findhorn, and maintained that by virtue of his title the right of fishing on the Findhorn and in the pool from which Higgins took the salmon belonged to the Earl of Moray. Lord Mure, after the case had been fully debated, recalled the conviction complained of, and found the Earl of Moray liable in the expenses, the amount of which he modified to five guineas. The case has caused much interest in the North of Scotland.

# CLUB REPORTS.

### ANCHOR AND HOPE ANGLING SOCIETY.

The trays of the above society were very poorly patronised on the 7th inst., only two members weighing in, Mr. T. Bowling, bream 2lb. 5oz. from Amberley; Mr. D. Davis, bream 6lb. 3oz., from the Medway. On the 6th inst., Mr. A. Shakel, roach 4lb. 5oz. from the Canal. A match will take place on the 21st inst., for five prizes given by Messrs. F. H. Rollings, F. Badcock, R. Farmer, D. Liston, and W. Clerke. Members are requested to attend on club night to receive particulars as to where and how it is to be fished.—D. Davis, sec.

### THE ANGLERS' ASSOCIATION, FORESTERS' HALL, CLERKENWELL-ROAD.

The monthly delegate meeting will take place on Monday evening next, Sept. 15th, at the Foresters' Hall, Clerkenwell-road, E.C., chair taken at 9 o'clock. The new instruction cards, with lists of fares and the lists of angling clubs, are now ready, and may be had on application.

### BURDETT ANGLING SOCIETY.

The following have weighed in since my last report:—On the 17th ult., Mr. Shervill, roach; Mr. Wilson, roach; Mr. Kerry, carp and rudd; Mr. Eaton, roach; Mr. De Cort, roach and dace. On the 24th ult., Mr. Stokes, roach; Mr. De Cort, roach; Mr. Eaton, roach. On the 31st ult., Mr. Shervill, roach and rudd; Mr. De Cort, roach; Mr. Wilson, rudd; Mr. Eaton, roach. On the 7th inst., Mr. Eaton, roach and chub; Mr. Herring, rudd; Mr. Shervill, rudd.—T. G. Walker.

### BIRMINGHAM AND DISTRICT AMALGAMATED ANGLING ASSOCIATION.

Knowing your generous principle at all times in publishing matters concerning angling, I beg to forward the following:—The annual contest in connection with the Highgate Angling Association (branch of the above) was held on Saturday, Sept. 6, at Fernhill Heath, Worcestershire. The weather, upon the whole, was favourable, with the wind from the south, accompanied by variable showers. The takes were fairly good, and a keen and lively interest was exhibited by the twenty competitors. We fished the customary two hours, and after the weighing was carefully gone through, the following were declared the prizetakers in the order named:—J. Bowler, F. Perry, Waite, C. Hall, W. Watkins, J. Powell, R. Gumbly, E. Workman, G. Midwinter, T. Coles, H. Garner, and J. Burnett. The prizes, thanks to the generous donors who contributed in a great measure to strengthen the list, were substantial and numerous. A novel feature in connection with the affair was a prize given by a hairdresser of this town, which consisted of a *carte blanche* check guaranteeing the holder twelve months' hair-cutting, shaving, and shampooing free of charge. It is not so much for its value as its originality that I mention it. To know that one's head can be kept cool and chin clean for 365 days without any aid from the pocket will be admitted is a consideration in these times. The referee, Mr. Field, jun., and the umpires, Messrs. Field, sen., Hands, and Hanks, discharged their respective duties in a fair and impartial manner, and gave evidence of ripened experience in such duties. After the contest was over, we adjourned to the Bull Inn and sat down to a substantial meal, served up by that worthy caterer, Mr. Cave. I should be wanting in courtesy were I not specially to mention the worthy host of the club house, Mr. Field, sen. His own personal kindness in giving a substantial prize, coupled with his instrumentality in getting others to build up the prize list, entitles him to our warmest thanks, and, in conjunction with his genial demeanour upon all occasions, stamps him truly our worthy host. The manner in which the Contest Committee carried out the arrangements reflects great credit to them for the unselfishness they displayed. I will close my letter by stating that the whole proceedings were marked by good feeling and good humour, and we returned home at 8.21 p.m., having spent a most enjoyable time, which will be regarded as a red letter day in the history of the above Association.—Thomas Coles, president.

### BRIGHTON ANGLERS' ASSOCIATION.

On Wednesday week our fourth annual outing took place at Leonardslea Park, near Horsham. After luncheon we adjourned to the cricket field, where a match took place by teams selected by Messrs. A. Dolton (secretary), and N. Clark (referee), the latter eleven winning an exciting match by one wicket, thanks to the bowling of N. Clark, who was quite a second Spofforth. Other sports took place, in which H. Inman figured prominently. At two o'clock the fishing competition took place in Mr. Hubbard's beautiful lakes, the scenery in and around the estate being one of the most charming pieces in Sussex. Inman again was well up, winning the first prize, one guinea, easily; Taylor second. Six o'clock, dinner was dished up in splendid style by host Brown (Mr. J. Saunders in the chair). After full justice had been done to the good things, songs and other toasts were indulged in. Mr. N. Clark, as referee, deserved the thanks of all present, which they unanimously voted. Other toasts followed, and at eight o'clock a return was made to Brighton. Between thirty and forty were present, amongst them being Mr. J. Walls, G. Heathorne, &c.—A. H. Dolton, Hon. Sec.

### BROMPTON ANGLING SOCIETY.

Only two members succeeded in getting fish on the 7th inst.: Mr. Burbidge, trout and chub; Mr. Dutton, bream and perch. Several other members being out. —W. Dutton, sec.

### CAVENDISH ANGLING SOCIETY.

*To the Editor of the* Fishing Gazette.

Sir,—In your issue of the 23rd inst., in the Cavendish Angling Society's report, the names of H. Reaves and C. Blackman are mentioned as being expelled from that society at a special general meeting for illegal practices. It would be as well to let your readers know how and under what circumstances they were expelled, if expulsion you can call it. Mr. Brett, the gentleman who brought the charge against Messrs. Reaves and Blackman, bet the latter 7s. 6d. to 2s. 6d. that he could not catch 4lb. of fish each Sunday for 13 Sundays, commencing June 22nd; also a level sovereign that he would not be money in at the end of that time. All went well while Mr. Blackman lost, which he did the first three Sundays; but on Sunday, the 13th July, he weighed in 8lb. of roach. This was too much, and Mr. Blackman was insulted by Mr. Brett and several other members, some of whom had similar bets on with him. He was told he must have bought them or had them given to him, as it was impossible for him to have caught them, &c. On Sunday, 20th July, Mr. Blackman weighed in 4lb. 9½oz. of bream. On Thursday, 31st July, Mr. Brett brings his charge. He tells the members of the C. A. S., from what he had heard about the roach, he felt convinced that he was being swindled, and that Mr. Reaves had caught them on the Thursday previous, and had kept them alive for Mr. Blackman to weigh in on the Sunday. He therefore employed a detective, who watched Mr. Blackman from his house, saw him meet Mr. Reaves, and followed them to Wimbledon, where, according to the detective's evidence, Mr. Blackman only caught one fish, and he weighed in four, and Mr. Reaves pulled one out on Mr. Blackman's line, and left two of his own catching on the bank, and although he did not see Mr. Blackman take them away, he must have done so and weighed them in. On this evidence Mr. Brett wanted Mr. Reaves and Mr. Blackman expelled at once, but this could only be done at a special general meeting. He, therefore, gave notice to the secretary to call a meeting in a fortnight's time. Rule 10 of the society says that the society may at any time, by giving notice to the members, convene a special general meeting upon the receipt of a written requisition signed by at least five members of the society specifying the reason of such special general meeting, and allowing at least two meeting nights between the date of the proposed meeting, which shall take place in the club room, and be strictly confined to members of the society; chair to be taken at 9.30 p.m., or as soon as 10 members are present. Thursday, the 14th August, the meeting took place, and Mr. Reaves objected to the meeting, as it had not allowed sufficient time according to rule for him to find his witnesses; but this was overruled. Mr. Reaves wished Mr. Bunn, of the Dalston Brothers (who was with Mr. Blackman on the 13th of July, and saw him catch the roach), to be called, but this was not allowed. Mr. Blackman then called Mr. Pratt, of the Queen's A. S., who was fishing next to him at Wimbledon on Sunday, the 20th, and saw Mr. Blackman catch three bream before 12 o'clock. At that time he left Wimbledon and went home to dinner; but the detective contradicted him, and said he was asleep on his box at Wimbledon from 2 till 4 o'clock, and although Mr. Pearce and Mr. Hodges, of the Queen's A. S., was called to disprove this, and gave evidence in favour of Mr. Blackman, they were laughed and jeered at, and treated in a manner that was a disgrace to any society calling themselves gentlemen and consider they rank next to the Gresham. Messrs. Reaves and Blackman were then asked to leave the room while the matter was discussed, and when they returned they were told they were expelled, and this on the sole evidence of a paid spy against that of disinterested members of other societies! This unjust verdict would have debarred Messrs. Reaves and Blackman from joining any other society; however, the Queen's A. S., well knowing how unjustly they had been dealt with, unanimously elected them into their own society.

P.S.—We should like to ask you, Mr. Editor, if it is usual to publish the names of members expelled from societies? If not, we think it shows a certain amount of malice on the part of the person who has done so, and if you would kindly give us the name of the reporter you will greatly oblige.—We are, &c.,

H. Reaves,
C. Blackman.

[It is certainly most unusual to give the names of any members who may have been expelled from a club. We are sorry to see betting introduced into an angling club in this way. It invariably leads to rows and unpleasantness.—Ed.]

### CITY OF LONDON ANGLING SOCIETY.

On the 7th inst. a few of our members met at Burnt Mill Station to compete in a pegged-down match in the River Stort. We found the little river in a much better condition than we expected, being low and bright, the weather having had but little effect upon it. Mr. Chambers won the first prize with roach and dace; Mr. Plumstead, sen., second, with roach, dace, and gudgeon; Mr. Robson third, with roach; and Mr. Nitz fourth, with roach; Messrs. Castell, W. Jones, Blackwell, and Bowyer also weighing in fish.—Cas.

### CLAPTON ANGLING SOCIETY.

The usual weekly meeting was held on Monday last, Mr. Colls in the chair, a very good muster of members and friends being present. Some capital trays of fish were exhibited, notably:—Mr. H. Short, a splendid trout from the Lea at Ware, scaling 4lb. 3¼oz.; this gentleman also had some fine roach, one scaling 1lb. 3oz.; Mr. F. Tregenza had from Staarbrook 12lb. bream, heaviest 2lb. 9oz., 5lb. roach, and 2lb. chub, and this gentleman had some fine roach and tench from Harlington; I also, fishing with Mr. Tregenza, had a good show of roach and tench from the same water; Mr. G. Colls, 7lb. 4oz. barbel and small jack from Staines. Mr. Short will undoubtedly take Mr. Chillingworth's prize of two guineas with the above handsome trout. —Henry Howse, hon. sec.

### GLOBE ANGLING SOCIETY.

On the 7th inst. Mr. H. Lake had a very nice take of roach and dace, and two small chub, making an aggregate of 11lb. 3oz., the heaviest roach scaling 1lb. 2oz. Messrs. D. Thomas and J. Brown, roach, dace, and gudgeon from the river Wey.— J. J. Holmes, sec.

### GOOD INTENT ANGLING SOCIETY.

Mr. Guntrip brought in a capital lot of rudd on the 7th inst.; Mr. Maybury, roach; Mr. Hewett, dace; Mr. Gadbury, roach and dace; Mr. Murphy, dace; Mr. Haines, carp; Mr. Phillpott, bream and roach, our trays being well filled. Our distribution of prizes will take place on Tuesday, the 23rd inst. Trusting members will send in their prizes not later than Saturday, the 20th inst., the sec. will be at the club house from 8 till 10 p.m. to receive them.—R. Murphy.

### GRANGE ANGLING SOCIETY.

The usual fortnightly meeting of the above society was held on Thursday last at the Earl of Derby, Grange-road, Bermondsey, about 25 members putting in an appearance. The usual business having been transacted, and two new honorary members elected, the secretary (pro tem.) notified to those present that the following prizes had been promised for the month of September, viz.:—A cup given by Mr. Hosken (president) for the first heaviest weight of all fish except jack; a prize given by Mr. Colwell for the second heaviest weight of all fish except jack; a prize given by Mr. W. J. Rich for the third heaviest weight of all fish except jack; also a prize given by Mr. Gibbons for the heaviest weight of perch taken during the month.—Francis W. Croker, hon. sec. (pro tem.).

### GREENWICH ANGLING SOCIETY.

The usual weekly meeting of this society was held at the Prince Albert, Royal hill, Greenwich, on the 4th inst.; Mr. Young in the chair. The minutes were read and confirmed. Our trays were again completely filled by Mr. Young with barbel— two largest, 7½lb.—and a chub of 1¾lb., and by Mr. Martin with roach and dace. Two new members were elected. Some very agreeable musical selections followed, and the evening was brought to a close by a hearty vote of thanks to the chairman.— James Ware, hon. sec,, Sept. 9th.

### GREAT YARMOUTH PISCATORIAL SOCIETY.

The society, at this meeting on Tuesday, had the satisfaction of entering a 2lb. perch taken by Mr. C. K. Turpin, of Plumstead, and a number of large gudgeon and dace by a member of the Independent Society, also receiving the following subscriptions to assist the society:—Mr. Sterry, 10s. 6d.; Mr. Rivere, 5s.; Mr. Turpin, 5s.; these were duly handed and acknowledged by the treasurer pro. tem., Mr. C. K. Lamb, who is also chairman, not president, Mr. D. S. Bayfield being the president. Captain Blake, who I may tell you is the vice-commodore of the N. and S. Yacht Club, has joined us, and although much feeling has been exercised in for a pointed purpose, members are still being enrolled.—James Lark, secretary.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening, at the Masons' Hall Tavern, Masons-avenue, Basinghall-street. Mr. Crumplen presided, and there was a good attendance of members and friends. The minutes having been read and confirmed, some correspondence was read with reference to two or three pieces of water which the committee are making efforts to obtain for the use of the members. Captain Alfred reported several good takes by members during the past week, and also gave an account of the meeting of the Thames Angling Preservation Society. Members will be glad to learn that Mr. Godwin (hon. solicitor of the Gresham) has been unanimously elected a member of the committee of the Thames Angling Preservation Society. A perch competition (particulars of which will be found in the prize-list with which each member has been furnished) will take place on Tuesday next. Several gentlemen have signified their intention of competing, and a good show of fish is expected.—H.

### GOLDEN BARBEL.

During the past few weeks, the members of this society have been having some good sport at the various places they are in the habit of visiting. Mr. Chapman has had some nice bream from the Welsh Harp, some of them going over 3lb. each. Mr. Green has been well among the roach and dace, in the Thames and the Avon; Mr.

J. Stanton has also worked well amongst the same class of fish. Mr. Hale, from the Thames, Lea, and Avon, has not been lazy. Our esteemed member, Mr. Lawford, has found a very nice show from a place he was in the habit of visiting for other purposes besides fishing, which has now caused him to enter into that partnership which is generally supposed to last through all "the ups and downs of life," and he has uttered those most important words, in reply to a certain gentleman, "I will." The members of this society and myself wish him and his partner all the "Health, wealth, and happiness this world can give them." A competition among the members will take place in "Quin Ait," on the 14th inst., for a series of prizes. A smoking concert among some of Mr. Lerner's friends, will take place on September 16th, to which all members and their friends are invited.—Pixie,

### HIGHBURY ANGLING SOCIETY.

The annual dinner of this flourishing society took place at the Pied Bull, St. Margaret's, Herts, on Saturday, the 30th ult., when a large gathering of members and friends sat down to a most excellent *menu*, provided by host Lyndsell, to whom too much praise cannot be given for the manner in which he catered for the company. The majority of the members went down in a brake and four from their headquarters, the Plimsoll Hotel, St. Thomas's-road, Finsbury Park, the remainder of the party patronising the train from Liverpool-street. Mr. Charles Rose presided, and Mr. Devonshire occupied the vice-chair. After the removal of the cloth, the Chairman gave the usual loyal and patriotic toasts, which were in every respect duly honoured and responded to. The Vice-Chairman, in proposing the next toast on the programme, "The Anglers' Association," alluded in very eloquent terms to the good work which the executive of that body were endeavouring to carry out for the benefit of the entire angling community, and impressed upon every genuine angler the necessity of combined support. The toast was most cordially received and responded to by Mr. Frank Temple, who, in a well-chosen speech, recounted the many happy days he had spent in pursuit of legitimate angling in the Thames and other places, and fully endorsed the sentiments of the vice-chairman in wishing the Association every success. The next toast was then submitted to the company by the Chairman, viz., "Success to the Highbury Angling Society," coupling the same with the Secretary (Mr. J. E. Wheatley), and in very genial terms observed that, having had the honour of presiding over similar festive occasions for many years past, he felt bound to state that the present one greatly exceeded the pleasure he had hitherto experienced, owing to the fact that he had been chosen by the members to present to Mr. Wheatley a very handsome silver lever watch, which had been subscribed for by them in testimony of their appreciation of the manner in which he had conducted the business of the club as secretary since its formation, nearly sixteen years ago, and by whose instrumentality and exertions the society had been brought to the foremost position in which it ranked amongst those of a kindred character. The toast was most enthusiastically received and drunk with musical honours. Mr. Wheatley, in response, expressed his heartfelt thanks to the chairman and his brother members for their very handsome present, which he should value beyond anything he could say, and stated that he would always be ready and willing to promote the interest of the society to the utmost of his power. The healths of the President, Treasurer, Vice-Chairman, the Committee, Visitors, Press, &c., were afterwards given and acknowledged, and at a late hour one of the most enjoyable dinners of this society was brought to a close.—A Visitor.

### INDEPENDENT BROTHERS' ANGLING SOCIETY.

Our trays on the 31st ult. were well filled with fish of all kinds, Barbel, bream, dace, roach, jack, perch, and gudgeon, taken by Messrs. Leader, Roberts, Coomes, Clark, and Moore, and was considered by the visitors to be a handsome show of fish. —H. Moore, hon sec.

### LINCOLN ANGLING SOCIETY.

Our members were out on the 31st ult., and most of them had good shows of fish. Our return visit took place on Monday, September 8th.—H. Bingle, sec.

[Received too late for last week.—Ed.]

### LEICESTER GRANBY ANGLING CLUB.

The annual fishing contest of the members of this club was held on Thursday in the waters near Brooksby Station, by the kind permission of Mr. J. Main, of Hoby. There were upwards of twenty competitors. Fishing was commenced at half-past two, and terminated at half-past six. The awards comprised a fishing-rod, silver-plated flask, meerschaum pipe and case, pair of carvers, sportsman's knife, together with money prizes. The following were the successful competitors :—1st, H. Jarvis ; 2nd, E. Barrett ; 3rd, D. W. Humphries ; 4th, G. Wells ; 5th, J. Dunkley ; 6th, C. Hollyoak ; 7th, E. Winterton ; 8th, J. Rebaids. The party reached home about eight o'clock, after spending a most enjoyable afternoon.

### NORFOLK ANGLING SOCIETY.

On the 10th the members present were treated to a very fine show of fish, which were greatly admired by them all. Mr. Foulger, roach, dace, perch, and gudgeon, filling two large trays ; Mr. Goldsworthy, some very fine roach (he is just commencing his old form again ; we hope to see ere long some more of his leviathan takes as of old—Come, wake up, old man !) ; Mr. Pilgrim also a pretty show of roach and dace, and a very fine flounder ; Mr. Galloway roach and dace in abundance (he must have taken some of his own stuff down with him and caught them napping). The first of the monthly suppers will take place on Wednesday, 24th, at 8 sharp, when we hope to see a good muster of members and friends.

### PECKHAM BROTHERS ANGLING SOCIETY.

The trays of this club were well filled on the 7th, Mr. J. Gafney having bream and barbel, the two largest fish going over 7lb. ; Mr. F. Furnes, jack ; Mr. T. Phipps, perch ; Mr. "Sloper," jack ; Mr. Page and another gentleman, rudd. The next match will be at Kingston, on the 20th. All members are requested to attend on Tuesday next, as there are several gentlemen to be proposed as members.—Gadfly.

### THE PISCATORIAL SOCIETY.

The usual weekly meeting of the above society was numerously attended at Ashley's hotel last Monday. Mr. C. C. Blundell was unanimously elected to the chair, and after the usual routine of business, the secretary (Mr. J. Lander) proceeded to read the correspondence of the society. A letter from Mr. R. S. Fennings, who is still at Ringwood, stated that the sport had, owing to the state of the river, somewhat fallen off ; he, however, intended staying there for another fortnight, and if he had not too much depleted the waters of the Avon of roach, he hoped to become a prominent competitor in the forthcoming roach competition fixed for the 22nd inst. Mr. Fennings' weights since the last meeting were : Sept. 3rd, 46lb. 8oz., roach—largest 1lb. 8oz. ; Sept. 5th, 21lb. 7oz., and on Monday, Sept. 8th, 9lb. 8oz roach ; 14oz. dace, and a grayling 1lb. 10oz. Mr. Goodger read a letter of thanks which he had received from the secretary of the Orthopædic Hospital for basket of roach he had sent there one day last week, and said that he understood the patients would fully appreciate a further supply of these delicacies. As Monday was the fixture for the annual club competition, for which prizes were offered to the value of £5 8s. 6d., several members during the evening weighed in their fish. Amongst these were Mr. J. Huggett, 2 chub, 3lb. 12oz.; Mr. E. Foreman, 2 chub, 3lb. 9oz. ; Mr. Blamey 2 chub, 2lb. 4½oz. The full particulars and result of this competition will be announced next week. Mr. R. B. Marston then proposed Mr. J. Hodson, of Manchester, who was present as a visitor, as a member of the society, and the nomination was seconded by Dr. Brunton. Mr. J. Lander handed round for inspection one of Slater's (Newark) patent, silent check combination winches ; several of those present were fully acquainted with the usefulness of Mr. Slater's invention. Dr. Brunton was then called on by the chairman to give the society the benefit of his angling experiences during his recent visit to Scotland, and the Doctor related in his usual graphic manner, how he had "astonished the natives" by fishing on the Clyde coast from a moored boat with ordinary ledger tackle ; he only fished on three occasions for two hours in the evening, yet his style of fishing proved so effective, that over 120 codling, pollack, gurnard, plaice, &c., fell to his one rod. The bait he used was mussels, which he succeeded in hardening by soaking in salted water for twenty-four hours previous to using. After spending a few days on the Clyde Coast, he proceeded to his native home, and fished in his native lake ; although the weather was stormy during his visit, and the wind N.E. for two days, his baskets were by no means small, amounting to 76 trout on the first day, 108 on the second, and 32 on the third ; most of these fish were the ordinary four-to-the-pound size, with here and there a pounder to relieve the monotony. A curious fact about this lake was, that a few years ago it was stocked with 6,000 *Salmo fontinalis*. On the following year the Doctor captured a brace, but since then these fish had entirely disappeared : the more remarkable as there was not any suitable outlet from the lake for them to take advantage of. He then visited the Esk for salmon, with some friends whom, the Doctor regretted, occasionally used the "gardiner fly" on small Stewart tackle. The joint bag was four fish, ranging from 10½lb. to 16½lb. Dr. Brunton was not personally successful in hooking these fish, but the able manner in which he used his bayonet-pointed gaff in perilous positions was fully appreciated by his friends. Mr. R. B. Marston's experience fully bore out Dr. Brunton's observation concerning the *Salmo fontinalis*, and he said that there had been thousands of pounds spent in unsuccessful endeavours to introduce this fish into the rivers and lakes of England and Scotland. Rev. George Sumner, whose remarks relating to "striking from the winch," have been somewhat misinterpreted, explains that, in his opinion, whilst fly-fishing, the line should never be held with the hand, nor between the rod and the hand, and after striking a fish, the line should only be controlled through the winch. M. C. R. Blundell had returned from his holiday in Scotland, and gave an interesting account of his adventures and sport, which were principally confined to the neighbourhood of Inveroron. In the river Orchy he killed his first salmon, 13lb.; in Loch Ba, in 2 days, 7½ dozen trout ; in Loch Doghard, one day, 3 dozen trout, and in Loch Tulla two perch of 1lb. each. The usual toast, and a vote of thanks to the chairman brought a very pleasant evening to a close. Pro T. H.

### ROYAL GEORGE ANGLING SOCIETY.

Notwithstanding the rough weather, the majority of our members were out on the 7th inst. Messrs. Hughes, Longland, Angus, Wood, Cromer, Rider, and Palmer had some roach from the Upper Thames. In the tidal waters, Messrs. Guynan and Carter braved the elements in an open boat, at Twickenham, and were carried away by stress of weather with the loss of a mast (that is to say, a punt pole). After suffering great privations, they were picked up in an extreme state of thirst by a friendly craft. The former gentleman heads the list for the day with 7lb. 6oz., followed by Mr. Hewitt with 6lb. 13oz. Messrs. Trotter and Sinclair weighed in fish from Richmond. The other shipwrecked mariner brought in 4lb. 6oz.—C. W. W. Bernhardt, sec.

### ST. JOHN'S ANGLING SOCIETY.

The annual dinner of the above society was held on August 31st, at The Black Dog Inn, Bury, near Amberley, when a number of members and friends sat down to what was declared on all sides to be a thoroughly good dinner, our worthy host, Mr. Henley, doing everything in his power to make the affair a complete success, everything being of the best description and served up in the best style. After the usual toasts, an adjournment was made to the neighbouring hills, where we were well rewarded for the climb by the panorama of beautiful scenery spread out before us, just getting back in time for a good tea, which finished up a thoroughly enjoyable day. Saved from a blank on the 7th by Mr. Dawes, with a nice show of dace, most of the members complaining of there being too much fresh air about.—W. Stevens, sec.

### STOKE NEWINGTON ANGLING SOCIETY.

On the 7th inst., nine members of the above competed in a pegged-down match at Pulborough for three prizes in most unfavourable weather, a violent gale blowing the whole day, rendering fishing almost impossible ; but the competitors, sticking well to their task, just managed to bring it to a conclusion, the following being the result :—T. Gretton first, W. Webb second, and W. Watkins third. An error occurred in my last report as to the result of the gross weight competition. It should read—W. Robinson, 12lb. 10½lb., first ; C. F. Robinson, 12lb. 7½lb., second ; and C. Martin, 10lb. third.—T. Gretton.

### STOKE-UPON-TRENT ANGLING SOCIETY.

The second competition of the season came off in the society's waters at Haywood, on Saturday afternoon, Sept. 6th. Thirteen prizes were offered, for which 23 members competed. Haywood was reached soon after 3 p.m., when a general stampede was at once made for the water, some trying the canal and some the river. It was soon known amongst the competitors that Mr. E. Cocker, fishing the river, was at home amongst the roach, that gentleman eventually securing the 1st prize with a very nice catch. The other winners were—2nd, Mr. J. Stevenson ; 3rd, Mr. J. Bailey ; 4th, Mr. Wm. Hassall ; 5th, Mr. Wm. Evans ; 6th, Mr. J. Brooks ; 7th, Mr. J. Morgan ; 8th and 9th, Mr. Wm. Sweetnam and Mr. Hodgkinson tied ; 10th, Mr. F. Johnson ; 11th, Mr. P. Ellis ; 12th, Mr. Wm. Lea ; 13th, Mr. Bennett. The weather was miserably wet, rain falling in drenching showers, which somewhat marred the pleasures of the afternoon.—J. Hollins, hon. sec.

### WALWORTH PISCATORIALS.

The following is the result of competition, 11th September :—1st prize, Mr. F. Grigg, 35lb. 13oz. of roach ; 2nd, Mr. A. Brodie, 35lb. 2oz. of roach ; 3rd, Mr. Groumett, 33lb. 14oz. of barbel and dace ; 4th, Mr. Gilbert, 19lb 14oz., of barbel, chub, and dace ; 5th, Mr. A. F. Russell, 19lb. 3oz. of barbel, dace, and roach ; 6th, Mr. Hibble, 18lb. 8½oz. of dace and roach, with H. Mansell ; 7th, Mr. Piolaine, 14lb. 15oz. of barbel and dace ; 8th, Mr. Bedford, 14lb. 12oz. of roach ; 9th, Mr. A. J. Russell, 13lb. 6oz. of roach and dace ; 10th, Mr. H. Bayley, 12lb. 12¾oz. of dace and roach ; 11th, Mr. Grocutt, 11lb. 9oz. dace ; 12th, Mr. Delhaye, sen., 10lb. 5oz. of roach and dace ; 13th, Mr. Mawby, 10lb. 5oz. of roach ; 14th, Mr. H. Dale, 6lb. 9½oz. of dace ; 15th, Mr. Irons, 5lb. 14½oz. of roach ; 16th, Mr. Hawkridge, 2lb. 6oz. of bream ; 17th, Mr. Griffin, 1lb. 6oz. of bream ; 18th, Mr. Delhaye, jun., 1lb. 3¾oz. of bream. The gross weight told up to 268lb. 9½oz. This is a red-letter day in this society. There were two specimen chub, one roach, one bream, and two barbel.—Pixie.

The Editor authorises me to say that the printer is alone responsible for the absurd report last week (23/8/84). The printer took the numerals showing the order of the prize winners, 1, 2, 3, &c., as being the number of fish taken. The Editor says the only excuse the printer has is that he has no idea what weight roach grow to, and it would not surprise him to hear "that they grow to over 7lb."—Pixie (pro J. B.)

### WESTBOURNE PARK PISCATORIAL SOCIETY.

The members of the above held a smoking concert at their club-house on Tuesday evening last, when several visitors were present. After a few songs, Mr. Geo. Evans, the chairman, rose and said he had a very pleasant duty to perform, which was to present a handsome diamond ring to the hon. secretary, Mr. H. Thompson, in acknowledgment of the many services he had rendered the society, and also as a mark of esteem from its numerous members, all of whom had contributed an equal sum towards its purchase. The secretary's health was then drank with musical honours. After a short interval, Mr. Thompson rose, and in a neat, well-worded speech, thanked the members for their valued present, and in doing so drank to their health. The remainder of the evening was spent in the usual manner. Mr. Adeane was in the vice-chair, and several members weighed in fish last week, those most worthy of notice being Mr. Buttery, with barbel from the Thames, and Mr. Archer, who had an eel from the Kenneth, taken with the rod and line, which weighed, when caught, 4lb. 8oz.—G. Archer.

## THE EYED-HOOK THIRTY-FIVE YEARS AGO.

AN Irish correspondent writes to us from Mallow as follows :—

"SIR,—As anything connected with the early history of eyed-hooks may interest you, I send you the inclosed fly, which I got from Mr. Hewett Wheatley about twenty-eight years ago. He strongly advocated the use of eyed-hooks, and, as well as I remember, he had most of his trout flies on them. He tied his own flies, but I cannot say where he got the hooks for them. He wrote an interesting book on angling called 'The Rod and Line.' I read it, but I cannot remember whether he referred to eyed-hooks in it. I believe it is out of print, but I intend to get a loan of a copy if I can. I think it was published by Longmans and Co. Mr. Wheatley lived at a place called Eigne, in Herefordshire ; he afterwards lived in Ireland ; he died some years ago. Mr. Hall and Mr. Bankart might like to see the fly inclosed, so you can let them have it, but please return it to me when you have done with it. If you think it worth while to publish anything I have mentioned you can do so. Mr. Wheatley was in the habit of getting fishing-rods from Copham, of Taunton. If Copham is still alive he might be able to tell where Mr. Wheatley got his hooks made."

Some months ago, Mr. W. H. Aldam wrote to us to say that a friend of his in the North had discovered the original inventor of the eyed-hook for flies, and referred to Wheatley, giving a quotation from his book. We got a copy of "The Rod and Line," the sub-title of which is "Practical Hints and Dainty Devices for the Sure Taking of Trout, Grayling, &c., by Hewett Wheatley, Esq., Senior Angler." London : Longmans, 1849. This most interesting little work had been recommended to us by Mr. Francis some time before. It is illustrated with some coloured plates of spinning baits and flies, most of the latter, including those almost midge size, being on eyed-hooks. Here is his dressing of a very favourite North-country fly :—Body : Orange floss silk. Hackle : Small speckled brown partridge ; wrapped only three times round at most ; No. 13 hook.

Although we have headed this note "The Eyed-Hook Thirty-five Years Ago," it will be seen from the following quotation from Wheatley's book that he must have used them long before 1849, when the book appeared. He says, p. 74 :—

"I generally use them made on hooks having a fine eye at the extremity of the shank ; in fact, I very commonly make all flies, large and small, on similar hooks—a practice which will doubtless be much scouted by many anglers ; nor shall I attempt to persuade anyone to adopt it, though it possesses the advantage of enabling me to use either fine or thick gut with the same fly. It is far more durable, for when the fly is tied on gut, the gut is very soon so worn as to be unsafe, and the fly consequently valueless. Besides, in an ordinary-sized round snuff-box I carry to the river three hundred flies—a compression of the material with which I am well pleased, more especially as each is kept separate and available without trouble.

"Should the good-natured fishing public ask for a second edition, I may perhaps give more details on this subject, for it is somewhat of a pet, though not exactly the child of our old age ; rather the mistress of our youth and the friend of our riper years, combining, as Keats most correctly sings,

'The bread of friendship and the wine of love,'

exhilaration and sustenance, the excitement of sport, and its fruits."

It will be seen that Mr. Wheatley covers the whole ground. His reasons for using the eyed-hook are just those which lead so many fly-fishers of to-day to use them, and if he were to rise from his grave and see the worthy secretary of the Hungerford Club pull out an "ordinary-sized round snuff-box," and fit up one of the dozens of flies on eyed-hooks which it contains he would doubtless think he had not written in vain. And yet it is perfectly certain that the thing has been invented over again, and perhaps improved upon, though, in face of the fly of Wheatley's make now before us with its fine slightly turned-up eye, we think both Mr. Hall and Mr. Bankart will admit the improvement is not great. Unfortunately, no second edition of "The Rod and Line" ever appeared, and this is the more surprising as it is one of the best angling books ever written. We must give our readers some extracts from its always practical and often sarcastic pages. Here is a statement we fully endorse : "I esteem the colour of the fly's body of far greater importance than that of the wings."

[We believe Mr. Mudford, of Taunton, bought the stock of Copham rods. Perhaps he can tell us what became of C. ? We know anglers who still think their "Copham" perfection.—ED.]

NOT A SINGLE BITE.—"I haven't had a single bite since I've been here," pleaded a chap who was caught fishing on a posted stream. "Well, you'll get one now," replied the irate farmer. "Here, Tige—Tige—" The angler broke a ten-dollar gate getting away.

## EASTERN COUNTIES ANGLING SOCIETY, GREAT YARMOUTH.

A meeting of this society was held on Monday evening, the 8th inst., at 9 p.m., at Mr. Seaman's, the Duke's Head Hotel, Quay. The chair was occupied by the president, Dr. Mitchell. The meeting was an adjourned one, called together for the purpose of making re-arrangements towards settling the unfinished match, the weather having defeated the plans so carefully drawn out for the management of the angling tournament, which was to have been fished on the 4th inst. at Ormesby Broad. Unsatisfactory as the conclusion was, too much praise cannot be bestowed upon the competitors, twenty-three in number, who endeavoured, in the face of a howling north-easterly gale, in a drenching rain, to carry out the contest in as strict accordance with the arrangements previously made as possible. After a two-hours' struggle, however, they were obliged to acknowledge the elements their victors, and had to retire as best they could. It has been arranged to finish the contest on Thursday, the 11th inst. A proposition was put to the meeting and carried that a committee, consisting of the president, vice-president, and the acting secretary (Mr. Seaman), should meet on the morning of every competition, and were empowered, in the event of the weather being very unfavourable, to postpone the match about to be fished. To the prizes as already advertised to be contested for, three more have been added, presented by Mr. Freeman, the President, and Mr. Seaman. Ten gentlemen were proposed as members. They will be balloted for at the next general meeeting, which will be held at the Duke's Head on Tuesday, the 16th inst., and, if found eligible, will be admitted. According to instructions given him, Mr. Lee, the honorary secretary, wrote Sir Edmund Lacon, Bart., M.P., and Edward Birkbeck, Esq., M.P., asking them whether they would become members of the society. In reply, the following letters were received from those gentlemen by him :—

"Ormesby House, 8th September, 1884.

"DEAR SIR,—I shall be happy to become a member of the Eastern Counties Angling Society, if you will propose me. By your rules I see my payment will be 10s. 6d. If I am correct I will send you the amount.—Yours truly,

"Mr. John Lee. "(Signed) EDMUND H. K. LACON."

"At Sea. Yacht *Ptarmigan*, 5th September, 1884.

"DEAR SIR,—I have received your letter of the 30th ult., which has been forwarded to me from Norfolk ; and on my return I will read the rules of your society, which have *not* been forwarded.—Yours faithfully, EDWARD BIRKBECK."

"John Lee, Esq.

Mr. Lee explained to the meeting that the book of rules was not forwarded for some days after the letter, because of its being in the hands of the publishers for correction ; but that now, as Mr. Birkbeck was in possession of the rules, a more favourable letter may be expected from him in a few days. In addition to that of Sir Edmund Lacon, Bart., we notice amongst others who have been proposed for membership the names of T. P. Burroughes, Esq., Captain R. W. Styles, C.M.R., John Etheridge, Esq., Terry Hurst, Esq., &c.

TO SALMON ANGLERS AND OTHERS.

JAPANNED FLY-MAKER'S BOX, complete Four trays, divided and sub-divided, with bottom space. To hold and preserve collection of feathers, hackles, hooks, and all requisite materials : Card board partitioned Box for seal's furs in lid, as supplied to Mr. Kelson.

18 inch by 12 by 10½ high, price £3 10s.
12 inch by 9 by 8 high, price £2 10s

ALL ORDERS TO BE ACCOMPANIED BY A REMITTANCE.

W. ROLLASON,
12, Kirby-street, Hatton-garden,
London.

FIRST CLASS ONLY
TRADE MARK

SALMON, COD, CONGER, PIKE, TROUT.—These noted FISHING LINES, in 16-plait and Cabled, we spin direct from the raw material. Black Prince and Enamel Brown, expressly for spinning, trolling, and mahseer fishing. Double and Single Taper Salmon and Trout Lines, for fine cast, no splash, as used and recommended by Editor of "Field," "Rod," in India, and Officers of the English and Indian Armies. For samples and catalogue address, enclosing two stamps,
COTTON TWINE SPINNING COMPANY, Manchester,

THE
GREAT REMEDY

For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. Prevents and Quickly Relieves or Cures the worst form of TYPHUS, SCARLET, JUNGLE, and other FEVERS, PRICKLY HEAT, SMALL POX, MEASLES, ERUPTIVE or SKIN COMPLAINTS, and various other altered CONDITIONS of the BLOOD.

"It
'SAVED MY LIFE,'
for the Fever had obtained a strong hold on me. In a few days I was quite well."—Extract from letter of C. Fitzgerald, Esq., formerly Correspondent of the MANCHESTER GUARDIAN in Albania, referring to

D. SLATER,
8 and 9, PORTLAND STREET, NEWARK-ON-TRENT.

Awarded Five Prize Medals and Diplomas.

Also two special money prizes, value £17 10s. for bottom fishing appliances, comprising excellence with mininum of cost.

Inventor, Maker, and Patentee, of the Perfect Combination Reels, suitable for Salmon, Trout, Pike, and all kinds of bottom fishing. Price, with Check, 2½in., 10s. 6d. ; 3in., 11s. 6d. ; 3½in., 12s. 6d. ; 4in., 14s. 6d. ; 4½in., 15s. ; 5in., 16s. 6d.

FISHING GAZETTE, Feb. 16th, 1884.—"I used Mr. Slater's New Combination Nottingham Winch for the first time, and am perfectly delighted with it ; it is the perfection of a winch."—R. B. MARSTON, Esq.

Complete Outfits for Bottom Fishing, 10s. 6d. Very Superior ditto, 15s.

Very Superior Outfit for Pike and Bottom Fishing including Slater's Patent Combination Reel, 21s.

Nottingham Rods for Pike, Roach, Bream, or Barbel, 4s. 6d., 5s. 6d., 6s. 6d., 7s. 8d., and 8s. 6d., warranted perfect action and superior finish.

Superior Star-back Reels, 3in., 2s. 6d. ; 3½in., 3s. ; 4in., 3s. 6d. ; 4½in., 4s. 6d. ; 5in., 5s. 6d. Post free.

Very Superior Greenheart Fly Rods, perfect action and finish, in partition case ; price 10s. 6d. each. See FISHING GAZETTE, August 2nd, 1884.

Roach and Chub Silk Lines, 80 yards, 1s. 2d. ; Pike, 2s., 2s. 3d., very strong, 2s. 6d. ; Superior Plaited, 1s. per score yards. All kinds of Pike Tackle, Gimp Traces, or Gut, at the lowest possible price.

Braided Waterproof Silk Lines, equal in every way to the Americans, 1d. per yard. Samples sent per post, free. Price list, to any address, post free.

RIVER COLNE.

TWO RODS TO LET, on one and a half miles of water ; half an hour from town ; from 25th December, 1884, to December 25th, 1885. Trout. Price £25 each per annum.—Apply to V. E., 18, Milton-street, Dorset-square.

Price 2s. 6d., post free 2s. 9d.

BOWLKER'S ART OF ANGLING. By CHAS. BOWLKER, of Ludlow. Containing List of Flies, Directions for Fly Fishing, Trolling, Making Artificial Flies, &c. ; with a List of the most celebrated Fishing Stations in North Wales, and Coloured Plate of Flies.

Published and Sold by G. WOOLLEY (Late Jones), Ludlow, Shropshire.

AS HEAD-WATER KEEPER or single-handed.—Advertiser, shortly disengaged, desires SITUATION as above. Life-long experience of all kinds of fresh-water fishing and fish-culture ; thoroughly practical ; last three seasons on a famous trout stream ; first-class references ; wages moderate ; permanency chiefly sought.—Address, RIVER KEEPER, 6, Jewry-street, Winchester.

RINGWOOD SALMON FISHERY.—Trout, Grayling, Pike, Perch, &c. Daily Tickets, 5s. each.—C. WARD, White Hart Hotel, Ringwood.

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, s 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and CO., the Proprietors, 188, Fleet Street, E.C.

# The Fishing Gazette.

SATURDAY, SEPTEMBER 20, 1884.

## BLACK BASS FOR THE NATIONAL FISH CULTURE ASSOCIATION.

AT the last meeting of the Aquarium Sub-Committee of the above Association, the Marquis of Exeter stated that he was sending Mr. Silk to Canada for more black bass, and he thought the Committee might like to know this. Mr. R. B. Marston said it was an opportunity they ought not to lose, and he had much pleasure in proposing that they accept the kind offer of Lord Exeter. It was finally decided that the Society would take a number of the fish.

Gentlemen or angling clubs wanting black bass should write to Mr. W. Oldham Chambers, Secretary of the National Fish Culture Association, The Health Exhibition, South Kensington. The aquarium at the Health Exhibition, which is under the care of the above Association, will amply repay a visit.

## THE TROUT STREAMS OF NORTH DEVON.—III.

By HELWR.

BEFORE leaving Hawkridge, and conducting the reader to fresh pastures, I must mention that I have fished the waters in that neighbourhood several times lately, not, of course, from any desire for selfish gratification, but to fit myself to efficiently discharge my task of instructing the readers of the FISHING GAZETTE. To my surprise I found the fish larger than I have usually caught them there. On one occasion I killed twenty weighing 6lb., on another twelve weighing 3½lb., and on a third nineteen scaling nearly 6lb. I took several ½-pounders, and few less than the very respectable weight (for the district) of a ¼lb. A friend killed a splendid fish of exactly 10oz., and we both used the fly, and the fly only. We found the March brown, though late, decidedly the favourite.

The portion of the Barle adjacent to Hawkridge[*] is now very accessible for bank fishing, as the trees and bushes have been recently cut down, and fish are very plentiful indeed.

Simonsbath is the place I shall next look at as a very nice place for an angler to put up at for a week or two. This pretty village is 12 miles from South Molton, and the length of the drive therefrom will be somewhat atoned for by the beauty and wildness of the scenery displayed before the eyes of the traveller *en route.* Upon arriving at South Molton Station an omnibus will take one to The George ; here Mr. Kelland has plenty of horses and vehicles to transport the angler to Simonsbath or elsewhere.

There is only one inn at Simonsbath, but it is commodious and comfortable, with but one drawback. The owner of the inn, and of all the wide tract of Exmoor, Mr. Knight, C.B., M.P., does not allow beer or spirits to be sold ; wine is kept, but anything further must be provided by those requiring it. It will be necessary to write and inquire if they are full before venturing upon an invasion. Simonsbath is on the Barle, and not far from the upper waters of the Exe. Permission to fish must be obtained from Mr. Knight, whose private address in town I do not feel at liberty to give ; but a letter addressed "House of Commons," or Simonsbath, will find him. I do not think there is any fear of a refusal from this gentleman.

Mr. Knight's portion of the Barle is about 6 miles long ; I mean, of course, that six miles is the length of fishable water, for it needs not to take into account the river up at its very source. Before Landacre Bridge, the bottom boundary, is reached two or three small tributary streams will be met with, and these lesser streams are more esteemed by local anglers than the large river. My own experience bears out the opinion of these sportsmen.

When I give Landacre Bridge as the extremity of Mr. Knight's water, I am speaking rather roughly, for it really terminates a few hundred yards before that celebrated landmark is reached ; and it is important that persons fishing with Squire Knight's ticket should be careful not to go nearer the bridge than that permit allows, because the persons claiming the portion of the Barle below that point, and all through the Manor of Withypool, are *not* celebrated either for courtesy or consideration towards anglers so transgressing even in ignorance. Fortunately, the line of demarkation, once pointed out, cannot be missed. Fishing down stream from Simonsbath, just before Landacre Bridge comes in sight, we find a stream coming into the Barle from the right, or south-west ; this is Sherdon Brook, and below this junction we must not go. The brook is full of good trout, and it is highly recommended for 3 or 4 miles up when there is plenty of water.

About a hundred yards of the bottom of Sherdon Brook is claimed by the gentlemen having the sporting rights over the Manor of Withypool, so, in order to avoid possible unpleasantness, the angler desirous of ascending this charming stream had better allow his flies to dry in the breeze while he walks past the debateable ground.

The Exe lies about two miles N.N.E. of Simonsbath, and belongs to Mr. Knight for some miles downwards from its source. I think the angler may safely venture to follow the river without so carefully noting the boundary as he does in the other river.

About six miles down the Exe, measuring the distance as the stream flows, we come to Exford, which is the next "point of vantage" I shall discuss.

Exford is nine miles from Dulverton, from which place it can be reached by conveyance.

The White Horse hotel at Exford is pleasantly situated, facing the river, being divided therefrom by a broad road. The angler staying here has thus the pleasure of having the water constantly before his eyes and sounding in his ears. After the evening meal, what more pleasant than lounging on the bridge, or sitting on the parapet, with the "evening incense" in full blast? Should the scene be illuminated by a moon, surely the angler—whether fisherman only, "piscatorial preacher," or a cross between the two—will derive inspiration that will nerve him to fresh efforts in the future. I am not aware of any portion of the Exe above the bridge where Mr. Knight's ticket will not be available, with the exception of a short length belonging to my friend, Mr. S. Moore. This good man cares not who fishes his water. Below the bridge I believe the water is considered free fishing. Mr. King would explain fully to anyone staying in the hotel.

The valley of the Exe is more beautiful and romantic than even that of the far-famed Barle, rushing as it does between precipitous tree-clad heights ; and when we get nearly down to the junction of the two rivers below Dulverton the prospect is indeed noble. The upper portion of the Exe—I mean that within reach of Exford—is narrower than that portion of the Barle running parallel to it, say, at Landacre ; and it is, therefore, more important when fishing this stream to have plenty of water than when fishing the other. For three or four months this summer this part of the river has been almost unfishable, owing to the long drought and consequent lowness of the water. In September, when trout-fishing is almost over, the river has been in capital order, and good dishes have been killed with the fly. I consider the trout from the Exe better for the table than their brethren of the Barle ; but they do not run so large. In both these rivers, in certain states of the weather, the angler is much plagued by the parr. The little nuisances sometimes insist upon being caught, no matter how large the fly. It may be taken as a general rule that when parr sport freely trout do not.

The Exe is fishable for about four miles above Exford. Proceeding downwards seven miles (by the stream) brings us to Winsford, and seven more to Hele Bridge, near Dulverton, of both of which places more anon.

Three or four miles north of Exford both the Oare and Horner streams rise. The latter would be more conveniently worked from Porlock. The former runs through the property of Mr. N. Snow, M.F.H., and is a particularly good fishing stream, being *full* of good fish.

Presuming Mr. Snow's permission to be obtained—which is not very difficult, for he is a kind, courteous sportsman—the angler will have capital sport in this stream, as regards number, for a creelful will not be out of the way. The difficulty of catching these fish will not be great, the ordinary rules of secretion being observed, and the operation will be fraught with particular pleasure to the man who loves wild, enchanting scenery—as what true follower of dear old Izaak does not?

It will not prove a very great day's work to walk from Exford to the water, and to fish up to Oare and back again. *Nota bene,* there is no "pub" at Oare ; fluids spirituous or vinous, together with a morsel to stay the stomach until dinner time, must accompany the angler on this trip. This is the one great drawback to the district I am treating of that has to be encountered by the angler or stag-hunter who explores these wilds—if, indeed, the absence of inns, causing as it does the absence of 'Arry and Co., is a drawback. 'Arry likes his "pubs" to present themselves frequently when he honours the country with his presence and that of his "gal," and when they are few and far between he is a *rara avis.*

I have started a favourite topic : fain would I enlarge upon 'Arry's style of fishing, and the class of fish he delights to enveigle—not trout, you bet ; but I fear I must not stray from the path I have marked out for myself.

I have finished my remarks about Exford and the streams to be worked from that centre, and now to pass on to Brendon.

Brendon is a pleasant village, rather inaccessibly situated upon the northern part of Exmoor. It contains two good inns, and several houses where nice lodgings are to be obtained. At either inn the angler can rely upon being fed and housed comfortably and cheaply. There are several ways of getting to Brendon : driving from South Molton (15 miles) or from Minehead (same distance), or from Lynton, which can either be reached by coach from Barnstaple or Minehead, or by sea from Bristol.

Of Brendon as a fishing centre I cannot speak too highly. It lies amongst scenery so wild and striking, and, withal, so unlike what one ordinarily meets with in these islands south of the Highlands, that *my* pen, at least, cannot attempt description of its charms and grandeur.

In the immediate vicinity there are no less than eight nice trout streams all flowing from the lofty moor into the sea at Lynmouth, one of them being the far-famed Badgworthy water, which Mr. Blackmore has made so well known to us in his delightful romance of "Lorna Doone" (Sampson Low and Co.). Were there no fish to be caught in this stream, the angler of imaginative mind and warm feelings would like to stray along the banks of Badgworthy with charming Lady Lorna wishing ardently all the time that he was John Ridd and her destined husband. But there are trout, loads of them ; and patience, skill, and due manipulation of a light fly-rod and corresponding tackle will lessen their number by something like thirty brace a day.

These streams are usually visited during the tourist season—that is, in the months of June, July, and August. At this time of year the days are generally sunny, and the waters low ; nevertheless, by attending to the hints given us by Cutcliffe in his admirable book entitled "Trout-fishing on Rapid Streams," republished recently by Messrs. Sampson Low and Co., the trout will be brought to bank, despite these great difficulties.

ILLEGAL FISHING IN THE ONEY.—At the Bishop's Castle Salop Petty Sessions, on Friday, before the county magistrates, Richard Smith, John Barnes, Joseph Wilcox, George Morris, and Richard Yapp, living in the vicinity of Plowden, were charged with illegally fishing in the river Oney on Sunday, August 17th. The Bench dismissed the case against Smith and Yapp, and fined Wilcox and Barnes 12s. 6d. each, and Morris 10s., including costs.

---

[*] The Rev. Rowland Newman, of Hawkridge Rectory, strictly preserves his stretch of the Barle, and we hear the open water is getting considerably over-fished, and whereas a few years ago you could easily get a 10lb. basket, now you must work very hard to get half that weight. In fact our correspondent gives rather too rosy an account of the numbers of fish in the North Devon streams.—ED.

## ODDS AND ENDS IN SALMON FISHING.

By Geo. M. Kelson.—No. 1.

In self-cultivation, to believe we are able is almost to be so; to buckle to and resolve to attain is almost attainment—at least, it makes success a foregone conclusion. And thus do many toil—by the sweat of the brow and to the uttermost limit of undue strength, begotten in the flame of anticipation, born in darkness, reared in simplicity, led on by one of those instincts which the mind cannot trace but which it invariably follows, aided and abetted in not a few instances by a lad in his teens who traffics in a pretended competency—a wretched parish brat unfit to confer a minimum of benefit, nothing else than a loquacious lubberly loafer very sure to attend carefully to the luncheon basket, to the flask, and to the flies—so the young master toils!

In all our lengthened career is there one who has not contemplated, and most probably witnessed more than once, the young salmon fisherman left to the mercy of an ignoramus whose perennial fame is plunder, and whose certain code of ethics is beer and tobacco?

Respectable and competent gillies having been bespoken and engaged, novices are dreadfully imposed upon, and begin, as usual, knowing nothing, not even the impropriety of thrashing away with a rod shaky in the sockets, innocent of all desirable and advantageous preliminaries, and plod on perhaps till they have paid dearly into the gentle hand of Experience—that unseen hand so singularly qualified to enlighten.

However, in the absence of all science a few sportsmen progress in their own way somehow or other. The miner, in his legal right on the Esk with his rod of hazel, loses no ground, but, as it were, makes headway like a sweep in a crowd—uninterruptedly. He thinks nothing of Failure, which, if he encounters, may turn out to be the stepping-stone to Success. But although it is only by toiling that our ideas can be made healthy, and only by impressions that our efforts can be made pleasant, still there is a right and a wrong way—indeed, always a *best* way of doing everything; and our safest principle, perhaps, is to respect whatever custom has established until some opposite course assures a positive advantage.

Now, it is immaterial whether the wood be good or bad, the ferrules firm or feeble by becoming loose, and the workmanship never so perfect, an 18ft. salmon rod can be racked and ruined in double quick time.

First of all, ascertain in good time before leaving home that all the fittings are tight, as no rod-maker living can ensure their remaining sound under certain conditions of wear and weather, or under the usual conditions of storage. This is simply done by putting the rod together and playing it, so to speak. Hold it firmly in the right hand about 2ft. below the first joint, and place the other thumb and forefinger lightly on each ferrule above and below, when you will easily feel anything amiss if you spring it up and down that the point in so doing may nearly touch the floor and ceiling of your room alternately. In detecting any of this mischief with the top joint less play will suffice.

Time causes the glue to become crumbly—more than that, pulverulent, and therefore it invisibly escapes. Any experiment to overcome the evil would be penny wise and pound foolish; for all that, it is a pleasure to feel well appointed with the modern means in our workshop, and we may well crow when we are master of the situation. If we wet the wood, of course it swells, but it might swell too much; not only that, it is injurious. Farlow, if requested, would fasten loose ferrules in a few minutes, and I know of no plan better than his for doing so.

To rack a rod is as easy as to crank a saw by pushing it when it gets jammed, and if you unluckily do so it is fit for nothing but the fire. A rod may be ruined in this way by making the thrash too soon and before the line is in full swing, or by lifting it too hurriedly and vigorously to repeat a cast when the line is deep and taken down the stream out of course in a zig-zag fashion, and then if the wood is crooked-grained and not well seasoned it would very likely snap asunder. Or, when fishing with treble gut the fly gets caught behind in any thick bough or other unyielding obstacle. And I am aware a rod can be racked without the line attached, by flourishing it about and making a violent down-cast before recovery.

Any distortion by overstraining in use may possibly be remedied, hence the difference between racking and weakening. The former never happens to top joints, which are, however, frequently rendered weak; it is advisable then to strip, sandpaper, and suspend them for a time weighted from the "fisherman's rack," and they will not take long to get over their limp, lopsided appearance. This rack or rail, with hooks in it for the purpose, should be located in a dry, airy place, and all the joints hung upon it when not in use. All three of them are liable to get crooked by constantly fishing from the same side of the river, &c.; or, when taken to pieces and left leaning against a wall, especially after a wet day; but although they can quickly be made straight by heat, the process is one I cannot recommend unless wanted at once. Heavy weights take time, but answer the purpose well, and I think, if possible, we should avoid everything that tends, even in so small a degree, to perish the wood.

We know now that if a rod is properly made, and the line suited to it, that it is possible to propel the fly 45 yards—even more than this was accomplished the other day at the Fishing Gazette Tournament, which cast is the longest on record. Perhaps others, though of less importance, might be enumerated, and would appear to the ordinary mind equally wonderful.

In salmon fishing the love of superiority is almost a passion; so may it continue to be! It is only natural that the captivating and influencing wings of ambition are ever hovering around all acroatic competitions. The fascination of our sport to the uninterested is strange, unknown, unreal; yet how delightfully and familiarly it clings to us, and as we are duly enlightened so do we increase in warmth—steadily, yet surely and naturally as the light of the morning over the gloom—till the whole thing becomes as clear as noonday, and seems to throb with one word—Knowledge. "Surely and naturally"? yes, even so; indeed Nature is in all her mystery a grand field of observation, and within her gates—open to all, denied to none—may one of Fortune's favourites some day discover how to move about in the air over a land-locked pool, or even to live in the water.

## A COMPLAINT FROM ABERDEEN.

I have a few grievances which, through your courtesy, I wish to make known in the columns of the Gazette. As a constant reader, I hope you will therefore afford me the necessary space.

Natural minnow fishing is now being practised on the Dee and Don to such an extent that many of us, who adhere to a more gentlemanly style of sport, are getting perfectly disgusted. Nor is this all, for it seems to me that those minnow fishers, judging by the rapidity of their movements from pool to pool, are more bent upon making the art a paying concern than a pleasant pastime.

Till within a year or two ago nearly every Dee angler fished as every real angler should—with a high regard both for his own reputation and the character of sport; but "times are changed," and with them "old manners gone." Instead of everyone using the fly, as hitherto, "angels," eel-tail, and natural minnow seem to be all the rage. Imagine, therefore, Mr. Editor, to find so-called sportsmen running from one pool to another, purposely to get ahead of you, and pitching in and raking every inch of the pool with one or other of these abominable nuisances.

On the point in question there is really some license for speaking out, and more so is this the case when we couple it with the fact that rents are now absurdly high. How is it that one fisher should be allowed to spoil the sport of another by using, for instance, natural minnow, when so abundant proof can be adduced that more fish could be killed were fly exclusively adhered to? Some minnow fishers maintain that the minnow is irresistible; but this is utter fallacy, for no salmon, after being crossed properly with the minnow several times, will deign to give it anything more than a passing glance. With fly it is quite different, as every true angler well knows.

I do trust that, for the sake of good feeling among anglers, the lures referred to will be used to a less extent. Mark me, I have no wish to insist upon their entire disuse, as often, when fly won't bring up "potted" fish, some of these lures will; and, therefore, to have some sport (a point anglers always have in view) recourse to their use is necessary.

Having suffered of late in my sport from causes too obvious to mention, and having an interest (like others who have beats) in preserving their sport-affording qualities, my remarks, you can see, are not uncalled for.

I now turn to the subject of poaching. If it is too expensive for the Fishery Boards to maintain a sufficient staff of river-watchers, the proprietors ought certainly, in order to secure for their lessees something like equivalent sport to the high rents exacted, to set themselves to preventing, or at least lessening, the nefarious practice of netting by night.

Sportsmen cannot be expected to order their ghillies, who are often heavily taxed in the way of work, to attend to what is the duty of either the proprietors or the Fishery Boards. To frustrate the attempts of netters, a few stakes might be planted in such pools as are suitable for netting. This, by some, may be thought as likely to interfere with the free play of a fish; but experience proves that the object intended is duly served without the line ever, or scarcely ever, getting entangled on the stakes. I would suggest that slender, round metal stakes, with dome-shaped heads, and projecting upwards from the bed of the river the matter of 18 inches or a couple of feet—according to the depth of the pool—might be tried experimentally. These would resist ice better than wooden ones, and, further, reduce to a minimum the danger of lines being held when fish are played.

This method should commend itself to proprietors, because its adoption would give no room for grumbling, and, besides, if not enhancing, tend to give the fishings something like their market value.

I am aware that, on the upper reaches of several salmon rivers hereabout, as well as on their tributary streams, little attention is given to the preservation of fish till too late in the season.

Small salmon usually reach the spawning grounds pretty early in the season, and, once settled in the pools, "black fishing" is carried on to a greater extent than many are aware on all occasions when the water dwindles down to a small size. Instead of having watchers promenading about in places so public that the chances of poaching are almost impossible, the out-of-the-way and upper reaches should have apportioned to them a competent staff of bailiffs in the early season. Fewer "kippers" would therefore be had in the glens, and more fish yearly fall to the angler's rod. I consider it a fatal mistake not to have the natal resorts of the fish—the early spawning fish in the high reaches of rivers—sufficiently protected, say, in September, October, and November. In our rivers, particularly in September, there are few fish, except in the places where I have indicated, and those the salmon, grilse, and sea-trout that ascended in summer.

So full of spawn as they are, if we calculate the number of table fish the destruction of even one implies, very stringent measures, I think, ought to be taken for their preservation. The stakes, in this case, would not answer, and watchers, as I have said, would have to be employed.

If the Fishery Board or the river proprietors will not unite in securing an end so desirable, I shall be happy to unite with other anglers in forming and supporting an association having primarily in view such an object as I have sketched. G.

Aberdeen.

[G. has pointed out some unpleasant things, and we sincerely trust those who have the power to alter matters will do so.—Ed.]

## THE NATIONAL FISH CULTURE ASSOCIATION.

The National Fish Culture Association issued to the public this week the first of a series of publications respecting the work it is doing and intends to do in the future under the title of the *Fish Culture Journal*, which will appear periodically under the editorship of Mr. Oldham Chambers, secretary of the association. This journal will contain from time to time articles from various scientists, and information and statistics relating to pisciculture, together with valuable notes upon the various influences which act maleficently upon fish. The first number contains a full report of the Annual General Meeting of the Association, preceded by an introduction setting forth the views, propositions, and aims of the *Journal*. Some interesting particulars respecting temperatures in fresh and seawater, &c., are also given. The price is one penny.

## AN APPEAL.

Some friends of John Milbourne, who is now a pensioned conservancy river-keeper at Sunbury, whose health for some time past has been of a failing character, are desirous of raising a subscription in recognition of a lengthened service of fifty-five years on the river and at the regattas, and especially to assist him in a time of affliction when medical attendance, good diet, and other necessaries increase his ordinary expenses. It is proposed that no individual subscription should exceed one guinea, but this limit need not extend to rowing clubs and regatta committees.

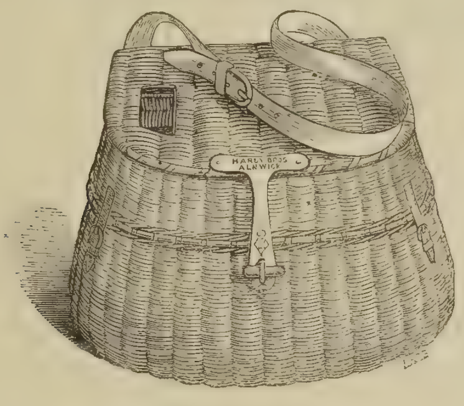
Mr. Alfred Nuthall (treasurer to the fund), Mr. James Forbes, Mr. T. Spreckley, Mr. F. White, Mr. Arthur J. Humphery, Messrs. Willans and Robinson, and Mr. G. F. G. Desvignes have headed the list with one guinea each; and Mr. Edward Clarke, Mr. A. Mitcheson, Mr. G. Bishop, Mrs. John Harris, Mr. A. Burgoine, and Mr. H. A. Benson half a guinea each; Mr. Tims and Mr. H. B. Vears, five shillings each. Mr. W. H. Brougham, Swayfield Villa, Hounslow, is honorary secretary to the fund, and will be glad to receive any contribution.

## NETTING THE CORVE AT LUDLOW—HEAVY FINES.

At the Ludlow County Petty Sessions, on Monday, Thomas Rowley, John Jones, and John Didlick were charged with illegally netting the river Corve on the 31st ultimo. Mr. Bowles defended. A witness, William Morris, deposed to seeing Rowley and Jones in the Corve, near the Boiling Well meadow. Didlick was not in the water. A net was pulled out and about eighteen fish were in it. Robert Yapp, gamekeeper to Mr. C. Wicksted (Master of the Ludlow hounds), said he saw the men at six o'clock in the morning, and went to meet them. Didlick had a net and a pole. Jones and Rowley were in the water. They took the net over a fence into Mr. Bishop's field. Mr. Bowles contended the defendants had a general permission from the occupiers of the land to fish there. The Bench said there was no doubt in their minds, and the case had been clearly proved against them. Rowley was fined £3 and 9s. costs, Jones £2 and costs, and Didlick £1 and costs.

## HARDY'S C. D. T. "CARRY-ALL" CREEL.

The accompanying illustration very clearly explains this "patent" creel. It is made to hold the fish in the lower part, and the lid is formed into a compartment for fly-book, lunch, tackle, and reel, which are thus kept quite separate from the fish. It was made to meet a demand often expressed in the Gazette for a creel which would "carry all." It is very light. The straps can be arranged either for carrying the creel over one shoulder or knapsack fashion. This is a great advantage to be able to distribute the weight of a heavy load over two shoulders as you walk home after a successful day. It has also at the back two small straps for macintosh. The only thing wanted to make this creel perfect is an inside light macintosh bag to fit the fish compartment. This will entirely prevent exudation from the fish on to basket or coat; it will keep them moist and fresh-looking as when caught; and it can be cleaned in a moment or two. A hook or two on the basket inside and an eye or two in the lining bag are all that is necessary to keep it in place. Any practical angler will see the advantages, and especially those of cleanliness, which our suggestion offers. Messrs. Hardy inform us they will supply this inside bag if desired.



## A DAY AMONG THE BARBEL AND CHUB.

Novices in the gentle art, like myself, may imagine with what pleasure I received an invitation to join such a well-known and skilful angler as Mr. Philip Geen in a day or two's fishing at Eynsham, and my anticipations of sport were realised in such a manner, that I think a short account of our expedition may not prove uninteresting to my brother anglers.

We reached Eynsham late in the evening of Wednesday, the 10th instant, to find Mr. Howe, our genial host, awaiting our arrival, and soon received at The Swan that hearty welcome which I am told Mrs. Howe extends to all visitors. The village residents were in a state of feverish excitement in consequence of the Flower Show and Bazaar to be held on the morrow, and as we were given to understand that the attractions there would be of no mean order, it was decided to spend the next morning in baiting our swims, and the afternoon in visiting the show.

This intention was carried out, and I may observe, *en passant*, that the show fully deserved the recommendations it had received, for although the flowers were indeed beautiful, they were far eclipsed by the lovely village damsels present. The Bazaar proved a most dangerous "swim" for us, or rather our pockets, as a fair angler who fished for our shillings and sixpences had securely netted them before we had proceeded far, and when we finally broke loose, it was with lightened pockets and a great respect for the persuasive powers of the bait used. But nothing was able to detract my thoughts from those barbel and chub which I fondly hoped to make a closer acquaintance with in the morning.

> "I went to bed and almost wept for downright sorrow,
> To think the night must pass before the morrow."

However, Friday came at last, and brought with it weather that was all to be desired for fishing—a cloudy sky, with a nice breeze, causing a steady ripple upon the surface of the water. The start we made would have been an earlier one but for Mr. Geen's inordinate desire to get "Nap" the previous evening, the achievement of which feat necessitated a late sitting. On arriving at the river, we took up our position at the head of the swim, wherein 1,500 worms had been deposited on the previous day, and as we prepared for the fray, Mr. Geen's remark to me was, "Well, if you get a barbel in the first swim, we may consider we are among them." My float had scarcely settled before it disappeared from from view, and a small barbel, weighing about a pound, was caught and returned.

Once more my float started on its journey, but only to again disappear before it had gone three yards down stream. I struck with a result which, to me, who had never landed anything heavier than a five-pound jack, was, to say the least of it, astonishing. Before I had recovered myself 30 yards of line had run off my reel; but the coolness and advice of the experienced sportsman at my elbow soon restored confidence, and I managed to check my fish, and gently bring him back to within a few yards of the punt, only to be almost terrified when I caught sight of what I had hooked, as with a splash of his tail, he again went off with a rush which, notwithstanding all my efforts to restrain it, made the winch go round with a whirr, which seemed to me the sweetest music I had ever heard. Again and again was this performance repeated, varied by vigorous dives for the bottom, and "goes" for the punt pole, which, of course, had to be checked in a very summary fashion, forming a severe test of the quality of the light Nottingham *roach* tackle I was using. At last my mentor adroitly slipped the landing net under him, and congratulated me upon landing the splendid barbel, weighing 8lb. 6in., which lay gasping at the bottom of the punt.

I sat admiring it until reminded by my friend that there were others waiting for my attention; and so there were, for, having made a fresh start, I was soon fast in a fish, which, after a little play, gave up the game, and turned out to be a nice chub, weighing a little over 2lb.

The fun continued fast and furious until about midday, when, amongst others, two more eight-pounders having succumbed, the barbel went "off" the feed, and I suggested it was time we went "on," so we adjourned to the neighbouring lock-keeper's house and did justice to the good things prepared for us. Having completed this important part of the day's proceedings, we returned to our swim, but only to find that the barbel had left us. However, by the time when darkness compelled us to desist from fishing we had added several fine chub to our collection. On examining the contents of the well, we found upwards of 50lb. of barbel, the three largest weighing over 8lb. each, together with a splendid lot of chub, several turning the scale at 2lb. They were all taken in the Nottingham style of fishing, on the finest tackle; and so ended what I think may fairly be described as a very good day among the barbel and chub.

H. Clifford Taman.

## ON STRIKING A SALMON.

Mr. Kelson has sent us the following letter from Major Traherne:—

It has been on my mind to write an article in the Gazette on striking a fish. I believe you and I differ on this point; but I am so convinced that striking is a mistake that I should like to state my opinion. Will you send it on to Mr. Marston? It may bring the matter into discussion by some old anglers. I have read several articles lately in the Fishing Gazette on striking a rising salmon from the winch when fishing with double hooks. I tried double hooks for two whole seasons, and lost more fish with them in proportion than I ever did before or since. I did not strike from the winch, which perhaps will account for my want of success. I have taken to single hooks again, and I wish it to be understood that what I have to say relates to these only.

What is desired is "when a salmon takes the fly" to drive the point of the hook in over the barb. In my opinion, to effect this it is unnecessary to strike under ordinary circumstances. It may be advisable to do so when fishing with a long line in dead water or up stream, but I would rather run the risk of not hooking my fish than get into what I consider a very bad habit.

When striking from the winch—especially when fishing with the large-sized flies if the winch is not a very stiff one (which to me is an abomination)—a sufficient strain on the line cannot, in my opinion, be available to fix the point of the hook over the barb, and when striking with the line tightly grasped between the hand and reel, the sudden jerk and strain on the line is apt to leave the fly in the fish's mouth, or smash the top of the rod; also, the fly will often be snatched away before the fish has had time to take hold of it, which may scare him to such a degree that he will not rise again. When a salmon rises to a fly no jerk or strike should be made, and the rod should be kept in the same position as before the fish rose. If he is hooked he will soon let you know it, and all that is required is to raise the point of the rod slowly, keeping a tight line. The action of downward course of the fish after taking the fly will then be quite sufficient to fix the barb; but when fishing with large flies a strong pull or two may be necessary, but no jerk or strike.

It often happens that the point of the hook comes in contact with a bone, in which case it will be impossible to fix the barb. To keep a tight line would then be the only chance of bringing the fish to bank, and this is a golden rule that a salmon fisherman should always keep in mind. Many a time I have seen my fly drop out of the fish's mouth the moment he was gaffed or netted and my line slacked, which so plainly told the tale. There is luck in salmon fishing as in everything else. Many old salmon fishermen swear by double hooks, and will use nothing else. I have killed as many as twenty-eight out of thirty fish hooked with single hooks, and in the long run I will back them against double hooks.—J. P. Traherne.

## ANGLING NOTES AND QUERIES.

The Thames Angling Preservation Society in 1854.—The clubs which supported the Thames Angling Preservation Society in 1854 were the Friendly Anglers, Piscatorial Society, the United Sons of Walton and Cotton, the United Society of Anglers, and the True Waltonians. Mr. F. Pearce (we were very glad to see him at the Piscatorial Society the other night) was on the auxiliary committee appointed by his club to aid the Thames Angling Preservation Society.

The Split-cane Rod Thirty Years Ago.—In the *Anglers' Almanack* for 1854 we find the following notice of split-cane rods:—"Mr. Aldred's trout and salmon-rods, formed of split angular sections, after the manner of a ship's mast, avoiding all splicing, and securing an elasticity perfect and permanent under all kinds of circumstances, are perhaps unique. The top joints in particular, which are too often treacherous when spliced, are here far more perfect than any single piece of material could be made, and it is quite certain that the point of the rod can be brought nearly to the butt, and resume its straight position again without the least appearance of having been so violently tried." Mr. Aldred still sells these rods. In the same paragraph the Editor notices a rod in which "the line is to go up the inside and work on rollers."

"Gross Weight.—What ought we to do to a society that gives a prize to the member who catches the greatest total weight of fish? . . . . We cannot too strongly urge the water-bailiffs to look into punts as they pass, and to watch them, and make one or two examples."—Editor *Anglers' Almanack*, 1854.

"Mr. Little, of Fetter-lane, one day caught two barbel of 12lb. weight each at Teddington."—*Anglers' Almanack*, 1854.

Godfrey's Water at West Drayton.—We find the following notice in the *Anglers' Almanack* for 1854:—"Since last year I have become proprietor of the Thorney Broad Fishery, near West Drayton, 13 miles from Paddington, by Great Western Railway, on the river Colne, about 2¼ miles in length. Since having it I have made it one of the best subscription waters near London for general fishing. All places that are exposed I have had well staked; but the most particular thing is to protect the fish in spawning time. . . . . I have bought a great many fish and put in, and am going to try the artificial spawning process with trout; afterwards, in April, with barbel, perch, &c." New brooms sweep clean.

## ANSWERS TO CORRESPONDENTS.

C. B., SHEFFIELD.—Thanks. But the books are not rare or of much value.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### A NOTE FROM NOTTINGHAM.

SIR,—Angling news this week is rather more encouraging in the neighbourhood of Nottingham. There has been one salmon 9½lb. taken by a Nottingham angler, and a trout over a pound by another one in the same water. There have been several nice catches of barbel in the Shardlow water. Mr. F. W. caught a nice lot of dace one day and some good perch. I saw a gentleman the other day who had been to the Dove, and he had got four brace of very fine grayling. He said there was any quantity of grayling in the Dove, a fish that we hardly ever see in the Trent now. There is no doubt the refuse from the Burton breweries destroys them.—I am, &c.,

Nottingham, Sept. 15. A. W.

### THE RIVER BOLLIN (HEATLEY, LANCS.).

SIR,—I was very much interested in perusing your valuable paper this week-end to find the account of Sam Brooks and Mr. C. Cartwright's large basket of fish from the River Bollin at Heatley on the 3rd inst. But I cannot agree with Mr. Thomas in stating that it was the largest catch that has been taken out of this river for years. In this respect I am inclined to think that he is rather over the mark. A friend of mine, a well-known local angler, has taken a superior catch out of the same river this season, and during the past two or three seasons has taken equally as good baskets. Hoping you may find a corner in your valuable paper for this—I am, &c., BOLLIN.

Ardwich, Manchester.

### FISHING IN THE WYE, BETWEEN BAKEWELL AND ROWSLEY, IN DERBYSHIRE.

SIR,—In the Wye, between the clean and neat town of Bakewell and the far-famed Haddon Hall up to Rowsley, good sport in fly-fishing may be obtained, while the vernant views and rich meadows with stately trees charm the eye at every point. The trout fishing season commences on April 1 and ends on Oct. 1. The grayling season commences on June 15 and ends on March 15. In the river are found trout of all sizes, the river being well-stocked with this favourite fish. The trout particularly being well-fed and uniformly, season by season, are in splendid condition, offering to the accomplished angler a fund of sport. Mr. Hensbergh, the Duke of Rutland's keeper, who resides in a house on the steep hill-side near Haddon Tunnel, is a most indefatigable caretaker of the river, which is strictly preserved. He takes a great interest in the welfare of the fish, and keeps an attentive look-out against all infringements of the rules. We may add here that he ties a good fly (and most deftly can he do so), and is ever ready and willing to supply any gentleman with flies which at any particular time are required for the river. The writer has fished the river in question all the season, and can positively assert that it has been a good one, the dishes taken being uniformly good ones almost day by day, three and four brace weighing from 1½lb. downwards. Mr. Hensbergh ties a capital fly, which takes very well close to the bank the last thing of an evening. He also produces a very good apple-green and red spinner, all at times and in season having a killing effect. During the season the evening dun has taken remarkably well. It may be here mentioned, however, that in consequence of the winding nature of the river, really in acute curves, it is not at all difficult to fish even in windy weather. The keeper has just put into the river 800 odd trout, so that eventually further sport may be safely anticipated. On July 2 a dish of fine trout was caught by a gentleman. There were eight fish in all, two of which were over 1½lb. each in weight, and the remaining six all over 1lb.; they were in splendid condition, and presented a handsome appearance, forming on a large dish a perfect piscatorial picture, while the rich delicacy of their flavour and their firmness on the table were a rural treat of the highest order—fit to grace the breakfast table of a prince and satisfy the most captious epicure. Although it is probably widely known, it may not be out of place to mention that there is every accommodation for anglers at the Rutland Arms Hotel, Bakewell, or at the Peacock Hotel, Rowsley. At either of these hotels tickets may be purchased which confer the right of angling. Numerous dishes of fine grayling, over 1lb. each in weight, have been taken. It sometimes happens the angler will obtain one fine grayling to four or five trout; but even the grayling have been in grand condition, well fed and affording ample sport. As many trees grow on the water-side, the fish in the river can get plenty of grubs and other food, which makes them fine and strong. The trout remarkably so, and they show, when hooked, good fight, and give the angler rare sport. It is difficult to pick out in England a more happy hunting, or rather fishing, ground than the silvery Wye between Bakewell and Rowsley, in Derbyshire, or one more prolific in sport. A fortnight's visit would well repay any trout fisher, and if he only once lashed the waters of the Wye in this particular length, he would never fail in constantly repeating his visits on every possible occasion. I must again say a few words with reference to Hensbergh, the keeper, who is not only accommodating in every way, but by his attention and urbanity further pleasure is added to the enjoyment of fly-fishing; while his aptitude and skill in the formation of flies conduces much to the success of the angler. He is also skilled in the rearing of the trout, and by his indefatigable exertions and attention turns into the Wye, every year, between these points, some hundreds of trout, which he receives, in the first instance, from Loch Leven and other Scotch lakes, and which is the principal reason why this fishery is the best in the county. The present season has been all that could be desired, and there is every prospect of next season being as equally enjoyable and successful.—I am, &c., PISCATOR.

Bakewell, Sept.

[We do not like to say that "Piscator" has over-coloured his description of this lovely stretch of water and the sport it affords; but to prevent disappointment we may say that the trout of the Wye have a critical eye!—ED.]

### A SUGGESTION TO ALMANACK MAKERS.

SIR,—As most publishers of almanacks are revising their 1885 issue, may I suggest that the fishery districts, names and addresses of their conservators, and secretaries, close times, and license duties be inserted? A very pretentious volume of Messrs. Waterlow's, called the "Country Companion," labours under the impression that all close times are the same. I took the trouble to go and see the publishers, but the marvellous reasons why the information could not be given were so overpowering that I have not felt disposed to call their attention to it, except by letter, since. I may call the attention of Quarter Sessions to it, then I think the publishers of that "official directory" may perhaps think it desirable to correct their statement. I also wrote in vain to the publishers of "Whitaker's Almanack."

Whilst the Fishery Boards state one thing, the almanacks state another. To a foreigner or a man in a strange fishing district it is perplexing.

Now, Waterlow's production disposes of Sept. 1 by saying, "Salmon fishing ends." Does it? I fish for salmon up to Nov. 1; and it professes to be a country almanack for country life! It may be, but it is also a great nuisance to the country conservators of fishery districts, and a very useless and unreliable guide for any man to refer to about sport. Perhaps proprietors of such almanacks will some day find out that to be useful a publication should be *accurate*, and "no use—no sale" is too old a story for us to suppose they have never learnt it.—I am, &c.,

Torquay. ALAN BAGOT.

P.S.—The "Country Companion" is most accurate as to dates and places where Petty Sessions are held. That is desirable, for were any person to fish under its advice he would soon have occasion to attend them.

### THE DEE, NORTH WALES.

SIR,—I had a few hours' fishing on this charming river between Chester and Holt. I killed a few very fine roach ledgering with gentles, but I did not get on so well as I expected. I regret to inform my brother piscators that the steamer which plies daily—except Sundays—between the above places does not improve the angler's prospects. It passes four times daily, and I am sorry to say it not only unsettles the water and the fish, but it also destroys great numbers, as I saw numbers of small fry lying dead on the bank after the steamer passed. If any of your readers intend paying a visit to this river, I should recommend them to go to Llangollen and Bala way. The river would be improved by some good showers.—I am, &c.,

GEO. ATTWELL.

### RECIPE FOR STEWING WHEAT AS BAIT.

SIR,—In answer to your inquiry in GAZETTE of Sept. 6th, I have found the following to be the best plan for stewing wheat—viz.: Put the wheat in a stew jar and just cover with cold water, then place it on the oven side of the grate until it gets hot, when you will find the wheat begin to swell and absorb all the water; you will then keep adding water from time to time to keep the wheat covered for the space of six or seven hours, but on no account allow the water to more than simmer; by the end of that time the wheat will be swollen to its full size, the skin will be soft, and all the flour retained.

In baiting your hook merely press your hook in from the broken side right to the husk, and the odds are twenty to one in favour of your hooking every roach, bream, chub, or dace that bites.

Trusting this reply will meet your inquiry—I am, &c.,

E. TILDESLEY, sec. Bordesley Waltonians.

13, Chapman-road, Smallheath, Birmingham, Sept. 12.

[We are much obliged to Mr. Tildesley.—ED.]

### HOW TO STOP POACHERS.

SIR,—I read in your paper that a gentleman wishes to know what will prevent poaching with nets in his river. I have had many years' experience as water bailiff, and I find forge cinders, or bricks with stout wire twisted round, with the ends left to form hooks, and carefully put on the scours, is a good preventive; or, if the river is sluggish or dead water, I find thorn breezings cut small and thrown in will stop either draw net or trammel—it will either roll it or clog it up, so they will do nothing to hurt, and it will take a long time to get the net free again. As a rule, after a big flood I do the water over again. I also have my river (the Trent) piled with tenter-hook piles, but an old hand at poaching will sometimes walk behind and lift it off when fast; but, still, it will partly spoil the draw.—I am, &c.,

Alrewas, Lichfield. CHARLES DRAPER, Water Bailiff.

### OLD-EYED HOOKS—RECIPES WANTED.

SIR,—Having seen in several of your papers letters referring to eyed-hooks, I inclose you a few which I have had for some time; they must be, at least, 20 years old. Should anyone like to see some, I shall be glad to send them a few.

Could anyone kindly give me a good recipe for blacking ferrules of rods? I mean the rough ones as they come from the factory.—I am, &c.,

1, Mount-terrace, Taunton, Somerset. H. W. BURTER.

P.S.—Could you also tell me where I can get some small coch-a-bonddu hackles?

[The hooks are sneck-bent roach size, with a neat little eye straight with the shank. The Irish correspondent who sent us the specimen of Wheatley's eyed-hook referred to last week, sends us another long shank small hook with a small eye, which was also given him by Wheatley. It is dressed as a small green caterpillar. Our correspondent says, "Friends of mine, who make their own salmon flies, have been in the habit of using eyed-hooks almost exclusively. Flies last much longer, which is a great point. On the whole, eyed-hooks have great advantages over other hooks for salmon and trout flies." We are much obliged to our correspondents for the information and hooks.—ED.]

### EYED-HOOKS: THEIR EARLY HISTORY, &C.

SIR,—I do not wish to trespass further on your space, nor on the indulgence of your readers; but some of Mr. Bankart's statements in his last letter are so inaccurate, and some of his arguments so unfair to me, that I hope I may be allowed a brief reply.

I am not going to criticise Mr. Bankart's elaborate discussion of what took place for the first two years we were thinking of eyed-hooks. I am content to draw the attention of your readers to the following facts:—(1) When I wrote my account in the *Field* of July 3, 1880 (at a time when all the circumstances were fresh in the minds of both of us), there was no allusion whatever to Kelly and Sons, and Mr. Bankart's correspondence with them. Mr. Bankart's only comment on my letter was one of unhesitating approval. I have never written anything inconsistent with that original account, and by it I stand. Some of the points raised now by Mr. Bankart should have been raised then if they were ever worth raising at all. (2) Mr. Bankart is unfair in appealing to our extensive correspondence and making capital out of it. A very large number of my letters had no reference to eyed-hooks, and Mr. Bankart himself insists on the fact that there was no partnership after 1879. Five years' correspondence must, therefore, be left out of consideration. (3) Mr. Bankart *knows* that I was in communication with Mr. Aldam about eyed-hooks as early as April, 1877. I gave him full particulars and dates quite recently. (4) It is unfair to allude to one single failure of turned-up eyes—the only failure I ever had, I believe. I had turned up the eyes of quantities of hooks, both with Mr. Aldam and alone, with perfect success months before the incident he refers to at Abergavenny. This, too, Mr. Bankart knows, unless he has forgotten or overlooked some of my most recent letters. He had full particulars last June. (5) I must beg to contradict the assertion that "the final patterns were settled in 1880, and so they remain." Mr. Bankart assumes that because he has done nothing, nothing has been done. (6) Nor has he any right to say there was no difficulty to overcome in getting the smaller sizes made. I have had endless bother and difficulty of which Mr. Bankart knows nothing. Perhaps he is not aware that I have had three different firms at work for me this year. The most recent patterns I am convinced Mr. Bankart has never even seen. (7) With regard to "elaboration and refinement," I was alluding to what has taken place since 1880, as the context clearly shows. Any "elaboration" Mr. Bankart had a hand in is, therefore, wide of the mark. (8) It is not a fact that I had "a select circle of acquaintances among the best Hampshire anglers." I had a very slight speaking acquaintance (from meeting him on the Itchen) with Mr. Marryat, and nothing more. He was my sole acquaintance.

Mr. Bankart plumes himself on his "facts." I think the points I have referred to (and I could enumerate others did space permit) show that some of the so-called facts are nothing more than assertions made with insufficient knowledge, and which are partially or wholly incorrect; and the rest of Mr. Bankart's letter is a laborious endeavour to defend his first letter of May 26th, which I still assert to be grossly inaccurate, and inconsistent with my *Field* account approved by Mr. Bankart. After four years of silence and inaction, he suddenly puts before the public a series of incorrect statements, and this is why I took the matter up. I never accused him of *wilfully* misstating the case, but I thought the mistakes had occurred through inadvertence, till he obstinately refused to admit any error. Since then he has said: "I wrote hurriedly, and intended, &c."; "I wrote hastily on May 26th," and thereby stands self-convicted. The whole of his last reference to the Kelly correspondence (the importance of which I certainly never heard of until now) is nothing more than an attempt, more laborious than successful, to defend some of the hasty writing of May 26th.

Finally, to sum up the whole question at issue, Mr. Bankart labours hard to prove that I did nothing at all at first, and that everything was settled and done in 1880. He contradicts himself at the end of his letter, saying the partnership "was as equally active as two individuals could make it." With regard to what has been done since 1880, Mr. Bankart is not competent to form an opinion. There are plenty of readers of the Gazette who know more about it than he does. To some of them my thanks are due for hints and advice, and I take this opportunity of once more acknowledging my indebtedness to them. If during the last four years all had been as quiescent as Mr. Bankart, "the hooks of the future" would long since have been forgotten, and would certainly never have come into general use.—I am, &c.,

H. S. Hall.

[This correspondence is closed.—Ed.]

## FINE TAKE OF BREAM AT WALTON.

Sir,—Fishing with "Old George Hone," on the 15th inst., at Walton-on-Thames, I caught fifty-one bream, weighing 110lb., the two largest 6lb. and 5½lb., all taken on the very finest drawn gut.—I am, &c.,

Tenby Lodge, Kingston Hill, Surrey, Sept. 16. Alfred Mackrill.

## MR. GUISE AND THE REDDITCH PISCATORIAL SOCIETY.

Sir,—I inclose you the rules of this Society, and ask you to allow me to correct the statement of Mr. Guise, when he says we have no fishing club, but a railway ticket society. See rules. This society was formed to meet the wants of the working class, and has been a success every year yet. Last year we handed over to the Birmingham Hospital 21s., after paying all demands, and left a favourable balance in favour of the club. We shall be glad if Mr. Guise will give the name of the party who says he takes out a ticket simply for the convenience of the railway, and the same shall be forwarded to the railway company for them to deal with.

The Piscatorial club have nothing to do with coloured hooks, or matters connected with trade.

We hope Mr. Guise will be truthful in what he asserts for the future in respect to our club; our accounts are properly laid before the members at the yearly meeting.—I am, &c., George Welch, President of the Piscatorial Society.

Redditch, Sept. 16.

## FISHING AT DOVER.

Sir,—Will you allow me to correct a statement respecting sea fishing at Dover which appears in Mr. Sach's letter to you published in the Gazette of the 13th inst.? He says, "The fish travel in the tideway past the end of the pier without giving a look in to Dover Bay." Now, I can assure you from personal experience that that is not the case. I resided in Dover during the years '80, '81, and part of '82, and whilst there had very good sport amongst the fish in the Bay. By spinning from a boat during the latter part of the summer and autumn in the evening plenty of fish may be had, chiefly pollack; my best take there one evening, from 6 p.m. to 8 p.m. was twenty-one fish, ranging from 2lb. to 5lb. each.

From the landing stages of the pier, bass, mullet, pollack, silver whiting, codling, and, of course, the ubiquitous conger are taken. The great advantage of the pier for fishing is, that if it is blowing a gale on one side the other is quite calm. The best natural bait I found in my experience there to be the rock lug, which inhabits the little tunnels it makes in the chalk rocks at low water, which are covered at high water. They are obtained by knocking the rocks to pieces with a pickaxe; it is a dirty job, and best done by proxy. Small boys sell the mud lug, which they obtain from the harbour on the pier.

Of course, I do not intend for one moment to say that the fishing at Dover is as good as it used to be; but, in that respect, it is no worse than other seaside towns on the South coast, the shore fishing about all seeming to have deteriorated.—I am, &c.,

Richmond, Sept. 15. Harry Davis.

## ANGLERS AND THAMES ROUGHS.

Sir,—Noticing an article in the Fishing Gazette of August 9th, 1884, upon "Anglers and Thames Rights," and the decision of a committee upon the same after most extraordinary and exhausting exertions for four months, I am surprised that they should exhibit such ignorance in their report of the real state of things to the House of Commons after dealing with the subject so long.

They state, "The paramount object of the river is the navigation." Was, or is, anyone so grossly ignorant as not to know this? Did, or has, anyone ever attempted to interfere with, or even spoken against the legitimate traffic of the river? They say again that the pleasure traffic does not interfere with its navigation? I say it is a very great source of annoyance and trouble to its traffic. The navigation and traffic have for years been on one side of the river—that is, the towing path side, as being the shortest route; but they do not mention a word about the above and annoyance to quiet and inoffensive anglers, on the other side especially. I have myself, as well as others, been a witness on a Sunday, when there were upwards of 500 row boats and numerous coffee-pot steamers between Teddington Lock and Kingston Bridge, full of the grossest indecencies, annoying every angler who dared to courteously ask them to avoid their tackle, and no police or water bailiff to appeal to, or to take cognisance of their conduct. Remonstrance was useless. Indecently dressed, and their female companions lying on a cushion in the boat in disgusting positions, in sight of every passer-by (a gentleman and his wife and daughters taking a walk by the river side), this must be very edifying, and highly to be approved of. This is the filth that is to take the place of quiet serenity on the river Thames. This locality was once a quiet and much-loved place of resort for well-disposed people. Look at it now!

They talk about suggesting that for certain offences there ought to be summary jurisdiction. I think that the chairman must have been in a facetious mood when he made that remark. The fact is, there is no one to take cognisance of their conduct. The anglers have in many instances had to restrain the misconduct of offenders against public and private property.

Likewise they state "that the Conservancy should have the control of the river." This is ludicrous enough. Any person of common sense must know that when there is a large concourse of people that supervision of an authoritative description of some kind is absolutely necessary, more especially upon the river, where the greatest ignorance in the management of boats can be witnessed. I saw a small sail boat sink with seven or eight persons, but, beyond a good ducking, they all managed to get on shore; but things might have been worse, and accidents happen almost daily with this boating by inexperienced persons.

As for ancient customs, it is simply ridiculous; there never were so many anglers as at the present time. How far back the committee have been searching I do not know—perhaps to the time of Henry the VIII., or still further back, when serfdom was in vogue; if they will but read they will find that angling is a very ancient custom indeed. Or have they been hunting to try and find some law to put down angling, so that these pitiable creatures, with their abominations, may splash and steam about anywhere and everywhere to the great annoyance of decent and well-disposed persons, and quiet, inoffensive anglers, who molest no one? Can no legislation reach this lamentable state of things, and rescue this locality from destruction?

As to the legitimate traffic, that, of course, cannot, nor has been interfered with; but the quiet of the Thames anglers and others has been grossly interfered with on both sides of the river. I wonder if any of the committee have ever ventured to pay a visit to this once quiet spot and took notes of his observations thereon; and, whether they prefer a Babel of noise and discordant songs, to the exquisite quiet that once reigned supreme in this highly-favoured locality. For more than 20 years I myself have known it, and never regretted a visit to its shady banks.

There is a quiet nook used now for bathing purposes; notwithstanding this, there are many who will persist in bathing in the main stream, exposing their nakedness to every boat that passes, and also to the passers-by on either bank. They do not seem to know the danger they run, for if one of those large pike were to make an attack matters would be very serious. Perhaps they would desist if Mr. Pike were to make an example of one or two of them, for if he be but hungry, nothing that moves in the water will stay his voracious appetite.

Why is it that all this hurly-burly is allowed to exist. And those that should assist to put a stop to this state of things are actually attacking the quiet, inoffensive angler who annoys no one, and has often to leave the place in disgust, with his tackle damaged, to the intense delight of these miserables who are totally and determinately blind to their own real pleasure. They are like the scum in the pot—require to be removed. —I am, &c. G. W. A. K., of the St. Alban's Club.

[What is wanted on the Thames is an adequate river police, and half of them should be detectives, otherwise the sight of the police boat, with its men in uniform, would give the roughs the chance to get away. It would not be a bad idea to put a few crocodiles in the Thames; they would soon stop indecent bathing.—Ed.]

## ANGLING FOR PIKE WITH BACON.

Sir,—I send you an extract from letter received from an old Wharfe angler who recently emigrated to Manitoba. I think your readers will find it interesting.—I am, &c., Francis M. Walbran.

"Dear Mr. Walbran,—Many thanks for your letter of the 7th July (received 27th). I am very glad the feathers came in so handy. I know from experience that they are very bad to meet with in England, and although I have kept a sharp look-out here, have not come across another yet; but when I do you shall have another lot of feathers.

"I am sorry to hear your report of the weather; it must have been most disheartening both to fishers and farmers. Those brutes who limed the river deserve burying alive in quicklime. I hope they have traced them by this time, but it will be a difficult matter to do, I fear. Shouldn't I have liked to have been at Driffield with you! I inclose a few feathers from the wing of the blue teal. I fancy, if hackled on a yellow body, they will kill grayling, but I have no doubt you will know better what to do with them than I do. I do very often think of Wharfe, and especially on Wednesdays and Saturdays, and should like to have a day in a good water again. Fishing just here is practically *nil*. There *are* fish in the Cypress, six miles from us, but, from what I hear, are only fit for pike baits, and 16 miles from here there is very good pike fishing in a large lake called Swan Lake, and the stream flowing from it. I will now attempt to give you a description of a try to take a fish by your humble servant: I went there to a picnic (save the mark!) on the 11th June, not knowing there were fish (and not having tackle here if I had). Being told we could fish, I ventured to ask if there was such an article as a rod. 'Oh, no! but so-and-so has hooks and some stout whipcord, and you can cut down a young poplar to fish with!' This reply, to a fellow who had just left a pet trout rod behind in England, and could still imagine the play of it in his hand, was rather a 'facer.' However, I cut down a poplar and trimmed the branches off, and succeeded in getting a small scaffold-pole 12ft. long, and fairly straight. I then applied to the hook and whipcord man. Oh, yes, he had *hooks*; and he was quite right—they *were* hooks. At home I should have used them for deep-sea fishing for large cod and halibut! He also had whipcord about the size of three fly-lines laid up together. I borrowed a 10ft. length, and hitched on my hook sailor fashion, tied the other end to the end of the pole, and behold rod and line. Then to see to what length barbarism could go, I asked about bait, and was told they used bacon or pork fat! Nothing daunted, I artistically sliced a piece off and put it on so as to spin; and then for the stream. After nearly tearing my arms out of their sockets by waving the *rod* about for half an hour, I was rewarded by the sight of a big brute that would weigh about 14lb., as near as I could judge; but he was not satisfied with the look or size of the bait, and quietly went home again, and I gave it up in disgust. Some of the party by fishing in the deep holes got a few, which would average about 3lb., and seemed highly pleased at the result, as no doubt they ought to be. With proper tackle and baits there ought to be no end of fun for anyone fond of the art and having time—Mr. Jardine ought to come here; but living as I am sixteen miles away, and with plenty of farm work to be done at home, I am afraid I shan't trouble it much, and especially as I can get my other pet sport—shooting—close at hand. If you care to send the above account to Marston, do so. We had ten days of blazing hot weather in June, from the 13th to 23rd inclusive; the thermo. averaged 118 deg. in the sun, and on the last day it was 128 deg in the sun at 5 p.m. Then, for a change, the 24th opened up with a S.E. wind, Scotch mist, and the thermo. at 48 deg. all day. I should be very glad to have an occasional copy of the 'F. G.'—I am, &c., "Chas. Edw. Porritt."

## A YANKEE ANGLER'S GRUMBLE.

Sir,—This has been the poorest season for angling here for thirty-three years. The water has been too high, roiley, and cold, but a splendid season for poachers with their seines, traps, spears, dip nets, gill nets, set nets, trot lines, shooting, and dynamite. Then they grumble because fish are so scarce. We have good game and fish laws in this and other States, but they are not enforced by gentlemen sportsmen and anglers, because they are threatened with death by the hoodlum poachers and pot-hunters. Some people are allowed too much liberty in this free America. I can recollect back twenty years, when I could go and catch a mess of fish in a few hours; a 4lb. black bass, and a 10lb. cat fish were very common. Those days are past.

On the 2nd inst. our city druggist, Daniel H. Calvert, and a young attorney, Frank Connolly, went to the Embarras river for an afternoon's angling, about four miles S.E. of here. They fished in the Mike Hall Hole; they caught twenty new lights (croppies), total weight 10lb. Weather clear and fair, water clear. This is the first creel of fish here this season. Please send specimen copy of your paper with this item. More anon.—I am, &c. J. B. Dazey.

Charleston, Coles County, Illinois, Sept. 4th.

## FISHING SHARP STREAMS.

Sir,—Supposing I am fishing a river, the current of which is rather fast, is it not possible for me so to manipulate my float, and the shots or leads attached to the taft or tackle, that by keeping a certain backward pressure on the tip of the float, either when floating for barbel or tight-corking for the same (Nottingham style, of course) I can *always* keep the bait at about an angle of 75 deg. or 80 deg. from the float, and so constantly present the bait to the mouths of the fish? Says one, quite easy. Very good. "Philo" says the top of the stream is so much stronger and quicker than the stream even half-way down (you must admit it), and the stream at the bottom much slower than the stream in the middle (admitted again), that do what you will, you cannot help the tackle and line bulging and forming a huge bow, and the consequence is, instead of the bait being presented to the mouths of the fish, as you seem to imagine, it has quite a contrary effect, I assure you, and the fish have to *turn round*, follow the bait, and seize it the best way they can.

In this case I am forcibly reminded of the old saying, "Who shall decide when doctors disagree?"

Many thanks for your foot-note on pike. You mean to say a 15lb. pike would smash a 4lb. bream all to ribbons. I shall not contradict you, Mr. Editor. I am inclined to think you are right; but it is rather extraordinary that dear old Izaak should have made such a mistake about the tench, for he says (Chapter XI.):—"And it is observed that the tyrant pike will *not be a wolf* to his physician, but forbears to devour him, though he be never so hungry." We live and learn,—I am, &c.,

Mark Antony.

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE, SALMON AND TROUT FLIES, SUITABLE FOR ALL PARTS OF THE WORLD.
Mahseer Tackle in Great Variety.
Makers of Split Cane Rods.
Improved Folding Trout Landing Nets
(Very Light).
New Patent Lever Salmon Winch
(Can be regulated to any stiffness at will).
PENNELL'S TACKLE KEPT IN STOCK.
CATALOGUES GRATIS. PRIZE MEDALS. IMPORTERS OF SILKWORM GUT.

A NEW PERFECT FLY AND SPINNING LINE.

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES; FREEDOM FROM IRRITATING ENTANGLEMENTS; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says:—"I find the Acme more valuable than all others."
Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction, will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. Samples, Post Free, to all Applicants.

D. and W. H. FOSTER,
SOLE MANUFACTURERS AND INVENTORS,
ASHBOURNE.
None are genuine without the word PATENT affixed to label.

SPIERS AND POND'S
GAIETY RESTAURANT,
STRAND.

THE HOME DINNER DAILY at 5.30 till 8 p.m.
Consisting of Soup, Fish, Joint, Vegetables, Bread and Cheese, *ad lib.*
2s. 6d.
GRILL ROOM for Suppers open till Midnight.
SPIERS and POND, Limited.

## IMPORTANT DECISION AS TO A TRIBUTARY OF THE TEME.

At the Ludlow County Petty Sessions, on Monday, Richard Dansey, Esq., of the Sheet, was charged with illegal fishing in the river Ledwyche. The case had been adjourned for the attendance of Mr. Stallard, clerk to the Severn Fishery Board, who was now present. Mr. Salwey said the case had been adjourned to enable the clerk to the Board to state whether a tributary of a tributary came within the meaning of the Act, and to produce the order of the Secretary of State defining the arc of the Severn Fishery district, copies of which should have been lodged with the Clerk of the Peace for the county of Salop.

Mr. Stallard then produced the order, &c., from the Home Secretary, which stated that the Severn with all the tributaries of such river as are situate in the counties of Salop, Hereford, and Worcester should form the said fishery district. He also quoted the case of Merricks *v.* Cadwallader, which was heard before Justices Grove and Lopes, in which the district was defined, showing that so much of the river Severn with rivers Teme and Vyrnwy lying in the counties of Salop and Worcester with all tributaries.

Mr. Salway: Then you contend that a tributary of a tributary is included?

Mr. Stallard: Yes.

Mr. Salway asked Mr. Stallard to oblige him with the recital of the words of Mr. Justice Grove again.

Mr. Stallard read as follows:—"If all tributaries of tributaries were tributaries of the river Severn, it would be so much of the river, and all tributaries thereof as are situated therein."

The Bench said that a conviction must take place, and their opinion was that the justice of the case would be met by Mr. Dansey paying the costs and the amount of a double license, 2s. (The Ledwyche is a tributary of the Teme, and runs near Ludlow, joining the Teme near Tenbury.)

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

Add
30 minutes for Chelsea.
40 " Putney.
45 " Hammersmith.
50 " Barnes.
55 " Kew.
75 " Richmond.
80 " Twickenham.
85 " Teddington.

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | Morning. | Afternoon. |
|---|---|---|
| Saturday, September 20 | 2.15 | 2.35 |
| Sunday, " 21 | 2.51 | 3.8 |
| Monday, " 22 | 3.27 | 3.43 |
| Tuesday, " 23 | 4.1 | 4.17 |
| Wednesday, " 24 | 4.43 | 4.49 |
| Thursday, " 25 | 5.4 | 5.21 |
| Friday, " 26 | 5.41 | 6.2 |

## THE LOWER THAMES.

### General Remarks.

The trout season this year closed with the capture of more trout than many previous years, not only at its terminating point, but throughout the entire period. In addition to those which were reported in the Fishing Gazette of last week, there are two others which were caught on the closing day. One at Kingston, by Mr. A. E. Fricker, in the Town's End Hole, weighing 6lb. 3oz., and a small one at Teddington, which was returned to the river again. In throwing the cast net for some minnows at Teddington, Benjamin Stevens caught about forty small barbel, from two to three inches in length, which he carefully put back again. It is the general opinion the supply of barbel in the river was never greater than it is this season, and in the tidal district there are few takes of roach and dace unaccompanied without barbel. There is only one good rule necessary to be observed in barbel fishing, and that is only to take away the best fish, and put the smaller ones back to grow bigger. The barbel is becoming more recognised as an article of food, and certainly more acceptable as a gift. The water above the locks is in about the same condition as last week, and is reported to be "in good order for fishing." In the tideway the report is: "The water is low and bright, and the mud is leaving fast." The returns of sport this week are satisfactory, and no lack in the attendance of anglers and the emyloyment of fishermen.

### Angling Results.
